Liberia was founded 135 years ago and is the only Republic on the continent of Africa. It is the only instance in modern history of a nation built out of a wilderness in a new land that was not first a colony of another nation. Dr. Kwame Nkrumah, head of state of the new Government of Ghana, has stated: "Liberia is the pioneer of the freedom movement among Africans today." Moreover, it is the only part of Africa that has always belonged to the African.

The country was first settled in 1822 under the auspices of the American Colonization Society, a private organization comprised of such American patriots as Henry Clay, John

Marshall, Thomas Jefferson, and James Monroe, and designed to help American Negroes return to Africa. The first settlement and present capital city was named "Monrovia" in honor of the American President. In 1839 there were a number of such settlements which were combined into the Commonwealth of Liberia. The delegates from each settlement met in a convention, wrote a constitution and bill of rights closely modeled after those of the United States, and signed a declaration of independence proclaiming Liberia "a free, sovereign, and independent state."

Today Liberia is a nation whose economic development has amply demonstrated the large-scale opportunities it holds forth. This development has accelerated since World War II and offers foreign capital the advantages of an ever-increasing supply of technical skills and experience. Liberia's laws guaranteeing security for foreign capital investment and her trade policies have become a model for other nations seeking to increase foreign trade. Her large modern harbor has become the home port for much of the world's merchant marine.

Liberia's foreign trade continues to increase each year. Since 1939 a favorable balance has been maintained between imported goods and exported products. In 1955 the imports and exports totaled slightly more than $68 million as compared with $49 million in 1954. Of the $68 million, export trade accounted for $42 million, giving a favorable balance of 60 percent of the value of imports.

Mounting foreign purchases, mostly from the United States, reflect the dynamic aspects of President Tubman's 9-year plan, with large purchases of building materials, motor vehicles, road-building machinery, power installations and other technical materials forming the principal items of import.

Rubber exports, which bulk large in the national foreign trade picture, show the biggest continued increase because of the additional acreage and the development of higher yielding trees. In 1955 the total rubber production more than doubled the previous year's output.

The nation's diversified economy includes the Liberian Mining Co. which raised iron ore exports from zero in 1950 to more than $4 million in 1954, making the export of the "highest grade iron ore in the world" the second most important item in the Liberian economy.

Palm kernels rank third on the list of Liberian exports accounting for more than $1 million each year. Coffee, cocoa, and piassava are also important products exported each year from the thriving docks of the port of Monrovia.

Under the administration of President Tubman, Liberia has witnessed in a decade greater economic progress than in the preceding century. Its internal finances are sound. Its revenues and standard of living are steadily growing. As the standard of living and disposable income of the 1,500,000 population continues to rise, Liberia offers an expanding market for consumer goods and services.

Under President Tubman's 9-year plan, educational facilities in Liberia are constantly improving. Technical education is increasing to meet the demands of an ever-expanding economy and there is a system of adult education to prepare all citizens for their rightful role in a democratic society. Under President Tubman's leadership, emphasis in education has included teacher training and the sciences as well as the liberal arts.

Operating under the Department of Public Instruction are more than 400 public schools and under government supervision, almost as many private schools, as it is a legal requirement that each of the missionary organizations in Liberia operate a school. Foreign business organizations, such as the Firestone Plantations Co., also contribute to education by providing schools for employees and their children.

In world affairs, Liberia's position has paralleled that of other nations of the free world. Liberia was an ally of the United States during World War I and World War II. In view of potentials opened up by Liberia's Lend-Lease harbor, the first "plan of assistance" was drawn up in Monrovia by the FEA economic mission, in recognition of facilities made available to us during the war. And so Monrovia was actually the birthplace of point 4. I myself helped to write that plan. Liberia is a charter member of the United Nations and has supported measures for disarmament and international control of atomic energy. It has consistently voted on the side of extending freedom and self-determination of nations throughout the world and has been especially vocal in condemning violations of human rights wherever they occur.

The Liberians are conscious of their unique role in African affairs and the neverending struggle to preserve the independence which is their heritage by right of the early struggles of their forefathers.

President Tubman summarized the Liberian credo of liberty in a recent Independence Day address and his words take on added significance today as the world welcomes another African country, Ghana, into the family of nations.

"Our pioneer fathers obtained our liberties through hard trials and tribulations," President Tubman stated, "and maintained these liberties by virtue of courage and perseverance. Now, more than ever, the eyes of the world are turned upon African and it is our duty to develop our liberties on a grand scale. For that liberty which lies dormant—existing only in the minds of men—is on the pathway to deterioration. This must not happen to us."

GEORGE W. HARLEY.

Aid to Economically Distressed Areas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of February 26, 1957, which discusses Federal assistance to areas that are economically distressed:

The issue of Federal help for depressed areas in America has come up again in a report by the National Planning Association.

Congress often has considered the problem but thus far no comprehensive legislation has been enacted. Some lawmakers favor broadly liberal United States aid; others feel the stress should be almost wholly on local or regional self-help.

The NPA recommends that Government ought to extend to economic trouble spots the same kind of technical aid it offers areas abroad.

It also urges aid in new plant financing and tax exemptions to encourage business growth.

The conservative approach might exclude extensive help in financing, but the NPA's suggestion of technical aid might find wide appeal in Congress.

It might satisfy both those who want to leave the principal task to the depressed areas themselves and those who believe the Federal Government has an important responsibility in rehabilitating such regions.

Section-by-Section Analysis of National Housing Act Amendments of 1957

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SECTION-BY-SECTION ANALYSIS OF NATIONAL HOUSING ACT AMENDMENTS OF 1957

Section 1: Short title.

MORTGAGE TERMS

Section 2: Increase in maximum loan-to-value ratios—FHA section 203, mortgages on 1- to 4-family homes:

This section would amend section 203 of the National Housing Act by liberalizing the loan-to-value ratio limits on mortgages insured by FHA under its regular sales housing program. As amended by this section, the amounts of mortgages insured by FHA under section 203 would be limited to 96 percent of the first $10,000 of appraised value of the property, plus 85 percent of the next $6,000 of appraised value, and plus 70 percent of appraised value in excess of $16,000 up to the maximum dollar amount permissible.

Within the maximums, the loan-to-value ratios would be at the discretion of the Commissioner, rather than on a mandatory basis. Under this permissive authority, it is, of course, contemplated that, as during much of the past 2 years, lower maximum ratios would be specified in any periods when inflationary pressures dictate the desirability of such lower ratios. The section contains a provision (par. (d)) which states that the Commissioner, in establishing maximum ratios under authority contained in sections 2, 4, and 5, of this bill, shall determine that such ratios are in the public interest, taking into consideration their effect on the national economy and on conditions in the building industry. The availability or unavailability of residential mortgage credit assisted under the GI bill of rights would also be required to be taken into consideration.

Where the mortgagor is not the occupant of the housing (as in the case of a builder-mortgagor) the mortgage would continue, as in the present law, to be limited to a maximum of 85 percent of the mortgage amount available for owner occupants.

The increase in loan-to-value limits provided under this section would also be applicable to sales-type cooperative housing mortgages which under the provisions of section 213 of the National Housing Act can be insured under section 203.

Under the present provisions of section 203, the loan-to-value ratios for owner-occupants are limited to 95 percent of the first $9,000 of the value of the home plus 75 percent of the value in excess of $9,000 (except that the President can increase this latter limit to 95 percent of $10,000 and 75 percent of the amount over $10,000 if he considers such action to be in the public interest). For example, under present law the owner-occupant of a single-family dwelling could receive a 95-percent mortgage on a house valued at $9,000, 90 percent at $12,000, 87 percent at $15,000, and 84 percent at $20,000. Under the

bill, these percentages would be 98 percent at $9,000, 94 percent at $12,000, 92 percent at $15,000, and 87½ percent at $20,000.

The home loan guaranty program of the Veterans' Administration has demonstrated the strength of demand for housing with more liberal credit terms than have previously been permitted under the National Housing Act. The default record under that program as well as under FHA home mortgage insurance programs encourages the expectation that FHA losses with the proposed loan-to-value ratios can be handled with the resources from present mortgage insurance premium charges of one-half of 1 percent annually.

Section 2 (c): Increase in maximum mortgage amounts—FHA single-family homes in suburban and outlying areas:

This subsection would amend section 203 (i) of the National Housing Act to increase from 95 percent to 96 percent the maximum loan-to-value ratio of mortgages insured by FHA under that section covering single-family homes in suburban and outlying areas. A corresponding change (from $6,650 to $6,750) would be made in the maximum dollar limit. These increases would make the mortgage terms under this program consistent with the regular FHA sales housing program as it would be amended by this bill.

Existing provisions of section 203 (i) which expressly permit a person or corporation other than the mortgagor to advance all or part of the downpayment on a house would be deleted by this subsection. The deleted provisions would no longer be necessary if section 201 (b) of the bill is enacted, making applicable to section 203 (i) of the National Housing Act the same provisions relating to secondary financing as now apply to sales housing for the elderly.

This subsection would also eliminate the reference in the existing section 203 (i) to insurance of mortgages on a "farm home on a plot of land five or more acres in size adjacent to a public highway." This statutory language does not add to the Commissioner's other authority which presently is broad enough to permit insurance on mortgages on acceptable suburban or farm properties. In view of such existing authority the reference to 5-acre farm homes in section 203 (i) is unnecessary.

Section 3: FHA rental housing for the elderly: Increase in mortgage limit on elevator-type structures—Rental housing for single elderly persons:

This section would amend the special provisions of section 207 of the National Housing Act for rental housing for the elderly. It would add a provision that the maximum amount of a mortgage could be in an amount up to $8,400 per family unit where the mortgage is given by a nonprofit organization to finance an elevator-type rental housing project which is to be used and occupied entirely by elderly persons. Under present law there is no provision for higher mortgage amounts per unit for elevator-type structures for the elderly, and the limit is $8,100 for all rental housing projects for the elderly financed under these section 207 provisions. A provision would also be added to the section 207 special provisions for the elderly to assure that units in such housing could be designed for and occupied by single elderly persons.

In the 1956 amendments to section 207 which provided for housing projects for the elderly, the provision for additional mortgage amounts for elevator structures was omitted. The increase in the mortgage limitation is considered necessary to place the program for housing for elderly persons on a par with any other rental housing under section 207, and to avoid restricting projects for elderly persons in large metropolitan areas to rural or suburban locations.

FHA has, in the past, interpreted the legislative term "family unit" as indicating a dwelling unit suitable for occupancy by two or more persons. It is felt that further clarification is needed to affirm the intent of Congress that aged widows, widowers, and other elderly single persons are not to be debarred from occupancy of projects designed especially for elderly persons, and that small units in such projects may be especially designed for the occupancy of a single elderly person.

Section 4: Increase in maximum ratio of loan to value—Section 220, urban renewal housing:

This section would amend section 220 of the National Housing Act to increase the maximum mortgage amounts on urban renewal sales housing based on ratio of loan to replacement cost, so that they would be consistent with the increased ratios of loan to value in the regular FHA sales housing program as it would be amended by this bill.

Subsection (b) of this section is a technical amendment necessitated by a change in language made by subsection (a).

Section 5: Increase in mortgage amounts—FHA mortgage on housing for servicemen: This section would amend section 222 of the National Housing Act to increase the loan-to-value ratio from 95 percent to 96 percent for insured mortgages covering housing for servicemen. A corresponding increase (from $17,100 to $17,300) would be made in the maximum dollar limit for the mortgage. These changes would be consistent with the increases under the bill for mortgages insured under section 203.

Section 6: Terms of FHA mortgages covering war, defense, and veterans' housing sold by Federal, State, or local governments: This section would make the terms of mortgages insured by FHA covering World War II, defense, and veterans' housing sold by the Federal, State, or local governments the same as mortgages insured under sections 203, 207, or 213.

Section 7: FHA title VIII military housing mortgages:

This section would extend by 1 year the period during which the Federal Housing Commissioner is authorized to insure mortgages under title VIII of the National Housing Act. Although it is now expected that about 70,000 units can be placed under FHA commitment by December 31, 1957, and that commitments can be obtained on the balance of the presently approved units by June 30, 1958, it is doubtful that units approved by the military in the future can be ready for FHA commitment by the latter date. Accordingly, in order to permit sufficient time for selection of sites (and acquisition, if required), planning, and design by the military, and for making financial arrangements by successful bidders, it is believed that the time during which the Commissioner may insure mortgages should be extended by 1 year.

The section would also make the statutory average maximum of $16,500 per unit under title VIII applicable to each project rather than to each mortgage as at present. In order to obtain financing for large projects it has been found necessary to divide the project into several units and to enter into a separate mortgage for each unit. Since distinct areas for officers' housing and enlisted men's housing are usually established within the project site or as separated sites, and since the act currently provides that the principal amount of a mortgage may not exceed an average of $16,500 per family unit, considerable difficulty has been experienced in defining the various areas covered by each mortgage. This change, which is believed to maintain the intent of the act, would permit greater flexibility in that the determination of mortgage areas would be greatly simplified. Progress by the eligible builder in completing the work in individual mortgage areas would be facilitated, because work could progress from 1 area to adjacent areas rather than being undertaken in 2 or more scattered areas simultaneously.

Finally, the section would provide that the bid of the eligible bidder on a military housing project under title VIII shall bear a reasonable relation to the Commissioner's estimate of replacement cost of the property or project when the proposed improvements are completed. This would be substituted for the present provision that the eligible bid must be equal to or less than FHA's estimate of replacement cost of the proposed project.

Under the present provisions of the statute, if the military receives no bid which is equal to or less than the FHA's estimated replacement cost, FHA may, upon request of the military, reexamine its estimated cost and revise its appraisal and eligibility statement appropriately, or the military is forced to reject all bids and abandon the project or issue invitations for new bids. In large construction projects, such as most military housing under title VIII, a moderate range among estimates of replacement cost is inevitable due to cost variances in materials, labor, job overhead, and other factors. This proposed amendment would provide much-needed flexibility in the administration of the military housing program.

OTHER PROVISIONS

Section 8: Repurchase of title I repair and improvement loans by lenders: This section would amend section 2 of the National Housing Act to provide a 2-year statute of limitations with respect to the FHA requirement under certain conditions that a lender must repurchase a title I case on which FHA has paid an insurance claim. The effect of this proposal would be to prevent the Federal Housing Commissioner from demanding that a title I lender repurchase a title I case (because of lack of eligibility for insurance) if a period of 2 years has elapsed since the date the lender's claim for loss was paid by the Commissioner. At the present time there is no statute of limitations and in many cases a long period of years will elapse before some type of information is discovered which indicates that the claim would not have been paid if all the facts had been known to the FHA at the time the lender's claim was allowed. The possibility of repurchase requires that lenders, in effect, create a contingent reserve, as under the present statutory and administrative provisions a lender cannot be assured that its payment of claim is final. It is believed that FHA should have 2 years after the claim has been paid to investigate the case for matters of eligibility, but after such reasonable period has passed, the lender should be entitled to consider the payment of its claim as final and incontestable unless it can be established that the lender had been guilty of fraud or misrepresentation. A delay in making this section effective (until January 1, 1958) is desirable in order to take care of a backlog of pending matters.

Section 9: Repeal of certain FHA farm housing provision: This section would repeal section 203 (d) of the National Housing Act. Section 203 (d) provides for a special category of insurance of mortgages on farm properties. Because this section had been virtually unused, Congress (in the Housing Act of 1954) amended it to provide that no mortgage could be insured under the section after the effective date of the 1954 act, except pursuant to commitments issued on or before such date. There are no outstanding commitments under this section at the present time, and it is therefore recommended that the section now be repealed as obsolete.

Section 10: Mortgagee expenditures on foreclosed properties—and FHA premiums: This section would permit the Federal Housing Commissioner to authorize mortgagees to make expenditures for protection of properties during the period commencing with the institution of foreclosure and continuing until such time as the Commis-

sioner takes title to the property. This period of time represents a minimum of several months and may, in States having statutory redemption rights, extend to as long as 18 months. It would be to the Government's advantage to authorize mortgagees to make relatively small expenditures during this period to protect property from vandalism and damage by the elements, and to make necessary repairs for acceptable maintenance of the property.

A further provision of the section would permit terminating the mortgagee's obligation to pay mortgage insurance premiums when an application for debentures has been filed. Mortgagees are now required to pay such premiums up to the date of acceptance of title and FHA then includes in the debentures amounts to compensate the mortgagees for such expenditures. This results in unnecessary duplication, in that the FHA billing and collecting of insurance premiums after the filing of a claim for debentures is followed by the repayment of the premiums to mortgagees, with interest, within a limited time. In order to provide a consistent treatment to mortgagees' applications in the various sales housing programs, the scope of the proposed amendment includes all sales type programs, including sections 603 and 903.

Section 11: Clarifying provision relating to FHA debentures interest rates: Section 224 of the National Housing Act, added in 1954, provides that the debenture interest rate with respect to any section of the act shall be fixed by the Commissioner, with the approval of the Secretary of the Treasury, in an amount not in excess of an annual rate of interest determined by the Secretary by estimating the average yield to maturity on the basis of daily market quotations or prices during the calendar month next preceding the establishment of such rate of interest, on all outstanding marketable obligations of the United States having a maturity date of 15 years or more from the first day of such next preceding month and by adjusting such average yield to the nearest one-eighth of 1 percent.

In conformity with the provisions of section 224, a debenture interest rate was established in December 1956 at 3¼ percent. In sections 204, 207, and 803, there remain references to the former maximum rate of "3 per centum per annum." FHA has interpreted section 224 as being controlling and has published a debenture interest rate in excess of 3 percent notwithstanding the reference to 3 percent contained in sections 204, 207, and 803. While there is no legal difficulty, there has been a practical problem resulting from the seeming conflict between section 224 and the wording of the other three sections. To remove this point of confusion, section 210 of the bill would include an express reference to the section 224 interest rate formula in the other three sections.

Section 12: Obsolete cooperative housing provision: This section would repeal section 207 (q) of the National Housing Act which has become obsolete, particularly with the enactment of sections 213 and 306 (e) of the National Housing Act which authorize special FHA and FNMA aids for cooperative housing. The reference in section 207 (q) to "paragraph numbered (2) of subsection (c) of this section" is an obsolete reference to a repealed provision.

Section 13: Commercial and community facilities serving cooperative housing: The purpose of this section is to permit an FHA cooperative housing mortgage to include commercial and community facilities in sales-type and investor-sponsor-type projects. The law presently permits the inclusion of such facilities only in management-type projects. The section would have the further effect of limiting by law FHA sales-type cooperatives to those having eight or more units. However, because smaller sized cooperatives are generally not feasible, this limitation is already in effect by regulation.

Section 14: Technical amendment relating to termination of mortgage insurance premiums: This section would make the provisions of section 204 (j) of the National Housing Act (which are now applicable to individual home mortgages insured under section 203 of that act) applicable to individual home mortgages insured under sections 213, 220, 221, and 222 of that act. Section 204 (j) permits termination of the mortgagee's liability for payment of mortgage insurance premiums in those cases where the mortgagee forecloses on the mortgaged property but informs the Commissioner that it does not intend to convey the property to FHA in exchange for debentures. Upon such notification (which terminates FHA's insurance liability), the FHA terminates the mortgagee's obligation to pay subsequent mortgage insurance premiums. Similar termination of the mortgagee's obligation results under section 204 (j) when FHA's insurance liability terminates because the mortgage has been prepaid in full. The same considerations which led to the enactment of section 204 (j) apply equally to making it applicable to the additional home mortgages.

Section 15: Transfer of moneys among FHA insurance funds: The section 221 housing insurance fund and the servicemen's mortgage insurance fund do not come within section 219 of the National Housing Act which authorizes certain transfers of moneys among the several FHA insurance funds. Section 214 of this bill would provide for their inclusion. The omission of these 2 sections from the provisions of section 219 could create a situation which would make it necessary under unfavorable circumstances to call upon the Treasury Department to redeem debentures issued by the 2 funds even though ample resources for this need may be available in 1 or more of the other funds enumerated in section 219. Also, inclusion of these two funds within section 219 would permit transfers, as required, from these funds to other insurance funds which are now included under section 219.

Section 16: FHA appraisals available to home buyers: Under the present provisions of section 226 of the National Housing Act, the Commissioner must require that a statement of FHA appraised value be furnished to purchasers of homes. In instances where the law bases the amount of the mortgage upon replacement cost, it has occurred that the FHA estimate of value is actually less than the amount of a mortgage based upon replacement cost. This creates unnecessary misunderstanding. It is believed that the objectives of the act would be met by furnishing a statement of the FHA's estimate of replacement cost instead of appraised value where the law bases the mortgage upon replacement cost.

Section 17: Use of sales-type housing for transient occupancy: This section would remove from the provisions of section 513 of the National Housing Act the language which now requires mortgagors under the various sales housing programs to certify that they will not use the dwellings for hotel purposes. It is believed that the possibility of any material use of single-family dwellings or groups of single-family dwellings or 2- to 4-family structures as hotels is so remote that little, if any, effect upon the hotel industry could result from removal of the present statutory language. Under the present statute, proposed mortgagors have been required to certify that they would not use the dwelling for hotel purposes, and this has created an unnecessary processing requirement in the large volume sales housing program. No change would be made in these restrictions insofar as they apply to rental housing programs or to management-type cooperative housing programs.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following speech by Hon. George A. Dondero before the Michigan State Legislature on February 12, 1957:

Mr. President, Governor Williams, Mr. Speaker, members of the senate and house, State officers and friends:

Today we meet to commemorate the 148th anniversary of the birth of one of the world's great men. But these anniversaries avail us very little, save as we turn them to the patriotic service of the great cause Lincoln served—namely, the preservation of our Republic and the security of our constitutional order.

These were the great inspirations of Lincoln's public service and we cannot honor him better today than to recall the nobility of that service and the deep wisdom of those policies which he so often molded in anguish and despair.

Lincoln's every thought was for all the people. The spirit of grasping partisanship was not in him. He sought nothing for himself.

Sometimes the Great Ruler of the Universe places greatness in strange surroundings, but no one would ever have thought to have looked for it in the crude shelter of a pioneer in the backwoods of Kentucky 148 years ago today.

All over our broad land the American people are conscious of an imposing presence and are standing at salute today while Abraham Lincoln and all his deeds and scenes of sacrifice go passing in review. They turn to this humble man who came from a cabin to the Capitol for guidance and hope and wisdom to solve the problems of our time. There is something about his lowly origin and the story of his life and its struggles that causes people to draw close to him. While he obtained position far above the plain people yet he never lived above the plain people.

I know Michigan commends its legislature for pausing today to pay tribute to the most unexplainable man in all history. He was the least schooled yet the most educated; the poorest yet the richest; the least pretentious yet the most resourceful; the homeliest yet the most fascinating; the commonest yet all pay tribute to his dignity and nobility. He inherited the least promising future yet no man ever lived who left to the future a legacy so great.

Wherever in this world liberty and justice, mercy and kindness, truth and rugged honesty are known and understood by the people, there also is known and understood the name of Abraham Lincoln.

Therefore, it is most fitting and proper that you, the members of the legislature of our great State, should lay aside your legislative duties and remember the birthday of this Nation's most uncommon commoner.

Many millions of people in America today still live by the political axiom which William Penn uttered before the struggling pioneers of Pennsylvania when he said: "He who will not be governed by God will be ruled by tyrants."

Such was the flavor of the basic patriotism which Lincoln had gleaned so laboriously from his lonely reading in the pioneer wilderness of Illinois.

In whatever range of human relations we examine the philosophy of Lincoln, we thus find him dealing with the abiding realities of the spirit.

He was a great man because he held fast to the fundamental virtues and truths which had been wrought by the suffering and sacrifice of mankind through countless generations.

He was a wise and good man because he sought wisdom in the eternal principles of humble charity. Once he said, "I am driven to my knees because I have nowhere else to go."

These are the reasons that so much he expressed in the critical period of the last century apply with compelling force to the age in which we live today.

The great issue which confronted Lincoln was whether or not this Government conceived in liberty could long endure. Freedom and slavery faced each other in our land in 1860. That issue confronts us in our day and generation. For destiny has thrust upon us the tasks in an age where today freedom and slavery face each other again in a world divided by communism. Let us, therefore, take as much as we can of inspiration and wisdom from this commemorative occasion for we need to know in solving the vexing problems facing us more of the lofty spirit of Lincoln, his example of supreme patience, of vast tolerance, of inflexible integrity, of humble charity and good will toward all mankind.

These were the deep wellsprings of Lincoln's noble character.

Above all, Lincoln was sustained in the darkest hours of our national travail by an unflinching faith in the judgment of all of the people.

He was an American who dared to stake the very future of the Republic on those broad principles of human equity and social justice upon which the very theory of self-government was reared.

A man of lesser faith would have failed, but Lincoln's unquenchable faith in the judgment and good sense of the people upon issues touching their national destiny was unflagging.

And it was that great faith which carried this Nation through to victory—a triumph which 92 years of added history now tell us never shall be undone so long as the spark of freedom glows in the heart of man.

His imprint on America and the world still is not measured in its full scope, nor will it be until all civilization knows the living reality of living freedom under law.

I have said that he was the least schooled yet the best educated. Many years ago in Washington his son, Robert Lincoln, related to me that his "father did not have anything to start with and he hardly went to school at all." Yet from a page and half of ordinary ruled paper in less than 3 minutes he delivered an address that has never been surpassed on American soil. To me it has almost seemed a miracle that a man with President Lincoln's limited education and whose opportunities for schooling were so meager could produce such a gem of English literature as the Gettysburg Address. Lincoln's lines not only gave mankind the essence and the meaning of the struggle then being waged —the Civil War—but also serve in this hour and for all ages as a prayer of deliverance for all people. His humility and compassion are revealed in the fact that his invitation to come to Gettysburg reluctantly extended "to make a few appropriate remarks" at the dedication of a cemetery, came as an afterthought and long after the orator of the day had been invited. That went to the best known orator of his day—Edward Everett—who had obtained his education in the temples of learning of two continents. Such an incident in our time would be regarded by any President of the United States as a slight and an insult to the highest office in our land.

We will notice in his address the complete absence of any hostility. Great utterances have been delivered in many places down through the centuries. This one had the singular gift of expressing the basic meaning of the United States, in the noblest language, at a moment of deep national peril by an American President whose entire life work is summed up in those compact sentences of that short oration. Never in the history of literature was so much said, so wisely, in so few words. His few appropriate remarks will stand forever as the symbol of our American philosophy of government and are as much the living tradition of our country today as the Declaration of Independence or the Constitution of the United States.

Now, while we are discussing Lincoln today, I do not think it would be inappropriate to speak briefly about the one who captured his affection and his heart, became his wife, the mother of his four boys, and his helpmate during the last 23 years of his life, who sacrificed much socially and who was in many ways responsible for Lincoln's success—and I refer to the little girl who came from the bluegrass of Kentucky—Mary Todd.

I doubt whether the people of the United States yet know fully the debt of gratitude that we owe as a Nation to that little girl who came from Kentucky for the part she played in molding the destiny of this immortal American whose birthday we commemorate today.

Had it not been for a stepmother in a Kentucky home, it is very probable that Miss Todd and Abraham Lincoln would never have met each other. There were 14 children in the Todd home at Lexington, the offspring of two marriages, filling the house with half-brothers and half-sisters. We can suppose that irritations, disagreements, and arguments influenced Mary to seek the home of her sister, Elizabeth Edwards, at Springfield, Ill., where she met Lincoln at a dance.

Romance and marriage followed, and we can see those two young people standing with their backs to a fireplace in the Edwards home pledging to each other for better or for worse. It would be very difficult, in my judgment, to find two people more unlike each other—he was 33, and she was 23—they were unlike each other in temperament, social standing, wealth, appearance, education, culture, refinement, and pride. The fact is, Lincoln stood there on his marriage night $1,000 in debt, the result of an unfortunate grocery-store adventure. Mary was the proud daughter of a bank president.

From the Edwards' home that November night, Mary Todd went forth a laughing and happy bride entitled to a home, peace, and contentment like anyone else, but she was destined to enter upon a career that for tragedy and sorrow stands without parallel on the pages in American history, a career that was to lead her by successive steps to the White House, a sanatorium, voluntary exile in southern France, and then back after a number of heartbreaking experiences to the same house from which she emerged a bride 40 years before, and there at last to sit in shadow and gloom while the light of her life went out in 1882.

Why do we owe Mary Todd Lincoln a debt of gratitude? When Lincoln was offered the governorship of the territory of Oregon he would have accepted had it not been for his wife who refused to cross the vast reaches of the West in a prairie schooner and live among the savages. Had he accepted it is probable he would have removed himself from the political scene and influential people of the Middle West and East, that he may never have been heard from again as a political figure.

During the last part of the debates with Douglas he returned to his law office in Springfield, Ill., and declared to his law partner, Herndon, and a young law student in the office that he intended to break off his debate with Douglas, that it was killing him. It was then that the only person in Springfield who offered encouragement and determination was the little woman in the frame house down on the corner of 8th and Jackson Street, his wife. Had he broken off his engagements in that great debate, it is quite possible his political career may have ended then. We all know that it was his historic debates with Douglas that brought him to the attention of the people outside of his own State of Illinois.

When the Civil War broke out, Mary was the only member of the Todd family to remain loyal to the Union and the Government of the United States of which her husband was the President.

It was my privilege to have known and to have been a guest in the home of Emilie Todd Helm, the last living sister of Mary Todd. What did her family think Mary saw in Lincoln that induced her to take him for a husband instead of Douglas? They believed "Mary found an intellect superior to her own and a tongue equally as sharp."

When the news reached the Todd family at Lexington that Mary had taken this country lawyer for a husband, they were shamed, chagrined, and embarrassed.

The passing of time works wondrous changes in this world when we consider the embarrassed feelings on the part of the Todds because of Mary's choice of a husband and that magnificent memorial in Washington, which has been visited by the leaders of nearly every civilized government in the world and over 48 million people. The guards report that rarely does anyone speak out loud when they enter the memorial and men voluntarily remove their hats, so great is their reverence for this humble man who came from the cabin to the Capitol. At Christmastime and on his birthday the Memorial receives a flood of cards and letters addressed to Mr. Lincoln and some of them contain small sums of money. "Though dead he still liveth." Perhaps you have stood within that impressive memorial and read through misty eyes the words engraved in granite above the Emancipator's statue, "In this temple as in the hearts of the people for whom he saved the Union the memory of Abraham Lincoln is enshrined forever."

Some years ago while visiting with Robert Lincoln in Washington, I inquired of him what had become of his father's library. He informed me that his father did not have a library. When he died he had 10 or 12 books: 1 was the Bible which he kept on his desk, 2 were treatises on slavery, and the rest were books on history and government. How strange it seems to our generation that one of the world's great men should leave a library of less than a dozen books. We may safely assume, however, that whatever information those few volumes contained was transferred to his mind by careful and digestive reading. I believe one of the weaknesses of our age is that we read too much and remember too little.

If you had a son of military age who attended college for 3½ years 500 miles away from the danger zone during a war in which the very life of the country was at stake, it is more than probable that the seats you now occupy in this Capitol would be filled by others.

Robert Todd Lincoln, the President's son, studied law at Harvard College near Boston from the breaking out of the Civil War in 1861 until his graduation in June 1864. However, neither Lincoln nor his son were at fault, for Robert endeavored to enter the Army which Mrs. Lincoln strongly opposed. They had already buried one son from the

White House in 1862 which had left her in a highly uncontrollable state of mind. For the time being both the President and his son deferred to her wishes. When Robert graduated he enlisted in the Army and was sent to General Grant with a note which asked the general to place him in service "without rank or pay." It was Lincoln who purchased and paid for out of his own funds the horse his son rode during the last year of the war as a captain on Grant's staff. The amount of the check was $125 across the end of which he wrote "horse for Bob." Horseflesh had become expensive toward the close of the conflict. Lincoln's great-grandson still has that original check.

Robert Lincoln related to me that in his judgment not more than one-third of the stories attributed to his father were ever told by him. While his father told many stories, they were only told to drive home a point or to clinch an argument.

An example of his keen wit and humor is his answer to the inquiry by a neighbor back in Springfield why his wife's family, the Todds spelled their name with two d's. He said he did not know but had observed that God was satisfied with one d.

While practicing law in Springfield, two of his small boys were in the habit of running to meet their father as he came home from the office. On one particular occasion, he had each of the two boys by the hand and both of them were screaming at the top of their voices so that it attracted the attention of Mrs. Lincoln as they neared home. She inquired what was wrong with the boys. Lincoln answered saying, "Just what's wrong with the whole world? I have 3 walnuts in my pocket and both of them want 2!" This is as good an illustration of selfishness as we might find anywhere.

During one of the Lincoln debates, Lincoln noticed while Douglas was sitting on the platform, that Douglas took copious drinks of water. Lincoln nudged a friend sitting next to him and said, "It's the first time I ever saw a windmill run by water."

At the height of the Civil War Lincoln never lost his sense of humor. Bowed down as he was with the burdens and cares of that terrible conflict he could still come to Cabinet meetings with the customary inquiry and say, "Gentlemen, who's abusing us today?"

A subject very rarely discussed about Lincoln is his estate. When he was elected President he was asked by news reporters what he thought all his wordly goods amounted to. After a short pause, he answered saying it would total about $15,000. This consisted of his home in Springfield, his law books, 40 acres of land in Iowa given to him by the Government for his services in the Black Hawk War—the value was about $10 per acre—a vacant lot in Springfield, the value of which we can best judge by the fact that the taxes on it were less than $1 a year, and a few promissory notes given to him by friends to whom he had loaned money—the going rate of interest at that time was 10 percent.

It took him 51 years to accumulate this sum. When he died only 4 years later, his estate amounted to $83,000. He had saved 65 percent of his salary which was $25,000 a year as President. This sum he had invested in Government bonds to assist the Government—the bonds drew 6-percent interest. Before the estate was closed it had increased by the interest on the bonds and loans to $110,000. His widow and two surviving sons each received approximately $36,000.

Had the lowly Carpenter walked this earth in the flesh when Lincoln lived they would have been good friends for they had much in common. Lincoln's humility, his mercy, his compassion and kindly nature are characteristics which typified the Master of all men.

Two incidents in Lincoln's life had a profound effect upon his career. One was the death of his mother, the other his unfortunate venture as a merchant. However, Lincoln could overcome defeat and misfortune. We know that he was defeated as a candidate for the State legislature, for the United States Senate, also as a candidate for the House of Representatives. When he became 21 years of age, he embarked upon various business enterprises—every one of which proved equally disastrous to him. As I stated, one of the most crushing misfortunes of his life was in a grocery store business with a man by the name of Berry. Business was not too good in that early day and Berry advised that they add liquor to their stock in order to stimulate trade. Well, the liquor stimulated Berry but it had no effect on trade. While Berry was in the back end of the store drinking up the whisky, Lincoln laid full length on the counter in the front of the store reading law and eating up the groceries. The result of this combination as Lincoln himself phrased it, "the store soon winked out."

This fastened upon him a burden of debt which he carried for 20 years, and which he never did dispose of in full until 1849, his 40th year and after his election to Congress. The amount of the debt was $1,100 represented in promissory notes which he signed with Berry for the purchase of the store. This obligation was so large to him that he referred to it years later as the "National Debt." He asked his creditors to bear with him and that he would give them all he could earn over his living.

All agreed except one who brought suit, obtained a judgment, took out an execution and levied on all the property that he had, all as Lincoln said that he had to keep body and soul together. This consisted of a horse and a few surveying instruments. James Short, a friend of Lincoln, bought in all the things at the sheriff's sale for $120, and taking them to where Lincoln stood by the side of the road, broken hearted and discouraged, he laid them at his feet and said, "Here young man, begin again."

Thirty-two years later a message reached the White House that James Short was destitute out on the frontier of Nebraska. Then as fast as train and pony express could carry it, there went out of the White House from Abraham Lincoln, President of the United States, aid and comfort and support to the one who had been his benefactor in the days of his youth—gratitude after 32 years. I would love Abraham Lincoln for that if not for anything else. Lincoln appointed James Short Indian Agent for the State of California.

In conclusion, Lincoln was not only a great orator, but he was also a great lawyer, a great statesman, a great President, and in my judgment America's greatest man. He was great in the strength of his convictions, in his own unfaltering adherence to the principles for which he stood and in his personal uprightness, his sound judgment, his knowledge of the people, his love of country, his humanity and in his devout reliance upon the supreme being. Lincoln, marvelous man that he was, belongs not to America alone but to the world for he truly is one of the great men of history.

And so in truth it could be written "his heart was as great as the world, yet there was no room in it to harbor the memory of a single wrong." With malice toward none and charity for all, with firmness in the right as God gave him to see the right, he lived and died, and while we, who have never seen him yet, feel daily the influence of his kindly life and may we always cherish among our most valued possessions, the heritage of his splendid example, and say with the poet who said that he was:

"A blend of mirth and sadness, smiles and tears;
A qaint knight-errant of the pioneers;
A homely hero, born of star and sod;
A peasant prince, a masterpiece of God."

Civil Defense

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. GARMATZ. Mr. Speaker, for the past several weeks the Military Operations Subcommittee has been holding hearings on the very important subject of civil defense.

Under legislation now being considered by the committee, the civil-defense functions would be merged with similar functions now carried on by the Office of Defense Mobilization.

This morning the committee had the privilege of hearing from Thomas D'Alesandro, Jr., mayor of Baltimore, in his capacity as chairman of the legislative committee of the United States Conference of Mayors.

In view of the fact that the conference represents cities in all of our districts, I believe his statement is of interest to all of us, and therefore I am inserting it in the RECORD, under permission to extend my remarks:

STATEMENT OF HON. THOMAS D'ALESANDRO, JR., MAYOR OF BALTIMORE, ON BEHALF OF THE UNITED STATES CONFERENCE OF MAYORS, BEFORE THE MILITARY OPERATIONS SUBCOMMITTEE OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS, MARCH 5, 1957

My name is Thomas D'Alesandro, Jr. I am the mayor of the city of Baltimore and chairman of the standing committee on legislation of the United States Conference of Mayors. The Conference of Mayors represents the collective thinking of approximately 300 major American cities, all of which are seriously concerned with the problem of an adequate national civil defense.

At the outset, I want to go on record in support of bill H. R. 2125 and all similar bills. Legislation of this character is badly needed to make our civil-defense effort effective and to overcome widespread public apathy and indifference that presently exists.

In 1953 the Conference of Mayors had this to say about civil defense:

"Civil defense, involving Federal, State, and city, sharing costs, is directed almost entirely to the urban centers. Our large city industrial areas, the centers of production, would be the prime targets in case of any enemy attack. Yet the progress of this important phase of military preparedness and national defense, has been stymied for several years through lack of adequate Federal appropriations. To date, the Congress has not taken civil defense seriously and it has failed to make available such funds as are recognized to be necessary if we are to be even partially prepared. If Congress does not take civil defense seriously it is logical that State and city officials should not take it too seriously."

That was our position in 1953, gentlemen. Almost 4 years have passed since that statement was made. Yet conditions with respect to civil defense remain substantially the same.

In fiscal year 1953, civil defense asked the Congress for $600 million to finance what should be one of the most vital parts of our total defense. Congress appropriated $43 million.

In fiscal year 1954, civil defense feeling that their previous requests were going unheeded, asked the Congress for $125 million. They got $46 million.

For fiscal year 1955, $35 million was requested of the Congress. Forty-eight milion was the total appropriated. This has been pretty much the story. Civil defense budgets have been cut regularly and cut substantially. The appropriations for this all-important area of our total defense, the protection and defense of our homes and families, our industrial might and power, have been so small, so inadequate as to be practically useless. The appropriations for national civil defense to date have averaged somewhere between $55 million and $60 million per year—less than the cost of one submarine, the *Nautilus*, which cost about $90 million.

It is the opinion of the Conference of Mayors that Federal civil defense must be given the authority, prestige, and power to put into effect those policies determined as the best means of accomplishing our primary purpose of saving lives. It is our feeling that the best civil defense organization must emanate from Washington, D. C.

Thus far no real leadership has been provided to the local communities. Federal authorities have sources of information which are not normally available to us on the local scene. Therefore, the extent, the scope and the organizational functions of a local civil defense organization should be guided by the requirements as set forth by a Federal organization, such as that proposed in H. R. 2125.

This is the time for decision. The Federal Government must assume its full responsibility for the protection of the people of this Nation against enemy attack. That responsibility does not end with building an H-bomb stockpile of our own, with creating squadrons of bombers and guided missiles and the like.

No alliance of cities or States can give this country a sound and effective civil-defense establishment. The history of civil defense during the past years is proof of that. Planning for target areas can only be done by the Federal Government. Only the Federal Government can provide funds in the amounts that are needed to build the shelters without which civil defense is meaningless. Under the direction of a strong Federal agency and with adequate Federal appropriations, the States and the cities can join in building a civil-defense program that has some meaning, that will provide the people of America with a feeling of some security, a feeling important to all of us, but certainly nonexistent now.

We have reached D-Day with respect to civil defense—Decision Day is here. We must decide whether the Federal Government is going to face this problem realistically or not face it. What has been done thus far amounts to token recognition that the problem exists. What has been done certainly is not without some value; but months and months will pass before this Nation's civil defense is expanded and strengthened to perform adequately in the event of nuclear warfare. And yet, minutes could lie right now between us as a nation, and the deadly violence of an H-bomb delivered by an enemy bomber or guided missile.

The great expanse between what exists and what is needed can only be bridged by the Federal Government, and to quote from the so-called Holifield proposals:

"So long as we dwell on the responsibilities of the individual or family or upon responsibilities of State or local units of government, we are apt to forget that in a fundamental sense, the most important responsibility rests with the Federal Government. • • •

"In the face of a clear constitutional duty to provide for the common defense and to repel invasion, the Federal Government cannot let the matter rest with the States or localities."

It is noted, however, that H. R. 2125 continues to place reliance on a wholly volunteer system for development of the necessary organization which will be required to mitigate and recover from the effects of a nuclear assault. I believe it is time to face the reality that this is almost impossible to achieve in time of peace and prosperity. I firmly believe that some thought should be given to requiring civil-defense service from some of the people rejected by the Selective Service Board because of physical defects. They could well discharge their civic responsibility in that manner and not be completely excused therefrom as under the present system. Some recompense should be provided, from Federal funds, while so serving.

The Conference of Mayors hopes, therefore, that H. R. 2125, amended as found necessary as a result of these hearings, will be passed. We want to see civil defense made as effective as possible.

I want to thank you, Mr. Chairman, and members of this subcommittee for your kind attention here this morning.

What Do People Really Want: Heavy Spending or Economy?

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. AUCHINCLOSS. Mr. Speaker, extravagance in Government, reduction in taxes are the complaints we are all receiving from our constituents and it gives me great pleasure to have permission to include in my brief remarks a statement entitled "What Do People Really Want: Heavy Spending or Economy?" made by our highly esteemed colleague, the Honorable ROBERT W. KEAN, who so ably represents the 12th District of New Jersey.

It is unnecessary to say that Mr. KEAN is one of the highly respected Members of the House of Representatives and his views on the great questions of the day are always penetrating and constructive. He has ably analyzed the people's protest against the high budget which was submitted by the administration, as well as the increasing demand for lower taxes, and his observations of this situation from a political point of view are most pertinent. As he points out, in Congresses where economy was practiced and the cost of Government reduced along with taxes, the controlling party which brought that about was defeated in the next Congress. He sizes up the situation well in the last two paragraphs of his statement when he says:

The nub of the matter appears to be: Will those who are sincerely interested in economy join ranks to fight as hard to back up economy-minded Members of Congress as do the militant free-spending groups to thwart their efforts.

Congress is troubled by the size of the budget, but many Members—both Democrats and Republicans—also are troubled by the lessons of history which have made them skeptical as to whether the majority of the people really want curtailment of heavy Government spending.

The entire statement is as follows:

WHAT DO PEOPLE REALLY WANT: HEAVY SPENDING OR ECONOMY?

Do the American people really want economy in Government? Do the people appreciate efforts along that line? Will they support those who vote for cuts in Federal expenditures?

Those questions have been asked with frequency by Members of Congress in Capitol cloakrooms since public outcries over the size of the proposed Federal budget for the 1957–58 fiscal year.

In asking the questions, Members call attention to the fact that during the past quarter century in only two Congresses was there a successful attempt to cut expenditures substantially, and point to the results of the ensuing elections.

In the Republican 80th Congress, the Truman budget was cut by $3½ billion. In the Republican 83d Congress, the Truman budget was cut by $10 billion. And what happened in the next elections? The Republicans who had been in control in each case were badly beaten. The voters threw out the economizers and put those who had opposed economy back in control of the Congress.

It is commonplace for those who vote for economy in a certain area of Government activity to be told by some constituents that such a vote was false economy. It is, of course, true that nearly all Government spending has a worthy objective and cutting in any area might be characterized as false economy by the group which is particularly interested.

But one must look at the Government picture as a whole. It is the duty of the Federal Government to participate in such and such an activity? Could it not be done better and cheaper by the States, or even by the local communities?

NEW JERSEY'S STORY

The answer might often be yes in New Jersey, for as the New Jersey Taxpayers Association has pointed out it costs New Jersey taxpayers $2.40 in Federal taxes for each dollar returned in the form of grants under the 50-odd Federal-aid programs. But those groups who get the dollar are vociferous supporters of such programs, usually not realizing that they and their neighbors are digging deep in order to receive these "benefits."

Representative ROBERT L. DOUGHTON, the late wise old chairman of the House Ways and Means Committee, used to say that the cry of witnesses who came before our committee was: "Don't tax me, tax that fellow behind the tree." The same thought seems to be that of many people who talk economy: "Don't cut my pet project. Cut some other fellow's, for if you cut mine, I won't vote for you."

Somewhat the same pattern has occurred with reference to tax reduction. Only three times in the past quarter century has a Congress passed a bill reducing taxes substantially. Once by a Democrat-controlled Congress—the 79th where the cut was $6 billion. The next year the tax-cutting Democrats were thrown out and Republicans were put in control.

Again in the 80th Congress there was a substantial cut—approximately $5 billion. Next November the Republicans who had sponsored the cut lost control. Even the chairman of the Ways and Means Committee, the author of the bill, was defeated.

Again in the 83d Congress there was a tax cut of $7,500,000,000, but in the following November the Republicans were thrown out of control. Is it strange that I heard a statement made at lunch last week

that the public really does not seem to appreciate a tax reduction?

One of the reasons, perhaps, for the lack of appreciation of the latest tax cut is that in a time of increasing prosperity when people are earning more money they do not feel that there has been a tax reduction, for with greater personal earnings they pay more in taxes. They do not realize how much more they would have paid if there had been no cut.

TAXES ARE TOO HIGH

I believe that taxes are too high for every segment of our population and they should be reduced at the first opportunity, but the people must help bring about the opportunity—that is if a majority of them want lower Government spending and resulting tax reductions.

The ways of the voters sometimes seem surprising and you can't help understanding—remembering history—why many Members of Congress look at the political advantage of voting for economy and lower taxes with a somewhat jaundiced eye.

We must have economy in Government. We must have cuts in taxes. But the support of the average voter for such policies has in the past, to say the least, been half-hearted. A headline in the Washington Star last week is discouraging. I quote:

"SENATORS RESTORE MOST OF HOUSE MONEY BILL CUT

"The Senate Appropriations Committee has restored practically all of the $47 million slashed out of a deficiency money bill by the House.

"The action, regarded as the first economy test of the session on the Senate side of the Capitol, came yesterday on the initial appropriations measure submitted by President Eisenhower in 1957."

THE UPPER HOUSE

Some humorist has said that the reason the Senate is known as the Upper House is because it always ups the appropriations made by the House. The above is just one example, but I am sure that pressures from officials and individuals interested in the spending projects had much to do with the result by making their views known, while the economy minded remained silent.

The nub of the matter appears to be: Will those who are sincerely interested in economy join ranks to fight as hard to back up economy-minded Members of Congress as do the militant free-spending groups to thwart their efforts.

Congress is troubled by the size of the budget, but many Members—both Democrats and Republicans—also are troubled by the lessons of history which have made them skeptical as to whether the majority of the people really want curtailment of heavy Government spending.

Stegmaier Co. of Wilkes-Barre Wins Award

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Times Leader Evening News of February 21, 1957, stating that the Stegmaier Brewing Co. of Wilkes-Barre, was awarded the first prize among United States breweries in a nationwide poster contest:

AWARD WON BY STEGMAIER—WILL RECEIVE CITATION AT CHICAGO

CHICAGO, February 21.—The Stegmaier Brewing Co., now in its 100th year of business, has been awarded first prize among United States breweries at the annual outdoor poster competition held here.

Stegmaier's award-winning poster was selected as the best in the brewery category in 1956 by a panel of 17 judges representing advertising agencies, art museums, and commercial designers throughout the Nation.

The brewery will be officially honored, along with other winners, at an awards luncheon to be held here on April 30 by the competition's sponsors, the Advertising Club of Chicago and Outdoor Advertising, Inc.

The Stegmaier poster, and other winning entries, will be displayed during the month of May at the main branch of the Chicago Public Library.

The Old Santa Fe Trail as A National Monument

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. BREEDING. Mr. Speaker, on February 28, 1957, I introduced a bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing as a national monument a site on the Old Santa Fe Trail near Dodge City, Kans. As further evidence of the desirability of establishing this monument I want to bring to your attention an excerpt from a National Park Service report made in 1956:

SANTA FE TRAIL REMAINS

Near the little station siding of Howell, Kans, 8 miles east of Cimarron, 10 miles west of Dodge City, on a low bluff adjoining Highway U. S. 50 and overlooking the Arkansas River, there has been providentially preserved over 1 continuous mile of clearly visible remains of the original Santa Fe Trail. This site is worthy of careful consideration on these grounds: (1) The Santa Fe Trail is a historic highway, rivaling the Oregon Trail in national fame; (2) most of the 800 miles of the historic Santa Fe Trail is in the State of Kansas; (3) these authentic remains are believed by reliable informants to be the best preserved and most extensive along the length of the trail; (4) the remains are distinct and impressive, in a relatively unspoiled setting; (5) this was part of the 'trunk line' of the Santa Fe Trail, which split at nearby Cimarron Crossing; (6) the site is relatively accessible to millions of travelers over nearby U. S. 50; (7) the terrain lends itself to a minimum outlay for protection and interpretation of historic features. It is recommended that a comprehensive survey be made of the Santa Fe Trail so that proper evaluation can be made of this site in historical and geographical perspective.

In passing this bill and establishing this monument I believe that we would be keeping faith with our pioneering forefathers who so courageously took the trail that opened the West and it would serve as a stirring remainder of our great American heritage to the generations following.

Problems of American Education

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. BOLLING. Mr. Speaker, no man is better qualified by training, knowledge, and experience to comment on the problems of American education than Earl J. McGrath, the author of the letter which follows. Dr. McGrath is now executive officer of the Institute of Higher Education, Teachers College, Columbia University. Before accepting this important position he was president of the University of Kansas City.

TEACHERS COLLEGE,
COLUMBIA UNIVERSITY,
New York, N. Y., March 4, 1957.

To the EDITOR OF THE NEW YORK TIMES:

Your issue of March 2, 1957, reports the testimony of Mr. John Miles, representing the United States Chamber of Commerce, before the House Committee on Education and Labor regarding the schoolhouse shortage in the United States. As the witness who appeared before this committee for the National Education Association and as former United States Commissioner of Education, I wish to comment on Mr. Miles testimony.

I was happy to observe, as the report of the committee hearings at which I testified will show, that there was little disposition among the members of the committee to dispute the fact, which is clearly stated in President Eisenhower's special message on education, that a real and urgent need for more classrooms exists and that Federal assistance is absolutely essential. If the committee is representative of the whole Congress, as I believe it is, the questions now before the Congress relate to the type and amount of aid and to the methods of distribution, rather than to the need. For this reason, Mr. Miles' testimony is all the more shocking.

First, with regard to the numbers game which, I regret, Mr. Miles has revived: As early as 1952 a study for the Congress, made in the United States Office of Education, of schoolhouse facilities showed a critical shortage of classrooms throughout the Nation. These figures on need for new facilities, which involved over $10 billion, were supplied by the education officers in the several States and not, as sometimes stated, by bureaucrats in Washington. With regard to theses compelling figures on the need for Federal aid, the Chamber of Commerce took the same position then that it takes now. The chamber then said, as it says now, that, if left to their own devices, the States and communities would soon build the additional classrooms out of their own resources.

Yet, 5 years later, as Secretary Folsom has shown, the present shortage of classrooms still numbers 159,000. Even with increased building, the gap between need and construction has not materially closed. It is clear, to those who really want to get at the truth in this situation, that the argument that the States and local districts could and would build the needed classrooms had no validity then and has none now. Nevertheless, Mr.

Miles, on behalf of the leadership of the United States Chamber of Commercee, advances the same threadbare and false argument that the States and school districts will, in 3 years, build the needed facilities from their own resources.

In view of the facts abundantly available to all those who sincerely wish to arrive at the truth—facts whose soundness is admitted by all reputable educators and informed laymen—one is irresistably driven to the conclusion that Mr. Miles' statement was not made in good faith. To suggest a delaying action for another survey is dishonestly to use a ruse to prevent any action on an important social problem already adequately illuminated by existing facts. Aside from the fact that, if Mr. Miles' advice is followed, hundreds of thousands of children will be deprived of an adequate education, there are three disturbing aspects of this testimony which voters, and especially their congressional representatives, will want to consider seriously.

The first is the deviousness involved in the statement by the chamber's representative that the States and local communities should and can build their own schools. If the chamber really believes this statement and ardently wants the schools built, sincere men might reasonably expect that the State and local bodies of the chamber of commerce would be carrying on thumping campaigns for larger State appropriations and larger local bond issues for schools. This would, in their own logic, be the best way to avoid Federal legislation while, at the same time, bending their efforts toward relieving the present emergency. Regrettably the opposite is true. Such legislation and bond issues have repeatedly been vigorously opposed in the States and communities by some of these very people in the chamber who argue against Federal aid. The only deduction one can draw is that the chamber wants to spend as little as possible for schools. This position would be understandable, if not defensible, if the chamber were equally parsimonious with the public's money in all other respects. But the record shows it isn't. Where its own selfish interests are involved, as, for example in the matter of road building, it shows none of the revulsion toward increased Federal grants and the inevitable increased burden of taxes which it exhibits toward the expenditure of Federal money for the improvement of our children's education. Since the education of our children for work and for the responsibilities of citizenship are directy connected with the well-being of our country and its position of strength in the world at large, one can draw his own conclusions concerning the social responsibilities of the chamber of commerce.

Secondly, thoughtful citizens will be troubled by the influence of a self-interested and financially strong lobby on the legislative process which is supposed to operate with equal efficacy in behalf of all in a democratic society. A Washington reporter of the New York Times states, in an article on page 52 of the March 3, 1957, issue, that educators in the House hearing were reporting from key cities that high officials of the chamber of commerce were stimulating letters, telegrams, and telephone messages to the Congress opposing Federal aid for schoolhouse construction. For this reason congressional mail is running 5 to 1 against Federal legislation for providing aid to the States for the building of school facilities. Yet as late as February 10, 1957, a Gallup poll, reported in the Washington Post, showed that American citizens, regardless of political affiliation or religion, were overwhelmingly in favor of this type of legislation; overall, the percentage was 76. Surely the Members of Congress, serving as they do their entire constituency and not a special group with unlimited financial resources to press their own case, will recognize that the letters received opposing Federal aid constitute a negligible, though vocal, percentage of their constituents, and that the vast majority of voters want Federal aid for schoolhouse construction.

Thirdly, there is an aspect of this testimony which is often overlooked but which, in my mind, may be the most important of all, though its effect may be more remote. We are now engaged in a struggle with communism, the most serious danger to our free enterprise system that has ever appeared. Millions of human beings in other parts of the world have fallen prey to the blandishments and false promises of totalitarian propaganda. Recent events in the Middle East show the possibility of our losing other hundreds of millions to the banner of communism. One of the greatest handicaps in the uncommitted areas is the feeling among those people, rightly or wrongly, that we are a materialistic Nation interested primarily in things and not in people. They wonder why a nation, which does not hesitate to spend $50 billion for roads, debates for years about spending $2 billion or $3 billion for schools. This attitude can be found all through the Middle East, Asia, and Africa, as anyone knows who talks with candid people in those areas as I have done. This attitude finds confirmation in fact when a large national organization in the United States favors spending Federal money for material things, such as roads, and opposes expenditures for intellectual and spiritual things, such as education—and let it not be said that schoolhouses, or the lack of them, have no influence on the intellectual, spiritual, and moral development of our children.

The strongest defense of free enterprise, and our free way of life generally, at home is increased opportunity for the development of the talents of our people. The strongest defense against communism abroad is the recognition among other peoples that we stand for human, not material, values. In both respects, the enactment of Federal legislation for schoolhouse construction will strengthen our position at home and abroad.

Those who love this land of freedom, which by the help of God has surpassed all other creations of the human mind and hand, will not be misled in their thinking by the revival of the numbers racket on schoolhouse construction. This attempt to deceive the people has already deprived hundreds of thousands of American children of their educational birthright and the Nation of inestimable knowledge and skills so sorely needed in the fullest development of our democratic society. It is gratifying to observe that many members of the local chambers of commerce are not in favor of this socially detrimental policy which, if continued, in the end will undermine public faith and confidence in the purposes and policies of American business. The inexorable pen of history will eulogize those who put the educational welfare of American children above self-interest. It will treat the others with the same impartial objectivity.

Sincerely yours,

EARL J. MCGRATH,
Executive Officer, Institute of Higher Education.

Birthday of Pope Pius XII

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. MAY. Mr. Speaker, on Saturday of last week, March 2, 1957, Pope Pius XII celebrated his 81st birthday and the 18th anniversary of his election as head of the Catholic Church. I should like, at this time, to add a word of personal congratulations to the thousands of message he has received from all over the world.

His spiritual leadership has long been a source of strength to those countries resisting the threat of atheistic communism and of courage to those suppressed peoples who have been persecuted because of their faith and have been subjected to the evils of the Communist system.

His tireless devotion to the cause of peace and justice, and his scholarly pronouncements on matters dealing with a wide range of subjects both spiritual and temporal have long been a source of inspiration to the peoples of the world, regardless of their faith.

At this time, and in the name of the people of my district, among whom are thousands of Catholics, I pray that the world will, for many more years, have the benefit of his inspired leadership.

Is Force the Uppermost Idea in Foreign and Domestic Policies?

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. SMITH of Kansas. Mr. Speaker, as Members of Congress we get a good many letters whenever the Congress starts consideration of policies that affect the whole United States. Particularly is this true when a policy such as the Middle East resolution is being considered by Congress.

This letter calls attention to the phrase, "of using force as a basic American policy," in connection with the Middle East problem, and the writer asks whether the same idea is to be a basic policy as far as domestic civil rights are concerned.

This letter simply wants to know if, in the final analysis, force is to be the uppermost idea in foreign and domestic policies.

The letter follows:

FALLS CHURCH, VA.,
February 22, 1957.

Hon. WINT SMITH,
United States House of Representatives, Washington, D. C.

DEAR CONGRESSMAN SMITH: In the President's February 20 Middle East message he stated: "If the United Nations once admits that international disputes can be settled by using force, then we will have destroyed the very foundation of the organization, and our best hope of establishing a real world order." On the other hand, the President has asked the Congress to endorse his proposal to use United States Armed Forces in the Middle East, if necessary.

He proclaims a gospel against the employment of force as an implement of sovereign authority in one instance. Yet, he is the first to hasten to propose and to promote the use of armed force to implement the resolutions of the United Nations, ostensibly organized as an international voluntary association of nations.

This is the birthday of George Washington, the Father of our Nation. It seems,

therefore, an appropriate time to ask if the real issue is the employment of force as the ultimate test of authority. Or, rather, is it simply a question of where that authority for the employment of force shall be vested?

That these foreign entanglements are but an extension of our progressive departure from individual strength and responsibility to reliance upon an American adaptation of the Marxian ideology is demonstrated by the chronological sequence of events over the past half century. At this hour this pattern has developed on the domestic front to the point that the constitutional sovereignty of the several States of the Union over their internal affairs is being suspended by capricious judicial decree. At this hour some men are being awarded civil rights at the expense of others who are to be denied the right of trial by jury and the right of freedom of expression. At this hour the Federal Government is about to assume intra-State police power in order to pursue interests in harmony with the United Nations which the President has endorsed as "our best hope for establishing a real world order."

Has not the time arrived, if we are the men and women that we pride ourselves to be, that we cease to insult the memory of our Founding Fathers; that we cease to degrade the American tradition; that we cease to deceive ourselves concerning our present status? Let us face up to the fact that we are no longer individually free, nor individually responsible as individuals or as a Nation. Let us frankly admit our national breach of faith with the spiritual authority of our forefathers that we may proceed openly to our just rewards. At least, the brotherhood of man could credit us with some claim to integrity.

Respectfully,

KENNETH H. HOOLEY.

Interest Rates on Veterans' Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from one of my constituents, Mr. Paul R. Ringler, 8226 Huntington Road, Huntington Woods, Mich., regarding interest rates on veterans' housing:

ROSSIN & RINGLER,
Detroit, Mich., February 22, 1957.

Hon. WILLIAM BROOMFIELD,
United States House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: We read by the papers that the Committee on Veterans' Affairs has voted against raising the interest rates on veterans housing. This we realize will put the Veterans' Administration out of the housing business.

As builders, we realize this will eliminate a certain portion of the housing market which means, of course, our business will suffer. It is about time that the Veterans' Administration go out of the housing business. They have done a fair job to date but after 11 years this program should be washed out. The Federal Housing Administration, for a quarter of a century, has done a marvelous job and should be given every possible support by the Congress. If the Congress feels that veterans are still to be given some special benefits in obtaining housing then let those benefits be administered by the Federal Housing Administration.

It has been our feeling for years that to have two agencies doing the same job in competition with each other was a waste of the taxpayer's money and certainly in view of the king size budget presented this year, any effort to consolidate governmental activities should be seriously considered.

Very truly yours,

PAUL L. RINGLER,
Huntington Woods, Mich.

Progressive Tax Reductions

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. VANIK. Mr. Speaker, undoubtedly, many Members of Congress are receiving letters from businessmen throughout the country asking Congress' action to reduce Federal expenditures to an extent that will assure a balanced budget for the 1958 fiscal year and permit starting equitable progressive tax reductions which these businessmen consider essential to the country's welfare.

I received such a letter from Mr. Frank D. Stranahan, cochairman of the Champion Spark Plug Co., of Toledo, Ohio.

In reviewing the rise of quick tax amortization certificates, by Mr. Stranahan's company, I found that in September 1952 the Champion Spark Plug Co. received a $420,000 certificate authorizing a 65 percent amortization in 5 years. This certificate was for the acquisition of machinery in the Toledo plant of the company. In January 1953 this same company received a $2,177,000 certificate providing for a 55 percent depreciation in 5 years on machinery and buildings required for the company's Cambridge, Ohio, plant.

It seems to me that companies which have been the beneficiaries of quick tax-amortization certificates are not in good graces asking for consideration to give them progressive tax reductions. They have been using devices which have diverted the public's tax money from the Public Treasury into the buildings, machinery, and facilities which they have acquired in this way.

Following is a letter which I have received from Mr. Stranahan, cochairman of the Champion Spark Plug Co., and the reply which I have addressed to him this date:

CHAMPION SPARK PLUG CO.,
Toledo, Ohio, February 21, 1957.

Congressman CHARLES A. VANIK,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN VANIK: Businessmen all over the country, through the United States Chamber of Commerce and the National Manufacturers' Association, also their affiliated State and civic organizations, ask and expect your best cooperation in bringing about a sizable reduction in Federal expenditures that will both assure a balanced budget for the 1958 fiscal year and permit starting equitable progressive tax reductions so highly essential to our country's welfare.

Assurances are requested that you are in accord with this program and will do your utmost to bring about in the present session of Congress through favorable action on the Hoover recommendations and the elimination of all Federal expenditures that are not absolutely essential to the fiscal year of 1958.

Sincerely yours,

FRANK D. STRANAHAN,
Cochairman.

MARCH 5, 1957.

Mr. FRANK D. STRANAHAN,
Cochairman, Champion Spark Plug Co., Toledo, Ohio.

DEAR MR. STRANAHAN: Thank you for your letter of February 21, 1957, requesting my cooperation in bringing about a sizable reduction in Federal expenditures that will assure both a balanced budget for the 1958 fiscal year and permit starting equitable progressive tax reductions so highly essential to our country's welfare.

I wonder whether the progressive tax reductions which you urge are as essential to our country's welfare as they are to the welfare of your company and its stockholders. In reviewing the record of the Office of Defense Mobilization, I note with interest that in September 1952 your Toledo plant was granted a quick amortization certificate in the sum of $420,000 authorizing 65 percent depreciation in 5 years on the purchase of machinery. In January 1953 I note that your company also was authorized a $2,177,000 quick amortization certificate for the purchase of machinery and buildings for your Cambridge, Ohio, plant. This certificate authorized 55 percent depreciation in 5 years.

It seems to me that this country would be closer to a reduction in national debt and in our income taxes if companies like your own had not relied upon the use of quick tax writeoffs in the construction of production facilities. The use of these writeoffs was discriminatory to your competitors and diverted a considerable portion of your taxable income from the Federal Treasury to the construction of your company's expanding facilities.

It is estimated that somewhere between $20 billion and $32 billion have escaped the Public Treasury in this way. If this sum of money had been paid into the National Treasury through the payment of income taxes on existing schedules, the national debt would have been monumentally reduced.

It seems to me that it would be good Federal housekeeping to maintain current tax rates until the national debt is reduced to more tolerable proportions. You may be sure that I will do everything in my power to resist the further use of quick tax writeoffs which your company has found so useful. In addition, I will resist corporate tax reductions until the Government can recoup some of its tax losses on the quick tax amortization device.

Sincerely,

CHARLES A. VANIK,
Member of Congress.

Research and Development in Jeopardy?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Army-Navy-Air Force Journal of March 2, 1957:

RESEARCH AND DEVELOPMENT IN JEOPARDY?

The services and industry, which together make up the defense team, must be wary of

the surprising decision announced this week by Secretary Charles E. Wilson to merge the Offices of the Assistant Secretaries of Defense for Research and Development and Engineering. In the consolidation, engineering came out on top—at least for the present. This of course, could be the happenstance of the fact that the chief of Research and Development, Dr. Clifford C. Furnas, had resigned his post to return to duties as the Chancellor of the University of Buffalo, and that the Chief of Engineering, Mr. Frank D. Newbury, who has valuable Pentagon experience, is staying on.

Whatever the personalities involved, there will be proper concern over the implications of Mr. Wilson's action. Noteworthy is the fact that at the time the Hoover Commission recommendations were made public last spring, it was Mr. Wilson himself who opposed the recommendation that the two Assistant Secretariats be merged. He said that there was proper work for each official. What changed Mr. Wilson's mind is not known.

That there is reason for alarm over the apparent downgrading of Research and Development is evident. One need only recall the appeal by Gen. Nathan F. Twining, United States Air Force, Chief of Staff, for a stepped-up Research and Development effort following his return from a visit to Russia last year. Instead, the Air Force Research and Development effort is being reduced. The Army has said that its civilian Research and Development Director should be an Assistant Secretary; presumably Mr. Wilson's new order will thwart that objective.

The recent jet-age conference of the Air Force Association was featured by repeated calls for more intensified Research and Development efforts. Dr. Edward Teller, the brilliant thermonuclear physicist, issued the challenging statement that this Nation's task now was not to try to stay ahead of the Russians in science, but rather to try and recapture the lead.

It could very well be that Mr. Wilson's decision to abolish the Research and Development post at the Pentagon does not mean necessarily a further curtailment of research and development expenditures and efforts. Let us hope so. But the fear that is being voiced in the services and in industry is justified and understandable. There is wonder why Mr. Wilson, who has indicated that he may be leaving office this year, did not choose to leave this important decision for his successor, particularly since he himself declined for so long a time to take action on the Hoover Commission recommendation.

It Had Better Be Good

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson, which appeared in the New Republic of March 4, 1957:

THE SUPERFICIAL ASPECT: IT HAD BETTER BE GOOD

As these words are written the jam into which we have worked ourselves in the Middle East seems to be so critical that silence is imposed upon the most doubtful. There is nothing to do now but support the President and the Secretary of State in anything they do, short of rank insanity. All parties to the dispute should be given to understand that, whatever may be our differences among ourselves, we are prepared to prove that the official utterances of the United States are not idle words, even when the policy they announce seems less than ideal.

However, judgment is merely reserved, not yielded. At the proper time an accounting will be exacted. If the present negotiations are conducted with skill and success, the accounting may be little more than a formality; otherwise, it will be serious indeed.

The completely committed Zionists in this country are a small minority—highly vocal, to be sure, but not numerous. At present, however, the merits and demerits of Zionism are irrelevant.

The relevant facts are that Israel is a civilized country, friendly to the United States, and firmly committed to the Western ideal of political liberty. It is facing a coalition of backward countries with nothing but contempt for our way of life, and incited to hostility by the great power that is our avowed enemy and the only serious threat to our national survival.

The complicated diplomacy of the past 4 years has now placed us in such a position that many foreign observers are drawing inferences extremely embarrassing to us. With apparent justification they have decided that we are allowing ourselves to be used as a catspaw by the Arabs and the Communists, in their scheme to eliminate Israel.

This is an intolerable position for a great, independent nation, and the diplomacy that has led us into it certainly cannot be described as brilliant.

It is an utterly false position. No rational man will accuse Mr. Dulles of deliberately contriving to make the United States the ally of slave-traders and the Communists, even in the superficial aspect, much less in solid reality. It appears that he has simply been out-maneuvered, at least so far.

It is conceivable that this is a deceptive appearance. It is conceivable that by some brilliant stroke within the next few days Mr. Dulles will retrieve the position, restore the true relations and leave his antagonists baffled and humiliated. It is conceivable, but do you really believe it?

His critics, in fairness, must give him time. More, they must be prepared, if he pulls it off, to offer him abject apologies, perhaps even to accept Eisenhower's estimate of him as the greatest Secretary of State in history.

But, so much being stipulated, his critics will have a right to demand his resignation if he doesn't pull it off. This has no reference to the Zionists. Non-Jewish America has no intention of being caught aiding and abetting the destruction of any liberty-loving nation, Israel included. We have no taste for even appearing to countenance such a crime. So diplomacy that ends by putting us in such a position that the scornful can accuse us of intriguing with the criminals is appallingly incompetent diplomacy; and in the present state of the world there is no nation which can afford to tolerate incompetent diplomacy.

The President has given the wild turkeys of Georgia a reprieve by hastening back to Washington. Evidently he has at last awakened to the seriousness of the situation. The country is relieved, for during the war he gained a reputation as a master-hand at composing disputes and pouring oil on troubled waters. He will need all his skill and ingenuity to straighten out this mess with credit to the United States.

But even if he succeeds, he will be asked some questions, and if he doesn't succeed the questions will become very searching indeed. The direction in which Mr. Dulles' diplomacy was taking us has been apparent to acute observers for a long time and their objections have been strong. But hitherto the President has met them with resentment.

Very well. If the fat is now in the fire, the blistering will not be monopolized by Dulles; the man who put him in office and kept him in office in the face of mounting criticism cannot escape his share. The Secretary of State is an agent of the President, and the principal is responsible for the acts of his agent. If the present snarl eventuates in anything short of a brilliant, unmistakable triumph of the administration, responsibility for getting us into the snarl will remain a heavy burden, which cannot be loaded entirely on the shoulders of the Secretary of State.

The Case for the Statehood Bills

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. UDALL. Mr. Speaker, the people of my State—the last to enter the Union—have always been sympathetic to the cause of statehood for Alaska and Hawaii. The vivid memories Arizona's older generation have concerning our long fight to gain statehood have given us a special insight into the ambitions and hopes of the citizens of these two Territories.

Again, as in previous years, it is easy to predict that Arizona's Senators and Representatives—2 Democrats and 2 Republicans—will vote unanimously for the statehood bills presented to this Congress.

Typical of the Arizona point of view is the following editorial which appeared last Saturday, March 2, in the independent Arizona Daily Star, of Tucson:

HAWAII AND ALASKA AS STATES

When Arizona celebrated its 45th birthday as a State, it brought back some memories of its long struggle to attain that status, and their connection with the efforts of Hawaii and Alaska to achieve a similar ambition.

Just as warnings were sounded in the years previous to 1912 about the danger and the futility of Arizona being allowed to become a State, so are warnings being sounded today about Hawaii. Just as Arizona's pleas were ridiculed, so today are Hawaii's. What nonsense to allow a State with so few people, and most of them Mexicans, to be allowed to become a State.

New Mexico enjoyed much the same position Alaska does today. However, there was this difference. Efforts were made to admit New Mexico and Arizona as one State. That would not be practical in the case of Hawaii and Alaska, but Arizona had to rise up and fight that proposal.

When Arizona did become a State, it did so in company with New Mexico, and they were the last States to achieve the status. The dire forebodings made at that time have not come to pass. Both new States have furnished, on the whole, level-headed Senators and Representatives. Arizona, in its vote for President, has always backed the winner.

Arizona was spanked by President Taft and had its status of statehood delayed, because the new constitution provided for the recall of judges. That was too much for a distinguished judge like President Taft. He vetoed the bill passed by Congress. Arizona had to drop that clause from its constitution, whereupon a new bill went through Congress and was signed by the President.

Immediately afterward Arizona, by a vote of the people, put the recall of judges back into its constitution. Moreover, Arizona's constitution to this day contains the almost unheard-of provisions for "advisory" recalls of its Representatives and Members of Con-

gress. It has many other provisions which today seem a bit ridiculous, but which in 1912 represented the best progressive thinking.

Just as our Union has survived the admission of the dangerous States of Arizona and New Mexico, so it will survive the admission of Hawaii and Alaska. Just as Arizona and New Mexico finally had to work together to win statehood, and to muster enough political influence among the Members of Congress, so the chances are that Hawaii and Alaska will have to do the same thing.

The trend of events forecasts rapidly increasing development in both Hawaii and Alaska to justify their admission to the Union as States. Arizona can sympathize with their aspirations and the justice of their cause.

Puerto Ricans—Americans

SPEECH
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BURNS of Hawaii. Mr. Speaker, under permission obtained by the Resident Commissioner, the Honorable Fernós-Isern, of Puerto Rico, for the Members to extend their remarks, I join with my colleagues in the tribute paid to the able and distinguished Resident Commissioner Fernós-Isern and to the Puerto Rican people.

Hawaii is proud of the several thousand Puerto Ricans who have made a very distinct contribution to the economy of Hawaii. Our transplanted Puerto Ricans have also added to our cultural and political life.

In the true tradition of the Hawaiian, Puerto Ricans have been integrated into the cosmopolitan community of peoples that is Hawaii. Their volatile natures, their gracious and pleasing personalities, their industry and fortitude, have won for them the admiration and friendship of the many cultures who share in the development of the melting pot blended together by the Hawaiian.

Hawaii is very glad to have the Puerto Ricans participating in the building of the institutions by which the paradise of the Pacific has won the respect and admiration of all who know her. We expect still greater attainments by the people whom Puerto Rico has sent to us.

The celebration of Friendship Day, illustrating as it does the basic American sense of fair play and justice, increases the faith and nurtures the hope of the people of Hawaii in statehood for Hawaii. Though Puerto Rico was described as being appertinent to but not a part of the United States, America demonstrated her belief in democracy and showed that she did not believe in half measures for any people by the granting of full citizenship to the Puerto Ricans just 40 years ago on March 2. The people of Hawaii and Alaska are confident that Hawaii and Alaska will have the last step of an incorporated Territory accomplished in the very near future by their admission as States of the Union.

It is a privilege and a pleasure to congratulate the people of Puerto Rico on their remarkable progress over the last 40 years, and as an American on this occasion to be proud to be an American.

Chairman Carl Durham, of the Congressional Joint Committee on Atomic Energy, Discussed the Building of Atomic Power Reactors Over the NBC–TV Network, February 19, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. VAN ZANDT. Mr. Speaker, on February 19, 1957, over the NBC–TV network, our distinguished colleague, Representative CARL DURHAM, of North Carolina, chairman of the congressional Joint Committee on Atomic Energy, discussed the building of atomic power reactors. During the course of the discussion, Chairman DURHAM answered questions by Messrs. Garroway and Blair, of the NBC–TV network staff.

In view of this timely discussion of such an important subject, I hope that every Member of Congress will take the time to read the following account of this interesting TV discussion:

On the television screen, Dave Garroway was seen in closeup seated at his regular desk. The camera moved back to medium distance while Frank Blair joined Dave Garroway, seating himself beside Dave at his desk. Together they turned to the monitor screen behind them where the Congressman appeared in closeup. From time to time during the interview, the Congressman was seen on full screen closeup.

"Less than 90 minutes from now, a Joint Congressional Committee on Atomic Energy will open important public hearings in Washington. The committee wants to know how this country is doing in harnessing the atom for peacetime purposes.

"Presiding will be Democratic Representative CARL DURHAM, of North Carolina, the chairman of the joint committee. Representative DURHAM has stopped by in our Washington studio this morning to answer a few questions on the subject from Frank and myself.

"Are you there, Mr. Congressman?"

Congressman DURHAM: "Yes; I am here, Dave."

Mr. Garroway: "There you are, right there. Well, in 1954, Congress decided that the peacetime use of nuclear power should be developed by a partnership of Government and private industry. Now what does that mean?"

Congressman DURHAM: "Well, it is rather broad. The 1954 act was passed, of course, to primarily assist private industry to get into the business of developing the atomic energy field for humanity, and for the benefit of the whole country."

Mr. Garroway: "I see."

Congressman DURHAM: "The act, of course, is rather broad. It covers all fields and all aspects of the atomic energy industry."

Mr. Garroway: "Well, now, sir, the taxpayer, through the Government, of course, spent tens of billions of dollars to discover the secrets of the atom. Why did Congress decide to share these expensive secrets, instead of having the Government make the profits which could be expected in the future?"

Congressman DURHAM: "Well, I think, if you look back to the 1946 act, which I was one of the charter members on the committee, that was completely owned and held by the Government, as you probably know. The Congress, of course, decided, and the country, that we had done a lot of research and development in this field, which, of course, was—could be a benefit to human beings in the field of agriculture, medicine, and many other fields, industry primarily—and so Congress decided that it was in the best interest of the people to let them share in this investment, since they had themselves made the investment from tax sources."

Mr. Garroway: "I see. Frank Blair has a question for you, Mr. DURHAM."

Mr. Blair: "Good morning, Congressman."

Congressman DURHAM: "Good morning."

Mr. Blair: "A recent survey by Nucleonics Magazine shows that most industrial leaders in four foreign countries which were surveyed, feel that Britain is ahead of us in harnessing the atom for peacetime use. Now, is Britain ahead of us to the best of your knowledge?"

Congressman DURHAM: "Well, I think our program is much broader than the British. I've visited Calder Hall myself and seen the reactors. The British were in this kind of a position; of course, as we all know, the power situation and the need for it was much greater in Britain than it was in this country. It's not still yet competitive in this country. We're still developing and trying to develop reactors, of course, which will bring the cost of power down to a level where we can compete. Our local situation is entirely different, so I am definitely of the opinion that the British are not ahead in this field of atomic energy."

Mr. Blair: "Now, in the struggle to win the allegiance of the neutral nations, many of them poor in coal and oil, as you've stated, much may depend on whether the East or the West is first able to deliver atomic-power generating plants. Do you know if the Russians are capable of delivering such a plant while maybe we're still perfecting our test models?"

Congressman DURHAM: "Well, we don't have very much information on the Russians, of course. I don't think at the present time, from what information I can secure, and the best information we can secure, that they are anywhere near the point of development that we are in this country, I'm sure of that."

Mr. Garroway: "Congressman, because we are so relatively rich in coal and oil, while other nations like Britain and France are poor in such resources, are we not likely to fall behind because our efforts are not spurred by sheer need and poverty?"

Congressman DURHAM: "Well, I think not. I think we have a very vigorous reactor program in this country at the present time. It's one that covers, not just one reactor like the British have built, and, of course, we'll be able to sell to those countries where the need is there. I, yesterday, just talked to the Italian representative from his country, who is in need of power just like the British are, and, of course, they're looking around, and it would mean to our interest of this country, I think, much, if we can develop a reactor than we can sell abroad, and that's what we are primarily endeavoring to do at the present time."

Mr. Garroway: "Well, sir, there's likely to be a proposal to turn over peacetime development of atomic energy to a Government agency, sort of a nationwide TVA. What chance do you see for legislation of that type?"

Congressman DURHAM: "I don't think there's any chance whatever. There's no—in my opinion, there's no member of the committee that's in favor of such a program. I think that we are developing this primarily for—we're trying to develop reactors—where industry can come in and look at them and build a reactor for any company or any power company in the country that desires it, whether it's a cooperative, or whether it's a public power or whatever it might be, in the interest of development."

Mr. Garroway: "How long before we'll be using the maximum number of watts from atomic-energy stations to be built in this country?"

Congressman DURHAM: "Well, we're using some at the present time. I had the pleasure last week, a week ago last, of turning on the reactor up at Argonne, which, as you know, produces power. It produces all the power for that laboratory that we have there. I think that within the next 5 or 10 years you're going to see reactors in many parts of this country producing power."

Mr. Blair: "Do you think there will be many Government restrictions and Government supervision over industry's building and maintaining these plants?"

Congressman DURHAM: Oh, I don't think so. I think at the present time we have access permits. They can come in here to the Commission and get all the information they want at the present time in building a reactor. There's very little restriction now in building a reactor."

Mr. Garroway: "Do you have any idea how big these powerplants will be?"

Congressman DURHAM: "Oh, they'll vary in different size, I think, according to the local communities, just like your steam plants do. You may have some up to 500,000 kilowatts; then you may have lesser whatever the demand. I think that will determine to a large degree, what size reactor will be built."

Mr. Garroway: "But they only will service one community, generally?"

Congressman DURHAM: "Generally, I'd say so."

Mr. Garroway: "Thank you very much, Mr. Congressman, for talking with us this morning."

Congressman DURHAM: Thank you. I've enjoyed it very much."

(The camera closed in to show Dave Garroway on full screen closeup.)

Mr. Garroway: "Thank you Congressman DURHAM, who goes to his committee meeting in a few minutes."

Statement of Hon. Edward J. Robeson, Jr., Before the Celler Subcommittee of the Committee on the Judiciary, House of Representatives, in Opposition to H. R. 2145 and Related Bills

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, on February 26, 1957, our colleague, Hon. ED ROBESON, JR., of Virginia, appeared before the Celler subcommittee in opposition to the pending civil rights bills. Mr. ROBESON'S presentation before that subcommittee was clear and to the point, and, in my opinion, should be read by every Member of this body. Therefore, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include herewith the text of Mr. ROBESON'S statement:

STATEMENT OF HON. EDWARD J. ROBESON, JR., DEMOCRAT, OF VIRGINIA, BEFORE THE CELLER SUBCOMMITTEE ON CIVIL RIGHTS OF THE JUDICIARY COMMITTEE OF THE HOUSE OF REPRESENTATIVES APPEARING IN OPPOSITION TO THE CIVIL-RIGHTS LEGISLATION PENDING BEFORE SAID SUBCOMMITTEE ON FEBRUARY 26, 1957

Mr. Chairman, I appear before this committee today in opposition to the legislation now under discussion. The vast majority of the citizens I represent are opposed to this legislation. They feel that it is an unjustified invasion by the Federal Government of rights reserved to them and the State of Virginia by the Federal Constitution.

It is my opinion, and in fact my conviction, that the proposed legislation which this committee is now considering, if enacted, will violate provisions of the Constitution of the United States. It has been and is now my purpose to uphold the Constitution of the United States. I am further obligated in this respect by my oath of office.

Located in the First Congressional District of Virginia which I have the honor to represent are Jamestown, Williamsburg, Yorktown, and many other historic landmarks of this country's early history. My home on the James River is nearby and I have on many occasions been present with others who gathered to commemorate events of great significance to all Americans.

Love of liberty and respect of the rights of mankind are inherent in the nature of the people of Virginia. Virginians will not willingly relinquish the rights guaranted to them by the Constitution of Virginia or by the Constitution of the United States.

It is also my opinion that an impartial and objective investigation will show conclusively that there is no basis of fact sufficient to warrant Federal legislation such as is proposed. The effect of Federal implementation can be reasonably expected to bring about serious adverse influences which will make impossible continuation of the present sympathetic, friendly, and generally satisfactory relations between the white and the colored races which now prevail, particularly in the Southern States.

Recorded human history gives no comparable accomplishment of the development of human relationships in which the descendants of primitive-type people have been integrated to such a degree by another race whose forebears had for many centuries enjoyed a high degree of economic, cultural, and religious background. May I emphasize that our people of both races worship God in the same faith and in like manner, speak the same language, and have in general the same customs.

Particularly in Virginia and other Southern States, they live and work together as friends and neighbors with mutual respect and regard. As basically Christian people, we encounter an almost unbelievable minimum of difficulty because of the inherent obstacle of racial characteristics.

Like many citizens whose forebears for generations have lived in the favored Southland of our great country, I am unable to consider the relationships of the two races in generalities based on the racial differences. Rather, people of the Negro race are to me individuals, and for many of them from infancy to the present day I have an abiding, affectionate regard and a sense of responsibility toward their well-being and happiness.

My concern is primarily for these Negro citizens whose well-being depends to so great an extent upon the good will of the white citizens who presently are their friends and neighbors.

For many years prior to my election to Congress, on May 2, 1950, as an industrial executive in responsible charge of personnel administration, industrial relations and public relations with one of the world's foremost shipbuilding organizations, much of my time and effort was directed toward establishing and maintaining harmonious relationships in industry and the community. I can, I hope with becoming modesty, admit to recognized competency in the field of human relationships, not only in industry but in their broader aspects.

In my home area of Virginia the population ratio is approximately 25 percent Negro. For many years the company with whom I was associated and other employers have maintained a similar employment ratio. The conditions of work, rates of pay, and employee benefits are applicable to all employees alike.

There has never been a work stoppage or race friction in this shipyard, and the white and colored citizens have worked harmoniously together on the same jobs and lived in the same communities. There are four large hospitals in this area. Three accept both white and Negro patients. One, the Whittaker Memorial Hospital in Newport News, is entirely managed, staffed and operated by Negroes for Negro patients. I know of no other such hospital.

There are competent Negro citizens engaged in the numerous professions. Many profitable businesses are operated by Negroes. Some of these are patronized by and are dependent on white customers. To illustrate, perhaps the most popular barbershop is Negro operated and is located in the main business section near the largest bank.

Our Negro citizens have their own churches, bank and places of amusement and entertainment. The schools, of which they are justly proud, have 100 percent Negro principals and faculties.

The Huntington High School for Negroes is a top-ranking high school with nearly 3,000 students. They have a modern school building and modern facilities, a floodlighted stadium, large gymnasium and other facilities beyond what less modern white high school in this area now have. There has never been any race friction among our school children or population.

This is no unusual picture for many and perhaps most localities in the Southern States. However, you may be assured that the legislation now being considered, together with the implementation of the recent Supreme Court decision, will relegate such outstanding accomplishments to the more glorious past history of our people. It will be impossible to continue the race relationship upon which such society as I have described must rest.

There is nothing new in the current effort to persuade minority segments of a society to accept the illusion presented by political and Government leaders to bring through man-made law and courts, or military enforcement, a better way of life. Inevitably and with certainty, disasters overtake them. I also have concern that the proposed legislation is but another step which can and will bring us nearer to the point foreseen 120 years ago by Abraham Lincoln when he said in a speech at Springfield, Ill., on January 27, 1837:

"At what point, then, is the approach of danger to be expected? I answer, if it ever reaches us it must spring up among us; it cannot come from abroad. If destruction be our lot we must ourselves be its author and finisher. As a nation of freemen we must live through all time, or die by suicide."

Tennessee Medal of Honor Holder Honored Posthumously in Commissioning of New Navy Destroyer Escort

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks, I desire to have included in the RECORD the speech delivered by the Honorable J. CARLTON LOSER on the occasion of the commissioning of the new Navy destroyer escort the U. S. S. *John Willis* at Philadelphia on February 21. The U. S. S. *John Willis* is a fitting memorial to the unparalleled gallantry of John Willis of Nashville, a member of the Navy Medical Corps, whose deeds of valor on Iwo Jima have earned for him the undying gratitude of the Nation as epitomized in the Congressional Medal of Honor.

The speech is as follows:

Admiral McLean, Mrs. Duke, distinguished guests, officers and members of the crew, ladies and gentlemen, I am deeply grateful for the honor you have done me by inviting me to say a few words on this very significant occasion. And I am aware, as you are, that words are weak and only deeds and acts are great.

As we assemble here today to commission this new destroyer escort we are aware of and can sense the stirring overtones of history; the thrilling undertones of gallantry and heroism; some muted notes of sorrow and sadness; and the challenging call to duty of our country.

Across the stern of this new unit of the greatest Navy in the world is the name U. S. S. *John Willis*. In giving his name to this new destroyer escort, the Navy and the Nation do fitting honor to this brave Navy man, who, in going far beyond the call of duty, exemplified and reemphasized the treasured traditions of the United States Navy. His gallantry and sacrifice shall, through the years be cherished by the people of this great Nation as hallowed memories.

John Harlan Willis was a pharmacist mate first class who was assigned to duty with the United States Marine Corps in their assault on Iwo Jima. On February 28, 1945, while acting as platoon corpsman with the 3d Battalion, 27th Marines, 5th Marine Division he was in action under heavy artillery and mortar fire from the enemy. Without regard for his own safety, John Willis administered first aid to the many marines wounded during the furious close-in fighting until he himself was struck by shrapnel and was ordered back to the battle aid station. Without waiting for official medical release, he quickly returned to his company and during a savage hand-to-hand enemy counterattack daringly advanced to the extreme front lines under mortar and sniper fire to aid a marine lying wounded in a shell hole. Completely unmindful of his own danger as the Japanese intensified their attack, Willis calmly continued to administer blood plasma to his patient, promptly returning the first hostile grenade which landed in the shell hole while he was working and hurling back seven more in quick succession before the ninth one exploded in his hand and instantly killed him. By his great personal valor in serving others at the sacrifice of his own life, he inspired his companions, although terrifically outnumbered, to launch a fiercely determined attack and repulse the enemy force.

These are the thrilling undertones of gallantry and heroism; these are the muted notes of sorrow and sadness; here is the challenging call to duty in the service of our country so fully answered.

Even with this brief recital of events, I am sure that you will agree with me when I said in the beginning that words are weak and only deeds and acts are great.

This occasion is significant also because it underscores the continuing progress being made by the United States Navy to better serve the Nation in its program of national defense.

The U. S. S. *John Willis* is one of the several new destroyer escorts. Others will follow at intervals. And in other shipyards around our coastline naval craft of other classifications are being constructed, launched, given shakedown cruises, and taking their places in a magnificent fleet in near and remote areas of the world.

It is essential that we continue to build, because the great battle in which John Willis and thousands of others have died has not yet been won. Fervently we hope and pray that the free world can win that battle without another shot being fired. Ardently we plan, confer, and study in a zealous quest for a stabilized peace built on law and order and decency and justice.

We must continue that search for a peaceful solution of the problems that are rooted so deeply in the bloodsoaked soil of a fearful and frustrated world. We must press with unabated ardor toward the goal of a world in which the dignity of man once more is a sacred thing, and in which all men may look up to God rather than down to the dictators of a totalitarian state.

But until such time as the light of real brotherhood and mutual respect breaks through the overcast of suspicion, hatred, and deceit, we must see to it that our aims, ideals, and aspirations for peace are backed by strength on the sea, the land, and in the air.

The United States has become the arsenal of the free world. Current commitments undertaken by the United States include eight treaties involving 42 nations and military assistant agreements with 20 additional nations. Although military assistance agreements do not bind the United States to go to war, there is a strong moral obligation to do so. Fulfillment of the terms of all these treaties is dependent upon free use of the seas. At the present time, 62 nations, over one-half of the world's land area, and over one-half of the world's population, depend upon seapower.

We are not alone in knowing that our need for a Navy is greater than ever. The Soviets know this. After analyzing the activities of World War II the Russians saw that much of the world depended on our seaborne assistance to survive the great holocaust. She knew that if the United States were to have any allies, we must control the seas.

We have to have our ships go from here to Europe, and reach Europe, and go from here to Japan, and reach Japan, and Formosa, and other allies. If we couldn't move by sea, we would be stalled right back here in the United States and we couldn't help anybody. All we could do would be to stay within the waters of the United States and wait for the attacks to come to us. The war would be fought in and over our own country.

The U. S. S. *John Willis* will take her place on the battleline with other ships or her class to seek out and destroy the enemy. She is especially made for this purpose and with the valor of her namesake for inspiration, I know she will not fail. Not many yards from where we now are, in this same shipyard, the battleship *Tennessee* is resting after long years of valiant service. She has made us proud of her record and the great State for which she was named. Now again the spirit of Tennessee will venture forth again with the memory of one of its valiant sons, John Willis.

So let us wish godspeed to this fleet and sturdy vessel. As she puts forth to sea, let us cherish the hope that always her officers and crew shall be inspired and upheld by the challenge that comes like a clarion call from the sovereign State of Tennessee and the battle scored sands of Iwo Jima.

Negro Democrats or Dimocrats—Which?

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. DIGGS. Mr. Speaker, the significance of the shift in the Negro vote from the Democratic Party during the 1956 elections, especially in the South has apparently been ignored or not properly analyzed by many leaders in that area. The following editorial from the Carolina Times, Durham, N. C., dated February 16, 1957, is an excellent case in point. A continuance of this attitude by Democrats in Southern States will find it further "protest Negro votes" going into the Republican column in future elections, not that Republicans in those areas are any better on the "race question" but because of the dominant and more responsible position Democrats hold there. The Negro voter in the South, regardless of past economic benefits derived from Democratic policies is being more and more influenced by the practices of local political leadership.

The article follows:

NEGRO DEMOCRATS OR DIMOCRATS—WHICH?

Last week, Gov. Luther Hodges was inaugurated for his second term as the chief executive of North Carolina. The inaugural program included the usual mammoth parade, ball, swearing-in, and other appendages that go with occasions of this kind. As usual, Negro Democrats of the State received no official recognition and got none from the beginning of the inaugural program to the end. About the closest any representative of the race came to officially participating in the affair was that of the three Negro State college bands from North Carolina College at Durham, A. & T. College at Greensboro, and Winston-Salem Teachers College at Winston-Salem.

What went on in the minds of these young Negro members of the bands as they marched in that parade would probably be a revelation to Governor Hodges and other State officials. The Governor has persistently kicked Negroes around since the beginning of his first administration, and we suspect the thinking members of the bands considered it more of a dishonor than an honor to march in his inaugural parade, although it might be good for one or two new buildings on their college campuses.

As we see it, there is no such animal as a Negro Democrat in North Carolina but rater Negro "Dimocrats" who are expected by officials of the party in this State to exercise canine loyalty, vote the Democratic ticket in any and all elections and then dim out of the picture on all other important

occasions, especially when partronage and jobs are being handed out.

We think we see on the political horizon a cloud now about the size of a man's hand but definitely growing larger each hour. We think we see an end to the grand and glorious banquet the Democratic Party has had in this State when its loyal Negro members get only the crumbs from the table that are handed out the back door. Governor Hodges' inaugural parade is probably the last one in which even a Negro State college band will participate without a murmur of protest being heard from its members and other Negro sources in this State. All three of the Negro bands could have more befittingly joined in playing a requiem to a dying era than a march in the Governor's inaugural parade.

There is a storm arising. Negro voters in * * * age. They are tired of being "Dimocrats." They see their children graduating from schools and colleges only to have the door of job opportunities in city halls, courthouses, and even post offices, slammed in their faces by the Democratic Party in this State. They see themselves on the outside of party patronage. They are tired of being "Dimocrats." They will either be full-fledged Democrats, participating in all of party affairs from top to bottom, or the Democratic Party in this State can kiss their votes goodbye.

Thinking Negroes are well aware that the present crop of Republican officials in North Carolina are no better than a majority of the Democratic Party officials—probably not as good. They believe, however, that the Republican Parfty has a potential of producing better timber at the top. They have about reached the conclusion that the situation certainly cannot be too harmful, if at all. In other words, the Democratic Party in this State has given the Negro voter little or nothing to lose by switching his vote.

Unless there is a great change in Democratic Party policies in North Carolina, the gathering storm is certain to reach greater and greater proportions by 1960. This, plus the tendency on the part of thousands of young intelligent white southerners who are tired of having their party affiliation picked out for them before birth, may eventually mean the end of the one party system in North Carolina. For sure the day of the Negro "Dimocrat" is about over. Either the Negro will be a Democrat, or he will seek a berth under some other party banner.

Tribute to Harold E. Talbott

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, yesterday I had the high honor of paying my last respects to an old friend of mine at his funeral in New York City. This was Harold E. Talbott, an individual whom I consider to be one of the greatest Americans of this age.

Harold E. Talbott passed from this earth on Saturday, March 2, but Mr. Speaker, his memory will remain dear in our hearts forever. He was a selfless individual who loved his country as dearly as he loved his own life. Our Nation's welfare and security was his lifelong concern, and I believe that no single American did more to foster national defense and perpetuate the American system of democracy during the 20th century than did our deceased brother, Harold E. Talbott.

Here, Mr. Speaker, was a man of extraordinary foresight and energy. From an early age, much like Gen. Billy Mitchell, he foresaw the significance of a heavier-than-air craft and hence the inevitable and forthcoming age of airpower. He devoted much of his entire life to the development of the aircraft for the dual purpose of serving Americans and protecting them from foreign aggressors who would destroy our way of life.

During the early part of this century, Harold E. Talbott served with the Dayton Wright Airplane Co. when the airplane was indeed in its infancy. During those days, Mr. Speaker, it was only courage, determination, and an ardent love for progress that enabled the first men on earth to rise from the ground in an aircraft. Harold E. Talbott will go down in history along with the Wright Brothers as one of the first pioneers in aviation.

In the field of civic and public affairs, Mr. Talbott always placed the interests of this Nation above his own personal affairs. This was demonstrated during the frequent times that he would neglect, even for several years at a time, his personal business interests in order to serve his country in Government. During one of those tenures, as every Member of this body knows, he was extremely instrumental in building the most powerful Air Force on earth while honorably serving as Secretary of that branch of the military.

In conclusion, Mr. Speaker, let me add this: The death of Harold E. Talbott inflicted a tremendous loss to this Nation, and he will be missed but long remembered. And the good that he did will pass on from one generation to another.

Sanctions for Israel, Bombers for Arabia

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from I. F. Stone's weekly of February 25, 1957, entitled "Sanctions for Israel, Bombers for Arabia."

The article follows:

SANCTIONS FOR ISRAEL, BOMBERS FOR ARABIA

In the Senate the other day HUMPHREY of Minnesota, said the pervading atmosphere in Washington was "characterized by the administration's insistence upon using ambiguous and generalized appeals, dramatically presented by the President and self-righteously defended by the Secretary of State." Though Senator HUMPHREY was talking of the way the Mideast resolution had been presented, he could have been describing the TV appearance in which Mr. Eisenhower summoned Israel to surrender or face sanctions.

The President's general moral propositions were unassailable, but his presentation of the facts were inadequate. The public and perhaps the President himself are not getting a candid picture of what we really have been doing in the Middle Eastern crisis. I want to tell a documented story no newspaper had yet printed as we went to press on the morning of Thursday, February 21, to illustrate just how uninformed Secretary of State Dulles manages to keep the country.

REMEMBER THE DESERT IMPASSIBLE TO TANKS?

The story begins a year ago February 16 when the Liberian-flag freighter *James Monroe*, in Brooklyn, was discovered to be loading 18 M–41 Walker Bulldog tanks for Saudi Arabia. The news created an uproar and brought about a Senate investigation because the administration had been refusing requests for arms from Israel on the ground that it was seeking to prevent an arms race in the area. Secretary Dulles was summoned before the Senate Foreign Relations Committee. His efforts to explain were ingenious. When Senator SMITH of New Jersey, asked why "if we send tanks to Saudi Arabia" we should not send corresponding equipment to Israel, Mr. Dulles replied that the State Department did not think "the problem of Israel and its Arab neighbors" involved "because things like tanks cannot get across the desert." Apparently Mr. Dulles had never heard of El Alamein.

Now imagine the uproar if it had become known at the time that we had also sent nine B–26 bombers to Arabia. There would have been no question that these could get across the desert. Just a few of those B–26's would be enough to make a shambles of Tel Aviv.

The evidence that we have sent nine B–26's has been available here to the Senate since February 6 and to the press since Sunday, February 17. It appeared when there was released for publication the heavily censored transcript of executive session testimony taken by the joint Senate Foreign Relations and Armed Services Committees on the Mideast resolution.

On page 644, in the second volume of those hearings, Senator RUSSELL of Georgia was questioning George Wadsworth, our Ambassador to Saudi Arabia. Senator RUSSELL seems to have been as misinformed as the rest of us. He observed quite incorrectly as it turned out, that Ibn Saud "has no military air, I believe." This elicited a reply from the Ambassador which is marked deleted at two points for security reasons. But in the part which was not deleted one will see that he revealed that we had sent Ibn Saud nine B–26s "in the course of the last 3 years."

LAST YEAR THE INFORMATION WAS "CLASSIFIED"

This information would have created a sensation last year, when the 18 tanks were pictured as an isolated and unimportant shipment. Senator MORSE almost succeeded then in eliciting the information from the wily Mr. Dulles, who puts Ulysses in the shade. Senator MORSE asked the Secretary at last year's hearing if we had sent any military aircraft to Saudi Arabia. The Secretary's way of replying was curious. His first answer was that we had sent "some shipments * * * but no jets." When MORSE then wanted to know whether these were fighters or bombers, the Secretary replied that he believed they were only cargo planes but reserved "the right to correct the record if necessary."

Perhaps the Secretary thought the matter would be forgotten—as it was—before the record was printed. When I went over to the Senate Foreign Relations Committee a few days later and asked whether any corrections had in fact been made by the Secretary before the transcript was sent to the

printer, I learned that Mr. Dulles had changed it to read, "We have sold a very limited number of military aircraft of the propellor type." (See the Weekly of last March 5, or page 68 of the printed record of the Senate hearing. No newspaper but the New York Post paid any attention to the story at the time.) There was a rumor then that some four to six B–26 bombers had been sent Saudi Arabia, but when the press officer of the State Department was asked whether fighters or bombers were among those propellor type planes, he said the information was classified.

WILL SAUD GET JET BOMBERS NEXT?

Every detail of this can be checked from the public record. It shows how easily the Department gets away with its own one-sided presentation of the facts. The story is also important in another respect. What were in the deletions of the Wadsworth testimony? He said we were now working on a plan "which would double the size of the army and strengthen the air force" of Saudi Arabia. Is Ibn Saud to get jets now instead of just propellor-type bombers? How does the Department reconcile this—and indeed the new multimillion dollar arms aid provisions of the Mid-east resolution—with the U. N. arms embargo on the area, and with the agreement by which Saudi Arabia placed its armed forces under Egyptian command last April 21? How against this background can the public judge, how can Israel trust, Mr. Dulles' assurances?

Federal Transportation Taxes

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. HERLONG. Mr. Speaker, repeal of the Federal excise taxes on commercial transportation of persons and property is the urgent objective of H. R. 2867. These are the taxes imposed during World War II which add 10 percent to the charges paid for transportation by train, airplane, or bus, and 3 percent to the charges for virtually all other freight, except that the tax on transportation of coal is 4 cents a ton.

These taxes produce total annual revenue of about $666 million. However, this is not a net revenue gain to the Government because, to the extent that the transportation is for business purposes, the taxes paid are expenses deductible from income and thereby reduce the amount of revenue which would otherwise be obtained through the income tax. With the greater part by far of the transportation taxes paid by corporations, and with the income of corporations taxed up to 52 percent, it is clear that any loss of revenue from repeal of the taxes would be offset to a considerable extent by an increase in revenue from the income tax. Indeed, removal of these taxes presents for the Government the distinct possibility of a net revenue gain for their repeal would remove a serious drag on commerce, thereby producing greater business activity and more net income subject to the Federal income tax.

As against this questionable revenue gain, the harm caused by continuance of the transportation taxes is clear and overwhelming.

To the extent that the taxes encourage shippers and travelers to use exempt private transportation, they deprive our essential public carriers of traffic and revenues they must have to keep pace with the requirements of our commerce and defense. That, in itself, is a price prohibitively high to pay for the revenue they produce and is reason enough for the Congress to take prompt action looking to their early end. By no means, however, is it the only reason.

The tax on freight, especially, is a tax, not on a luxury, but on a basic necessity of life. Transportation is part of the cost of everything that is grown or made, used or consumed, and the tax is paid, not once, but at each stage from growth or manufacturer to marketing and consumer. Moreover, it results in higher seller's markups at each stage, so that in the final price paid by the consumer the effect of the tax is pyramided many times.

For example, a witness who testified recently before a subcommittee of our Interstate and Foreign Commerce Committee presented figures to show that for each $9 of freight tax spread over the whole operation from manufacturer to consumer over $32 is added on the average to the prices paid by consumers for manufactured articles.

Thus, the tax on shipping represents the ultimate in inflation because its cumulative effect, applied at each stage of the manufacturing and marketing process, is to pyramid the cost to the ultimate consumer on every product that is bought, used, or consumed. While transportation rates must sometimes be increased to cover increased cost, it is a highly dubious policy for Federal taxation to add to the cost of this basic service artificially and unnecessarily.

The tax on freight falls heavily on those least able to afford it. It falls on the thousands of small businesses which, unlike the major companies, cannot afford to purchase and operate large fleets of private vehicles by which they could escape the tax.

Moreover, the tax discriminates against United States shippers, since foreign shippers are not required to pay the tax on prepaid shipments from foreign countries to destinations in the United States.

The tax on travel also falls most heavily on those least able to afford it. These persons are the 3 out of every 10 families in the United States who do not have private means of transportation and are, therefore, compelled to use the transportation services subject to the tax.

The burden of the passenger tax is borne, in fact, only by those persons who traveled by public for-hire transportation services within the United States—for travel to most foreign destinations is not subject to the tax. Thus, the American who travels in his own country by bus, rail, or plane is discriminated against, not only in favor of those who travel by private means but also in favor of those who travel abroad. In this respect, the tax was aptly described recently by the Camden (N. J.) Courier-Post as a levy designed to encourage Americans to "see America last," rather than "see America first."

In their effect on the Nation's essential public carriers, the taxes are particularly harmful. Because they apply only to transportation for hire, the taxes encourage the acquisition and use of large fleets of private trucks and private barges, especially by the large shippers able to afford them. Thus, in the 11 years since the end of World War II, private and other carriers not subject to the tax have made tremendous gains at the expense of the regulated carriers. Continuation of this trend, resulting in further weakening of our essential public carriers, could bring turmoil to our economy in time of peace and disaster in time of war.

Inconsistency of the transportation taxes with our defense effort was suggested by the Honorable Anthony Arpaia, then Chairman of the Interstate Commerce Commission, when he said in an address at Houston, Tex., on November 8, 1956:

> The Government clings to the excise taxes on freight and passenger service * * *although this tax is an important factor in retarding the progress of an efficient, up-to-date, organized system of public transportation which is an integral part of the machinery of defense which costs billions.

This organized system of public transportation to which Commissioner Arpaia referred was called upon in World War II to handle all but an infinitesimal amount of all military freight and military passengers, moving in organized groups. At the peak of the war, in 1943 and 1944, regulated carriers handled well in excess of 96 percent of all freight—military and civilian combined. And everything suggests that they would be called upon to repeat this performance, and more, in the event of another war.

In urging quick repeal of the excise taxes on transportation, I fully recognize that transportation is but one of the necessities of life which, many years after the war, still are bearing the burden of a war-imposed tax. I am fully aware, too, of the continuing need of government for large amounts of tax revenue to meet the growing threat of another war and to strengthen defenses throughout the free world. Finally, I am appreciative of the growing pressure which is being brought to bear from every quarter for relief from other burdensome taxes.

But, while it may not now be possible to afford all the relief that is sought, or even all that is justified, it is possible, through repeal of the taxes on transportation, to extend a measure of relief to each and every person and each and every business, without any serious loss of revenue to the Government. Moreover, the potential benefits to be gained by all consumers through the cumulative effect of lower prices at each stage of manufacture, wholesaling and retailing, are so great as to make any possible loss of revenue almost insignificant by comparison.

In short, repeal of the taxes on transportation cannot safely be delayed, while immediate repeal would be in the best interest of all.

Corn Farm Program

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, as a representative from one of the great corn States, I would like to address a few remarks to my colleagues on both sides of the aisle in an effort to impress on them the vital necessity of immediate action on the corn-base acreage problem. In many areas of our Nation corn planting will begin within a few weeks. Furthermore, the deadline for participation in the acreage-reserve program for corn in 1957 is April 15.

I am sure that the Members of the House are familiar with the Agricultural Act of 1956, dealing with corn and the corn farmers' participation in the soil bank. Sixty-one and five-tenths percent of the farmers voting in the referendum held on December 11, 1956, said they favored the farm-base acreage approach rather than to return to the corn-acreage allotment program. I think it was unfortunate that the Congress required a two-thirds vote in this referendum. A clear majority, 59.5 percent, of the corn farmers voting in Iowa favored the base-acreage approach, and 40.5 percent against.

Under the provision of law as it now stands farmers in the commercial corn area will not comply with the 37.3 million acre allotment, and I think we shall see roughly 58 million acres of corn planted in the commercial area in 1957. This simply means a continuation of a surplus position in corn, with consequent adverse effects on livestock production and prices, and this will have an effect on the whole economy of the Nation.

It is contended by some that giving corn growers a corn-base acreage of 51 million acres, for purposes of participating in the soil bank and price support, is unfair to cotton and wheat farmers.

There does not seem to be much disagreement that (a) the acreage taken out of wheat and cotton has mainly gone into feed grains, (b) as a result, feed grains produced on these diverted acres have been substituted for corn, and (c) this has resulted in the feed grain surplus appearing in the corn carryover which (d) has caused the decline in corn acreage allotments.

Farmers in the commercial corn area as determined for 1957 have continued to plant approximately 58 million acres, even though allotments have decreased until now they are 37.3 million acres.

Without a change in this situation, most commercial area corn farmers will not participate in the soil bank program and thereby will not contribute to bringing supplies into line with demand. As a short-run proposition, farmers can make more money growing corn for livestock. They cannot afford to cut 37 percent from their normal corn planting to get down to their corn allotment in order to begin to participate in the soil bank. On the average a corn farmer with 50 acres of corn would be required to cut to approximately 32 acres and then be paid an average of $43 per acre for each acre he cut below the 32 figure.

Surplus feed grain, estimated by the United States Department of Agriculture at 800 million bushels, was grown on acreage diverted in 1954 and 1955, most of which was taken out of wheat and cotton for which cotton and wheat farmers received price supports. Both directly and indirectly Government price supports have subsidized the production of surplus feed grain. Surplus feed grain has resulted in surplus livestock which has weakened livestock prices. Therefore, farmers everywhere are paying heavily for uneconomic price supports which are causing shifts into livestock production.

Corn farmers do not have a minimum national corn allotment or base similar to the minimum for wheat and cotton. If the allotments for wheat and cotton were to be determined on the basis of what is needed to keep supplies in line with demand, as is done in the case of corn, the national cotton allotment would be 3.9 million acres instead of 17.6 million acres; the national wheat allotment would be 12.4 million acres instead of 55 million acres.

Wheat and cotton farmers would not be treated unfairly if the proposed 51-million-acre soil-bank base is used.

Congress has now been in session 2 months and there is no bill before this House to help the Midwest corn farmer. I am informed that a bill has been reported by the House Agriculture Committee, but not until after it was amended so those who should know advise me that it will be of little benefit to the corn farmer. My information also is that an amendment was added in committee which destroys much of the value of the bill and that this was on a straight party vote, 17 Democrats voting for this amendment and the 15 Republicans against. Unless this amendment can be removed by the Members when the bill reaches the floor of the House, I fear the corn farmers of America will be in bad shape for this year. The responsibility for this will rest entirely upon the Democratic leadership in control of this Congress. H. R. 4555 and its companion S. 1125, without amendment, would give real relief to the corn farmers of America.

These bills provide that each corn farmer in 1957 will have the same choice he had in the referendum that was held on December 11, 1956; 61.5 percent of those voting last fall voted for the base-acreage approach. If those voting for the continuation of acreage allotments at 37.3 million acres want this program—well and good—but how can the Congress refuse to give the farmers of the commercial corn area their choice?

Individual farmers already have both their base-acreage and allotment figures which would be applicable under this proposal. There would be little administrative work to do by the Department of Agriculture or the local ASC offices. Immediate consideration and passage of a temporary corn program for 1957 is urgently needed. It is time to quit playing politics with the farmers of America and do something for them now—not later.

It's Mardi Gras Today in New Orleans

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. HÉBERT. Mr. Speaker, it's Mardi Gras today in New Orleans.

It all began 130 years ago.

Today New Orleans truly is the city that care forgot.

But learn all about it and those 130 glorious years from a piece which appeared Sunday in the New Orleans Item and then you will better understand Mardi Gras and the spirit of Mardi Gras:

ONE HUNDRED AND THIRTY YEARS AGO, SPIRITED GROUP HELD FIRST NEW ORLEANS CARNIVAL

This week excitement has been steadily rising toward the ultimate in celebrations—Mardi Gras, next Tuesday.

It's a celebration in the setting of a modern metropolis of big buildings and fast-moving crowds.

The smell of industry is in the air. The din of auto horns, huge bus engines, and thousands of bustling citizens and visitors rings in your ears.

The widest street in the world—Canal—is aflame with gigantic neon signs and well-dressed store windows.

There's the humdrum of riveters and welders' torches, cement mixers, and piledrivers, pushing up striking edifices throughout the city.

New Orleans is a modern metropolis bound for an all-out celebration—a celebration that cannot be matched anywhere in the world—a celebration as modern as a rocket jaunt to the moon, yet a celebration that grew from the carefree meandering of a small group of spirited young men 130 years ago.

New Orleans then was a far cry from what it is today.

The streets were of dirt and, when it rained, crossing a "thoroughfare" was less pleasant than the Pilgrim's trip through the slough of despair.

Shadows flickered beneath the wrought-iron balconies of Royal Street in the dim, gas-lit night of February 27, 1827.

Suddenly, the elite of Royal Street dwellers heard a strange sound, far away, from the end of the street.

Gradually, the sound grew louder until it was deafening as the noisemakers drew near Canal.

A small group of young men, who had recently visited Paris, had dressed in fantastic clothing and were walking about the city making as much noise as humanly possible.

The young men concluded their long march with a masked ball. This was the first real New Orleans Mardi Gras.

Mardi Gras, the name given Shrove Tuesday in New Orleans, means "Fat Tuesday," and can be traced as far back as the reign of Louis XIV of France.

At that time, a significant facet of carnival celebrations was the parading of the Boeuf Gras, or Fat Ox, by the butchers' guild.

It was, perhaps, a throwback to the adventures of the world's first psychoanalyst,

Joseph. As governor of Egypt, he interpreted the dream of pharaoh, in which fat cows were followed by seven lean ones, as meaning a period of plenty followed by a famine.

At any rate, it seems a good bet that Mardi Gras has followed from Boeuf Gras.

Carnival celebrations in the Louisiana Territory dated back well before 1827.

During the reign of Louis XIV, it was reported that a decree had been given by His Majesty permitting pre-Lenten merriment to abound throughout the territory.

The Creoles of Louisiana then followed Parisian carnival traditions almost to the letter, making Shrove Tuesday a gala day of mirth, culminating in a masked ball.

Practically from the start, though, the spirit of carnival was hindered by ruffians and thieves who used the cover of their grotesque masks to do their dirty work.

During the Spanish era in Louisiana, robberies by masked celebrants were common. The elite had no little difficulty keeping their entertainments private, what with masked intruders crashing the parties to the dismay of hosts and invited guests.

A number of years later, the celebrations in New Orleans were marked by maskers' throwing flour on spectators and each other.

This wasn't too bad, but when they began substituting quicklime for the flour, the joy of carnival turned to near-tragedy.

In 1845, the Mardi Gras observation consisted of gangs of masked hoodlums fighting in the streets, throwing flour, dust, quicklime, and even brickbats at each other.

In 1848, flour was thrown on the lovely young damsels watching activities from their private balconies, and the press started a campaign to outlaw Mardi Gras.

Happily, the press campaign served to cut down on the abuses of the day, but did not result in the abolition of Mardi Gras.

Carnival, as we know it today, dates back to New Year's Eve, 1830, in Mobile, Ala.

Young members of the so-called aristocracy attired in colorful costumes and hideous masks, banded together and paraded down Mobile streets, clanging cowbells and carrying rakes over their shoulders.

Someone dubbed them the "Cowbellion de Rakin Society" and the group took the name as their own. They marched New Year's Eve, 1831, too, but later transferred their night of revelry to Shrove Tuesday.

The masked ball was the most important part of early Mardi Gras in New Orleans. The street celebrations, which were the only mens of participation by the common people, were at first nothing more than groups of maskers going through the streets on their way to the mask balls.

The high society balls were ultraexclusive and the demand for invitations great.

In 1841, there was such a clamoring for invitations to the ball at one hotel that the management gave those in charge of the ball an ultimatum.

They were advised that either they must admit the guests of the hotel or seek a ballroom elsewhere. The ball was held elsewhere.

In 1847, Mardi Gras was marked with the emergence of the invitation committee as we know it today. Tickets to the ball were distributed among visitors to New Orleans—subject to the approval of the committee.

The common practice today of large groups of maskers dressing in similar costumes first appeared in New Orleans in 1857. Families or social groups would make all their costumes alike and march together.

And so, this year, as the brilliant floats parade about the city, and when Rex marches triumphantly Mardi Gras Day, there will be two spirits present.

The spirit of mirth, revelry, merriment, and giddiness will prevail, and accompanying the excitement, will be the spirits of that group of young men who made it all possible when they decided to have a good time 130 years ago.

The Life of George Peabody, Esq., 1795–1869

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and enlightening article by Edward J. O'Connor, M. Ed., principal of the Samuel Brown School, trustee and former president of the board of trustees, Peabody Institute, Peabody, Mass. The article appeared in the Peabody Times of February 28, 1957:

THE LIFE OF GEORGE PEABODY, ESQ., 1795–1869

Last Monday, February 18, we commemorated the birthday of George Peabody, the great American, after whom this city was named. For many of our newer residents and for many of the younger schoolchildren it seems appropriate at this particular time to review briefly some of the important events and highlights of this famous man's career.

Since the city of Peabody was named for him, we know that his birthplace is within the city limits. You may find his house at 205 Washington Street identified with a tablet on a stone marker. This tablet was placed there by the Peabody Historical Society in 1902 to permanently identify the building in which the merchant prince of two nations entered the world.

In his early youth George attended a 1-room schoolhouse that was on Lowell Street a short distance away from the South Congregational Church. Unbelievable as it may sound, George Peabody played with his schoolmates in Peabody Square where the Civil War monument now stands. In those days the center of the community was not the busy thoroughfare it is today. The schooling days were all too short for the boy who in later life founded extensive housing units, institutes, libraries, and schools on two continents.

On our Main Street in George's youth, a Mr. Sylvester Proctor operated a country store in which George worked for 4 years. When he left that part of Danvers (now Peabody) for Newburyport, he worked in a dry goods store which was later destroyed by a fire. From Newburyport he went to Georgetown, D. C. and still later to Baltimore, Md., to pursue his interests in the dry goods business.

Business prospered for Mr. Peabody to such an extent that he was able to go to London, England. Eventually in 1837 he established the firm of George Peabody & Co. in London, dealing with mercantile and banking activities all over the world. This company was the foundation of the present day banking enterprise of the House of Morgan, New York City.

Back in 1835, he made a substantial contribution for the erection of the Lexington Monument at the corner of Main and Washington Streets. This monument (which today is a traffic hazard) honors the minute men from this area who on April 19, 1775, died at the Battle of Lexington. A great fire destroyed a newly erected South Congregational Church of the Middle Parish of Danvers (Peabody) on September 22, 1843, but George Peabody of London made a liberal donation toward the erection of a new religious edifice for the Square.

Starting with the year 1851, Mr. Peabody was to disburse his great fortune in many endeavors, some of a passing nature while others are to last for yet untold generations to come. In the Crystal Palace in London during the first great World's Fair the American exhibit was underwritten by a gift of $15,000 from George Peabody. In the next year, 1852, $10,000 was given to search for Sir John Franklin, lost in an Arctic expedition. During this same year, 1852, the sum of $20,000 was donated for the first Peabody Institute of Danvers (Peabody) for a library and lyceum. Eventually this original sum was increased until it reached $150,000. In this eventful year our Peabody High School was named for George Peabody rather than as most of us believe, after the city's name.

In the year 1857, the Peabody Institute of Baltimore, Md., was founded with a gift of $1,500,000 from Mr. Peabody. Only last week, they observed the 100th anniversary of their founding. There, in Baltimore, is located the renowned Conservatory of Music.

For the poor of London, England, in 1862, Mr. Peabody established the Peabody Fund with $3 million to build homes for these unfortunates of an industrial society. Today in London there are 7,341 housing units built from the proceeds of this fund with approximately 18,000 people occupying these dwellings. During the Civil War in this country the United States Sanitary Commission received a gift of $10,000.

After the great rebellion in this country and before the end of his life on November 4, 1869, George Peabody gave away the following: $10,000 for a library at Thetford, Vt.; $150,000 for a museum at Harvard College, Cambridge, Mass.; $150,000 for a museum at Yale College, New Haven, Conn.; $20,000 to the Massachusetts Historical Society, Boston, Mass.; $140,000 for the Peabody Academy of Science, Salem, Mass.; $3 million to the Education Fund for the South (now incorporated with other funds to maintain George Peabody College for Teachers, Nashville, Tenn.); $15,000 for a library in Georgetown, D. C.; $75,000 for a memorial church in Georgetown, Mass., plus $25,000 for a library in the same town; $25,000 to Kenyon College, Gambia, Ohio; $25,000 to Phillips Academy, Andover, Mass.; $15,000 to Newburyport to enlarge its library; $2,000 for medals to the graduates of Holton High School, Danvers, Peabody High School, Peabody, Mass.; and $100,000 for a Peabody Institute in Danvers, Mass.

On September 13, 1869, George Peabody paid his final visit to Peabody, Mass., attending a luncheon in his honor at our Peabody Institute on Main Street. Five months later, his mortal remains returned to this building to lie in state. After a funeral in Westminster Abbey, London, with Prime Minister Gladstone representing Queen Victoria, his body was returned to his birthplace and now reposes in a tomb in Harmony Grove Cemetery, Peabody, Mass., for all to see.

The American Tradition

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. UDALL. Mr. Speaker, 2 weeks ago a dinner was given in Washington by the Fund for the Republic to honor a few Americans from all walks of life whose actions during the past year had enriched our traditions as a free people.

Although the occasion itself was inspiring, perhaps the highlight of the evening was the address given by the historian, Bruce Catton, which is printed below:

THE AMERICAN TRADITION

(An address by Bruce Catton at a dinner given by the Fund for the Republic in Washington, D. C., on February 21, 1957)

A real national tradition is something that we live by rather than something that we talk about. We seldom try to define it; we feel that we don't have to, because if it is a real, living, moving force—and it is, if it is a genuine national tradition—we simply respond to it. We respond to it instinctively, because it is so deeply a part of our lives that it has us in its possession.

The greatest of all American traditions is the simple tradition of freedom. From our earliest days as a people, this tradition has provided us with a faith to live by. It has shaped what Americans have done and what they have dreamed. If any one word tells what America really is, it is that one word—freedom.

This is a word that is eternally growing broader. If any single thing gives us reason to have confidence in the infinite future of the American people, it is the fact that this most basic of our traditions is capable of infinite expansion. It does not limit us. On the contrary, it forever invites us to grow—to see beyond the horizon, to look ahead to a fairer and a brighter day, to develop and to strengthen the noble concept of brotherhood by which we live. The Fund for the Republic is founded upon this living concept of freedom, and that is why I am proud to be a director of the fund and to take part in this dinner tonight.

We are meeting here in the spirit of this magnificent tradition to see how it stands in today's uncertain world and to pay our tribute to certain present-day Americans who have done all that individuals could do, with faith and with courage and with devotion, to keep the tradition a living, breathing force in American life.

I think we shall discover, as we proceed with our examination of these cases, that this national tradition of ours is as strong and as healthy as it ever was. Today, as always in the past, its best and strongest defense lies in the reactions which individual Americans make when they find the tradition under attack. The tradition may be a national thing, but it resides finally in the hearts of individual men and women. These men and women do not always bother to work out elaborate rationalizations of their acts of defense. They simply respond instinctively to specific cases. When they encounter a situation which denies the tradition of freedom, an inner force which they do not need to define impels them to go out and do something about it; they move, without thought of what the cost to themselves may be, to put themselves in between the oppressor and the oppressed. They strengthen freedom simply by going ahead and living it.

We find them, quite literally, everywhere. A State legislator in Florida discovers that his stand for school integration makes him a minority of one in his legislature; no matter, he goes on as he has started, and attainment of the brotherhood of man comes one step nearer as a result. A Catholic priest in Indiana finds immigrant farm laborers suffering medieval exploitation and injustice; he refuses to walk on the other side of the road but stops to demand that the exploitation and injustice be remedied—and, after months of unremitting effort, finally sees his demand made good; and 50 or 60 human beings move out of peonage into the sunlight of American life. A handful of Protestant ministers risk their careers to stand against bigotry and intolerance in their own Tennessee town—and, after a long struggle, see the area in which bigotry and intolerance can operate perceptibly narrowed. A young Oklahoma schoolteacher loses his job in order to make his lone protest against racial discrimination—and, telling why he had done so, gives a noble and eloquent explanation of the spirit that moves Americans who love freedom: "In a thing like this you don't stop to think. You just do what you feel you have to do."

You don't stop to think; you just do what you feel you have to do. From the earliest days, the presence of that spirit in the breasts of American men and women has been our most profound national asset. It is where this tradition really lives. Not all of the petty, malignant forces of reaction—the men who think the people need a guardian and a keeper to guide their way into a blighting conformity; the men who dread freedom unless it be limited to folk who think and talk as they themselves would do; the men who believe that there should be classes and grades in American citizenship, and dread anything that tends to remove the barriers that set man apart from man—not all of these together, operating in a time of confusion and danger, can summon a force strong enough to beat down the simple, instinctive reaction that rises in the breast of the ordinary American when he sees American freedoms being cut down.

I used the plural—freedoms—for it appears that freedom has many forms.

We seem to have begun, in this country, with a demand for freedom of religious belief—in Plymouth Colony and Providence Plantation, in William Penn's settlement of Pennsylvania and in the charter for the first colonization of Maryland.

We moved on to see that freedom must also mean freedom from foreign oppression, and fought the American Revolution to make that freedom good.

Then we came to see that there must also be freedom from domestic tyranny, and we put together the Constitution of the United States.

We realized, also, that the mind of man must be free from dominion by government, and we added to our Constitution the Bill of Rights—which is just as pertinent, and just as much needed, today as at the time when it was written.

We came, as well, to see that freedom has to be unlimited—that it has to apply all across the board, to men of all colors, all races, and all conditions—and we struggled through a terrible Civil War in order to make such an extension of freedom possible.

All of these are not separate freedoms so much as they are varying forms of an undivided whole. For one of the things we have learned in this country is that freedom has to be indivisible. Anything that limits any part of it, for anyone, is a menace to all of us, a threat to the tradition by which we live. Our American gospel applies unto the least of these, our brethren; we share all of our rights with them, and any denial of freedom, to anybody, anywhere along the line, applies ultimately to all of us.

American freedom today is under attack—very often, by people who insist that they are trying to defend it. In a short-range view conditions are extremely ominous; yet I think if we look at our present situation long range, we can see that we have little reason to be afraid. We get waves of reaction in this country periodically in times of extreme national stress, and the great national tradition comes under attack—seems, indeed, to be in a fair way to be overwhelmed entirely. But the waves always pass with, however, much incidental injustice and oppression for certain individual victims, because the instinct in the American mind and heart which the tradition is based on is, finally, irrepressible.

In the early days of the Republic we had, for instance, the Alien and Sedition Acts.

Europe was torn by a great war and by an unpredictable revolutionary movement. America's position seemed insecure; external pressures were becoming all but intolerable; and men hardly knew which way to turn to find national security. Out of this came these almost unbelievably repressive laws. Freedom of the press and freedom of speech were effectively outlawed. It was made a crime to criticise acts of the national administration. Editors who spoke out against these laws were imprisoned. Thomas Jefferson's mail was opened in the hope that some paragraph or sentence could be found on which he could be arrested for sedition. A man who tried to get signatures to a petition to Congress urging repeal of these laws was arrested and sentenced to jail. Lawyers who defended victims of this oppression were denounced by judges as traitors. To all appearances, American freedom had been done to death.

All of this lasted 2 years or more. Then came a change. Jefferson himself, against whom so much of this attack had been aimed, became President. The laws expired. The freedom that had been assailed so malevolently was restored—stronger than ever for the very virulence of the onslaught that had been made upon it. Today the men who inspired and supported the alien and sedition laws are remembered only because they have come to symbolize the stupidity and the viciousness of those who tried, briefly and unsuccessfully, to turn backward the main stream of American life.

Similar things have happened at other times. During the early part of the Civil War a brigadier general in the Union Army was called before a congressional committee and questioned because of suspicion that he had been having traitorous dealings with the Confederates—his real offense being that by following the instructions of his superiors, and returning fugitive slaves to their Maryland owners, he had given offense to the powerful and suspicious Abolitionists who were rising to dominance in Congress. He was accused of nothing whatever; indeed, he never quite realized that he was even under suspicion; but he was finally removed from command and sent off to prison, by a War Department which dared not oppose a powerful congressional committee, and his career was ruined. He was released, finally—not exactly cleared, because nobody had ever formally accused him of anything, so there was no charge from which he could be cleared—but at least released. And the episode comes down in history as a melancholy illustration of the way in which fear and hysteria, operating together, can lead even a committe of Congress to narrow the area of American freedom and justice.

I have cited two cases out of the past. There are many more that could be cited; some of them, indeed, matters of tolerably recent memory. But the thing to bear in mind is that these spasms to which we are now and then subjected are always of temporary effect. We do come out of them; their authors pass on and are forgotten, surviving only as melancholy footnotes in history; and our great tradition, down the years, grows broader and stronger despite these temporary setbacks.

We are today emerging from the latest of these spasms of terror. We have seen some highly discouraging things in recent years. We have seen an atmosphere in which the mere fact that a man was accused of something was taken as proof of his guilt. We have been reminded of Mark Twain's comment on the reign of terror that prevailed in late medieval times under the Doges of Venice, when a committee on public safety received anonymous accusations against the loyalty of citizens; as Mark Twain remarked, if the committee could find no proof to support an accusation, it usually found the accused guilty on the ground this simply showed how deep and devious and inscrutable the man's villainy really was. We have witnessed an era in which it was widely taken as a crime for an accused person to invoke the Bill of Rights itself in his own defense—as if the provisions of the Bill of

Rights were not meant to operate in precisely a time like the present. We have seen times in which no one in authority seemed willing to place the slightest amount of trust in the innate loyalty, good faith and intelligence of the American people; times which led former Senator Harry Cain to burst out with the cry: "A whole clique of spies could hardly do as much damage to us as could our failure as a government to have confidence in the people."

We have seen all of this, and we can still see too much of it if we look around carefully. Yet the crest of the wave is passing. It is passing because the American people are responding once more to that deepest and most profound of all of their instincts—the instinct to defend the tradition of freedom when it comes under attack.

It is passing because the courts of America have stood firmly in defense of individual liberties. It is passing because many groups and individuals have stood up for the rights of their fellow Americans.

Scientists have made a contribution by their efforts to promote rational discussion of the dangers of too much secrecy about their work. The congressional committee headed by Representative Moss has thrown much light on the secretive practices of some Government agencies. The press, through its reports on the Moss committee's work and through the efforts of individual newspapermen, has helped to break through some of the official barriers to the free flow of information.

The American people are gradually getting the materials for a more factual understanding of communism in the United States and the world. The events in Hungary have clearly demonstrated the essential falsity of Communist claims to a concern for civil liberties—and have contributed to the decline of the Communists here and in other free countries.

But when I say that the crest of the wave is passing, I do not mean that no threats to liberty exist. Arbitrary censorship both by private and governmental groups has continued to affect a wide area of American life. Government restrictions on the flow of information are still excessive in some agencies. Much confusion remains in the administration of security measures; some unfair procedures have become institutionalized. The pressures of conformity are still strong in many places.

Yet I feel confident that the American tradition will flourish in the future as it has in the past. That tradition, to repeat, is something that lives inside of us. It is not a set of laws; and freedom itself is not simply the absence of restraint. Rather, it is an abiding inner faith that cannot be limited by doubt or by confusion or by fear. It is something built into the American soul, and in the long run it is unconquerable.

The secret of the American tradition is freedom—freedom unabridged and unadulterated, freedom that applies to everybody in the land at all times and places, freedom for those with whom we disagree as well as for those with whom we do agree.

And the secret of freedom, in turn, is—just courage. The kind of courage, welling up instinctively in the breasts of individual citizens, which over and over again leads to the kind of actions that are commemorated in the letters which we are concerned with here this evening; the kind of courage which led the poet to cry:

Yet, freedom, yet, thy banner, torn but flying,
Streams like the thundercloud against the wind."

Freedom rests on courage; and courage, in its turn, rests on faith—on faith in ourselves and faith in our fellows, on faith that the thing which we believe in and which we live by is immortal and everlasting, a fundamental truth of the universe with which we move on toward the future. It is on this faith that our confidence finally rests. For out of this faith come those noble statements which show why this American tradition is, in the end, invulnerable; statements like that one of the Oklahoma schoolmaster:

"In a thing like this you don't stop to think. You just do what you feel you have to do."

On that spirit, and in that spirit, we can go ahead to broaden the great American tradition.

Spain Should Be Admitted to NATO

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bob Considine entitled "Link in Our Defense Chain," which appeared in the New York Journal American, Monday, February 25, 1957. This article points up some of the essential factors and reasons why Spain should be admitted to the North Atlantic Treaty Organization. As one of the sponsors of a number of resolutions now pending which have for their objective the admission of Spain to NATO, I was particularly pleased to see the case for Spain set forth so concisely and ably by Mr. Considine.

I hope that all Members of the House will take the time to read this informative article:

LINK IN OUR DEFENSE CHAIN
(By Bob Considine)

WASHINGTON.—The popularity in the Nation's Capital of youthful Spanish Ambassador Jose Maria Areilza, Count de Montrico, is symbolic of America's recent discovery of that hard-working, militantly anti-Communist, strategically placed nation.

Areilza, a lawyer, industrialist, author—war hero and former mayor (at 26) of Bilbao, looks like a recently retired matador and moves about Washington with a speed that would dismay his siesta-taking ancestors. He is trusted and admired by our top people. They have sought his counsel on matters as pertinent to today's fornt pages as the length of the great runways Spanish engineers and workers are completing for our Strategic Air Command at record low cost to United States taxpayers.

They seek his thinking, too, on the pending question of Spain's entrance into NATO. As of today, 35 Members of the House of Representatives have introduced resolutions urging the Eisenhower administration to propose Spain for membership. There are two Senate resolutions along the same line, introduced by Senators BRIDGES and WILEY and bearing the names of 31 additional Members of the upper House. These Congressmen feel that NATO needs new blood as much as the United States needs Spanish air and naval bases—especially now that Britain and several other countries are of a mind to withdraw in part from full participation in the alliance.

TRUSTED BY ARABS

Spain, and therefore its spokesman in this country, also now looms large in the healing of the raw wounds of the Middle East. Spain, occupied for 700 years by the Moors, enjoys unique popularity and trust in the Arab world. One of the first calls King Saud made upon arriving in Washington was to Ambassador Areilza. It was noted, too, that Saud flew directly from the United States to Madrid to see his friend Franco on the way that will lead to home.

In view of these events it is difficult to believe that only a few years ago Areilza—a man of ambassadorial rank—would not have been permitted to set foot in the beautiful Spanish Embassy (a splendid place built for but never used by Calvin Coolidge). We had joined a United Nations agreement to exercise diplomatic sanctions against Spain in an effort to unseat Franco. The motion was introduced in U. N. by the Communist bloc for the most transparent reason. But we went along. Franco, a dictator albeit benign, easily survived this treatment, thanks partly to the fact that Latin American countries called the Red-backed embargo preposterous and refused to withdraw their top diplomats from Madrid or send Spanish ambassadors packing.

WILL CLOSE VITAL GAP

The late Adm. Forrest Sherman, United States Navy, Francis Cardinal Spellman, James A. Farley, and one or two others illuminated our folly of implementing a Soviet scheme at the risk of forfeiting a country that had meant much to Western civilization and Christianity and could again.

The fruit of our massive change of mind will soon be revealed. The great SAC bases at Torrejon, Moron, and Saragossa will close a vital gap in our atomic containment of Soviet aggression. They will serve, too, to take up the slack if something should happen to close down SAC's North African and Saudi Arabian fields. Gen. Curt LeMay's B–47's and B–52's will be able to use these tremendous strips and maintenance depots any day now.

The United States naval airbase at Rota is ready and its communications just about in order. The oil and high octane pipeline, reaching up from Rota in the south like the ribs of a half-opened Spanish fan, has been tested and found completely capable of doing its defense job.

The Postal Worker Needs and Deserves a Salary Increase

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, today attention is being sharply focused on the economic plight of the Nation's underpaid postal employees who day after day find it increasingly more difficult to meet the cost of living on their present salaries.

Even though the postal workers are united together in fine organizations that provide them with splendid representation, they nevertheless lack the right to face their employer across a table and bargain until a mutually convenient salary scale is reached. Thus, Mr. Speaker, they must appeal to you, to me, and to every other Member of this legislative body for relief in order to sustain a deserved standard of living.

Last Sunday I spoke in Waterbury, Conn., to a large group of postal employees and expressed my views on this matter. These are contained in the following text of my speech to that group,

and I ask unanimous consent to insert it here in the CONGRESSIONAL RECORD:

TEXT OF SPEECH OF CONGRESSMAN JAMES T. PATTERSON AT THE PAY RAISE SALARY RALLY, AMERICAN LEGION HALL, WATERBURY, CONN., MARCH 3, 1957

Friends of the postal service, I am honored to be one of your guest speakers here this afternoon at your pay raise salary rally.

At the outset, I assure you that I have earned, at the apparent displeasure of some, the dubious distinction of being a Member of Congress who is extremely friendly to postal employees and sympathetic to their goals. And if it is dubious, I also have the distinction of being one who will continue to work in your behalf until inequities suffered by your organizations are finally removed and you are reelevated to the economic status that you once enjoyed and still deserve.

As each of you know, there are members of the House Post Office and Civil Service Committee who, in the past, have been reluctant to speed through legislation beneficial to, and necessary for, the postal workers of our Nation. Your alternative has been to get this legislation to the floor through the cumbersome process of a discharge petition. In the past, it has been a pleasure for me to be one who signed these petitions. I assure you that I will do the same if it becomes necessary during the present session of the Congress.

Before going further, I wish to commend you on the fine organizations that represent the postal workers of America: The National Association of Letter Carriers, the Postal Transport Association, the National Association of Postal Clerks, to mention several. Striving forward in a common cause, these organizations, with singleness of purpose have contributed immeasurably toward the enhancement of your general welfare.

Despite this fact, there still remains much to be done.

With regard to postal organizations, how fortunate we are to have present here this afternoon one of your outstanding national officers, Mr. Peter Cahill, secretary of the National Association of Letter Carriers. And no important rally in this city could escape the thought of one of Waterbury's fine sons, hard-working Wallace J. Legge, capable editor of the Postal Transport Journal.

* * * * *

Now you have rallied here this afternoon to inspire a raise in salary. Your expected minimum goal is $5,500 per year. I wholeheartedly agree that a minimum salary of $5,500 per year for postal employees is not only deserving, but absolutely necessary in order for you to meet the present cost of living.

I pledge herewith my support of legislation that will increase your salary to such a level.

Everyone knows why a salary increase to $5,500 per year for postal employees is necessary, and there is no reason for my boring you with familiar statistics. You all know that postal salaries have increased less than 100 percent since 1939 as compared to an average of 300 percent in private industry generally. You all know that the average annual earnings of even highway construction workers amounts to $5,516 as compared to $4,630 for the highest paid road clerks in the Postal Transport Service.

The plight of the underpaid postal worker is dramatically underscored in a thought-compelling article which appeared in the Wall Street Journal last November 21. The article stated in part:

"'I'm desperate,' reports Mrs. Charlotte Smith, owner of Carlotta's, a Chicago women's wear shop, 'I've been in business 16 years and I never had to look for help like this. I'm trying to hire a good full-time girl at $75 a week and I can't do it.'"

Now my friend, at the same time the Post Office Department is attempting to employ individuals even with a family to support at a salary of $70.36 per week. Some of you may remember the budget table which appeared in the January 1957 issue of the authoritative Postal Record. The table showed that the weekly cost of living for a family of four, renting in California, amounted to $105 per week.

Enough of the statistics.

Despite these facts, we still hear reports from Washington that the Congress is studying the need for an increase in postal salaries. This is much like studying the need for an umbrella during a downpour of rain. The facts are on hand, the studies have been made; what is needed now is concrete action—a raise, not a study.

* * * * *

And while we are here, let's not confine our remarks to a salary increase. There are other improvements needed in the postal service. Improvements in employee morale—improvements in general working conditions—improvements designed to attract competent postal employees for the future—improvements designed to reassure present employees of greater security for the future. There is need to dispense with bureaucratic redtape that is so confusing, in some circles, that even the bureacrats themselves have difficulty in understanding which way to turn.

There is dire need to put into operation a Department-employee relations program that the bureacrats in Washington claim has been established. There is need to create more good will and mutual respect between the employees who work with their hands and distribute the mails, and those who sit behind desks in Washington, supposedly plotting some new scheme to "save the taxpayer's money"—even though their brainchild may seriously delay the mails.

There is need—particularly with respect to the Postal Transport Service—to give serious reconsideration to certain now-existing policies, according to which some appointee in Washington has only to discontinue an R. P. O. line in order to throw 6, 8, or even 15 postal clerks out of regular work.

There is a need to abolish certain discriminatory policies by either paying all employees of the postal service time and one-half for overtime or giving them compensatory time—and this includes the rural carriers who finally place mail matter in the boxes of rural areas.

There is need for a complete resurvey of the entire Post Office Department which, according to a Government Commission's recent report, is still using some of the same basic policies that were used more than 100 years ago.

Thus in conclusion, my friends of the postal service, there is much to be done, and you are listening to an individual who appreciates your outstanding service to your fellowmen, and an individual who is willing to assist you in any way possible in the realization of your worthy cause.

Nelson Award—National Strength

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. PHILBIN. Mr. Speaker, I desire to address the House briefly regarding the recent Nelson Sportsmanship Award, which was conferred upon a fine young American, Jim Swink, of Texas Christian University, at Boston on January 12 before a large, distinguished gathering of spotsmen.

In previous years, I have had occasion to make brief reference to the importance and inspirational character of the Nelson Award. I have done so primarily for two reasons: first, because I believe that in these trying days especially, it is vital for us to stress and seek to promote the physical, spiritual, and moral development and well-being of our young people and, secondly, because of the great admiration and enduring affection, which I have long held for Mr. N. V. (Swede) Nelson in whose honor this award is given. I am prompted by similar feelings this year.

As the recent Olympic games disclosed, this Nation appears to be going backward insofar as athletic proficiency in competitive international athletics is concerned. In previous Olympic games, we usually had little difficulty winning the Olympic world championship by substantial margins. This year we lost this title, which is something more than an empty honor, but a significant, meaningful national achievement. Various excuses and apologies have been given for this loss—none of which really impressed me. The bald fact is that the Russians won. Instead of hiding behind poor excuses and alibis, which is not the manner or in the tradition of true sportsmen, we should do a little soul searching to see whether we can honestly explain to ourselves and the American people why there should be such a marked change in our world competitive athletic proficiency in such a relatively short space of time.

Let me make it clear by these remarks that I am exceedingly proud of our great Olympic team, which was comprised of outstanding young men and women, who under the circumstances, made a brilliant showing. They are entitled to national gratitude. Some of their individual performances were outstanding and magnificent, and I commend and laud the victors and the team as a whole.

I can recall what the great Harvard football coach, Percy Haughton, once said on the illusory subject of victory and defeat, and I quote him in expurgated substance, "the world loves a winner." It has long been one of the fundamental tenets of American sports that any game worth playing has been considered worth winning. Our young men have never been satisfied with so-called moral victory stemming from defeat. This year's Olympic team was no exception, I am sure.

Many believe that there are underlying reasons for our inability to win the Olympic games that have to do with present social conditions and attitudes in the United States and with long-range trends in the Nation and in our educational life. It is indeed debatable whether a generation of young men and women living in a country, which is putting less and less value upon sustained, perserving training, and more and more emphasis upon the relaxed so-

cial graces, so-called, can successfully compete in the long run in athletic games, or for that matter in any other way, with nations where frugality features national life and rigorous, competitive physical training is pursued by the young and the vigorous.

It is no answer to say that this training results from certain measures of regimentation that obtain in Russia, because the sad fact would seem to be that here in America there is progressively decreasing interest and active participation by many of our young people in competitive sport.

There will be some who will not want to read such a significance into the Olympic games, and to them I would suggest most respectfully that they might read a little history, past and contemporary, so that they might be reminded of some of the reasons why great nations and governments of the past collapsed, as well as of the conditions existing in our own country today, which are moving this Nation away from many of the beneficial traditions and practices of former years.

Now, if I may be permitted, Mr. Speaker, I should like to say a word about "Swede" Nelson, the great American, to whom the Nelson award is dedicated. As was said of another, "Swede" Nelson needs no encomium from anyone. His career, his unselfish life's work, sterling personal qualities, inspiring personality, great talents, and unbounded patriotism speak for themselves. He is unquestionably the exemplification of everything that is lofty and fine in American sportsmanship, the symbol of shining American citizenship.

His untiring contributions to the cause of American youth can hardly be adequately measured or appreciated and for this reason the Nelson award stands for values in American life, which are at once essential and indispensable and must be preserved in the manner and degree to which he so characteristically embodies and represents them, if this Nation is to travel henceforth on the course toward its greatest destiny.

It would be a happy day for this Nation if the high ideals, human qualities, and unselfish spirit of "Swede" Nelson could be impressed upon all the youth of the land and his buoyant confidence could neutralize the stagnating indifference and cynicism which, in many places, threaten the moral stamina, physical tenacity, and burning patriotism of America.

This year's Nelson award winner, like his predecessors, is an outstanding American boy—a young leader of the gridiron, respected by his mentors and teammates for his character and ability. Our heartiest congratulations and best wishes will attend him now and in the challenging days ahead.

And may the hand of Swede Nelson be strengthened in the fine work he is achieving for the community, State, and Nation. His venerable and beloved mother, now in her 94th year, a great influence in shaping his ideals, and his gracious wife and lovely daughter, all of whom have contributed so much to his endeavors, will share with all of us, I am sure, their pride in his achievements.

Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a pertinent article from the well-known Boston Herald with reference to the Nelson award:

[From the Boston Sunday Herald of January 13, 1957]

SWINK CHERISHES NELSON AWARD—CREDITS HIS COACH MARTIN, MATES FOR BEING SELECTED

(By Joe Looney)

Jim Swink, the 21-year-old senior halfback from Texas Christian University, was only doing what came naturally last fall when he performed in such a manner that he was selected over 33 other candidates as the 11th annual Swede Nelson sportsmanship award winner.

Swink told a gathering of 600 last night at the Hotel Sheraton Plaza, "It's a great honor to be up here in Boston where everybody has been so nice to me these last 2 days. I don't feel like I've done anything to deserve this fine award, but it is something I always will cherish. If what I did was sportsmanship, it was because that was the way I've been taught by my coach, Mr. Martin, and my teammates."

Abe Martin, the TCU coach, lauded Swink as "the finest choice the committee could make. It is not only a great honor for Jim, but also for our school because the selection was made on a nationwide basis."

Swink was chosen for the Boston Gridiron Club's Nelson Award (an inscribed watch) for his exemplary conduct in games against Alabama and Texas A. and M. and his general spirit of self-sacrifice over the entire season.

A spectacular climax runner in 1954 and 1955, Swink played the role of decoy and blocker mainly throughout the past season.

Swede Nelson, for whom the award is named, praised Swink as a player "with a funnybone to help out when the outlook is bleak, a wishbone to provide the desire to do better, and a backbone that all good football players need."

Dave Lucey, former Boston College player, was the toastmaster. Speakers included Rev. Charles McCarthy, St. Ann's Church, Somerville; the Reverend Gene Rose, St. John's Episcopal Church, Winthrop; Rabbi Zev Nelson, Temple Emeth, Brookline; Mayor John B. Hynes; CBS sportscaster Bill Hickey; humorist Joe (Uncle Dinny) Madden; Tom McNamara, Gridiron Club of Boston, president; and Joseph C. Tomasello, dinner chairman.

Head-table guests included: Walter A. Brown, general manager of the Boston Garden; sports columnist Austen Lake; D. Leo Daley, award committee chairman; George Kurker and Joseph Asiaf, Tufts' 1957 cocaptains; Larry Vinecour and Jack Regan, Boston University's 1957 cocaptains; Maurice Stein and Charles Napoli, Brandeis' 1957 cocaptains; Robert Lyons, Northeastern captain-elect; Tom Hooper, Harvard captain-elect; and Tom Joe Sullivan, Boston College captain-elect.

The parody singing was led by Johnny Buckley.

Overtime

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 5, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very clear, concise, and very truthful statement on the subject of overtime by Vice President Clarence M. Christensen of the National Federation of Post Office Clerks, AFL–CIO:

A MESSAGE FROM YOUR VICE PRESIDENT

(By Clarence M. Christensen)

OVERTIME

The principle of premium or overtime pay for service of over 8 hours in 1 day and over 40 hours in 1 week is well established in private industry and in the Postal Service insofar as regular annual rate employees are concerned.

Previous to 1945 regulars worked for approximately 17 percent less than straight time when required to work overtime. Two basic reasons were considered in asking legislation to grant premium pay for overtime work. First, it was better for the economy of our country to have more employees working 40 hours per week than fewer working 48 to 60 hours per week. Second, if necessity required overtime work, the employee was entitled to premium pay for service beyond the legal workday.

Twelve years have passed and substitute (hourly rate) employees are still being paid straight time for all hours worked. Legislative correction to extend premium pay for overtime to substitutes is long past due. The Fair Labor Practices Act provides for premium pay for overtime in much of private industry and for employees working on Government contracts being fulfilled by private companies. Throughout the country the Department of Labor has instituted suits against private employers for not paying premium pay for overtime. Why should there be one set of laws for private employment and another for substitutes in the postal service?

Some substitutes might disagree with the principle of time and one-half for overtime. However, a good majority of substitutes are not willing to continue existence as slave labor. Are some willing to live in the past as their forefathers did, working 10 or 12 hours daily or even from sunup to sundown? Or do they desire to have the rights of free American working men and women, who, if they work over the legal work day or week, receive premium pay? Do substitutes realize that if regulars were paid only straight time that many substitutes working today would not even have a job in the postal service?

Statements have been made that if substitutes were paid overtime a great many more would be hired so each would work less than 40 hours per week. This, I believe, is an effort to imply that substitutes would be hurt and thus encourage them to be against overtime pay. If this implied threat was carried out, management would realize speedily that if they desire to maintain an efficient and solid force in the future substitutes must be treated as human beings and given a reasonable number of work hours.

We must all treasure the American principle of the 8-hour day. Legislation must be secured granting overtime pay to all substitutes, regular and temporary, as legally required for regulars.

The principle of time and one-half for overtime work is not giving something to the employee—it is the employee giving something to his job.

A successful and expanding electronics firm in my community states in its prospectus to applicants for positions that they do not hire part-time employees when peak periods occur. Rather they follow the policy of using their permanent force on overtime to maintain good production and efficiency. Why isn't the Post Office Department patterned after private industry in this phase?

During the Christmas rush, experiments have proved that experienced personnel are at least twice as efficient as temporaries on all but the very minor tasks. In comparing experienced employees with Christmas as-

sistants and temporaries we realize this must be done on an overall sustained average rather than on an individual short-period check. We must also consider in any comparison the important factors of accuracy, rapidity, and knowledge of job routine. Considering all these factors fairly, it is more economical in the long-run overall cost than the excessive use of temporaries.

It has been inferred by some levels of management that a regular is of no value after 8 hours of duty. If followed to its ultimate conclusion this question is posed: Is an hourly rate employee, classified or temporary, satisfactory after 8 hours of service or is it just because he is paid straight time? Are a great number of substitutes necessary to have what management terms "flexibility," or is it merely to have a force that can be worked unlimited hours at straight time?

When legislation is enacted extending overtime rates to all classified and temporary substitutes including Christmas assistants, then the work hours would be more equalized resulting in a more efficient operation.

We should never subscribe to the principle of overtime in order to increase our take home pay or extend our work week. Rather, the positive angle, the use of overtime during peak or emergency periods when necessary to avoid delay of the mails. We, as employees, know from practical experience that we can keep the mails rolling and that reasonable use of overtime when necessary is more economical compared to using part-time temporary employees. It will do much for the morale of the employee since it is nothing less than a recognition of his ability, his experience, and his value to the postal service.

Salute to Israel

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. DIGGS. Mr. Speaker, under unanimous consent I include in the RECORD the following statement made by me in connection with the eighth anniversary of Israel's independence, which is being commemorated at the America-salutes-Israel celebration in New York on April 29. I take pleasure in joining in this salute to a nation so strongly allied to the cause of freedom and democracy:

STATEMENT FOR AMERICA SALUTES ISRAEL CELEBRATION

I am happy to join in this salute to Israel. It is fitting tribute that we pay her, first, in honor of her eighth year of independence and the progress she has made and, secondly, in support of her courageous struggle to maintain the peace and freedom which she and all lovers of democracy so highly cherish.

The entire freedom-loving world pays homage to Israel. We in America salute her, in particular, because we see so clearly in her valiant efforts to enjoy peacefully the independence and progress she so rightly deserves an analogy to our own pursuit of freedom less than 2 centuries ago.

The state of Israel has, through diligence and perseverance, provided a homeland for a homeless and oppressed people. No one will deny the remarkable gains she has made in these few years in satisfying many of her own agricultural needs. Nor can we overlook the value which accrues to the free world from the example she presents to enslaved peoples of the survival strength of democracy, even amidst a hostile environment. There is a question, however, as to how long Israel can stand alone against the preponderance of power which is quietly being stacked up against her.

The present Middle East crisis warns democratic peoples everywhere that freedom and independence are never finitely attained. History and advances in science and technology have taught us, further, that one democratic nation cannot wall herself in and declare or will herself to be unaffected by what happens to either the neighbor next door or the one across the way. It is good to be optimistic. And, certainly, wishful thinking has its merits. But neither of these outlooks has proved effective thus far in stemming the tide of Communist aggression. All of us readily agree, I am sure, that we desire to maintain peace and harmony within the family of nations of the world, but let us not forget the power of a little well-aimed discipline to preserve peaceful relations in any family.

America salutes Israel with words. These are fitting, indeed, but how very inadequate. Let us salute her, also, with our deeds—not by waging a war in her behalf, for she does not ask that, but by providing her with the power she needs to defend herself against Communist aggression. Defensively armed, Israel can remain a strong link in democracy's chain and a symbol of hope to oppressed people all over the world.

CHARLES C. DIGGS, JR.,
Member of Congress.

A February View of Christmas

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following articles, writen by George H. Todt, which appeared in the February 11 and February 14, 1957, issues of the Valley Times, of North Hollywood, Calif.:

[From the North Hollywood Valley Times of February 11, 1957]

PARALLELING MRA CHRISTIAN CODE

"Jesus Christ, the same yesterday, and today, and forever"—(Hebrews 8: 8).

What does moral rearmament stand for? An increasingly large number of friends keep asking me that question. I am only an interested and sympahetic observer of this dedicated group, not an official spokesman, but I shall try to give you a few of my own impressions.

First, let me call your attention to a very fine article I have just finished reading in the January 22 issue of the CONGRESSIONAL RECORD, starting on page A383. It is entitled "A Rabbi Looks at Christmas." Written by Dr. Maurice N. Eisendrath, president of the Union of American Hebrew Congregations, the article was inserted in the RECORD by the Hon. ABRAHAM J. MULTER, of New York. This arresting concept of Dr. Eisendrath is worth reading by every thoughtful Christian; it is intelligent, filled with worthy feelings, and could be an important milestone in spanning some of our differences. I, for one, approved his message.

"No, it is not the Jews who do not accept Jesus—it is the vast majority of our whole generation which can truly observe Christmas in one way only—and that is to translate their creed of Christmas into the conduct which that creed commands; to transmit the doctrine of the Messiah into the deeds of loving kindness and humanity which that doctrine decrees; to convert the cult of Christ's mass into the genuine birth of the spirit of the Messianic kingdom with peace on earth to all men of good will."

How can any genuine Christian, if he be honest, quarrel with that statement? Especially since it is the truth. For the trouble with Christianity today is not Christianity itself—but those untold millions of souls who profess Christianity in name but do not actually live it in their lives. Mere faith alone is not enough. None other than Jesus Christ, Himself, has told us: "Faith without works is dead."

As a Christian myself, I hope that many others of our faith will read Dr. Eisendrath's A Rabbi Looks at Christmas. This monumental work has long been needed. I didn't approve every single item in it, of course, as no two of us see eye to eye on everything. But it is filled with so much wisdom and goodness—and historical accuracy—that I recommend it in substance most heartily to my readers.

Now back to moral rearmament. What I have just written about the article quoted from in the CONGRESSIONAL RECORD also ties in with MRA. For the basic fundamental driving force of this ideology is simply applied Christianity—a Christianity of works instead of merely words. While many moan that Christianity has failed, MRA seeks to bring about a worldwide movement demonstrating the one embracing truth that Christianity works.

From what I have been able to ascertain from my observation and questions, the spirit of MRA is pretty well cited in the preamble to the articles of incorporation of moral rearmament in the United States, which are as follows:

"Riches, reputation, or rest have been for none of us the motives of association.

"Our learning has been the truth as revealed by the Holy Spirit.

"Our security has been the riches of God in Jesus Christ.

"Our unity as a worldwide family has been in the leadership of the Holy Spirit and our love for one another.

"Our joy comes in our common battle for a change of heart to restore God to leadership.

"Our aim has been the establishment of God's Kingdom here on earth in the hearts and wills of men and women everywhere, the building of a hate-free, fear-free, greed-free world.

"Our reward has been in the fulfillment of God's will."

To me, a simple writer of words, there seems to be a correlation of purpose between Dr. Eisendrath, traveling on his road, and Dr. Frank N. D. Buchman, traveling on his pathway. Both have recognized that the greatest shortcoming of Christianity is that most Christians don't live their own religious teachings. It seems to me that MRA is trying to do something positive to remedy this unhappy deficiency. I believe these good people deserve our respect for the mission they seek to accomplish in our troubled world today.

[From the North Hollywood Valley Times of February 14, 1957]

FEBRUARY VIEW OF CHRISTMAS DAY

"Words of truth and soberness." (Acts XXVI: 25).

Has the crass commercialism of the world turned Christmas—which really means "Christ's mass"—into a wild-eyed Roman holiday?

Perhaps it has, and—what is the answer? Let me quote a small excerpt from a truly remarkable address over the NBC radio net-

work last December 18, 1956. It was entitled "A Rabbi Looks at Christmas" and was given by Dr. Maurice N. Eisendrath, president of the Union of American Hebrew Congregations. It was later published in the CONGRESSIONAL RECORD under extension of remarks of Hon. ABRAHAM J. MULTER of New York, commencing on page 383 of the Appendix. I am in full accord with the words of Dr. Eisendrath, which follow, and ought to be commended for their virtue, intelligence, and wisdom by all Christians everywhere.

"Which leads me to the very first thing which I, as a Rabbi, would like to say about Christmas," said Dr. Eisendrath to his Nationwide audience. "If I were a Christian minister instead of a Jewish teacher, there is nothing I would lament so much, and bitterly resent, as this wholesale transformation by myriads of Christians, by some Jews, and many non-believers in either Judaism or Christianity, of what was, in origin and should be, in its deepest meaning, a solemn and sacred day set apart to recall the birth of Him whom I, if I were a Christian, would call my Saviour, this transformation and degradation of such a holy day into so heathen a holiday, devoid of its profounder spiritual significance and more exalted moral challenge.

"If this degeneration of Christmas should continue unabated, if there can be no diminution, but instead only an ever-increasing crass commercialism which shouts at us, at those precisely fixed 15-minute intervals prescribed for the commercials that cannot be put aside in even the most moving radio or television program at Christmastide; then we in America; yes—Jews and Christians both—will have contributed to the paganization of an otherwise religious day.

"Unless Christmas be truly Christ's mass, with all the timeless and timely meaning of that term, then it should not bear that name in vain."

The greatest wonder of this to me, a Christian, is that so few members of the church have had the fundamental honesty and clarity of perception to say in the past what Dr. Eisendrath has expressed here so movingly and correctly. Maybe some of us have been asleep at the switch. Or have we been so lacking in elemental courage that we failed to take a forthright stand?

The reason I am calling this matter to the attention of my readers in February instead of next December, when Christmas comes again, is that it will be too late to take any kind of realistic action if we wait until 1 minute to midnight to solve our problems. The time to ponder such matters is well in advance. What can be done?

The increasing paganization of Christianity's holiday of deepest religious significance is a serious moral and ethical problem for all of us. Where one man's house is destroyed by corruption and greed, then whose house may be considered to be safe elsewhere? Our thanks to Dr. Eisendrath for speaking up so eloquently and well.

Life for Puerto Ricans Begins at 40

SPEECH

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. SANTANGELO. Mr. Speaker, I desire to join in the celebration of the 40th anniversary of the extension of United States citizenship to Puerto Rico. I represent a congressional district in which Puerto Ricans form an important segment of the citizenry. I have found these people, not only in my community but also in Puerto Rico, to be a very religious people. Three years ago I had the good fortune to visit Puerto Rico. I arrived on Easter Sunday and joined the people in prayer in their beautiful holy church. I saw the people in prayer. I saw them in the piazza or square engaging in their religious festivals. Because of their devotedly religious backgrounds and their practice, our Secretary of State or our President need not request us to grant $200 million or any less sum to fight communism. These people and their Spanish brethren in the Caribbean are natural enemies of the atheistic Communists.

I found the Puerto Ricans to be very hospitable and very friendly. Their homes are open with a welcome sign awaiting the visitor. Upon my visit to the senate and assembly in San Juan the legislators extended a most cordial welcome to a New York State legislator. The charming mayor of San Juan and the tireless governor of Puerto Rico were more than kind. They demonstrated the same characteristics which the poor and rich on that island demonstrate daily.

Last night I enjoyed a choral performance at Carnegie Hall celebrating the 40th anniversary of American citizenship for Puerto Ricans. This performance by a group of students of the University of Puerto Rico under the leadership of Augusto Rodriguez blended their voices in pleasing and perfect harmony. The Council of Spanish-American Organizations in New York should be proud that it sponsored this show.

The choral group sang religious and folk songs of old Spain and Carribbean lands. Their precision and performance was a marvel to behold and to hear. Tenors blended with sopranos and baritones joined with alto in harmonious ranges. Just as these students blended their voices in song, so the Puerto Ricans of the mainland are blending their cultures with ours toward a better America.

Let no one underestimate the contribution by Puerto Ricans to our America. Their sons have fought valiantly on the battlefield and they have made their sacrifices. They have earned their citizenship.

Without their help and without their labor hotels, resorts, and industry would find great difficulty to get along. They are a valuable asset to our economy. Like all new peoples to our shores, their lot has been a difficult one. Their inability to speak the English language and the lack of economic opportunities create certain problems. These problems are gradually being solved. Like all peoples who appreciate opportunities which the United States affords, they are advancing on all fronts—in schools, in business, and in politics.

Since Puerto Ricans acquired citizenship 40 years ago they have been struggling for equal opportunity. Despite the lack of privileges, despite prejudice and discrimination, Puerto Ricans have come of age this year in New York City, especially in my district.

It has been said that life begins at 40. After 40 years of citizenship Puerto Ricans are ready to live.

(Mr. SANTANGELO asked and was given permission to include as a part of his remarks a proclamation by the mayor of the city of New York commemorating the 40th anniversary of Puerto Rican independence.)

Text of the mayor's proclamation follows:

Whereas the people of the Commonwealth of Puerto Rico, on March 2, 1957, will celebrate the 40th anniversary of the extension of United States citizenship to Puerto Rico; and

Whereas through their courage and determination they have made dramatic progress under their development program, Operation Bootstrap, have rendered valuable service to the United States in international relations as an example of the highly democratic development of an underdeveloped area in free association with the United States and the people of North and Latin America; and have served with distinction in the United States Armed Forces in the First and Second World Wars and in the Korean war; and

Whereas the people of the city of New York feel a special bond of friendship and brotherhood with the people of Puerto Rico, since over 500,000 of our fellow New Yorkers are of Puerto Rican birth or parentage:

Now, therefore, I, Robert F. Wagner, mayor of the city of New York, do hereby designate March 2, 1957, as Puerto Rican Friendship Day in New York City to honor the friendship between the people of the city of New York and our fellow American citizens of the Commonwealth of Puerto Rico.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Some Recently Developed Scientific Ideas Pertaining to Water Supply

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ASPINALL. Mr. Speaker, one of the most pleasant associations that I have had since beginning my service in the House of Representatives has been my relationship with the Honorable John R. Murdock, former Congressman from Arizona. It was my privilege and pleasure to serve under his leadership and guidance when he was chairman of the Subcommittee on Irrigation and Reclamation and later when he was chairman of the House Committee on Interior and Insular Affairs. He has been a devoted public servant throughout his life and has contributed greatly to a continuing study of many of our national water problems. I am pleased to have inserted with these remarks the following pertinent parts of a recent lecture which Mr. Murdock presented to the Washington semester students of the American University:

SOME RECENTLY DEVELOPED SCIENTIFIC IDEAS PERTAINING TO WATER SUPPLY

Our country has never been so water conscious as in recent years. This concern has been nationwide but is particularly enhanced because of the prolonged droughts in the Great Plains area and in the Pacific Southwestern States. Coming as I do from the semiarid State of Arizona, where we can grow practically nothing without irrigation I, naturally, have been deeply concerned as a citizen about our water problems. While being chairman of two congressional committees having to do with irrigation matters, my private interests in a good water supply have been more than doubled by my official interests in the same. Therefore, I have eagerly sought information on any and all feasible ways of increasing the water supply, and in conserving what we have.

In the last decade some very hopeful suggestions have been submitted by scientific men and some of these are now being tried out and adopted. The daily press, in its eager search for news, is quite apt to publicize many of such scientific discoveries or suggestions. This is all to the good. But because a scientific idea has been suggested or publicized while in the experimental stage this does not mean that it is yet a proven fact. We who are so hopeful that some of these suggestions may be or soon will be proven facts are apt to follow through in studying them. I have been spending most of my time during the last few years in Washington in doing just that thing, having started it officially while in Congress and carried it on privately since. The wider study of the great West has had to be narrowed by me to the question: What do these discoveries mean to Arizona? Yet they apply to many States.

The following is not an exhaustive list, and it cannot be said to be an adequately proven list in all particulars—but indicative:

1. Increasing precipitation by cloud seeding.
2. Storing water underground with dams, without surface construction.
3. Minimizing evaporation by films on surface storage.
4. Increased effectiveness of water in photosynthesis by proper management.
5. Conversion of sea water or saline waters to potable condition.

INCREASING PRECIPITATION

It is an old idea that some men are rainmakers and can make it rain. However, prior to 10 years ago that was considered more a fable than a fact. But commencing with the first artificial snowfall about 10 years ago a great body of scientific fact and a tremendous volume of experimental knowledge has been accumulated on this subject. Now an official publication by the United States Government conveys the information that it is now a fact, rather than a fiction, and cites proof that in some instances precipitation has been increased over what it would have been naturally by from 9 percent to 17 percent. Of course, there are many ifs, ands, and buts concerning this long-wished-for process.

Some relevant questions are still awaiting solution concering rainmaking, such as: Can the induced precipitation be controlled as to time and locality? Will there be danger of lawsuits because of damage done to those who do not want rain at the time or place it comes? What proportion of the moisture that is in the clouds can thus be induced to precipitate? And if the clouds can be wrung nearly dry will that have a harmful effect upon leeward areas? This last question becomes highly significant to large areas lying on the opposite side of the mountains than that from which the moisture-bearing winds come. A whole new chapter in meteorology is being written and not yet completed.

WAYS OF CONSERVING WATER

In hot and dry countries where so much of the water for irrigation has been surface stored and carried in open canals and ditches, it has been found that the evaporation losses are terrific. The truth of this has been dawning on irrigation farmers for a long time but the proportional loss has scarcely yet been scientifically measured. However, we are appalled to know that in some cases probably as much water is lost to the atmosphere before reaching the fields as is applied to the soil in the total process of reclamation farming. Ordinarily, from a fourth to a third is lost that way. Of course, this loss occurs through the transportation of the water through streams, canals, and open irrigation ditches, but probably most of it occurs from the surface of lakes and reservoirs where the water is held in surface storage.

Is this evaporation loss entirely an inevitable incident to irrigation and therefore absolutely necessary? No; today we do not think so. In that stage of reclamation development in which the surface storage of flood waters played a prominent part and open canals were used, it has long seemed that such evaporation losses were unavoidable. This led to two suggestions to minimize evaporation losses. The latest of these proposals is to prevent some of this evaporation by chemical means, which will be discussed below. Another means of prevention is underground storage as well as underground or pipeline transportation. Of course, the water that travels seaward through the earth's crust is not subject to evaporation, and irrigation farmers are learning how to use subsurface storage because of that elimination of the evaporation losses.

DAMMING MOVING WATER UNDERGROUND

Perhaps every irrigation farmer who wishes he could pump water from this subsurface storage under his own land has several anxieties. One is what his "legal rights" are in regard to such water and whether he can retain such moving water for his own exclusive use. Another is the storage capacity beneath his land and how best to use it. He recognizes that underground storage is better than surface storage if he can actually store it and have it there when he later wants to pump it out. This has led to engineering efforts to stop and hold such underground waters in certain areas.

To illustrate one new method: A major oil company of the country advertises that they have a petroleum product in liquid form which can be forceably pumped into the valley-fill of sand and gravel in systematically placed drill holes to any desired depth, even to bedrock, which solution reacts with the earth material it encounters to make an impervious curtain which will hold the water as effectively underground as a concrete dam does above ground. This has been recommended and tried in this country although it is an importation from certain European countries. Assuming that the law will permit it, and that this damming of subsurface waters is efficient and inexpensive it may be seen that this is one way of doubling the water supply of a given valley where evaporation losses about equal the amount of water applied on the soil or otherwise exposed to the atmosphere.

RECHARGING AQUAFERS

In close connection with the subsurface storage and management of water is the recharge of underground facilities which the geologists call aquafers. Of course, nature has her own way of recharging these aquafers. Water sinks slowly into the sandy beds and the gravel of our Southwestern streams. Much depends upon the sand and gravel, as well as the volume of the torrent, as to how much sinks in and how much runs off. For years we have been practicing "water spreading" which is aimed to slow up the rush of floodwaters and thus by giving it more surface to penetrate thereby increase the recharge of the underground. In the Pacific Southwest this artificial recharging has been carried further than elsewhere.

The Los Angeles River, as it flows through the city of Los Angeles, has had some of its stream bed and banks paved for obvious advantages, but to overcome an obvious disadvantage of paving the gravelly-sand streambed, a small portion or strip down the center has been left unpaved to facilitate the getting of floodwaters into the underground. Only uncontrollable floods should escape to the sea. Sometimes this recharging is forcefully done by man by returning pump water, used nonconsumptively for air conditioning, into a companion well as is required on Long Island, in Phoenix, Ariz., and elsewhere.

It is my thought that much more needs to be known about processes of artificially recharging underground aquafers. I believe it has been carried to its greatest extent in the southern valleys of California where there are today many object lessons.

PROTECTIVE FILM

While the engineers have been figuring ways and means of controlling water in underground storage to prevent evaporation losses, scientists have been experimenting on how to prevent, or at least minimize, surface evaporation. It must be remembered that America is yet dedicated to a great degree to surface storage of water for many major purposes. The daily press informs us that scientists have proposed to cover the surface of stored water with a very thin chemical film that will protect it from the pull of the dry, hot winds that pass over it. Newspapers in Colorado, Kansas, Texas, and other Western States have hailed the idea with acclaim.

It appears that the Southwest Research Institute and Southwest Foundation for Research and Education at San Antonio, Tex., have put forth great effort and made progress in this direction. (Most recently, Congressman KILDAY, of Texas, extended his remarks in the Appendix of the CONGRESSIONAL RECORD of February 18, 1957, at p. A1178, to include an address by Dr. Harold Vagtborg, of San Antonio, entitled "We Grow With Water." This is a splendid presentation of many scientific water problems including this one on evaporation control.) It goes without saying that such a protective film of chemicals must not be too expensive, must be as highly effective as possible, must be harmless to plant and animal life and must be able to preserve itself against destructive forces. This is a very significant study.

DISCOVERIES IN PHOTOSYNTHESIS

Another scientific discovery related to water's function in plant growth includes the latest studies in photosynthesis. Since the splitting of the atom and the obtaining of abundance of radioactive isotopes, some of which are harmless and also very useful, the scientists have been able to study many life processes of great importance in agriculture and in medicine. At a world conference of scientists of almost all the world's nations at Geneva, Switzerland, a few days following the historic summit meeting of the four great heads of state, there occurred probably as significant discussions for human welfare in this scientific conference as those that occurred in the diplomatic conferences about the same time. These scientists freely exchanged their views and their knowledge on many important matters.

Strange as it may seem, when atomic energy problems are engrossing the world's attention, that such was not the most discussed scientific subject in this conference of world scientists, although they did discuss it, along with many others. A high authority in this country reports that more attention was given at this meeting to photosynthesis than was given to any other important subject. Of the two outstanding papers which this authority mentions, one was by an American scientist, Dr. C. Colvin, of the University of California at Berkeley. Without my knowing very much about photosynthesis, I have a firm conviction that the rapidly expanding knowledge of photosynthesis will enable future farmers of America with better irrigation to produce more than twice the volume of food and fiber than with the old methods of flood irrigation.

POTABLE WATER FROM THE SEA

It is not exactly a new problem for man to try to get drinkable water from the sea. Some ancient mariners could do it but most could only exclaim, "Water, water everywhere, but not a drop to drink." It is interesting to know that an American citizen named Jacob Isaacks, in Newport, R. I., in 1791, petitioned Congress to give him recognition and a reward for his invention of a method to extract potable water from the sea at relatively little cost. There being no Patent Office yet established, Congress referred the matter to the Secretary of State who at that time was an outstanding scientist himself, Thomas Jefferson. Now, Mr. Jefferson took the matter seriously and although he knew that while this was not altogether new knowledge, it was vitally important knowledge for all men to know who sail the seas. Jefferson gave it a lot of thought and personally made an official report, after due investigation and experimentation. What surprises us today is that such a simple idea was so little known then and needed to be proved. It was simple distillation of sea water in a still.

In this report to Congress, Jefferson asked and answered what had previously been done along this line and he went back to Lord Bacon and traced such efforts through the 16th, 17th, and 18th centuries to that date. In addition to distillation, which is obviously nature's method, Jefferson discussed filtration and congelation which he said had failed. He mentioned Sir Richard Hawkins in the 16th century; Glauber, Hawton, and others in the 17th century; Hales, Butler, Chapman, Hoffman, and Dove in the 18th century, all of whom used a distillation of sea water method.

In 1702, Dr. Lind used several mixtures, including sea water, supposing that the treated sea water would be less pure than other waters treated. He was surprised to find distilled sea water as pure as any rain water tested.

At this point in the report, Jefferson describes several kinds of stills and lists several experiments at sea, such as: Lord Mulgrave on a voyage toward the North Pole in 1773 made 40 gallons of fresh water per day with only a little additional fuel. M. de Bouganville, about 1763 in a trip around the world, did about the same thing.

DISTINGUISHED EXPERIMENTERS

For his own experimental work, Jefferson asked the aid of three distinguished American scientists of that time: Mr. Rittenhouse, president of the American Philosophical Society, Dr. Wester, professor of chemistry in the College of Philadelphia, and Dr. Hutchinson, professor of chemistry at the University of Pennsylvania. Three experiments were performed. In the first experiment, evidently done by Isaacks with the four distinguished men attending, "24 pints of sea water, taken 3 miles off the Capes of the Delaware at floodtime, distilled 22 pints of fresh water in 4 hours with 20 pounds of seasoned pine fuel."

In the second experiment of March 21 at the college (with a 5-gallon still) from 32 pints of sea water they got 31 pints of fresh water in 7 hours and 24 minutes using 51 pounds of hickory which had been cut about 6 months before. The third experiment was done with about the same results. Distilled sea water was found as good "as the best water in the city, although the taste was not so agreeable."

Secretary Jefferson held the opinion that this knowledge should be made very widely known, among seafaring citizens. How? Let full information of the method be printed on the backs of all clearance papers of all vessels leaving American ports. He also requested all returning seamen having used this information to report their success to newspapers with a view to improving it.

THE GOVERNMENT HAS FOLLOWED UP

Because of its historic interest I have given relatively too much space here to Jefferson's Report to Congress of 1791 on the Jacob Isaack's resolution which leaves too little space to document recent and more vital actions taken by the Government to find other solutions to this perplexing problem. President Truman in his state of the Union message called for renewed efforts to obtain usable water from the sea. Secretary of the Interior Oscar Chapman made it a point of paramount interest to have governmental action toward this objective. As a result, numerous so-called salt-water bills were introduced in Congress by both Democratic and Republican Congressmen. It is interesting to note—and quite understandable—why Congressmen from San Diego, Calif., regardless of party affiliation, were active in supporting such legislation.

As chairman of a subcommittee of the House Public Lands Committee I called the first hearing on one of these "salt water" bills—this one introduced by Congressman McKinnon, of San Diego, Calif.—which hearing was held on August 29, 1950, and several high officials of the Interior Department were called to testify on it. The serious turn of the Korean war at that time and for several years afterward made it particularly important that that great naval port and other coast cities with insufficient water resources in the hinterland should make haste to discover the great secret of purifying sea water effectively and least expensively. The transcript of this hearing was not printed—later hearings on the same bill in the next Congress were printed—but the transcript of August 29, 1950, may be found in the Government archives.

In the next Congress I was chairman of the full committee and the legislation, greatly modified, passed the House and the Senate and was duly enacted into law in 1952. This gave an authorization of $2 million through a 5-year period for appropriations to the Secretary of the Interior to enter into contracts with a scientist or with scientific bodies to carry on the necessary experimental work. On July 8, 1952, after the passage of the authorization bill and its implementation by a small appropriation as the last act of the 82d Congress, Secretary Chapman at a luncheon in his Department, personally thanked me for my official share in the legislative action toward this start. The Secretary said that while the appropriation was less, and the authorization was much less, than we had hoped for, that it was a beginning and that he would at once enter into contract with a great research organization to test the treatment of brackish and saline waters in certain wells in southwestern Arizona. This is cited to indicate that the treatment of brackish waters at the lower end of a great reclamation project is almost as important—and much less expensive relatively—as the desalting of sea water.

Let it be known that when an ideal solution for purifying saline water has been found it will be of great importance in many areas far inland as well as to seaports and coast areas. Subsequent legislation by Congress has wisely increased the authorization and also greatly increased the appropriation to implement the same. The ideal solution of treating sea water has not yet been found feasible, although the Navy is producing potable water for our Armed Forces by much improved methods of distillation. Thomas Jefferson and Jacob Isaacks would be greatly surprised to see how sea water is distilled today.

The above is but a sketchy outline of some of the directions being taken by modern science to make more good water available for use. I am glad to report that later congressional action and administrative effort has been given to this important question. Numerous Senators as well as Congressmen have given it their close attention. Since leaving Congress, I have had to leave the legislative work as well as the scientific work to others, of course, but have spent a great

deal of time in studying and checking on the progress in these various matters. Mostly I have inquired and written about what these experiments could mean to Arizona and how they could fit in—if and when satisfactorily completed—with the final solution of Arizona's water problems. I am happy to say that instead of despair I have hope that the future of Arizona will be tremendously benefited by this work of the scientist and the engineer, if aided by law and not thwarted by unwise political action.

H. R. 3011 and H. R. 4901

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I include a statement of the recommendations of National Federation of Independent Farm Organizations whose president is Mr. John G. Woods, of Lucas, Ohio, of my district. The membership of this organization are farmers and individuals who have made a study of and have practical knowledge of farm problems:

NATIONAL FEDERATION OF INDEPENDENT FARM ORGANIZATIONS,
March 5, 1957.

Hon. J. HARRY MCGREGOR,
Member of Congress, New House Office Building, Washington, D. C.

STATEMENT

On my visit to Washington today, I have been both surprised and greatly disappointed to learn that the House Committee on Agriculture has, without any invitation to, or knowledge of this federation, acted upon a majority sponsored bill, H. R. 4901, and minority sponsored bill H. R. 3011. Since I am informed these bills are to be presented to Congress tomorrow, March 6, it is impossible to now completely discuss them in detail. But as president of this federation, and also the Associated Farmers of Richland County, Inc. (Mansfield, Ohio), it is obviously of great importance I herewith express my comments.

In general, it appears these bills to implement the Soil Bank Act and the Agricultural Adjustment Act of 1938 are in essence the further extension of Federal regimentation of agriculture by subsidy which has proven so ineffective, unsound and costly to all taxpayers. This policy of attempting to thwart the natural law of supply and demand is simply another futile effort based largely on estimates and opinions, to give "gifts" of other peoples money to a minority which policy is fundamentally unconstitutional. In this perspective there seems little actual difference between the two bills to be presented, except that H. R. 4901 is more comprehensive, more costly and contains more operational loopholes or defects.

The basic argument, therefore, seems to be that other crops besides corn must be controlled since the curtailment of one crop generally increases surpluses of others. It must be emphasized that such a policy extended to its ultimate goal will require the complete socialistic control of all crops, livestock and farm management as in the British Islands. Furthermore, it should be noted, the premises on which various statistics are based, relating to corn or wheat surpluses, are fallacious inasmuch as an investigation will reveal most of the crops stored by the Commodity Credit Corporation are in fact in very bad condition and not even suitable for safe feeding to livestock. Another erroneous theory has been presented in behalf of these bills to the effect that substantially lower corn prices mean reduced profits to livestock producers, whereas the opposite is true since even possible cheap market prices to consumers of such livestock does not take into account the wider profit margin resulting on cheap feeding.

Another basic error is frequently mentioned in advocating said bils where reference is made to wheat surpluses. Actually, as occurred in the spring of 1956, there again appears to be developing a critical shortage of soft red millable wheat, as produced in the Midwest, as has been reported to me by local flour mill operators in Ohio, and at the recent national millers convention in Lexington, Ky. It is very difficult to understand why in all such legislation no distinction is made in propounding allotments, quotas, surpluses, etc., between the hard yellow-bellied wheat produced mostly in the Southwest, which is actually in surplus and the soft millable wheat produced in the Midwest which is in short supply. In regard to the voting by farmers on the corn referendum, 1956, it should be noted that although 61 percent of the farmers voting favored the 51 million acres over the 37.3 million acres, actually in Ohio, we found most farmers were considerably confused and disgusted with both plans presented, and in Ohio only about 14 percent of all corn producers voted. The ballots issued were strongly reminiscent of the Soviet type, inasmuch as they did not afford farmers the opportunity to oppose either plan, but only to select from the lesser of two evils. Furthermore, you will note, by reference to pages 3 and 4 of the attached leaflet that the provisions contained in the acreage reserve agreements (on the reverse side where very few farmers have read them) have delegated powers to the Secretary of Agriculture, and hence to the ASC, which are virtually unlimited, unconstitutional, and too complex to be readily understood by the average farmers.

In conclusion, I must therefore state in behalf of our membership, we are opposed to H. R. 3011 and H. R. 4901, as written, and believe that no legislation of this character should be added to our statutes, as we already have too many such complicated, confusing laws, which shackle our individual rights, and the operation of the American free enterprise system in agriculture. If the law of supply and demand were allowed to freely operate so that farmers today could exercise their own judgment and responsibility as did their forefathers, the corn and all agriculture problems would rectify themselves and the unjust burden of high taxes would be lifted from the present inflationary yoke of the American citizens, and constitutional Government preserved.

Sincerely,

JOHN G. WOODS, *President.*

Excerpts From Remarks of Hon. Mark Hatfield, Secretary of State of Oregon, at Lincoln Day Banquet

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith excerpts from an address delivered by the Honorable Mark Hatfield, Secretary of State of Oregon, at a Lincoln Day banquet in Portland during February 1957:

EXCERPTS FROM REMARKS OF SECRETARY OF STATE MARK HATFIELD, LINCOLN DAY BANQUET, FEBRUARY 1957

The President from Illinois died, but his party lived. The present danger of presidential assassination lies not in the man himself but in the assassination of those things for which he stands. Gettysburg in 1960, a hundred years after it became a symbol of sacrifice of another kind, might well become the burial ground of Eisenhower's modern republicanism unless youth is enlisted, a program of action is evolved, and humanitarian concepts govern those actions.

No one has sprung anything that is alien to the first Republican President. The principles of Lincoln and of Eisenhower are one and the same separated only by a century of time. Thus, I believe, that modern republicanism, embracing an honest fiscal policy, with alertness to the needs of others across the seas, with a concentration of power in the people, with an awareness of the need for harmony between labor and management, with a recognition of the men in the shops, is not new—it is fundamental and it runs through Republican Party philosophy from the emancipation of the slaves to the decisions of the Supreme Court in the past few years.

In my view the Republican Party and its revitalization to meet the challenge of vigorous party survival beyond the service of its popular President is and must be the rallying point for preservation of personal liberty, it is and must be the defense against subjection to further governmental encroachments in economic liberty.

Let us look at the 1860 Republican platform, plank No. 12: "We commend that policy of national exchanges which secures to the workingman liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the national commercial prosperity and independence." And at plank 14: "The Republican Party is opposed to any change in our naturalization laws or any State legislation by which the rights of citizens hitherto accorded to immigrants from foreign lands shall be abridged or impaired, and in favor of giving a full and efficient protection to the rights of all classes of citizens, whether native or naturalized, both at home and abroad."

We must face squarely the matter of labor. Eisenhower has proved that labor likes Ike. We have enjoyed the harmony between labor and management to which the century-old platform referred. We are still scratching our collective heads to know if labor could be convinced to like Republicanism. So let's take our queue from a winner. President Eisenhower, speaking in St. Louis a number of years ago said: "Above all, we need more economic understanding and working arrangements that will bind labor and management in every productive enterprise into a far tighter voluntary, cooperative unit than we now have. The purpose of this unity will be—without the subordination of one group to the other—the increased productivity that alone can better the position of labor, of management, of all America."

In November of 1946 he stated: "The continuing efforts of organized labor to bring the good things of our country's production to the hands and homes of those of our own people who work at their creation calls for every encouragement. As long as these efforts are in harmony with our national welfare every citizens must applaud."

Our appeal to laboring men need not be along partisan lines. It must be along the

lines of opportunities in a program we are advancing, it must be with the assurance his individual liberties will be maintained and protected. His stake in economic actions by Congress and by the legislature must be made real to him.

Lincoln's compassion toward the slaves of the South was based upon the same Christian motivation as Eisenhower's concern for the slaves of totalitarianism around the globe today. Materialism or business or property cannot serve as a foundation for a democracy but the character of individuals and the maintenance of a free society are the twin pillars which Lincoln exemplified.

We dare not lose sight of what made both of these Presidents great leaders; deep concern for their fellow man, statesmanship, and reliance on God.

If you will permit me to draw a parallel between what I fear may be our situation within the party and what it was in Lincoln's day within the Union, I should like to substitute the words "Republican Party" in those places in which Lincoln used the word "Nation" in his first inaugural address:

"That there are persons in one section or another who seek to destroy the Republican Party at all events and are glad of any pretext to do it, I will neither affirm nor deny; but if there be such, I need address no word to them. To those, however, who really love the Republican Party, may I not speak?

"Before entering upon so grave a matter as the destruction of our party fabric, with all its benefits, memories, and its hopes, would it not be wise to ascertain precisely why we do it? Will you hazard so desperate a step while there is any possibility that any portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all of the real ones you fly from—will you risk the commission of so fearful a mistake?

"Physically speaking, we cannot separate. We cannot remove our respective sections from each other, nor build an impassable wall between them. A husband and wife may be divorced and go out of the presence and beyond the reach of each other, but the different parts of the party cannot do this. * * * If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land, are still competent to adjust in the best way all our present difficulty."

Comment on a Speech of Hon. Wayne L. Hays

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a newspaper clipping taken from the Houston Herald, Houston, Mo. Houston is located in the heart of the Missouri Ozarks, drought stricken for several years, but not counted so by the Department of Agriculture. The writer of this article is a retired printer and newspaperman who served Houston newspapers for 60 years. This man is C. E. (Deacon) Elmore, of Houston, Mo. Elmore is a Democrat who has voted in every election—National, State, county, and local—since 1903 except one special election. Last week Elmore had the following article in the Houston Herald commenting on a speech by Congressman WAYNE L. HAYS, of Ohio:

Mr. EDITOR: Congressman HAYS, Democrat, of Ohio, is a real smart man. He has come forth with a wise solution of a knotty problem. Of course we all know Dulles and Benson are misfits, but it looks like the suggestion of Congressman HAYS will chase the clouds away from the darkness that envelopes our national affairs.

Mr. HAYS made a short speech in Congress a few days ago that is printed in the CONGRESSIONAL RECORD, as follows:

"Mr. Speaker, there have been some people who have suggested that the Secretary of State should resign. I think the Secretary of State and Secretary of Agriculture should exchange places and then perhaps Mr. Dulles would come out with a Middle West plan and we could give $200 million to the hard-pressed farmers of the Middle West while Mr. Benson who has again cut the farmers' income could devote his talents to cutting out some of the $200 million we are going to give to King Saud and the Middle East."

How about HAYS for President in 1960 in case Senator SYMINGTON or Congressman CHARLIE BROWN don't run? Thanks for listening.

DEACON ELMORE.

A Concentration of Business and Power Is Neither Desirable Nor Inevitable in America—Russia Places Her Entire Emphasis on Centralized Control

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in this cold war period, when there are constantly occurring the kind of situations that face us in the Middle East, in Korea, in Indochina, the two most powerful nations of the world are in fundamental opposition in almost every aspect of their life. This competitive struggle is all the more awesome and crucial in view of the tremendous nuclear forces which each has within its power to release.

Certainly, given these conditions, it seems to me that we must make every effort to strengthen our economic and political system with its emphasis on individual liberty and responsibility. Only in this way can we advance the prosperity of our people and the security of our Nation and our way of life. Only in this way will it be possible to defeat whatever schemes and plans the Communist dictatorship in Russia may devise.

Russia places her entire emphasis on centralized control of her economy, and this is productive of certain strength but also of many weaknesses.

Our own system has been built up by small-business men, by small farmers, and the working men and women of our country whether in the factory, or in the professions. This has been the basic strength of our country which has made it the greatest and most productive Nation in the world with a concern for the individual and the cultural values he represented which has been the inspiration of the entire world for three and a half centuries.

This week Senator PAUL DOUGLAS saw a threat to our way of life in the trend toward bigness in business and industry which, he said, threatens to replace democracy with plutocracy. The collectivization of modern business Goliaths by the state is no solution, he said, for Russia has shown that complete collectivism destroys freedom completely.

He emphasized the need for the protection of consumers from the exactions of the big oil and gas combines, and a reform of our taxing system.

DOUGLAS, one of the great public servants of our time, said:

I would further urge that a concentration of business and power is neither desirable nor inevitable and that what we should seek, instead, is a broader distribution of property and of power to the end that all may have enough to be secure but not so much as to menace others. This is the underlying economic and social problem of our times.

Senator DOUGLAS went on to say:

If the present trend toward bigness continues, then society will become divided between a relatively small group of managers and large groups of petty officials and workers. I am convinced that the economic efficiency of the modern business Goliaths is probably exaggerated and that their advantages are primarily financial and marketing. Their increase threatens indeed to replace democracy with a plutocracy administered by a managerial class. Moreover, as White has pointed out, the type of organization man which develops under this system is not the self-reliant American whom we prize.

European Socialists are content to let these giants become ever larger, believing that ultimately the state will then collectivize them. But even if this did occur, it would not be desirable. For power and control would be within even fewer hands. If the state controls the vast proportion of economic activity and a political party controls the state, how much freedom would there be for opponents? Few political leaders are deeply tolerant by nature. They have to be taught tolerance by the balance of political and economic power within the state. Let that balance become overwhelming or put almost complete power in their hands, then they will almost certainly use that power to coerce opposition. Russia should have taught us the lesson that complete collectivism is ultimately destructive of freedom.

The founders of American progressivism, Jefferson, Jackson, and Lincoln in former times, and LaFollette, Norris, and Brandeis in our generation had a sounder vision. They wanted to distribute power more broadly so that initiative would be stimulated and so that men could be more free.

CONSTRUCTIVE PROPOSALS FOR SMALL BUSINESS AID

Senator DOUGLAS makes these points, Mr. Speaker, that we should try to democratize the great corporations by developing more stockholders like Lewis Gilbert and promoting minority representation upon boards of directors.

We should try to protect small and moderate size business and the family farm.

We should seek the further democratization of the big unions which big industry has called into being.

The overall goal of Government should be distributivism rather than collectivism.

So far in this session of the Congress I have introduced four major bills designed to deal with various aspects of this basic and fundamental issue. They are:

H. R. 8, to establish corporate income-tax rates of 22 percent normal tax and 31 percent surtax.

H. R. 487, to provide for registration, reporting, and disclosure of employee welfare and pension benefit plans.

H. R. 2513, to amend the Small Business Act of 1953 to abolish the Loan Policy Board of the Small Business Administration, to make the Small Business Administration a permanent agency of the Government, and for other purposes.

House Resolution 166, to authorize the Select Committee on Small Business to investigate and study the problems of small business with respect to basic and applied scientific research and development.

H. R. 5034, to amend the Federal Deposit Insurance Act to authorize agreements with State banking authorities for the elimination of duplicate examinations which are insured under such act. Such permissive legislation would enable real savings to be made. This proposal was made in testimony given before the Senate Committee on Banking and Currency, January 31, 1957, by former Congressman Charles R. Howell, now Commissioner of Banking and Insurance for the State of New Jersey. Mr. Howell appeared on behalf of the National Association of Supervisors of State Banks.

TAX CUTS FOR SMALL BUSINESS

In the Cabinet committee report last year there were 4 recommendations for tax cuts for small business: First a rate reduction from 30 percent to 20 percent; second, accelerated depreciation on the first $50,000 spent for purchase of used equipment; third, permission for some corporations to pay taxes as partnerships; and, fourth, permission for installment payment of the estate taxes.

The cost of this whole package was estimated at $600 million in tax revenues, and the cost broke down as follows: $400 million on the rate reduction and $200 million on the last three recommendations.

The President says that because of circumstances beyond his control we cannot get the tax reduction promised the small firms in the campaign last fall by the administration. He adds, however, that he is favorably disposed on some tinkering with taxes as long as this tinkering effect on tax income is minimal. More than this, in a press conference recently Secretary Humphrey mentioned that $50 million might be a minimal figure.

If the President and Treasury Secretary George Magoffin Humphrey stick by these announced positions the question then becomes: How should this tax revision be made to give the brightest ray of hope to small firms?

George Burger, of the National Federation of Independent Business, has offered a very constructive proposal to me. He writes:

Why not see if it is possible for the Government to revise its business tax regulations to allow both corporations and unincorporated firms to deduct from their yearly taxable income, say $500 or $1,000, providing businessmen have spent this on expansions, improvements, or other things to improve their businesses. If a businessman has spent, say, $2,000 he would be able to take, under this thinking, $500 of that as a complete deduction from taxable income and compute his depreciation and other figures on the balance.

Perhaps some change in tax law like this might fit in with the $50 million figure mentioned by Secretary Humphrey. That is something I don't know, and is something that would have to be worked out by those people who do know the tax situation. However, this strikes me that if Congress were to do any one thing, if this particular thing were possible it might have the greatest meaning to small, independent businessmen. For it is not a matter of percentages they might not appreciate or understand, not a matter of accelerated depreciation on the first $50,000 of income spent on used machinery—most of the small fellows I suppose never get close enough to $50,000 to know what it smells like—and not like the other thing which might or might not have meaning to the great bulk of businessmen. On the other hand $500 or $1,000 in hard cash is something that they can all understand, and very clearly.

On the basis of this constructive recommendation and other like proposals I have developed and am introducing a bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct from gross income certain amounts paid or incurred for the expansion or improvement of a trade or business. The text of the bill follows:

A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct from gross income certain amounts paid or incurred for the expansion or improvement of a trade or business

Be it enacted, etc., That (a) section 162 (a) of the Internal Revenue Code of 1954 (relating to deduction for trade or business expenses) is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (3) the following new paragraph:

"(4) amounts paid or incurred for the expansion of the trade or business or for the permanent improvement and betterment of property used in the trade or business, and amounts paid or incurred in restoring property used in the trade or business or in making good the exhaustion thereof, to the extent that such amounts do not exceed $1,000 during the taxable year."

(b) Section 263 (a) of such code (relating to capital expenditures) is amended by striking out "No deduction" and inserting in lieu thereof "Except as provided in section 162 (a) (4), no deduction."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to taxable years beginning after December 31, 1956.

Our Reds Can't Bear To Be Called Subversive

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of September 15, 1956:

OUR REDS CAN'T BEAR TO BE CALLED SUBVERSIVE

The one procedure which the Communist Party of the United States has resisted more strenuously than all the other chapters in the book which has been thrown at it is the requirement that it register as a Communist-action organization, as required by the Internal Security Act of 1950. Inasmuch as it is now 1956, and the Communist Party has not yet registered with the Subversive Activities Control Board, it must be said that the Red brethren have not been unsuccessful.

All this will surprise and shock a good many Americans who had supposed that the intimate connection between the Kremlin and the American Communist Party had been established long since. (What was all that talk about Gerhart Eisler and J. Peters, two of the men who delivered Moscow's orders to its American stooges?) Nevertheless, the Communist Party has not registered.

Registration would mean that the party would have to file with the Board the names and addresses, not only of its officers but of its whole membership. Furthermore, the party would be required to file with the Board annual statements of its sources of income and other financial information. It is easy to see why the party has put up a more strenuous fight to resist registration than it has made even to save its more prominent officers from the clink.

The Communist Party's greatest victory in this battle was, of course, scored in the Supreme Court of the United States last April, when the Court refused to affirm the Control Board's order that the Communist Party must register as a subversive organization.

The Court's ground was that the proceedings before the Board might have been tainted by the testimony of three witnesses whose credibility had been challenged in earlier cases. The Communists made no serious effort to disprove the testimony of these men before the Board, contenting themselves with an effort to discredit them as professional perjurers. Actually, their testimony was hardly controlling. Justice Clark in his dissenting opinion declared that "never before have mere allegations of perjury, so flimsily supported, been considered grounds for reopening a proceeding or granting a new trial."

The Board recently decided to remove the testimony of the challenged witnesses from its report and to deny the party's motion for new hearings. However, an appeal by the Communists will start proceedings which may consume another 6 years before the Supreme Court has another crack at them.

To this end the Communist Party has been busy as a bee attempting to build a new case. It has again challenged the constitutionality of the Internal Security law and raised legal objections to virtually every step in the pro-

cedure. It demands that the appellate court in the District of Columbia order the FBI to produce its confidential files dealing with witnesses whose credibility was challenged—the customary effort to smash the FBI.

The 1953 report of the Subversive Activities Control Board was based on a record of 14,000 pages which makes it apparent to any intelligent American that the Communist Party has been under orders from Moscow since its inception. American Communist Party leaders have been summoned to Moscow to get their orders. Others have attended the Lenin Institute courses on subversive tactics. Several, including Earl Browder, have been removed from control by order of the Kremlin.

And yet 6 years after passage of an act of Congress intended to curb this conspiracy, effective action has been successfully resisted—and resistance at least temporarily facilitated by what seems to us to a Nervous Nellie type decision by the highest court in the land.

HOW MUCH RED PROPAGANDA CAN A GOOD MAN ABSORB?

A phenomenon which must be the despair of rational men and the delight of cynics is the extraordinary blindness of many good people to the ethical principles which they are supposed to defend. In a recent issue of the Christian Herald, Mr. Gerald Bailey, an observer for the United Nations and also for the British Society of Friends, was quoted upon his return from a 25-day tour of Communist China. Mr. Bailey declared that "in the broadest sense the Chinese people seem to be satisfied with the government * * * it is honest and responsible as compared with the preceding regime * * * it has given the country internal peace in the first time of the memory of the living."

Having said this, Mr. Bailey makes the astonishing statement that the "price of all this may be the slow destruction of the individual personality, but if this be true the Chinese do not seem to be aware of it." He adds that "Shanghai is now almost deserted" and that "600,000 persons, one-quarter of the city's labor force, are unemployed." Large numbers of Chinese, Mr. Bailey reported, have committed suicide.

What baffles us less dedicated people is the calm objectivity with which a religious leader is able to praise the accomplishments of a regime which has produced internal peace by means of universal terror.

If the day should ever come when the United States of America, or even Great Britain, was enslaved by a fanatical minority, isolated from the outside world, and brainwashed and terrorized into acceptance of these tragic conditions, let us hope there will be at least one Jeremiah among us to tell the truth, instead of blandly assuring the rest of the world that, although our personalities have been destroyed, we don't really miss them at all.

Hon. Francis E. Walter, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

SPEECH

Mr. KELLEY of Pennsylvania. Mr. Speaker, this is the 25th anniversary of the entrance into this body of a very distinguished Pennsylvanian, the Honorable FRANCIS E. WALTER, the dean of the Pennsylvania delegation. Mr. WALTER came to this Chamber a quarter of a century ago.

His career has been marked by a high degree of intelligence and statesmanship, I, along with other members of this great body, pay tribute to him today and wish him many more years of valuable service to this Nation.

Trinity River Project

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. SCUDDER. Mr. Speaker, on June 21, 1955, the House passed H. R. 4663, a bill to authorize construction of the Trinity River project as a unit of the Central Valley project in California. The debate on this bill indicated very definitely that the project was feasible and worthwhile. During the debate it was pointed out that the Pacific Gas & Electric Co. would propose a plan to buy from the Federal Government falling water for the generation of electricity and distribute the same through their own power lines to consumers in northern California. Many Members of Congress, including myself, who supported this legislation felt that a thorough and unbiased investigation of the proposal which might be offered should be considered in the full light of benefit to the people who would be served within the wheeling range of this project.

The project was approved and is well under construction. In accordance with the bill, the utility company desiring to bid for the falling water was allowed to submit its proposal within 18 months from enactment of the legislation. Negotiations have been going on between the Pacific Gas & Electric Co. and the Department of the Interior, and on February 13, 1957, the Secretary of the Interior, Fred A. Seaton, submitted his recommendation that the Congress approve joint development of the hydroelectric phases of the project and permit the sale of falling water to the Pacific Gas & Electric Co., providing that they construct the generating facilities and transmission lines.

This would amount to a reduction of $55,500,000 in the initial capital investment by the Federal Government in the overall cost of the Trinity River project, which is estimated at $225 million. The company also proposes to pay to the Federal Government over a period of 50 years $165 million for falling water.

Furthermore, the Pacific Gas & Electric Co. will pay Federal, State, county, and city taxes in the amount of $135 million over the 50-year period.

It seems to me that this is an extraordinarily profitable venture for the Federal Government and should receive almost the unanimous support of the Congress of the United States, particularly at a time when we are trying to balance the budget and put our financial house in order.

When this bill received the approval of Congress, I made the statement that I was in favor of free enterprise and that the distribution of the power generated on the Trinity River should be turned over to a private company if a favorable contract could be made. The decision that must be reached on this project is one for the exercise of each Member of Congress. I find myself necessarily in disagreement regarding this project with some members of the California congressional delegation. The people of my district, I feel, are overwhelmingly in favor of the partnership contract and endorse the stand of the California State Chamber of Commerce and former Under Secretary of the Interior, Ralph A. Tudor, as expressed in the following statements, which I desire to include with my own remarks:

STATEMENT OF POSITION OF THE CALIFORNIA STATE CHAMBER OF COMMERCE, AGRICULTURE, AND INDUSTRY ON THE TRINITY RIVER PROJECT DEVELOPMENT

The California State Chamber of Commerce believes that the partnership plan approved by Secretary Seaton for the development of the Trinity project is sound and in the best interest not only of every citizen in California but of the Nation.

This chamber is opposed to Government ownership and operation of industry, whether under the guise of reclamation or otherwise. It is an obvious and often demonstrated fact that the only means of saving money for the consumer through Government ownership and operation is to resort to false and misleading means of tax exemption and use of Government credit. There is no secret means by which Government can furnish goods and services at cheaper rates than private enterprise. The only way Government can use its powers to subsidize the few who directly benefit is by shifting costs to the many. Such discriminatory use of Government credit and powers, if continued, will eventually lead to nationalization of industry here, as it has elsewhere. No private business can compete successfully against a Government agency which has tax exemption and access to the purse and police powers of Government.

It is essential that Government encourage creation of taxable property. It is the opinion of this chamber that private enterprise should be encouraged, not hindered, by governmental competition. Public funds should be invested only where necessary to furnish adequate service that private enterprise cannot provide. Such a policy should be followed not only in regard to production and distribution of electric energy, but also in regard to all other business or enterprise, regardless of size or nature.

PARTNERSHIP DEVELOPMENT OF TRINITY RIVER PROJECT

(Statement of Ralph A. Tudor, Tudor Engineering Co., San Francisco; former Under Secretary of the Interior)

I have carefully reviewed the report of the Commissioner of Reclamation and of Secretary of Interior Seaton on the proposed partnership development of the Trinity River project in northern California. These reports clearly show that if the partnership plan is followed rather than all Federal development, there will be a saving to the Federal Government of not less than $55,500,000 in initial capital cost; the Federal Government will collect at least $165 million more in revenue in the first 50 years if it accepts the P. G. & E. proposal than if it generates and sells the power itself at present Federal rates; and the Federal, State, and local governments will collect an estimated $135 million in taxes during the same period if the joint development plan is adopted.

This is a total gain to the taxpayers of at least $355,500,000 on a project whose total cost was estimated by the Bureau of Reclamation to be $225 million.

Secretary Seaton concludes, and I am sure correctly, that "joint development would provide substantially more funds for potential irrigation and multipurpose development in the Central Valley area."

The principle of joint development proposed in this instance is by no means unique, for it has been worked out in the same general manner between the Federal Government and investor-owned utilities as well as local public bodies on numerous occasions ever since the Federal reclamation law was first passed in 1902, and, for that matter, even earlier.

Youth Group Achievement Awards

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mrs. GREEN of Oregon. Mr. Speaker, we hear much these days about juvenile delinquency. It is, of course, a national problem about which we should all be concerned. Many of us in this body, myself included, have, in fact, been so concerned that we have introduced legislation which would give Federal leadership to the fight against juvenile delinquency and establish a broad program to assist States and localities in their efforts for the control and treatment of juvenile delinquency.

However, while we must exert every effort to provide adequate services for the rehabilitation of those children who get into trouble, we must not forget that the vast majority of our children are doing things of which we have a right to be proud. Too often the misdeeds of the very few are allowed to overshadow the good deeds of the many.

I am, therefore, pleased to note the announcement of the Parent's magazine youth achievement award. Awards totaling $1,000, as well as certificates of honor, will be awarded to the youth group or groups which have rendered, during the period from June 1, 1956, to to May 31, 1957, the greatest school or community service or other outstanding and useful public service, to their school or community, or have done other important work.

Parent's magazine is greatly to be commended for this effort, the knowledge if which is deserving of the widest possible dissemination. I trust that every Member will make an effort to bring these awards to the attention of the people of his district so that youthful activities of merit may receive the recognition they deserve.

Under unanimous consent, Mr. Speaker, I request that there be printed in the body of the RECORD, immediately following my remarks, the information which should be furnished in making nominations for these awards. These nominations, which can be made by the groups themselves or by teachers, principals, civic or church leaders, newspaper editors, parent-teacher associations, and other interested individuals, before June 1, 1957, should be sent to Parent's magazine's youth group achievement awards, 52 Vanderbilt Avenue, New York 17, N. Y.:

1. I hereby nominate for Parents' Magazine's youth group achievement awards in 1956–57 the following group:
   Official title of group_____
   Address_____
   City, State_____
2. Total number of members_____
Boys_____ Girls_____ Average age_____
3. Affiliation of youth group_____
4. Please describe very briefly the useful service for which this group is being nominated. (Attach to this form a statement of 500 words, or less, describing more fully the achievement of the youth group nominated. Give facts on how the group worked on this project, what cooperation it received, the opposition (if any) encountered, and the specific accomplishment with particular emphasis on activities from June 1956 to date. Include supporting documents such as newspaper clippings or photographs of the group in action and letters.)
_____
_____
5. What circumstances made this service needed? _____
_____
6. Give dates of this service _____
_____
7. What has been achieved to date?_____
_____
8. How many members participated actively in the youth group's activities?_____
9. Was the youth group assisted in this service by any other group? _____ Explain nature of assistance (advice, guidance, direct participation) _____
_____
10. Does this youth group have an adult leader? _____ If yes, please give:
   Name _____
   Position _____
   Address_____
   Work done on project for which group is nominated for award_____
   _____
11. Names and titles (if any) of outstanding members in the group project:
_____
_____
12. What awards or other recognition has this group received as a result of this effort? List prizes won, newspaper or magazine articles, television and radio programs, etc. _____
_____
Date_____ Signed_____
Title_____ Address_____

Time for Action

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a commendable and most interesting editorial that appeared in the March 7, 1957, edition of the National Tribune-Stars and Stripes, Washington, D. C.:

TIME FOR ACTION

The House Veterans' Affairs Committee has approved H. R. 52, introduced by Representative OLIN E. TEAGUE, of Texas, World War II veteran and chairman of the committee. This bill would raise compensation payment to service-connected veterans with 10- to 90-percent disability by about 10 percent and increase the payments in 100-percent disability by 24 percent. The bill also applies to dependency allowance to veterans whose disabilities are rated at 50 percent or more.

Senator HUBERT H. HUMPHREY, of Minnesota, has also introduced a bill which would grant somewhat greater increases for the service-connected and their dependents than the Teague bill.

It would appear from present knowledge that some form of bill to grant increased compensation in the case of the service-connected will be passed. It is easy to give support to such a measure because there is not one honest to goodness American who wants to see that particular class of veteran neglected.

There are many others, in and out of Government, apparently responsible citizens, who also give this type of bill lipservice. These groups take such action because, first of all, they realize it is popular, but more surely, because they feel that by thus appearing to support help for the service-connected veterans and their dependents, they may avoid the payment of another just debt, due all veterans—a debt which they fear will tax their pocketbooks too much and a debt which they will try to avoid paying by every form of misleading propaganda.

On the question of this latter debt to the veterans of our country it all seems to resolve itself into one simple question. Do the people of the United States owe anything to the men who fought their country's wars and endangered his life and future in winning those wars?

Up to a few years ago the people of our Nation felt they did owe such a debt, a debt which has been met with generosity and alacrity by not only the citizens of the country but also by the many Congresses which have been making the laws of our land since the beginning of our Republic.

Until a short time ago the theory that a veteran, by reason of his service was not in a separate class from those who did not don the uniform in time of war, and had not earned the gratitude of the country, had never been brought up.

The first crack in the veteran's armor came in 1933 when the economy bill was passed, cutting off thousands and thousands, some old, some younger, from the benefits they had been granted.

A glance at the roster of the group which fostered the Economy Act will inform any intelligent reader that it was made up primarily of the wealthy, big taxpaying citizens whose only thought was to save themselves taxpayments at the expense of the most defenseless class, the veterans of the wars of the United States.

They were bold and determined in their efforts to lop veterans off the pension rolls and, sad to relate, they were quite successful. Thousands of veterans found themselves unable to cope with the then high cost of living—other thousands took their own lives in despair when they realized the enormity of the crime which had been committed against them. It took years to restore even a semblance of the inherent rights to which war veterans and their fellow countrymen had always been entitled because of such service.

Today, in a later era, we find the same forces of evil working against the veteran class, again using all kinds of misleading information and figures to deceive the people of the United States and put the fear of costs in their heart to such an extent that even the decent folks in our country are not sure just what they are facing.

It has been said many times that figures don't lie but liars can figure. That is what

is being done now and once again the lead is being taken by the big metropolitan newspapers, backed by the wealthy. Projection as to costs of veterans' care is being taken forward to the year 2000, when, if you believe the false propaganda being disseminated, the Nation will become bankrupt by the staggering amount which veterans and their dependents will take from the Government if their care is continued.

These figures do not tell you that within less than 10 years scarcely a Spanish-American War veteran will be alive, and this is also true of the widows of that war. They do not tell you that veterans of World War I are dying at the rate of 100,000 a year and that long before the year 2000 there will be hardly a single War I veteran still alive. And this also applies to the widows of such veterans. With the exception of a few long-lived survivors of that war the mortality laws will have taken care of the costs to the Government and the taxpayers.

We have not mentioned the veterans of World War II and the Korean War although we believe that when the time comes, they, too, should be aided by the Government for which they fought.

Fortunately, zealous action on the part of the older veterans has seen to it that this younger group is in a better situation, financially today than were their older brothers or fathers, 10 years after the end of the wars in which they took part. By reason of the laws which the older group insisted be placed on the statute books the country is far better off than ever, having developed the skills and services of a young, ambitious class whose advancement in the years to come can only inure to the benefit of all the Nation.

Our attention is called to that class of veterans and their dependents who now need the safeguards to which they always believed they were entitled. We think of the few remaining veterans of the war of 1898–1902 and their aging widows. The pitiful pension of $54.18 which the Spanish War widow now receives is truly a disgrace to the most prosperous Nation in the world. They should be cared for with a decent increase to help in their last few remaining years.

We consider, also, those veterans of World War I who are, with few exceptions, in their sixties and of the many in this class who, by reason of age or disability, or both, are now unable to meet the keen competition of the day and must fall back on the Government and the people they served in time of danger in the now almost forgotten long ago.

Bills of various descriptions have been introduced in their behalf, some better than others, but all designed in an attempt to bring relief.

It is too bad that people highly placed in our Government have declared that the veteran of a war is just another citizen and that when the time comes the Government or the State will take care of him with some form of old-age assistance.

Patriotism is considered unintelligent by many sophisticates but we cannot believe that it has entirely left the hearts of the great majority of our people and we believe that properly educated the good citizens of our country will back up the efforts of the various veteran groups in the latter's endeavor to secure some modicum of aid for their former comrades in arms.

Two things seem to be necessary if the veteran is to secure the benefits to which he is properly entitled. We have suggested the education of our citizens on the subject of veterans' rights. That can be done if properly conducted.

More important, however, is the union of all veterans behind a worthy measure which would insure a decent pension for those who deserve it, a pension without regard to income limitations, a pension that would be a real token of the esteem in which the veteran is held by his fellow countrymen.

We do not call for a Legion bill, a Veterans of Foreign Wars bill, a Veterans of World War I bill, or a measure proposed by any veterans' organization. We do want to see a measure which will have such a backing by the veterans and the people that it cannot fail of passage by the Congress and enactment into law.

Remember, the voice of the people is the voice of God, and once expressed it must be obeyed by the most powerful influences which might contend against it. Let that voice be heard in the next few weeks, veterans, and our fellow countrymen. Make it thunderous in its unanimity and we cannot lose.

The Political Trial of Mat Connelly

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson:

ST. LOUIS, MO.—On the morning of July 7, 1956, at 9:30, United States District Judge Rubey Hulen went into the backyard of his home in St. Louis, aimed a .32 revolver at his temple, and pulled the trigger. He died 4 hours later at the Barnes Hospital. It was one of the few times in the history of the United States that a Federal judge committed suicide.

At 10 a. m. that same day Judge Hulen was scheduled to go to the same hospital where he died, for another purpose. He was to get shock therapy to rouse him out of a depression partly brought on by a trial over which he had presided. It was the trial of President Truman's appointment secretary, Mat Connelly, and former Assistant Attorney General Lamar Caudle.

From remarks Judge Hulen made from the bench and to his doctors, it was obvious that the trial preyed on him. He expressed the private opinion that there might have been a miscarriage of justice. A jury on June 14 had found Caudle and Connelly guilty of conspiracy to help Irving Sachs, a St. Louis shoe manufacturer, evade taxes; and on July 19 Judge Hulen was scheduled either to sentence them or grant them a new trial.

Here in St. Louis I found that a friend who invited the judge to go for a drive a few days before his death had found him with a pad of paper and pencil trying to write an opinion in the case. "They didn't do any more than you or I would have done," he said.

He went out less and less during and after the trial. Mrs. Hulen said that the trial preyed on his mind. For a time, during the trial, his mind was such that his doctors considered giving him shock therapy. However, this type of treatment for a mentally ill person causes a complete, though temporary, loss of memory, and would have made it impossible to continue with the trial.

So the shock therapy was postponed until after the trial was over. Thirty minutes before he was to begin that treatment, Judge Hulen killed himself.

A DREYFUS CASE (?)

If you examine the facts in the case over which Judge Hulen had to preside, you can understand some of the reasons why he might become mentally upset. For the case could turn out to be as unfair as the famous case of Capt. Alfred Dreyfus.

For 3 years Attorney General Brownell had been probing the various activities of Truman's close friends and officials. Some of them needed probing. Most of them had been pretty well exposed in this column or by congressional investigation some years before. Obviously, however, a criminal conviction in 1956 would make important campaign material for an election year.

For over 2 years Brownell had been holding grand juries in St. Louis, Omaha and Kansas City, Harry Truman's home territory. Virtually the same officials were hauled out to testify—ex-Secretary of the Treasury John Snyder, ex-Under Secretary Ed Foley, Caudle, various revenue men. The juries in Kansas City and Omaha were unresponsive. But that in St. Louis was out for blood.

Finally Brownell's boys hit on the case of Irving Sachs, a St. Louis shoe manufacturer suffering from extreme epilepsy. Though there was a call from the White House on Sach's behalf, and though some wires were pulled, Caudle sent him to trial anyway. He pleaded guilty and was fined $40,000.

This column had carried the full story on April 24, 1950. The story had come from Caudle himself. He was completely frank, had nothing to hide. Almost 6 years later, well after the statute of limitations had run, Brownell's boys indicted him and Connelly. They took the case before their runaway grand jury in St. Louis.

At the final trial last spring, part of the Justice Department's case was so flimsy it folded up.

Judge Hulen, sitting on the case, obviously expected an acquittal. He seemed so surprised when the jury brought in a verdict for Brownell's boys that he remarked from the bench to Caudle's and Connelly's attorneys:

"You are going to renew your motion for an acquittal. And you are going to renew your motion for a mistrial."

Charles Margiotti, attorney for Caudle, said: "We renew those motions right now."

"Then I will hear your arguments on July 19," said the judge. He never heard those arguments. On July 7, worried over the case, he shot himself.

The Justice Department, instead of permitting a new trial, placed the written evidence before a completely new judge, Gunnar Nordbye of Minneapolis.

Judge Nordbye read the evidence. He had not sat in any part of the trial. He did not hear the witnesses testify. He did not hear the arguments. He didn't have the feel of the courtroom. He found for the Justice Department, sustained the convictions of Caudle and Connelly.

They are to be sentenced tomorrow.

A Letter From "Jimmy"

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

Mister, do you love your children and your grandchildren?

You know, mister, you've spent a whole lot more than you will ever pay for. And now you're spending and giving away the money me and my kids will have to earn.

My uncle tells me what you call "prosperity," and "we never had it better," isn't quite fair. He says you are borrowing on me and my children—and even my grandchildren and giving the money to people to

spend now—but me and my kids are the ones who will have to pay for it. Now, really, mister, don't you think that is a dirty trick to pull on us kids?

My uncle says we got a lot of fine men in Congress and the Senate—and he thinks our President is tops. But he says they are all so kind hearted they are trying to solve all the problems of the world right now. He says many of those troubles have been growing for hundreds of years, and it isn't quite fair for this generation to try to fix everything for everyone.

I suppose it was O. K. for you fellows to go as far as you wanted with your own money. But you shouldn't be loading it on me and my cousins.

Mister, I think if you knew what a dirty trick you're pulling on us kids, you'd be ashamed of yourselves.

JIMMY.

Visiting Congress

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ASPINALL. Mr. Speaker, it is an axiom that those who are closest to their everyday work often find it difficult to view their work objectively. Thus, it may be of interest to the Members to know what others think of the day-to-day operation of Congress. Such an unbiased point of view comes to hand in an editorial by Arthur Ballantine, Jr., publisher of the Durango (Colo.) Herald-News. Mr. Ballantine, a discerning observer, was a recent visitor in Washington and has written the following editorial on the subject. The editorial, from the Durango (Colo.) Herald-News, follows:

VISITING CONGRESS

(By Arthur Ballantine, Jr.)

Seeing the United States Congress at work is an impressive experience.

Most, fortunately, feel free to criticize the actions of Congress. Yet one gets a feeling of awe upon approaching the handsome Capitol Building where one of the two most powerful governments in the world makes its decisions.

The inside is rich in American traditions. Murals tell the famous incidents in American history. Statues of distinguished Americans have been presented by their home States and admiring groups. Dr. Florence Sabin is shortly to be added to the Capitol collection as a representative from Colorado.

The Senate Chamber is a remarkably quiet place. Although debate was beginning on the important Eisenhower doctrine, only a handful of Senators were listening. The Chamber is seldom full unless debate is nearing a crisis or votes are about to be taken. The only rule is that some Senator must be there to represent the majority and another to represent the minority.

The next day we had the unusual opportunity of lunching with the entire Colorado delegation.

While Colorado's delegation is equally divided between Reupblicans and Democrats, the delegation usually votes solidly on matters affecting Colorado such as water and highways. It was easy to see that the delegation worked together, having a friendly spirit which is probably impossible to achieve in the larger States.

The House is a good deal more active place than the Senate, since there are 435 Members against 96. Whereas the Senate has individual desks, the Representatives sit in rows of undesignated seats. The Speaker of the House, SAM RAYBURN, exercises a good deal more direct influence on day-to-day government than the Vice President does in the Senate, and he is second in line to succession to the Presidency.

A striking thing is the friendliness of Senators and Representatives to Capitol visitors. Many of them bear names famous throughout the country. Yet they are always ready to stop and visit when one of their fellow Members has guests.

This personal attention is certainly one of the more time consuming features of the lives of our Senators and Representatives. Another is the official occasions they must attend in the evening. This is in addition to the very heavy legislative work they must do. Being a Senator or Representative is not such a cinch as one might think.

Ohio Republican Members of House Show Way to Economy in Our Government

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. JENKINS. Mr. Speaker, I am pleased to learn that a resolution adopted by the Republican Congressmen from Ohio on February 25 is being given a great deal of attention and publicty. The fact that it was approved and signed by all of the Republican Members from Ohio has given it some special attention. The Republican membership in the House numbers 17. The fact that it recommended a reduction in the Federal budget, which reduction was being insisted upon by many of our people and our newspapers, also added to its importance and newspapers all over the country have commented on it.

My friend, Congressman CLEVENGER, from Ohio, has brought to my attention a very interesting editorial from the Fort Lauderdale News which gives the subject most favorable consideration.

Mr. Speaker, I ask that this editorial be printed in the CONGRESSIONAL RECORD as a part of my remarks. The editorial is as follows:

OHIO REPUBLICAN MEMBERS OF HOUSE SHOW WAY TO ECONOMY IN OUR GOVERNMENT

The widely held misconception that the average citizen can do little or nothing to help reduce Government spending got a big kick in the teeth last week when the entire Ohio Republican delegation in the House of Representatives served notice on their colleagues they had unanimously agreed a substantial reduction of President Eisenhower's $72 billion budget will be in the best interests of the people of the United States.

Why did the Ohio Republican delegation take this action? Primarily because the citizens of Ohio have taken up cudgels against high Federal taxes and high Government spending and through letters to their congressional representatives they have made it clear they want and expect relief.

These letters brought results. Representative THOMAS JENKINS was one of the Congressmen who was the recipient of many of these letters. After talking the matter over with some of his fellow Ohio legislators he called a meeting of the entire Ohio Republican delegation on February 25. At this meeting the budgetary situation was thoroughly discussed and after the discussion the following resolution was adopted and later presented on the floor of the House:

"The Ohio Republican delegation in the United States House of Representatives, after careful study and evaluation, has unanimously agreed that a substantial reduction of the $72 billion budget will be in the best interests of the people of the United States.

"It was further agreed that every proposed reduction in the budget, which does not curtail essential services or endanger the security of our country, will be supported.

"The action of the Ohio Republican delegation is the first of its kind with respect to the present budget and is in accord with the admonition of President Eisenhower and Ohio's own Secretary of the Treasury, George M. Humphrey, that Congress exercise its independent control over Government spending."

The above resolution was signed by all 17 Ohio Republican Representatives, who have now placed themselves squarely on the record for substantial budget cuts, and who will have to answer to the citizens of Ohio if they fail to live up to their economy pledge.

This incident demonstrates what can be accomplished when citizens of all stripes pick up their pens and let their congressional Representatives know how they feel about things. All too often Congressmen hear only from the pressure groups and the individuals who want something from the Government at all the taxpayers' expense. Thus we can hardly blame our Congressmen for adopting the attitude that since the general public doesn't care much one way or the other whether or not they go along with the pressure groups, there's no harm in giving them what they want.

But now, fortunately, Congressmen are beginning to hear from Mr. and Mrs. Joe Doakes back home and they are finding out there is a lot more interest on the part of the people in reducing taxes and spending than they might have realized. And so our Congressmen are starting to pay some attention to what Mr. and Mrs. Joe Doakes are asking them, and for the first time in a long while they are paying more than mere lipservice to the issue of economy in our Government.

That's why we would like to dispel the idea that the average little citizen can't do anything to reduce his taxes or stop the Federal Government from spending so much of his tax money. The average citizen can do a great deal simply by writing a postcard or letter to his congressional Representatives and letting them know how he or she feels about not only high taxes and high spending, but about other issues as well.

Don't get the idea Congressmen don't read their mail from back home. They all do it religiously and they are quick to note the reaction of their constituents to legislation coming up before them.

As we have pointed out before in this space, Congressmen are reporting the receipt of a very heavy volume of back-home mail this session, demanding that action be taken by Congress to reduce the budget and cut taxes. This is all to the good, and, if anything, our people should redouble their efforts in this respect.

The administration, no doubt, will put heavy pressure on the Congress not to reduce foreign aid and a host of other nonessential Government spending. But if our Congressmen have sufficient indication that their constituents back home really want these unessential expenditures cut out of the budget there is a mighty good chance this will be accomplished despite the objections of the bureaucratic spenders.

It's true one letter, by itself, isn't likely to sway a Congressman's vote. But many letters, all asking the same thing, will cause

him to stop and think, as has well been proved by the resolution adopted last week by the Ohio Republican delegation in the House.

JACK W. GORE.

Committee on International Affairs

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. TELLER. Mr. Speaker, I am introducing a resolution today—House Resolution 186—to change the name of our standing committee which deals with our relationship to neighboring countries and nations abroad from "Committee on Foreign Affairs" to "Committee of International Affairs." My purpose in proposing the resolution is to point up the grave responsibilities of world leadership which have been imposed upon our country.

My proposed resolution is not an exercise in semantics. Words help to mold thinking, and the thinking evoked by the words "foreign relations" is bad because it pictures our neighboring nations and nations beyond the seas as foreign to our interests, peopled by foreigners in whose welfare presumably we have no concern.

The name and existence of the present Committee on Foreign Affairs was established in 1822, when we were a country barely recovered from the struggle for independence from foreign shackles, when the War of 1812 was still fresh in the minds of our lawmakers, and when facilities for traveling were so slow that countries in Europe, and particularly in Asia, were regarded as being in a different world.

The present situation has not the slightest resemblance to the time in 1822 when the Committee on Foreign Affairs was established. Nineteenth century wars tended to local conflicts, most of them foreign encounters which we viewed at safe distance, but in this century we were participants in two world wars and even more recently saw the necessity for sending our soldiers to far-away Korea in defense of our ultimate national interests and world peace.

The airplane, the rocket and, overwhelmingly, the consequences of atomic energy have reduced space and increased interdependence to a degree which not even Jules Verne's imaginative mind preconceived. Add to this the world-wide menace of gangsterism which goes by the name of Soviet communism, and we see the utter realism of the word "foreign" to describe our relationship with the world community of nations. The air-mile has not only cut down distance but has evoked new and more closely knit space-time dimensions for good and evil.

Discarding the word "foreign" for the word "international" is a vehicle for expressing a number of policies and points of view. The Republican-dominated Midwest isolationism would be repudiated, and for it would be substituted a hospitable reception for the requirements of international cooperation, a more realistic appraisal of our significant role in the United Nations.

We would need also to abandon the preoccupation with the military aspects of our relations with other countries and assume a greater responsibility for the well-being of our friends and allies. Some of this is being done already, but at times its grudging and unsystematic character impairs its value. Piecemeal charity is different from a coordinated system of mutual assistance in international relations such as the Truman doctrine and the Marshall plan.

Upon our country has fallen the heavy tasks of world leadership. Free nations look to us for guidance and help in combating communism, in developing a sound economy. Asiatic peoples watch our profession of a new approach to their problems to see whether we really mean some of the nice things some of us are saying about them. It does not help, for example, to have a McCarran-Walter Immigration Act, which distinguishes between native-born and naturalized citizens, and which incorporates a racist national origins clause governing admission of immigrants.

I do not desire to extend this statement unduly to scrutinize all the ramifications of my proposed resolution. In a way, its purpose should be obvious, particularly with this purpose expressed, as I have sought here to do, my proposed resolution should be adopted as a forward step in our developing preeminence in international relations.

Those Oil-Rich Arabs

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. BERRY. Mr. Speaker, I have asked permission to insert in the RECORD an editorial which effectively points up the fallacy of the argument of those who attack the Middle East resolution on the ground that certain oil-rich countries would receive vast amounts of foreign-aid funds.

The following editorial was carried in the March 1, 1957, issue of the Washington Star:

THOSE OIL-RICH ARABS

One of the more constructive Democratic statements on the Eisenhower Middle East program has come from the youthful Senator JOHN KENNEDY, of Massachusetts. Mr. KENNEDY is not enthusiastic about the program. He is going to vote for it, however, because he believes the certain consequences of defeating it would be far more harmful than any conceivable consequences of adopting it.

Senator KENNEDY also had a few words for those who have been making demagogic speeches about what a shameful thing it is to be pouring our taxpayers' money into the coffers of the oil-rich Arab potentates. Actually, the oil-rich Arab countries of the Middle East—Saudi Arabia and Iraq—have received a total of $10 million in aid over the past 5 years. This is what Senator KENNEDY had to say about it:

"The total amount received by all eight Arab States in approximately 5 years has been only $73 million worth of economic and technical assistance (and no military grants to speak of). The bulk of our aid to the Middle East, with actual economic assistance expenditures of $237 million, has gone to Israel, and practically none at all has gone or is going to oil-rich Arab potentates.

"But surely $73 million or $200 million or even $750 million is not an unprecedented sum with which to bolster the economic and political stability of an entire area against the spread of Soviet imperialism. We have spent over $2 billion for this purpose in Greece alone, roughly $2.5 billion in Korea (not counting the war), and nearly $2 billion on Formosa and free China. The amount under debate for the entire Middle East area is less than the amount we spend for similar purposes each year—mostly in economic aid—in either Vietnam, Korea, or Formosa alone."

These are interesting statistics, and they should help the public to maintain some degree of perspective the next time an anguished Senator begins to beat his breast over this terrible business of showering American dollars on the oil-rich Arabs.

A Ceiling on Appropriations and Expenditures for the Fiscal Year 1958

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Rules Committee March 5, 1957, in support of House Resolution 170 which would set a ceiling of $65 billion for appropriations and expenditures for fiscal year 1958:

Mr. Chairman and members of the Rules Committee, I appreciate your courtesy and consideration in holding this hearing so promptly after the introduction of House Resolution 170 on February 19. Such recognition that the subject matter is of great public importance and that time available for action is rapidly running out, is both welcome and encouraging.

Going directly to the issues, I plan to deal with them in the following order: First, is legislative action in this field needed; second, will an amendment of the House rules provide the quickest and most nearly adequate remedy; and third, are the particular limitations set forth in House Resolution 170 reasonable and will they be practicable in operation.

Our forefathers were acutely conscious of the danger that the free government they were creating and the new individual liberties they were establishing might be lost by uncontrolled national spending and taxation. They sought to guard against that danger by placing in the Congress the power to control spending. More particularly they gave only to the House of Representatives, the Members of which are elected every 2 years, the power to originate tax legislation. With that power goes the responsibility for taking action appropriate to serve the national interest. A further check was given the President, elected every 4 years, in his power to

veto bills passed by the Congress. That system worked well for the first century and a half of our existence as a nation.

During the last 30 years our Federal appropriations and taxes have grown astronomically. Our national debt has reached staggering proportions. With minor exceptions the Federal Government must at some time collect taxes to pay for both the portion of current spending which is to be financed by current receipts and the portion which is financed by borrowings to be repaid in later years. Already the Government has saddled the public with the need for paying nearly $8 billion a year as interest on the existing national debt.

In addition, we have in recent years fallen into the dangerous habit of authorizing small starts on big projects, and thus in a way committing future administrations to pay hundreds of millions of dollars to complete them in later years.

These two items, interest on the national debt and commitments for huge so-called public works, reclamation projects, etc., are largely responsible for the so-called uncontrollable expenditures. In themselves they create a very serious situation. Some, among them a distinguished Member of the Congress who has devoted years to the study of government finance, think it may now be too late to stop the terrifying course upon which we have embarked.

We are considering this year the highest peacetime budget in our history. I do not need to spend time on the dollars involved or the particular projects covered by that budget. I am sure every member of this committee has them vividly in mind and that each has been forced to face up to the facts of that budget by the wave of indignation and resentment which has spread across the country and which constituents have, I am sure, pressed upon the attention of every Member of Congres. The trend of spending and spending and taxing and taxing must be reversed. I happen to believe that can be done.

It seemed to me that the only remedy, as far as the fiscal year 1958 is concerned, lies in Congress. As one Member I tried to find a way which might bring the problem before the House for full discussion and quick action. House Resolution 170 was the result.

It took only brief study to convince me that it was not necessary to propose a bill or a resolution which would require joint action. Corrective power lies in the House, and therefore it seems that action by the House is all that is necessary, at least as a first step. Further study and discussion with those I consider well informed in this field led to the idea to propose the particular amendment which is before you. Timing for such an amendment seemed right. February 15, the date by which section 138 of the Legislative Reorganization Act required a joint committee to present a legislative budget, had passed without any action by the committees of either the Senate or House. Accordingly House Resolution 170 was drawn up and introduced.

Section 138 reads as follows:

"LEGISLATIVE BUDGET

"SEC. 138. (a) The Committee on Ways and Means and the Committee on Appropriations of the House of Representatives, and the Committee on Finance and the Committee on Appropriations of the Senate, or duly authorized subcommittees thereof, are authorized and directed to meet jointly at the beginning of each regular session of Congress and after study and consultation, giving due consideration to the budget recommendations of the President, report to their respective Houses a legislative budget for the ensuing fiscal year, including the estimated overall Federal receipts and expenditures for such year. Such report shall contain a recommendation for the maximum amount to be appropriated for expenditure in such year which shall include such an amount to be reserved for deficiencies as may be deemed necessary by such committees. If the estimated receipts exceed the estimated expenditures, such report shall contain a recommendation for a reduction in the public debt. Such report shall be made by February 15.

"(b) The report shall be accompanied by a concurrent resolution adopting such budget, and fixing the maximum amount to be appropriated for expenditure in such year. If the estimated expenditures exceed the estimated receipts, the concurrent resolution shall include a section substantially as follows: 'That it is the sense of the Congress that the public debt shall be increased in an amount equal to the amount by which the estimated expenditures for the ensuing fiscal year exceed the estimated receipts, such amount being $.'"

House Resolution 170 would add this paragraph to section 138:

"(c) The aggregate amount which may be appropriated for the fiscal year beginning July 1, 1957, shall not exceed $65 billion; that expenditures for said year shall not exceed $65 billion; and that any revenues received during said fiscal year in excess of $65 billion shall be applied one-half to the reduction of the national debt and the other half to the reduction of taxes."

I am satisfied that if sent to the floor by this committee, House Resolution 170 will provide a basis for full debate and enable the House to work its will. I am also satisfied that if the House adopts the resolution, committees of the House will do their best to conform to it and that they can do so. Please note that the amendment is in the nature of emergency legislation, effective only for fiscal year 1958.

Adoption of the resolution under discussion will go far to restore the public's confidence in Congress.

Going back to the terms of the resolution, the first clause fixes $65 billion as the limit on aggregate appropriations for fiscal 1958, and that same figure as the limit on expenditures for that year. Control of expenditures is the more important. With budget figures of the magnitude of those before us, it seems entirely reasonable that a cut of approximately 10 percent could be made. I do not think in terms of a 10-percent cut in all appropriations, but the overall target of 10 percent seems reasonable.

Among the additional reasons for that view are the following:

(1) Sixty-five billion dollars is approximately the amount of expenditures for fiscal year 1956.

(2) I have been advised, and some who advised me will testify here today, that there is ample room to cut expenditures and appropriations to at least the limit suggested without endangering the national economy or the national security. In some cases this might require deferring natural resources development items, rather than going at them full scale this year.

(3) Opinions will differ as to particular cases where cuts can be made. Just as a starter I would eliminate Federal aid to schools, and that might mean as much as $500 million in fiscal 1958.

Last year the Appropriations Committees of the House and Senate provided funds for starting activity on more than 50 separate projects which had not been included in the President's budget, and which were not, therefore, regarded as being of pressing importance. If those projects are all completed they will involve costs running into the hundreds of millions over a foreseeable future. I am not able to suggest which of those items can be canceled out or at least deferred, but I submit those projects require careful and determined study to fix the cuts which can be made.

The program I am suggesting will require an intensive reexamination of all grant-in-aid programs and it should provide adequate pressures to enforce additional economies throughout the length and breadth of the National Government operations.

After House Resolution 170 had been introduced, I discovered that there had been House action a few years ago which established a sound precedent for that resolution.

When section 138 in the House Rules became effective in 1947, the Appropriations and Finance Committee of the Senate and the Appropriations and Ways and Means Committees of the House formed a joint committee to consider the budget submitted by the President in January of that year and to develop the legislative budget contemplated by section 138. In February 1947, Congressman TABER reported to the House and Senator BRIDGES reported to the Senate the following recommendations:

"The joint committee, therefore, submits the following findings and recommendations:

"(1) The committee finds that the estimated overall receipts assuming enactment of legislation with respect to excise taxes and postal revenues will be $39.1 billion compared with a budget estimate of $38.9 billion.

"(2) The committee recommends a ceiling on expenditures for the fiscal year 1948 of $31.5 billion as compared with the budget estimate of $37.5 billion.

"(3) The committee finds that the excess of receipts over expenditures will be $7.6 billion compared with the budget estimate of $1.4 billion.

"(4) The committee recommends that the maximum amount to be appropriated for expenditures in the fiscal year 1948 shall not exceed $24 billion compared with the budget estimate of $28.6 billion.

"(5) The committee recommends the inclusion of a reserve for deficiencies which might be expended in the fiscal year 1948 of $250 million compared with a budget recommendation of $25 million.

"(6) The committee recommends that a portion of excess receipts over expenditures be applied on the public debt.

"(7) The committee believes that the proposed reductions which in the main become effective beginning July 1, 1947, substantially 2 years after the termination of hostilities, will not impair the national economy.

"Summary

	Budget (billions)	Joint committee (billions)
"Estimate of overall receipts, assuming enactment of legislation as hereinbefore indicated	38.9	39.1
"Estimate of overall expenditures	37.5	31.5
"Excess of receipts	1.4	7.6
"Maximum amount to be appropriated for and which may be obligated in fiscal year 1948	32.2	27.0
"Maximum amount for expenditure of 1948 appropriations in fiscal year 1948	28.6	24.0
"Reservation for deficiencies which would be expended in fiscal year 1948	.025	.250"

Those recommendations were accompanied by a resolution which read as follows:

"Resolved by the House of Representatives (the Senate concurring), That it is the judgment of the Congress, based upon presently available information, that revenues during the period of the fiscal year 1948 will approximate $39.1 billion and that expenditures during such fiscal year should not exceed $31.5 billion, of which latter amount not more than $25.1 billion would be in consequence of appropriations hereafter made available for obligation in such fiscal year."

That resolution was adopted without change by the House. In the Senate, however, an amendment was adopted which would reduce the requested budget total by only $4,500,000,000 instead of the $6 billion cut for which the House had voted. Conferees were unable to agree, so the concurrent resolution was not adopted. The record stood, however, that the House had expressed its judgment that an overall cut of $6 billion could and should be made and the Senate had gone on record for a cut of only $4,500,000,000. For our purposes here today, we may ignore the difference between those cuts. The points I desire to emphasize are that by its action the House expressed its judgment and its committees respected and conformed to that judgment.

The last clause of House Resolution 170 dealing with the application of any excess of revenues over expenditures would, of course, have only the force, but, like the other clauses I have discussed, it would have the force of a formal expression of the sober judgment of the House.

It is often said that ours is a big country and it needs a big government. I agree, but I submit that big government must operate within constitutional limits and that bigness in government is not justifiable as an end in itself.

The task ahead calls for courage and determination to exercise our constitutional powers and to perform our constitutional duties in the interest of the Nation as a whole.

I hope this committee will report favorably on House Resolution 170. In closing I should like again to express my deep appreciation for the careful attention which all members of this committee are giving to this resolution.

Senator Johnson Shows Wisdom in His Senate Leadership

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. ROGERS of Texas. Mr. Speaker, on Thursday, February 28, there appeared an editorial in the Wellington Leader of Wellington, Tex. This editorial was written by the publisher and editor of this fine weekly newspaper, Mr. Deskins Wells. It concerns our able Senate majority leader, the Honorable LYNDON JOHNSON, the senior Senator from Texas. Mr. Wells, in his splendid editorial style, has expressed in clear and concise language the feeling of many on a most important subject.

The article follows:

LYNDON JOHNSON, Senate Democratic leader, has been doing something that this observer has contended should have been done over the years. He does not follow the seniority rule totally in his recommendations for committee appointments. In some instances, he has been criticized by extreme liberals and in others by conservatives, depending on who was affected; but he has stuck with his guns in trying to get the best man appointed as chairman of various committees regardless of some slight difference in seniority. The seniority rule has always seemed inefficient if applied absolutely. Experience in any work is valuable and should be taken into consideration. But just because a man has served 30 years in the Senate does not mean necessarily that he knows more about the work of a certain committee than say some more forceful and intelligent man who has served only 20 years on the same committee. The more elderly man might be growing senile or he might be known as an irresponsible leader to the members of his own party. The seniority rule should never be rigid either in business or in government.

Senator JOHNSON has also done another commendable thing as Senate leader and it was also a departure from the old hidebound rules. He has seen to it each Democratic freshman Senator was appointed to at least one important committee. This will tend to increase the strength and usefulness of his party in future years. By contrast the Republicans followed the old tradition and shunted their freshmen to committees that are of little importance. If you know anything about how rigid those old seniority rules used to be, then you can realize that it takes courage to exercise and maintain leadership of the JOHNSON variety.

Scenes From the Hungarian Border

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. EVINS. Mr. Speaker, I ask unanimous consent that an article appearing in the religious magazine, Gospel Advocate, under date of January 17, 1957, relative to conditions in Hungary be reproduced in the Appendix of the RECORD.

The article, Scenes From the Hungarian Border, is a very moving account of conditions in that area of the troubled world, and I believe Members of Congress and others will find this first-hand report of interest. The article follows:

SCENES FROM THE HUNGARIAN BORDER
(By Otis Gatewood)

My family and I, with Bob Hare, have just returned from the Hungarian border. It had rained last night and frozen as it fell, so the highway was covered with ice. It took us 2½ hours to travel 40 miles from Vienna to Nickelsdorf—the village near the border. Ice on top of snow made the highway very dangerous. It was 5° below zero and the cold winds that were blowing in from Siberia drifted snow and sand across the highway. We thought surely that no refugees would cross the border in such cold dreary weather.

As we drove into Nickelsdorf we stopped to ask directions, but the two men and the woman could speak no German or English—they were Hungarian refugees. We took their pictures and drove a short distance and saw a German Red Cross truck. We stopped to take a picture of it and learned that we were in front of the Hungarian refugee station. It was time for their noon soup, and they were eating. Five hundred had crossed the border at Nickelsdorf alone last night. The fog, in spite of the bitter cold, had helped them cross without being detected.

Very few of the refugees could speak German or English, but we talked to several through a young Holland Red Cross worker who was contributing his time without pay to help the refugees. He could speak eight languages. The refugees were extremely friendly to us. Brother Hare asked for Hungarian coins, as souvenirs, and we had to beg them to stop giving them to us. About 75 percent of those who cross the border are young men, but some families with children were there. We saw no old people. A man with a fur cap pinned a freedom fighter pin on my coat. I reached out to shake his hand in thanks. He took my hand and then hit between his and my hand knocking them apart and said: "Hungarian-Russian." He then took my hand again and gripped it tightly and shook it heartily and said: "Hungarian-American."

We wanted to go to the border, so the Red Cross worker from Holland volunteered to go wth us. We thought we would be stopped at the Austrian border patrol, but he got the Austrian guards to raise the bars and let us enter "no man's land." The worker showed us where he would go at night to get women and children to help them on across. The actual line between Hungary and Austria is marked with Austrian flags. I got out of the car to take a picture of the flags, and just as I did I heard a gun fire. The worker pointed out a Russian gun shack about a quarter of a mile to the left of the road. My wife wanted to turn around, but the worker assured us that we could go all the way to the Hungarian roadblock.

When we arrived at the Hungarian road blockade we could see the Hungarian guard with his gun about a hundred yards away. The worker waved for him to come over. He hesitated and walked in the opposite direction and looked closely. He then raised his gun and fired, and then walked in our direction. He allowed us to take his picture as we shook hands with him. We gave him a gift and he walked away a short distance and fired his gun again. The firing of the gun was evidently to convince someone not too far away that he was faithfully performing his duty. We asked the Red Cross worker if the Hungarian and Russian guards ever shot the refugees. He said: "They shoot into the air to scare the people."

Four refugees—a man and wife and their two small daughters—asked if they might ride back to Vienna with us. Since it was New Year's Day, the camp officials were lenient and granted them permission. They had left Budapest yesterday at 3 p. m., and traveled by train until 10 p. m. They then walked through fields and woods from 10 p. m. yesterday until 6 a. m. today when they arrived in Nickelsdorf. Almost all refugees cross the border at night unless it is extremely foggy so that they can cross at daytime. This family showed us bruises on their legs where they fell into ditches, ran into stumps, or fell into holes that were covered with snow. When they arrived at Nickelsdorf this morning they were covered with water, snow, and ice to their hips. They were given new shoes, socks, and underclothes by the Red Cross. They said they dodged from bullets several times. We asked: "How does it feel to walk across the border at night?" The wife replied: "Like walking on eggs."

One man and his wife tried to cross the border one night by boat on a lake. There was a heavy fog and they rowed in circles most of the night. The next morning they determined their course and finally came to the Austrian side, but they learned that their baby had frozen to death during sleep the night before. One lawyer of Budapest tried to cross the border with his 14 children. The baby cried and they were detected and returned to Hungary. We were told that those caught are sent to prison for 4 years. Some of the babies that arrive in the Red Cross camps in the Austrian border town are drugged with morphine or strong alcohol to keep them from crying in crossing. Some must be taken to hospitals immediately to revive and save them from the drugs.

Many of you who read this article would like to know what you can do to help the Hungarian refugees. Most of them are taken immediately to separation camps where they

are sent to other nations—to America, Canada, Germany, England, etc. Their needs are cared for quite well by these nations. But some of the refugees prefer to stay in Austria with the hope that some day before too long they can return to Hungary. This small nation, Austria, needs help to care for those who stay here.

Bob Hare and his family arrived here in Vienna 2 weeks ago to begin preaching the Gospel in this city. I suggest that you contact him to learn how best you can help. Perhaps through him you could help a definite refugee family here in Vienna. In this way Brother Hare might be able to win them for the truth, and some day when they return to Hungary they would be Christians and would perhaps be the means of establishing the church in Hungary. If you desire more information, write Bob Hare, Krottenbachstrasse 281, Vienna, Austria. He is not here primarily to help the refugees, but to preach the Gospel to the Austrian people, but perhaps you could work through him to help the refugees. Why not send him a contribution to help him get the church established in this city? He knows best how to use your money to the greatest advantage, to help the people in this part of the world.

School-Construction Bill Is a Must

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. FORAND. Mr. Speaker, the need of adequate facilities for the education of our children is recognized by all sound-thinking Americans.

Congress and the administration have been considering this need for a long time, but have done little to remedy the problem. The time has come for action and I respectfully urge my colleagues to delay no longer in enacting the much-needed legislation that will make school construction a reality.

Under leave already granted me I include as a part of my remarks a very timely editorial on the subject that appeared in the February 6 issue of the Providence (R. I.) Journal. The editorial follows:

LET'S GET BUSY ON THE SCHOOL-AID PROGRAM

It is difficult in this State and Nation to overstate the need for new schools or to underestimate the size of the financing problems posed by an adequate school-construction program. As President Eisenhower observed last week, coming to terms with the issues will require "the next decade the greatest expansion of educational opportunity in our history."

To help State and local governments build the needed schools and, equally important, to pay for them, Mr. Eisenhower has submitted to Congress a $2 billion Federal assistance program. Essentially, the program is the same as that which was defeated last year; the principal change is the shortening of the program's life from 5 to 4 years.

The President is asking approval of a four-point scheme. Under its terms, Federal money would be given to the States in direct grants, which would have to be matched by State and local governments. Federal money also would be available to buy bonds local school districts can't sell at reasonable rates of interest, to support bonds issued by State school-financing agencies, and to strengthen school construction planning.

There's no doubt that substantial Federal help is needed to lick the school construction problem. Every community with a growing population or an aging school plant has come to recognize the problem as the most expensive of local issues. Every State is harassed by calls for help from its member cities and towns. Only the Federal Government has resources of sufficient size and readiness to plug gaping holes in the building program.

Here in Rhode Island, needs in local communities are piling up. Warwick faces a $19 million recommended construction program. Cranston is being driven to the financial wall by its problem. Even the smallest towns are busy at special financial town meetings, trying to raise new bond issues or supplementary issues to build. Pawtucket has closed 13 elementary schools because of hazardous conditions; its tab for new buildings will be heavy.

The State has come slowly to grips with the problem. While it always has insisted that it is historically responsible for operation of schools, only in recent years has it been willing to match its responsibility with dollars. Now it is being asked somewhat gingerly to adopt a school construction bill with $750,000 earmarked for help in retiring school construction debt. The bill has yet to be submitted to the legislature.

But if the State has come late to the fight and with scant funds, it actually can do little more unless its whole revenue structure is overhauled to produce more tax dollars. It's an irrefutable fact that Rhode Island cannot do much more to help school construction unless and until the administration and the general assembly are willing to run the political risks of raising existing taxes or imposing new taxes.

The help the President would give Rhode Island is substantial. In direct grants alone, the State would get $886,000 each year for 4 years if it undertook to find annual matching funds of $1,316,000. Whether the level of matching funds could be maintained over the life of the program without new State taxation is difficult to say. Certainly, on the basis of experience, acceptance of Federal aid eventually will require approval of new taxes.

If the State means business, however, it can do no less than approve the State aid bill, which also contains provisions for acceptance of Federal aid. In fact, if it does not pass the State aid measure, it won't be able to get Federal aid, since it won't meet standards in the Eisenhower program. Approval of a State plan, for instance, depends in part on the designation of the State education department as the sole administrative agency for handling the Federal money.

The legislature may have to go even further than approving the designation of an administrative agency. The Federal bill also requires submission of evidence that steps have been taken toward modifying or removing restrictive debt and tax limits and other obstacles to the financing of construction of urgently needed school facilities from local tax sources. That's a lot of ground to cover in this State.

Mr. Eisenhower has a long row to hoe before his aid bill is passed, even in amended form. Rhode Island, too, has a lot to do if it is to help local communities build schools and is to be in a position to accept Federal aid. Congress and the general assembly can best serve the cause of education by getting about their chores as quickly as possible. Youngsters can't stop growing to wait for what they need now.

For Truth About the South—Negroes Seek To Oust St. Paul Commissioner

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. HUDDLESTON. Mr. Speaker, on Thursday, February 28, 1957, it was my privilege to insert in the Appendix to the CONGRESSIONAL RECORD a news article which appeared on the front page of the Tuesday, February 26, issue of the Birmingham, Ala., News, one of the fine daily newspapers of my district. The article, which was entitled "Minnesota Official Says North Misinformed on Negro in South," was an account of an interview with Mr. Milton Rosen, commissioner of public utilities in St. Paul, Minn., on the occasion of his recent visit to Birmingham. In the interview, Mr. Rosen stated that it was his opinion that northerners were receiving a great deal of misinformation on the Negro's condition in the South.

On last Monday, March 4, another article appeared in the Birmingham News. This article reported that certain Negroes in St. Paul were demanding that Mr. Rosen resign his position as commissioner of public utilities for that city. With it all, Mr. Rosen is sticking by his guns and reasserts that people in the North are, in fact, misinformed about conditions in the Southern States.

It seems that, in certain parts of this country, it is politically dangerous for an officeholder to tell the truth.

Under leave to extend my remarks, heretofore granted, I include in the CONGRESSIONAL RECORD this last newspaper article. The news article follows:

NEGROES SEEK TO OUST ST. PAUL COMMISSIONER

(By Paul Hogan)

A St. Paul, Minn., commissioner has been criticized in his home city for remarks he made on a recent visit to Birmingham concerning the Negro condition in the South.

Milton Rosen, commissioner of public utilities in St. Paul, was asked to resign his council post in a letter signed by four officers of the Dining Car Employees Union, Local 516.

Ernest C. Cooper, acting executive secretary of the St. Paul Urban League, who is a Negro, also criticized Rosen's statements.

A Birmingham News story last week quoted Rosen as saying that northerners receive a lot of misinformation concerning the Negro's condition in the South.

After hearing the criticism, Rosen explained that the people in the North are not completely informed about conditions in the South.

He said the News' story, with the exception of "rabble rousers," expressed his views.

Rosen was quoted as saying that "rabble rousers have told us that Negroes are terribly mistreated."

In St. Paul, Rosen reiterated, "many thoughtful white people are trying to help the Negroes. Progress is being made. The situation is improving in housing, school facilities, and recreational facilites."

"What I said is true," Rosen added. "We do not at all times get the complete picture of conditions in the South."

Cooper, quoted in a St. Paul newspaper, said he could not understand how Rosen could hold the opinions he expressed "when the Supreme Court, outstanding sociologists, public officials, reliable leaders, and his own political party have made it a matter of record that Negroes in the South are not accorded their basic rights as free citizens.

"If the bombing of homes and Negro churches, as well as other acts of violence which attend the efforts of Negroes in the South to secure their rights to vote, ride buses, and attend school in an unsegregated manner are not evidence of mistreatment then I am at a loss to define it."

Cooper called Rosen's remarks "a distinct slap in the face to those individuals in the North and South, who are valiantly striving for the realization of the principle of our democratic society, a quality of opportunity for all."

Mayor James W. Morgan said that he intended to write the newspaper and answer to the criticisms.

"It is so obvious now that there are elements up there who don't want the good people to know what is actually going on down here," the mayor said.

"They want the people to think Negroes are all mistreated down here."

In a letter to Morgan, that accompanied clippings from the Pioneer Press, Rosen said, "No matter who you tell the truth to sometimes you step on other people's toes."

The dining car employees local asked that Rosen resign from the council.

Rosen was first elected to a commission seat in St. Paul in 1930. He also has extensive automobile and auto tire business interests.

He made his remarks regarding the Negro situation in the South voluntarily at a press conference in Mayor Morgan's office last Tuesday.

Rosen had been in Birmingham several days, coming here to inspect the U. S. Pipe & Foundry Co. facilities in connection with the purchase of pipe from the company by the city of St. Paul.

The News' story concerning Rosen's remarks was incorporated in the CONGRESSIONAL RECORD last week by Congressman GEORGE HUDDLESTON, JR.

Textile Industry May Get Surgery

EXTENSION OF REMARKS

OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. COFFIN. Mr. Speaker, I wish to call the attention of the Members of the House to a disturbing story in the New York Times which recently reported that 420,000 shirts made of Japanese cloth in Hong Kong this year are on order in the United States. I do not at this time have any information beyond that which appears in the article from the Times of February 24, 1957. But I think that this report calls for close scrutiny by my colleagues with a view to determining whether the self-imposed embargo by Japan on textile imports is being subverted by shipments through other ports.

Mr. Speaker, under unanimous consent, the article to which I have referred is printed in full in the Appendix of the RECORD.

The article follows:

TEXTILE INDUSTRY MAY GET SURGERY—REDUCTION IN OUTPUT IS HELD SOLUTION FOR BUSINESS SLUMP, PROFIT DECLINE

(By Carl Spielvogel)

Further surgery, in the form of greater production cutbacks, is being prescribed to restore a healthy tone to the sluggish textile industry.

Business in the industry generally has been in the doldrums for several months. There are few signs that might be interpreted as indicating an immediate resurgence.

The strongest business is centering around blends of Dacron and cotton, and nylon. As a result some of these goods are in tight supply.

In instances where other merchandise is being sold in volume, profits are practically negligible. Market reports have indicated that some goods are being sold on a break-even basis in the hope that remaining stocks can be sold more profitably when the market stabilizes.

PRICES PUSHED DOWN

Prices generally have been pushed downward. For example, prices for the 80-square print cloth, the most popular unfinished cotton fabric, have been about 18¼ cents a yard in recent days. A year ago the price was about 20⅝ cents a yard.

The continuation of this generally unsatisfactory situation has caused many textile men to decide that they will not weave goods for inventory. The result has been production curtailments at several mills. Among those affected are Berkshire Hathaway, Inc., Deering Milliken & Co., and the Bates Manufacturing Co.

While this is believed to be a step in the right direction, many textile men contend that it is not widespread enough. For years most producers of print cloth yarn goods have been running their plants with three shifts working 6 days a week.

Some industry leaders are urging the adoption of a 5-day week. Such a move, they say, would help bring production more in with demand.

One leading executive said that the gravity of the situation demanded that the industry invoke a self-imposed, 4-day work week for the second quarter of the year.

RESULT: HIGHER COSTS

While this admittedly would run costs higher, he said the action would place producers' stocks in good shape for the final 6 months and enable them to recoup any earlier losses.

Many textile men trace the industry's troubles back to the end of last year when inventory liquidation first began to depress prices. The presence of a quarter-billion yards of low-priced imports from Japan contributed to the decline.

The situation has been made worse by what millmen term overly cautious buying by apparel manufacturers. But with prices declining, garment makers cannot be blamed for holding back on some orders. The current depressed price structure has caused them to feel that they can obtain the fabrics for a lower price if they wait.

Apparel makers, in turn, have had to contend with retailers who also are being cautious about their buying and striving to keep their inventories low.

Last spring's cool weather hurt retailers' sales of goods. Then at the end of the year unseasonably warm weather caused their winter sales of heavy outerwear to lag.

The effects of the textile market's weakness are becoming evident in related areas. In January business of textile finishing plants declined an estimated 20 percent from last year.

Several textile concerns have found it necessary to cut the amount of dividends to be paid to shareholders. Recently Textron, Inc., cut its 40-cent quarterly dividend to 25 cents. The quarterly payment of Bates was dropped from 20 cents to 12½ cents, and Berkshire Hathaway reduced its quarterly dividend from 25 cents to 15 cents.

J. Spencer Love, chairman of Burlington Industries, Inc., has told shareholders that dividends would be jeopardized if earnings continued to decline at the present rate.

There also is the possibility of labor discord that would involve about 40,000 New England millhands. Workers in about 100 plants in the northern region will be seeking wage increases on contracts expiring April 15.

Thus far two of the area's major manufacturers have split on offers made to the Texile Workers Union of America. Berkshire Hathaway has rejected the union's demands for increases and has proposed that the present pay scales be continued.

Bates Manufacturing, however, has asked the union to take a pay slash amounting to 14 cents an hour. The union has rejected Bates' proposal.

OTHER IMPORTS FEARED

The 235 million square-yard limit on Japanese exports to the United States for each of the next 5 years has given the industry some protection. But some executives have said privately that they should have held out for comprehensive protection against shipments from other areas, such as Hong Kong and India.

Fear has been expressed that goods may start to stream in from those places. Last week the men's shirt industry said that large shipments of shirts from Hong Kong might nullify gains made through the Japanese accord.

Trade reports indicate that United States orders on shirts made in Hong Kong of Japanese cloth this year already amount to about 420,000 dozen, compared with 650,000 dozen shipped from Japan in all of 1956.

An industry spokesman said this might mean that Japan was violating the agreement by using Hong Kong as a diversionary port and that an incipient threat to the United States industry had arisen.

Federal Trade Commission Order Invalidated Should Be Appealed to United States Supreme Court

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent I am inserting a letter from Mr. George J. Burger, representing the National Federation of Independent Business, together with a news report from the New York Times, dated March 1, 1957, in the Appendix of the RECORD. Because of the importance of the legal issue involved in the interpretation of the Robinson-Patman Act, many of the friends of small business are of the firm opinion that an appeal of the decision reported in this case should be taken to the United States Supreme Court.

The letter and news report follow:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., March 1, 1957.

Subject: Quantity discount rule for the rubber tire industry.

Hon. JOE EVINS,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN JOE: It is my hope, because of your great interest, as chairman of the subcommittee who explored this and other matters in Federal regulatory agencies, that you will find time to insert in the RECORD the report as published in the New York Times today.

As you know, this case was originally instituted by the House Small Business Committee recommendations in April of 1947, and you well know the handling of this case that was brought out during the hearings before your subcommittee.

In view of its importance it is our hope that the Federal Trade Commission and the Department of Justice will appeal the decision to the United States Supreme Court, and I believe the subject matter will be of vital interest to your colleagues in having it brought to their attention through the CONGRESSIONAL RECORD.

Thanking you in advance, and with very high regards,

Sincerely yours,

GEORGE J. BURGER,
Vice President.

[From the New York Times of March 1, 1957]

DISCOUNT LIMITS ON TIRES REFUSED—COURT INVALIDATES FTC RULE FORBIDDING SPECIAL PRICING ON MORE THAN A CARLOAD—BLOW TO SMALL DEALERS—JUDGMENT IS CALLED A VICTORY FOR 20 BIG MANUFACTURERS FIGHTING ORDER SINCE 1951

WASHINGTON, February 28.—In a ruling of interest to dealers and users of automobile tires the Federal court of appeals today invalidated a Federal Trade Commission order limiting discounts on bulk purchases of tires to single-carload orders.

The judgment was a victory for 20 major tire manufacturers and dealers who have been fighting the order since it was promulgated in 1951. It was deemed a defeat for small dealers who have contended that quantity discounts based on large orders gave the larger concerns a competitive advantage.

Proponents of bulk discounts on larger quantities contend that the effect of the FTC order would have been to increase the price of tires to the consumer.

The order placed a quantity limit on tires and tubes made of natural or synthetic rubber of 20,000 pounds ordered for delivery at one time. Twenty-thousand pounds is the weight of 1 carload.

FTC CITED TRUST LAW

The Commission based its order on authority conferred upon it by the Robinson-Patman Act, which prohibits discriminatory discounts, rebates, and allowances tending to destroy competition. The section of the act in question provides that "the Federal Trade Commission may fix and establish quantity limits as to particular classes of commodities where it finds that available purchasers in greater quantities are so few as to render differentials on account thereof unjustly discriminatory or promotive of monopoly in any line of commerce."

Major tire makers and dealers have been fighting the order on the grounds that it was arbitrary and capricious, not based on actual findings, and that they were denied procedural rights when the rule was made.

The court of appeals limited its ruling to the question of the FTC's findings. The formal findings, it asserted, did not include a determination that "available purchasers in quantities greater than a carload are so few as to render differentials on account thereof unjustly discriminative or promotive of monopoly."

NO QUESTION OF FACT

"Instead of dealing directly with that question of fact in its findings," the court declared, "the Commission seems to have been primarily concerned with the fewness of available purchasers in annual dollar volumes greater than $60,000. Obviously a finding concerning that does not support a rule fixing a quantity limit of one 20,000-pound carload."

The first of three formal findings by the Commission stated that purchasers in annual volumes of $600,000 were so few that differentials in their favor were unjustly discriminatory against purchasers in smaller quantities.

George J. Burger, vice president of the National Federation of Small Business, urged Assistant Attorney General Victor Hansen, in charge of the Department of Justice's Antitrust Division, to appeal the decision to the Supreme Court. He said it was important to small business that the Commission's order be upheld. The federation has been advocating strict limitations on quality discounts since 1947.

The opinion was written by Judge Wilbur K. Miller, with the concurrence of Judges E. Barrett Prettyman and George T. Washington. They comprised the panel that heard the case.

Their ruling sustained a judgment of Federal District Judge Alexander Holtzoff. This was appealed by the Federal Trade Commission.

Among the companies involved were B. F. Goodrich Co., General Tire & Rubber Co., Goodyear Tire & Rubber Co., Firestone Tire & Rubber Co., United States Rubber Co., Western Auto Supply Co., Montgomery Ward & Co., and the American Oil Co.

Lawyers who argued for the companies were Mathias F. Correa and Edgard Barton, of New York; Hammond E. Chaffetz, of Washington; and David L. Dickson, of Chicago. James H. Durkin, of the Department of Justice, argued for the Government.

Self-Determination for Cyprus

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. PHILBIN. Mr. Speaker, the New England Committee for Self-Determination for Cyprus, comprised of outstanding citizens, has forwarded me a letter and certain views and under unanimous consent I am inserting them in the RECORD. Mr. Paul Buck, director of the Harvard University Library, is the distinguished chairman of the committee.

For sometime past I have been interested in the question of self-determination for Cyprus and believe that I was one of the first in this body to come out for this objective.

Moreover, I strongly protested the treatment given Bishop Makarios and communicated my views to the State Department in an effort to end the disorder and carnage so unhappily afflicting the liberty-seeking people of that island.

This question goes to the very root of our fundamental political beliefs. Either we believe in self-determination for Cyprus, or we reject a principle that has been sacred to this Nation since its inception.

I realize that many pretexts have been advanced by those who are desirious of continuing the status quo, but these are just pretexts, and certainly not sound reasons for the continuance of the type of oppression that has been occurring in Cyprus.

I compliment this fine body of Americans in Massachusetts and New England for their interest in this great human question, and am proud to associate myself with them and continue my own efforts for a cause that I deem most worthy.

I hope and pray that this Government will continue to strive for a peaceful solution—one that will extend the principle of self-determination to a group whose devotion to freedom could not be questioned.

The letter follows:

NEW ENGLAND COMMITTEE FOR SELF-DETERMINATION FOR CYPRUS,
Cambridge, Mass., February 16, 1957.

Hon. PHILIP J. PHILBIN,
United States Representative from Massachusetts, House of Representatives, Washington, D. C.

DEAR SIR: By virtue of the important position you occupy and the support you have given in the past to noble causes, we address this letter to you, with the deep hope that you will give the enclosed resolution your kind consideration.

In view of the serious and steadily deteriorating situation in Cyprus, we believe that it has become imperative to give the Cyprus issue immediate attention. Since Russia has already announced publicly that it would support self-determination for the people of Cyprus, before the United Nations, we believe that it would be especially ironic and tragic if our Government were to fail at this time to lend its moral support to the just cause of the Cypriot people, letting Russia appear as the great champion of freedom. The consequences of such an event would be, in our opinion, very detrimental to our vital interests.

We feel confident that our sentiments expressed above are representative of millions of Americans, who would like to see lasting peace and stability prevail in Cyprus. And we believe that these can be achieved only when the people of Cyprus are given the right to decide for themselves the political destiny of Cyprus.

Therefore, we beg you to urge our State Department to instruct the United States delegation to the U. N. to support the resolution attached hereto. We consider this resolution to be quite consistent with the best interests of our country.

We will be extremely thankful to you, if you will give this matter your immediate attention.

Sincerely yours,

PAUL BUCK, *Chairman.*

Where We Are on Integration

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my re-

marks in the Appendix, I include the text of an address by the distinguished editor of the Richmond Times-Dispatch, Richmond, Va., delivered before the 41st annual convention of the National Association of Secondary-School Principals in Washington, D. C., on February 26, 1957.

Mr. Dabney is a winner of the Pulitzer prize and his reputation as a journalist is not encompassed by State of regional boundaries. Throughout his career as a writer and editor, he has worked earnestly and effectively in the cause of amity and understanding between the races.

Although I do not agree with all of Mr. Dabney's conclusions, I regard his address as a message of commonsense coming at a time when commonsense is an urgent need. The tragedy of the current bitter racial controversy, as with that of 100 years ago, is that the voices of men of moderation and intelligence, such as Mr. Dabney, are smothered by the blatant language of incendiary hoodlumism on both sides, as represented by the utterances of John Kasper and Federal Judge Walter Hoffman.

Mr. Dabney's address follows:

Mr. Chairman and members of the association, I am glad you asked me to speak to you this morning on "Where We Are on Integration" rather than "Where We Are Going on Integration." I would much prefer to try to tell you what the present posture of interracial relations is than to try to predict what the next few years will bring forth. As a newspaper editor, I have to dust off my crystal ball from time to time and to gaze knowingly into my tea leaves, but the job of forecasting the immediate interracial future in certain areas of the South is, I confess, beyond my powers.

As public school principals, you are inevitably concerned over the effect of the interracial controversy upon the public school systems of the various States. In some of those States the effect has not been particularly pronounced one way or the other, whereas in others it has been profound—even potentially catastrophic.

This latter aspect of the problem is one which also concerns me greatly. As a citizen, as a former teacher in a private preparatory school and a parent with a son in a public high school, I am deeply troubled by the thought that the growing intensity of the struggle over integration in some 8 or 9 Southern States may disrupt, and even close down entirely, the systems of public education in several of those States. A more chaotic condition would be difficult to imagine. Aside from the educational problems involved, consider the enormous rise in juvenile delinquency which would inevitably accompany such a development.

Already we are encountering acute problems in the educational field in a number of Southern States, and the end is not yet. Appropriation of school funds from month to month, uncertainty of the future for schoolteachers, reluctance of citizens to accept appointments to school boards are some of the disturbing phenomena which confront us.

In the border States where integration has been proceeding smoothly for the most part, there have been problems growing out of the 2- to 3-year educational lag often noticed in the performance of Negro students by comparison with white students of the same age. Granted that much of this is due to inferior school facilities heretofore available to colored pupils in those areas, and to inferior living conditions, the problem is a huge and baffling one, nevertheless. The question of how to avoid handicapping white children by throwing them into classes with Negro children who are incapable of doing the work must be giving many of you genuine concern. The parallel question of how to bring the colored students up to the required level of achievement doubtless concerns you no less.

Here in this great city of Washington, where 70 percent of the school population is colored, these problems are particularly acute. Although integration is now in its third year here, solutions are a long way off, according to the best information I can get. It seems clear to me that mixed schools were put into effect here with too much haste and too little preparation.

The situation described by the principal of the John Pitman elementary school in Kirkwood, Mo. (one of the first schools in that State to desegregate) is a disturbing one. At the end of 2 years of segregation, Mrs. B. A. Compton, the principal, said to a representative of Southern School News that the teachers there felt that "the scholastic disparity remains just as great and that it is now complicated by feelings of frustration and defensiveness on the part of the Negroes—feelings which come out in the form of greater aggressiveness, arrogance, and bad temper." It was added, however, that none of this constitutes an argument against integration, and that progress in the immediate future was hoped for.

Over against such a report as this must be put that made recently for the city of Baltimore, for example, by Superintendent of Public Instruction John H. Fischer, who said: "On the basis of our experience it seems clear that by desegregating our schools we have substantially improved the educational opportunities of Negro children without reducing in any way those available to white children."

Baltimore, unlike Washington, did not make the mistake of trying to integrate everybody almost overnight. If we are to have integration generally—and many of us in the South are strongly of the opinion that we are a long way from ready for this in numerous parts of the region—the Baltimore system is far superior to the Washington system. Baltimore did not try to force the races together. It allowed pupils of both races to decide which schools they wished to attend. The first year, only 3 percent of the Negroes enrolled in white schools. This rose to 7.4 percent the next year and the figure is now 13.8 percent.

But even Washington, dubious as its school policies seem to me to have been in certain respects, is more restrained than New York City in its approach to the problem. As you are doubtless aware, they are transporting children all the way across town in New York, away from the neighborhood schools which they have been reaching conveniently on foot these many years, and compelling them to enroll with members of the opposite race. All this is being done at great inconvenience and expense, on the theory that a modest degree of integration is not enough. We must have total and complete integration everywhere and at once, it would seem. The folly and absurdity of this strikes me as obvious.

In my home State of Virginia, the United States Circuit Court of Appeals ruled, on motion of the NAACP, that an excellent regional high school for Negroes in Christiansburg was operating illegally because some of the colored children had to travel longer distances to that school than some of the white children in the area had to travel to their schools. But we now have this same NAACP instrumental in forcing Negro children in New York to travel all the way across town, instead of attending their neighborhood schools, in order that every child may have what is termed "the right to attend a mixed school." Words fail me in commenting on this fantastic arrangement. Benjamin Fine of the New York Times says many New Yorkers are leaving the city for the suburbs because of it, and that the suburban schools are superior, one reason being that they are more homogeneous.

I find it easy to understand when Omer Carmichael, superintendent of the smoothly integrated Louisville schools, declares, as he did last week, that the NAACP is chiefly responsible for the southern chaos over desegregation. Not content with achieving reasonable gains, this organization continues to press for drastic changes that cannot possibly be granted, and would not work in the South if they were.

The attitude manifested in Arkansas last year illustrates the point. The plan worked out there for progressive integration in the Little Rock schools, beginning on the high-school level in 1957, was rejected by the NAACP as unsatisfactory. Its leaders were unwilling to admit that this plan represented a long advance toward their goal. Obviously they insist on having the moon handed them on a silver platter, and are unwilling to proceed by gradual steps. Such an unstatesmanlike attitude is hard to reconcile with the genuine advances the NAACP has achieved for the colored people of this country.

In Virginia, I regret to say, the State legislature has been unfair to the NAACP. It has passed bills designed to harass that organization by obtaining and publicizing the names of all its members and their financial contributions. This is a dangerous action, and one which the Virginia assemblymen may well live to regret. The legislative harassment of an organization which happens to be unpopular could easily prove a boomerang for the responsible parties. True, the statutes in question apply equally to such organizations as the white citizens councils, which are fighting integration. I am awaiting tangible evidence that these organizations will be harassed in the same manner as the NAACP.

There is no doubt of the unpopularity in the South of both the NAACP and the Supreme Court's 1954 decision ordering an end to segregation in the schools. The latest Gallup poll, which reported that it reflected the views of both white and colored citizens in the southern States, found two-thirds of those canvassed to disapprove the court's ruling. By contrast, the poll found nearly two-thirds of those in the rest of the country applauding the same ruling.

All of which raises a question as to the implications of such a situation for the South. How long can the South afford to remain in flat and violent disagreement with the North and West on so fundamental an issue as race relations?

Yet there are no indications whatever at this time of a shift of opinion in 9 on the 11 States which constituted the Confederacy. In Texas and Arkansas the so-called "black belt" areas appear to be as adamant as ever against integration, although some mixing has gone forward in other regions, especially in Texas. But in Virginia, North Carolina, Tennessee, South Carolina, Georgia, Florida, Alabama, Mississippi and Louisiana the resistance to integration is tremendous. Except for the much-disputed entry of about a dozen Negroes into the Clinton, Tenn. high school, there has been absolutely no integration in the public schools of these nine States.

If I had to single out one anti-integrationist argument that seems to influence the greatest number of southern whites against mixed schools, it would be the argument that mixed schools lead to "mongrelization." Other sections of the United States sneer and jeer at this argument. Herbert Ravenel Sass of Charleston, S. C., presented the ultraconservative southern position on this about as well as it can be presented, in the November 1956, issue of the Atlantic. Promptly the magazine was flooded with derisive letters

from the North and West hooting at Mr. Sass and his thesis.

Now it may be possible to argue that integration would not increase the likelihood of racial amalgamation—although any visitor to most of the countries of Central and South America with his eyes open would be likely to reach the opposite conclusion. But even if we accept this argument, which I do not, the desirability that every race strive to maintain its own integrity seems to me to be indisputable. There is nothing in my thesis of bigotry or prejudice, and nothing having to do with supposed racial superiority or inferiority. My point is that the Negro should wish, no less than the white, to retain his racial identity and his cultural heritage, to the end that his race's indisputably great achievements can be properly recognized and handed down to his posterity.

Perhaps the most alarming phenomenon in the South at this time is to be found in the repeated acts of violence against Negroes which are not only criminal and utterly wrong, but which are bringing the entire region into disrepute in the eyes of civilized people everywhere. The bombings, beatings, and shootings which are occurring in some areas, with whites as the guilty parties, are in glaring contrast to the passive and law-abiding attitude of Negro leaders—in the Montgomery bus boycott, for example.

On the other hand, the criminality and immorality of many Negroes is one of the chief reasons why white southerners object so strongly to mixed schools. Granted that other races might have similar records if they had been enslaved for centuries and then had had to live in slums and to fight against all manner of handicaps. Yet the fact remains that the Negro crime and illegitimacy rates are everywhere so vastly greater than those of the whites that these statistics have an alarming impact on the minds of parents, especially those of adolescent white boys and girls who would be thrown into rather intimate contact with colored boys and girls in integrated schools.

If I may be pardoned a personal reference, I should like to say that for the past quarter of a century I have striven to eliminate some of the major handicaps from which Negroes have suffered in the South. I was a member of the Atlanta conference which met in the early 1940's, in response to an appeal from Negro leaders who had met shortly before at Durham, N. C., and had asked that southern Negroes be treated more fairly and equitably. I was a director of the Southern Regional Council which was then organized in an effort to achieve these objectives.

I was the first southern newspaper editor to urge abolition of segregation on streetcars and buses. I proposed this late in 1943, but was unable to persuade the Legislature of Virginia to accept my suggestion.

Our inability to get this and other reasonable concessions for the Negro from the white leaders of the South caused the Negro leaders of the region to turn to their racial compatriots in the North. The South's Negro leadership would have been satisfied, I believe, at least for a time, with much less than the all-out objectives subsequently sought by the NAACP. But the white leaders of the region were unable to deliver, and the result was that the effort of the Negro leadership of the South to "keep the capital of the Negro race in Atlanta," as one of them put it, failed. It was then that the NAACP's drive for the abolition of segregation got underway, with the support of southern Negro leaders and the "capital moved to New York."

The tragic fact today in the South is that hardly any liaison remains between the white leadership and the Negro leadership. Not only so, but until a few years ago, Negroes were being elected regularly to city councils and school boards in several Southern States, and it was the most natural thing in the world for white and colored leaders to sit down together for discussion of their mutual problems. These things are no longer true. The two races have been driven apart by the rancorous arguments over segregation, with the result that hardly any avenues of communication exist in most areas. The NAACP leadership has committed all Negroes so completely to its drive for total integration that any white who dissents from this view is stigmatized as an enemy of the Negro race. Of course, Negro dissenters are assailed with still greater violence, and are pilloried in much of the Negro press as "Uncle Toms," "handkerchief heads," and so on.

I hold no brief for the extremist journals in the South published by whites. Some of them are no better than organs of the resurgent Ku Klux Klan. But it is dismaying to find a once well-balanced Negro paper such as the Norfolk Journal and Guide saying, apropos of anti-integrationist legislation adopted in Virginia: "We have a determination on the part of a majority of Virginians to continue slavery in spirit and practice."

And the temper of the more extreme Negro press is seen in a recent editorial, which appeared soon after the birthday of Robert E. Lee, in the Afro-American chain, largest Negro chain in the Nation. It dealt with the proposal in Congress by a northern Member to have Lee's citizenship restored. The Afro-American said, in part: "If Lee was stripped of his citizenship it was because the country just after the war felt that should be the penalty for a traitor who violated his oath and carried on a war to destroy the Union and preserve slavery. * * * He was engaged as a rebel and traitor in a foul and dirty business. The dear God passes judgment on him now."

In view of the universal verdict of leading historians in this country and Great Britain as to the nobility of Lee's character and the purity of his motives, further comment on this outburst seems unnecessary. It does serve to illustrate the bitterness which infuses a large segment of the Negro press.

The Negro schoolteachers of the South should be deeply concerned over this whole controversy. There are from 75,000 to 80,000 of them, and the great danger is that many of them will lose their positions, if matters are pushed to the ultimate conclusion, and mixed schools are forced in certain areas. The unwillingness of many white southerners to have their children taugh by colored teachers is the crux of this situation. Some will consider this attitude narrow-minded, but it exists in such definite form that it cannot be ignored. Several hundred Negro teachers have lost their jobs already in border States, chiefly Oklahoma, but I understand that most of them have been reemployed elsewhere.

The criticism heaped upon us by our northern friends because many white southerners, by and large, do not wish their children taught by Negro teachers, would come with better grace, I submit, if the public schools of the North employed more Negro teachers. The number, as is well known to each of you, is infinitesimal by comparison with the number in the South. Even where colored population is enormous, as in New York, Philadelphia, Detroit, and Chicago, there are few Negro teachers. No satisfactory explanation for this has ever come to my attention.

Permit me to remark parenthetically that the average salary of the tens of thousands of Negro teachers in the South is about equal to that of the white teachers, and in at least three Southern States (Virginia, North Carolina, and Tennessee), the average annual salary of Negro teachers is higher than that of white teachers. It must be confessed that the NAACP is largely responsible for bringing Negro teachers' salaries up to the white level. There is no telling how long it would have taken to achieve this objective, had it not been for the suits filed and won by that organization.

While we are discussing the attitude of the North, or certain segments of it, to the race problem, it seems appropriate to emphasize that this problem is not regional but national.

Just the other day I read of how a Negro man was beaten to death on the streets of Boston by white hoodlums who had begun yelling epithets at him when they saw him escorting a white woman.

You are of course familiar with the situation in Chicago, where scores if not hundreds of police have had to guard Negro families around the clock for more than 3 years at the Trumbull Park housing project. The clear implication of this situation is that these Negroes would have been mobbed long ago for moving into that housing development, but for the protection afforded them.

The mayor of Dearborn, Mich., makes it a well-publicized practice not to allow a single Negro to settle in that community of 125,000 people. "Negroes can't get in here." His Honor declared last year. "Every time we hear of a Negro moving in we respond quicker than you do to a fire." The mayor was given an overwhelming vote of confidence recently, so his policies evidently are regarded with favor and approval by the people of Dearborn.

I hope it is unnecessary for me to say that I abhor that sort of thing that is here described as happening in Boston, Chicago, and Dearborn. These things are disgusting and disgraceful. The fact remains that these occurrences—and others which might be mentioned—have all taken place outside the South. Furthermore, the fact that Negros have had to be protected from mobs 24 hours a day for more than 3 years in the State of Abraham Lincoln is not without its ironic and tragic implications.

Another point which needs to be made, I believe, is the attitude in the North toward the South's so-called lawlessness and flouting of the Constitution and the Supreme Court.

I do not defend or condone lawlessness, whether in the North or the South, but it is a bit dismaying to observe that some of our Northern compatriots seems to regard lawlessness as something which is not only acceptable, but admirable, when it occurs in accordance with what is deemed to be the sentiment of their particular communities.

Only a few weeks ago, for example, Mayor Richardson Dilworth, of Philadelphia, applauded this attitude. Speaking apropos of a State law forbidding Sunday basketball in the City of Brotherly Love, his honor said:

"Free people refuse to knuckle under to laws which completely ignore their welfare and desires. * * * Just as long as the legislature refuses to permit cities the right to determine what activities their citizens are entitled to engage in on Sunday, it is inevitable that the law will be ignored."

I wonder whether the Philadelphia newspaper which has been denouncing southerners who boggle at all-out integration as bigots and flouters of the law of the land has been equally caustic in its references to Mayor Dilworth, who loudly proclaims his intention to ignore the law. Incidentally, Mayor Dilworth is all for liberalizing the Democratic party and putting those law-violating southerners in their place.

And while we are on this general subject, a great many of those in the North who are blasting the South for failure to comply with the mandates of the Supreme Court on integrated, violated the Constitution and the statutes wholesale during the prohibition era. Of course, I realize that no one in this audience could conceivably have patronized a bootlegger when the late lamented noble experiment was our prop and stay, but

there were thousands, aye millions, who did so. In doing so, they flouted a duly enacted amendment to the Constitution and duly approved acts of Congress—not opinions handed down by the Supreme Court. Yet some of these very drinkers of white mule and bathtub gin are loudest in clamoring today that the South has no respect for law and order.

Ladies and gentlemen, we are heading into an era of intersectional tension and misunderstanding, and the intolerance that is being manifested on both sides of Mason and Dixon's line is not reassuring. It behooves us all to evidence a greater measure of sanity and good will and to stop hurling epithets.

The recent actions of a Federal judge in Tennessee in connection with the racial disorder at Clinton have alarmed many students of the Constitution, both North and South. They feel that the jurist in question showed a lamentable disregard for certain constitutional verities and ignored the time-honored right of defendants to a jury trial. They feel that the court was too sweeping in its injunctions. The whole episode seemed symbolic of the prevailing tendency in certain quarters to go to the utmost extremes, if integration is thereby promoted, whether by hauling schoolchildren many miles away from their neighborhood schools or by stretching the Constitution and the statutes in the name of "liberalism," "democracy," "brotherhood," or what have you.

I would not wish to seem to imply that all the examples of extremism are to be found in the North. In South Carolina, for instance, something very close to witch hunting and book burning has been approved almost unanimously by the State legislature. That body adopted a resolution last year asking the State Library Board to remove existing books and to screen future books that are "antagonistic and inimical to the traditions and customs of this State."

The civil-rights program now before Congress is a perfect example of the sort of extremist legislation which frightens and dismays the South—and should frighten and dismay the whole country. Has it been seriously contemplated before in this land that persons "about to engage in" certain acts could be arrested and haled into court? Yet one of the provisions of a pending civil rights bill embodies this amazing language. Even Congressman ADAM CLAYTON POWELL, Jr. of New York, not exactly a "race baiter" or a "white supremacist," has said that this plan to arrest persons "about to engage in" certain activities seem to him dangerously like thought control.

The civil-rights program also appears to negate the right to trial by jury, and it would enable the Attorney General to file, at public expense, suits on behalf of persons who contend that their civil rights have been violated. Another provision would seem to empower a proposed civil rights commission to summon any citizen from any part of the United States to any other part to defend himself against charges the nature of which was completely unknown to him prior to receipt of the subpena.

Most of all of the foregoing is vouched by former judges who are now Members of Congress as being in accord with reasonable interpretation of the language of these civil-rights bills. Such far-reaching legislation should have much more careful scrutiny than it appears to be getting. A majority of Congress seems to be so bemused by the phrase "civil rights" that it is reluctant to vote against anything which bears the label, no matter how dangerous its potentialities. And these particular measures have about as many potentialities for evil and for interracial conflict as have been presented to Congress in a long time.

In conclusion let me say that I end as I began—reluctant, even unwilling to try to forecast the future of the current interracial upheaval in the South. We are heading into stormy seas, I fear. The Deep South, it must be said in all frankness, has no present intention of integrating its public schools. Several of those States have a fixed determination to close their schools entirely, rather than mingle the races in them. All courts, as far as I know, agree that this would be legal, however deplorable from an educational and social standpoint.

Let us hope, therefore, that the NAACP will see the folly of forcing the issue in these States, and will exhibit a statesmanlike restraint. Enormous gains have been made by the Negro race in education and every other sphere throughout the entire South, and additional gains will be made, if only the responsible leadership of the race will assert itself. What the ultimate future holds is not for me to say. I only know that the course of wisdom for the NAACP today is for that militant organization to back up, to consolidate its gains, and to refrain from pushing matters so fast and so far as to pass the point of no return. Otherwise it will do irreparable harm to the cause of Negro advancement and to interracial amity.

Administration Faces Two Ways: Public Power Is Encouraged Abroad, Sabotaged at Home

---

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. EVINS. Mr. Speaker, an unexplainable situation which continues to baffle Members of Congress and our own citizens is the policy of the administration in opposing the development of worthwhile and beneficial public works projects in our own country while at the same time encouraging similar public power developments abroad.

A recent article by the able Columnist Thomas L. Stokes points up the fact that the administration, through a report of the World Bank, shows that loans in a recent 7-month period total $98,300,000 for public power projects in Austria, Italy, Chile, and Nicaragua. These new loans for public power projects, together with previous loans and grants, bring the total for these purposes to nearly a billion dollars. These loans are assisting 22 different countries which are enumerated in the article. Loans and assistance for these programs at home are called "creeping socialism" but under other flags they are all right and encouraged. When will the administration stop facing two ways and begin to give encouragement and assistance to worthy public power development projects in our own country.

Because I believe Mr. Stokes' penetrating analysis of this situation is worthy of further review, I ask unanimous consent that an article which appeared in a recent issue of the Nashville Tennessean be reproduced in the Appendix of the RECORD. The article follows:

ADMINISTRATION FACES TWO WAYS: PUBLIC POWER IS ENCOURAGED ABROAD, SABOTAGED AT HOME

(By Thomas L. Stokes)

WASHINGTON.—We have been hearing a lot lately, especially in protesting voices from Congress, about a double standard in international affairs. This referred to proposals for United Nations sanctions against Israel when the U. N. never had applied them to Soviet Russia and Egypt when they ignored U. N. resolutions.

In an entirely different area we are reminded again of a double standard that the Eisenhower administration has applied for 4 years.

ALL OVER THE WORLD

We see this in another report by the International Bank for Reconstruction and Development, in which we hold a third of the shares and subscribed a third of $9 billion capital. That shows the continuing approval by our Government, now managed by the Eisenhower administration, of loans to finance public-power projects all over the world.

Here at home, as you know, the administration is fighting public development of our own water resources to develop power. It insists, instead, upon something it calls the partnership policy.

As that works out, it means that granting to powerful utilities of title to resources that should belong to the people, and under terms that mean fancy profits for them and high rates to consumers. It means, too, that development in some cases is shortsighted and does not utilize the full potential.

LATEST REPORT

The latest report of the World Bank, as that institution is popularly called, covers its loan operations from July 1 of last year to January 31 of this year. It is issued as a special supplement to its 11th annual report covering operations up to last July 1 for the use of the United Nations Social and Economic Council meeting in New York beginning April 16.

This report shows additional loans for power development in that 7-month period of $98.3 million to Austria, Italy, Chile, and Nicaragua.

That brings to nearly a billion dollars—or to be exact, $887.3 million, the total of loans for electric power development in the 11 years the bank has been in operation. These loans went to 22 different countries. They are Austria, Algeria, Italy, Chile, Nicaragua, Ecuador, Finland, Norway, Rhodesia and Nyassaland, Uruguay, South Africa, Yugoslavia, Brazil, Ceylon, Colombia, El Salvador, France, Iceland, India, Lebanon, Mexico, and Pakistan.

Our share of these loans was $295.7 million.

OUT TO CRIPPLE TVA

In many instances the loans were to public authorities modeled after our own TVA in the Southeast. That has its ironical connotations, since the Eisenhower administration thus gives its approval to that means of developing water resources in foreign lands but has been antagonistic to TVA here and has sought in numerous ways to cripple that magnificent project. The President calls it "creeping socialism."

It's only "creeping socialism" under our flag. Under other flags it's all right.

RUSSIA MOVES FASTER

While we are helping to expand the development of power by public authorities and governments elsewhere, we have witnessed a retardation of power development, both public and private, in our country during the Eisenhower administration. In rate of increase in power production, we are lagging behind Russia, though we are still far ahead in total capacity. She is moving comparatively much faster than we are.

The lagging, almost stagnation, in the development of our water resources is due in part to the Eisenhower administration's desire to favor the utilities. They want only sites out of which they are guaranteed a handsome profit.

In their picking and choosing for such sites, they have disrupted basin-wide development, which is the only way to develop our rivers properly so that our people and our land

will be served. In this piece-meal development, they have not in many cases utilized all the potentials of our rivers.

The propet way to develop our water resources is integrated development as envisioned half a century ago by a great Republican President, Theodore Roosevelt, and as put into execution more recently by two Democratic Presidents, Franklin D. Roosevelt and Harry S. Truman.

Dr. Brusch on Fluoridation

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. PHILBIN. Mr. Speaker, under leave to extend by remarks in the RECORD, I desire to include the text, in part, of a recent speech on fluoridation delivered in Washington by Dr. Charles A. Brusch, director of the Brusch Medical Center, Cambridge, Mass.

Dr. Brusch, an eminent leader in medicine, spoke before the 31st Women's Patriotic Conference on National Defense on February 2.

His address follows, in part:

The issue that we are discussing today is whether or not we have the right to add artificial fluoride one part per million (or one p. p. m.) to our public water supplies, for the sole purpose of helping to delay the decay of teeth in children up to and including 12 years of age. This proposed treatment of an individual condition, which is not a communicable disease, brings up many problems of amoral, legal, economic and scientific nature.

* * * * *

There have been two congressional hearings on fluoridation within the past few years and a great number of reports have been published in the CONGRESSIONAL RECORD. One of these was the famous Delaney hearing and the other was the Weir bill discussion. After lengthy testimony by outstanding witnesses on both sides, the finding in the Delaney hearing was: "Go slow with fluoridation."

Economically fluoridation is very expensive. Only about one-tenth of 1 percent of our water supply is used for drinking purposes, so that the fluoridation of 99.9 percent of our water supplies would be a sheer waste. 1.7 grams of pure sodium fluoride added to 2 gallons of water would give 1 teaspoonful of 1 milligram of fluoride a day for 2 years at 1 cent a year. This dosage is equal to 1 part per million fluoride.

Also, since it is very difficult to distill the fluoride out of water, fluoridation seriously interferes with the production of such commodities as drugs, canned goods, beers, tonics, batteries, etc. Some manufacturers have been obliged to install expensive equipment to defluoridate their water supply. This has been done with some baby foods, to make them safe for consumption.

* * * * *

There are two main classes of fluorides: those occurring naturally, such as calcium fluoride, and those produced chemically, such as sodium fluoride.

Calcium fluoride is not as toxic as sodium fluoride, because it has a higher atomic weight and therefore does not dissolve as readily in water. The lower the atomic weight, the more active the electron.

The atomic weight of calcium fluoride is 99, that of sodium fluoride 41.997. Sodium fluoride has a solubility of 1 part in 25 parts of water and is 85 times more toxic than calcium fluoride.

Sodium fluoride is a highly toxic, cumulative, protoplasmic poison. In minute doses, over a long period of time, it reduces immunity, activates the disease processes, especially of inherent factors. It may act as an acute sudden poisoning or as a chronic slow poison over a period of time and also as an allergenic substance.

An example of acute poisoning occurred in an institutional kitchen, where sodium fluoride was mistaken for powdered milk in the preparation of scrambled eggs. Out of a group of 263 persons, 47 fatalities were reported. It is a known fact that the mortality of fluoride poisoning is very high.

We are here rather interested in the slow, chronic type of poisoning occurring after ingestion of small amounts over a long period of time. Sodium fluoride blocks in the body much like such contaminants as arsenic or lead.

While all fluoride componds have some toxic effect, the chemical reactions vary greatly because of atomic weight. Thus stannous fluoride at 2 parts per million is more active than 10 parts per million of sodium fluoride, and the fluorapatite at 700 parts per million is equal to 1 or 2 parts per million of sodium fluoride. This last is an interesting fact, because it is in the fluorapatite form that the fluorides, however contacted, finally do their destructive work in the body. You see, to be assimilated by the body, a mineral must first be converted by plant or animal life. Man is much more sensitive to fluorides than animals, generally speaking.

Every individual has a certain allergic tendency. As we know, a person may be allergic to such essential elements as wheat and eggs. Milk may cause a rash in one child, while another may be sensitive to strawberries or penicillin. The ingestion of sodium chloride affects every cell or every system of the body to some extent.

Since sodium fluoride is pharmacologically classified as a protoplasmic poison, minute doses ingested over a long period of time are capable of producing an allergic response, precipitating the loss of immunity and activating inherent sensitivity factors.

In this connection, it might be interesting to note the results of studies made at the Brusch Medical Center. It was found that, in over 1,000 cases of varying allergic manifestations, every one was allergic to sodium fluoride to a greater or lesser degree, depending on the inherent rate or allergy or immunity loss. The Healy blood allergen diagnostic method was used. In this test, the blood in gel media is tested directly with sodium fluoride 1 part per million, and the preparation of specimens calls for 5 cubic centimeters of venous blood from the antecubital vein and 5 cubic centimeters of tap water. As many as 120 basic factors are used, including common pathogenic bacteria, common pathogenic molds, indoor and outdoor dusts, contacts, drugs, and industrial substances of all kinds. In this series of tests, sodium fluoride was rated a high sensitizer or an allergen outside the basic or common everyday factors.

The recognized allergic symptoms or varying kind and degree manifested are: vasomotor disturbances; wheezing (asthma); gastrointestinal disturbances; urticaria (hives) and acne (dermatitis); circulatory changes (rheumatic, joint, cardiac, etc.); migraine; anemias; and bone changes (arthritic, calcium loss or displacement).

The amount of fluoride necessary to cause cell intoxication depends on the volume and concentration of the drug in the blood stream. It is well nigh impossible to have a fluoride-free diet, and since the advent of fluorine chemistry about 25 years ago, there is more fluoride in the air, in the form of dusts, fumes, vapors, or sprays. It is all around us, at home and abroad. We contact it in natural and in unnatural radiation, in fluorescent lighting, in television, and at the movies.

Today almost every industry uses fluorides in some way. It is used as a flux in tanneries and bleacheries, and plays a part in the production of varnishes, plastics, rubber goods, and emeries. This has given rise to many medical books and papers on industrial fluorosis, acute and chronic, and on sensitivity effects on the skin, lungs, kidneys, bones, blood, and teeth of individuals handling fluorides daily in the form of hydrofluoric acid or cryolite.

* * * * *

Here is the fluoride content of a few common foods:

Baking powder, 3,000 to 4,000 parts per million; buckwheat, 700 parts per million; cabbage, 74 parts per million; fish, 28 parts per million; liver, 1.5 parts per million; malt, 3.15 parts per million; rice, 9 parts per million; spinach, 6 to 8 parts per million.

Fatty foods absorb more than carbohydrates and stay longer in system.

Foods high in minerals (calcium, magnesium, aluminum), less fluorine is absorbed.

Foods rich in vitamins, less fluorine is absorbed.

Various diets give various combinations of fluorides.

The physiological action of a fluoride varies with the manner of contact—whether it is ingested, absorbed, inhaled, or injected.

Fluorides also have a different action on different cells and at different ages.

* * * * *

When sodium fluoride is taken into the system, it is absorbed in the upper part of the small intestine and carried by the blood stream into the various cells, organs, or tissues in the form of calcium fluoride, robbing the body of calcium. If there is a deficiency of calcium in the system, it will combine with other minerals, displacing them from their essential use and disrupting their function. Just as it acts as a flux in a metal-processing laboratory, so in the human body it activates an insidious demineralization under varying conditions and in varying lengths of time.

* * * * *

The primary gland in the body, the pituitary, is interfered with seriously. This affects the growth and development of bones, teeth, and reproductive organs. As a result, we have bone disturbances of mild to severe degree resembling arthritic and rheumatic changes, often with catilage involvement. Mottling of teeth, mild to severe, also occurs, as well as softness of teeth and periodontal disease.

A nutritional deficiency from failure of this gland causes a mineral imbalance which can bring about premature births, stillbirths, abortions, miscarriages, or sterility. Embryonic tissue, which is rich in primary gland substance, especially from the first week to the third month of pregnancy, is affected.

* * * * *

Fluoride poisoning can also produce persistent blood dyscrasias with resultant changes in circulation. Blood cholesterol may be increased and coagulation retarded from 6 to 20 times. It has also been found to hasten the course of the disease in mice with cancerous tendencies, because of lessened immunity. Arteriosclerosis may also be induced.

Common symptoms are affections of the skin, mottled or flecked fingernails, and thinning or loss of hair.

* * * * *

SUMMARY

Since the exact cause of tooth decay is not known nor can it be shown that fluoridated water will prevent it, and because we are already getting plenty of fluorine through

our foods and are practically surrounded by it, it is clear that we can have good teeth without fluoridation but not without plenty of essential minerals (calcium and phosphorus), especially not without essential vitamins and a properly balanced dietary intake, and, of course, not without well-taught habits of dental hygiene.

Because sodium fluoride is a protoplasmic poison that may accumulate in the body, especially in injured or weakened tissues, fluoridated water cannot be said to be harmless.

Tooth decay is an individual condition and not a contagious or water-borne disease. Therefore sodium fluoride should not be put into the water supplies from which all and sundry must drink. On the contrary, water should be kept as pure as possible, since it is the universal cell solvent so vital to human physicochemical relations.

* * * * *

How inconclusive statistics can be was strikingly demonstrated recently in New York State. Dr. Forest, of the University of the State of New York, reported an increase of 33⅓ percent in damaged or destroyed teeth in the fluoridated city of Newburgh over the unfluoridated city of Kingston. Later a Dr. Ast reported 50 percent more tooth decay in Kingston over Newburgh.

When we hear of fluoridation being put into effect at Army and Air Force bases here and abroad, we wonder why the public is never notified that the fluoride is a harmful substance and why it has so often been put secretly into water supplies throughout the country.

Are mass medication and experiment to be forced on the entire population from birth to death, whether they want it or not? Have we no longer the right to personal care by our own family physician or dentist? Is this right to be taken over by a police power?

Why is it that we hear only one side of the story from newspapers, radio, television, and town meetings? Is this to be the American way of life?

Organizations and groups everywhere have endorsed this measure wholeheartedly with no consideration of its systemic effects. I trust that this 31st Women's Patriotic Conference on National Defense will consider seeking further enlightenment on plans to fluoridate the national water supplies and also see to it that women and mothers everywhere understand the dangers pertinent to the drinking of water containing 1 part per million sodium fluoride by themselves, their children, and their children's children. I deem such action one of national defense and the success of such action definitely patriotic to the highest degree.

Tax Relief for Small Business

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. SHEEHAN. Mr. Speaker, today I and other Republican Members of the House Select Committee on Small Business are introducing a bill to provide income-tax relief for small businesses. The Republican Party platform of 1956 pledged a continuation and improvement of our drive to aid small business and strongly endorses the recommendations of the Cabinet Committee on Small Business, which recommendations embody certain tax-relief suggestions. During their campaign speeches the President, many Members of Congress, as well as the Democratic Presidential candidate, all agreed that the tax situation for small business had to be alleviated.

We all recognize the traditional concept of American business ingenuity which in the past enabled a man or group of men to start a small business and carry it forward until it prospered and grew in size and capital. During the past 24 years our tax laws have served to choke small business and we find today that small business cannot effectively compete and prosper in our present-day economy of big business, big Government, and big labor unions.

In order to provide a healthy atmosphere for small business it is the purpose of the bill being introduced today—

To provide for growth, expansion, and modernization for small and independent business enterprises engaged in trade or commerce;

To provide an election for filing income-tax returns for small and independent businesses engaged in trade or commerce whether or not such businesses operate as individuals, partnerships, or corporations;

To provide a normal tax rate of 20 percent for taxable years after March 31, 1957, and to increase the surtax exemption;

To provide credits for losses incurred through investment or loans to small and independent business enterprises engaged in trade or commerce;

To provide a growth, expansion, and modernization exemption on net taxable earnings for small and independent businesses engaged in trade or commerce;

To provide for rapid amortization of property utilized for the production of profit by small and independent businesses engaged in trade or commerce;

To provide small and independent business an exemption for good will in the determination of the value of an estate;

To provide family-sized farmers and others engaged in agricultural pursuits an exemption for the improvement, modernization, and renewal of buildings or equipment used in the production, care, and marketing of farm products; and

To provide family-sized farms, whether or not such farms are owned in fee or occupied by renters or tenants, an exemption for the improvement, modernization, and renewal of buildings or equipment used in the production, care, and marketing of the products of such farms.

Some of the outstanding features of the bill are—

To enable small businesses earning under $150,000 of taxable income per year, to treat as expenditures a certain proportion of money spent for construction, improvements, or installations of land, building, and machinery, to increase productive capacity;

To reduce the normal corporate tax to 20 percent instead of the 30 percent existing at the present time;

To increase the surtax exemption from the present $25,000 to $150,000 of income before surtax rates apply;

To enable individuals or parties engaged in a trade or business to be taxed as a corporation and to enable small corporations to be taxed as individuals;

To enable investors in small corporate business ventures to treat such losses as a full deduction instead of the present limitation of $1,000 capital gains loss in the present tax bill;

To enable small business to exercise the option of depreciating property, machinery, etcetera, on a 5-year basis which would enable them to provide for a faster write-off; and

To enable small business to obtain more time in paying off estate taxes so that the businesses would not have to be liquidated because of Federal estate taxes.

There are other provisions in the bill which will benefit all small-business establishments and provide for a healthier economy.

It is admitted by all economic students that present trends in our economy work far more hardships on small business than they do on big business. The swing of the business cycle bears much harder on the small business firms because they are less diversified, have fewer products, have fewer distribution channels, and have fewer key personnel.

The change in the economic weather affects small business more strongly because like a gambler with a small bank roll, they may have a good system of winning on the average, but they cannot win all the time and are more easily wiped out with a run of bad luck.

Under present tax laws, as soon as a small business corporation earns $25,000, 52 percent of all its profits go to Uncle Sam with the result that under present-day conditions, the small-business man cannot, as in the old days, depend upon earnings to enable his business to grow and prosper. The larger corporations can float stock issues, sell bonds, make adequate bank loans, whereas, small business mainly has to depend upon plowing back earnings which it cannot do today under the present-day structure. This is the most serious problem of small and new businesses today—the raising of capital to satisfy their financial needs.

The upshot of the many varied and new tax rules over the last 24 years is such that there is little to encourage the furnishing of venture capital to small and new business. There is no ready market, such as is available for the securities of publicly held corporations, nor is there likely to be, unless and until the business has grown out of the small-business category and entered the ranks of the large successful companies.

Under present tax laws there is no incentive for a group of small investors or small-business men to get together and form new small corporations. If their gamble is successful, the Government immediately confiscates 52 percent of the earnings of the corporation in excess of $25,000. If the venture is unsuccessful, the taxpayer is allowed to only deduct his losses up to $1,000. In other words, the dice are loaded in favor of Uncle Sam.

It is my earnest hope that all of the platitudes of both party platforms, both presidential candidates, and most Members of Congress and Senators will be effectively put into action and provide some tangible tax relief for the small-business community.

Land Acquisition Program in the Missouri River Basin

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. BERRY. Mr. Speaker, because of the fact that many thousands of acres of the best land in my State are being required for the storage of water back of the large dams in the upper Missouri River which takes such land forever from production or from the payment of taxes for revenue purposes for local governments.

And, Mr. Speaker, because these thousands are being taken from the owners at prices which will not permit the owners thereof to replace such lands elsewhere for farming and ranching purposes.

Under unanimous consent, I insert in the RECORD Senate Concurrent Resolution 4 of the South Dakota State Legislature:

Senate Concurrent Resolution 4

Concurrent resolution memorializing the Corps of Engineers and the Congress of the United States relative to the land-acquisition program in the Missouri River Basin

Be it resolved by the Senate of the State of South Dakota (the House of Representatives concurring):

Whereas the land-acquisition program of the Corps of Engineers of the United States Army in connection with lands required for the Missouri River dams is of such size as to affect a large number of the citizens of the State of South Dakota; and

Whereas it is unfair to the landowners in that the land appraisals do not take into consideration the fact that the acquisition involves a mass taking of practically the whole Missouri River bottom lands from one side of the State to the other; and

Whereas, as a result of such mass taking, the number of displaced landowners who desire to buy replacement land runs into the hundreds and perhaps thousands and the demand pressure thus built up forces these landowners to pay much higher prices for such land than they are offered by the Government for their land; and

Whereas, as a result of this pressure and increase, the landowner is placed in a much worse position than before the taking; and

Whereas there are relatively large blocks of school and endowment lands held in trust by the State of South Dakota for the benefit of the common schools and other endowed institutions, which lands are now, through long-term leases, a part of, and an asset to residents of the area to be evacuated; and

Whereas large bodies of such school lands are not available for lease adjacent to land available for resettlement; and

Whereas the willing-seller, willing-buyer concept which has been adopted by the courts as a basis for determining the compensation to be paid the landowner is unfair in that the landowner is not a willing seller but is forced to sell: Now, therefore, be it

Resolved, That this legislature respectfully request the Corps of Engineers to take into consideration the cost of replacement land and to adopt a scale of appraisals which will enable displaced landowners to purchase other relatively good lands at the amounts received by them; and be it further

Resolved, That the legislature respectfully request the Corps of Engineers to abandon the willing-seller, willing-buyer concept as a basis for its appraisals and that it take into consideration the fact that the landowner is forced to sell; and be it further

Resolved, That, if congressional action be necessary to correct the present unjust system, this legislature respectfully request the Congress of the United States to take such action promptly; and be it further

Resolved, That the replacement-value concept be adopted in the appraisal of land by the Corps of Engineers so that it shall conform to the fifth amendment of the Constitution of the United States providing that no private property shall be taken for public use without just compensation, to the end that the owner shall be placed in as good a position pecuniarily as he would have occupied if his property had not been taken; and be it further

Resolved, That copies of this concurrent resolution be forwarded to His Excellency the President of the United States, the Honorable Secretary of Defense of the United States, the Honorable Secretary of the Army of the United States, the Chief of the Corps of Engineers of the United States Army at Omaha, Nebr.; to the Honorable KARL MUNDT and the Honorable FRANCIS CASE, United States Senators from South Dakota; to the Honorable E. Y. BERRY and the Honorable GEORGE McGOVERN, Representatives in Congress from South Dakota; and to the presiding officers of both Houses of Congress of the United States.

L. R. HOUCK,
Lieutenant Governor, President of the Senate.
NIELS P. JENSEN,
Secretary of the Senate.
NILS BOE,
Speaker, House of Representatives.
WALTER J. MATSON,
Chief Clerk, House of Representatives.

Forty-fifth Anniversary of Hadassah

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News of March 2, 1957, paying tribute to Hadassah, the Women's Zionist Organization of America, on the occasion of its 45th anniversary:

Developments in the United Nations during the past 24 hours, indicating a settlement of the dispute between Israel and the Arab nations, should add zest to the local observance of the 45th anniversary of Hadassah, the Women's Zionist Organization of America, on Monday.

Founded in 1912 by Henrietta Szold, of Baltimore, this organization has dedicated itself to service in Israel. Its purpose has been to reclaim land, to provide hospital and health care, and to rescue the homeless children of Europe and Asia.

Today, Hadassah has 1,200 chapters throughout the United States, and a record of having rehabilitated 70,000 children through its Youth Aliyah program. In addition, Hadassah's doctors, nurses, and volunteer workers have made considerable progress in the eradication of disease in the Middle East, and are proud of the fact that the doors of its hospitals and clinics are open to anyone in need of help. Hadassah women are dedicated to building the new Hadassah-Hebrew-University Medical Center.

Hadassah plays a vital role in the life of the average American Jewish woman. Through these humanitarian services, she finds a deeper appreciation of the American way of life and is even more grateful for the privilege of living in the best of democracies. But through Hadassah she lives a fuller life, coming in contact with men and women of stature, men and women who are in close touch with history in the making.

Greater Wilkes-Barre women have had an opportunity to expand the scope of their lives through service and through these vitalizing contacts, rising from local office to posts of importance on the regional and national scene. Through Hadassah, they have received inspiration and the spirit of dedication so necessary to the American woman today.

In four decades, it is possible for a woman to have spent a lifetime serving an organization—and in Hadassah such service becomes almost a way of life. For example, of the local chapter's president, Miriam Sare Charnow, whose parents were pioneer Zionists, it can be said that she was a Zionist at birth. To her and to many others, Hadassah is not just another organization.

Hadassah women are Americans first, but Americans who are willing to share, willing to care, and willing to love; willing always to clothe the naked, teach the unlearned, and fed the hungry. This they do through Hadassah.

With a proud record of achievement to its credit, Hadassah faces a challenging future, its opportunities for service practically unlimited.

Legislation To Correct a Deficiency in the Civil Service Retirement Act

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. HOLIFIELD. Mr. Speaker, I am today introducing legislation which will correct a serious deficiency in the Civil Service Retirement Act.

At the present time, if a Federal employee dies or leaves the service before he has completed 5 years of Federal service, his dependents who survive him will not receive benefits under the Civil Service Retirement Act. Employees who are covered by the Social Security Act are protected after 18 months of covered service.

My bill will correct this inequity. It provides that the Federal service and salary after 1950 of any employee who leaves Government before completing 5 years' Federal service will be deemed "employment" and "wages" for social-

security purposes. This has the effect of transferring credit for short-service employees. It also affords them social-security survivor protection during and after their Government employment in the same manner as though they were working in private employment. Once the employee completes 5 years of Federal service, he acquires retirement and survivor protection under the Civil Service Retirement Act, and credit for his Federal employment may no longer be transferred for social-security purposes.

This legislation was drafted by the Civil Service Commission at my request made during hearings on Federal employees' retirement last Congress. It has just been received.

Under leave to extend my remarks in the RECORD, I include a letter of transmittal from the Chairman of the Civil Service Commission, an analysis of the bill, and a copy of the bill:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., February 28, 1957.

Hon. TOM MURRAY,
Chairman, Committee on Post Office and Civil Service, House of Representatives.

DEAR MR. MURRAY: In its report of July 21, 1956 (No. 2854), on the bill S. 2875, 84th Congress, the Committee on Post Office and Civil Service stated:

"PROTECTION OF EMPLOYEES SEPARATED BEFORE COMPLETING 5 YEARS OF SERVICE

"In the consideration of this legislation the committee has recognized a serious deficiency in the law with respect to protection of employees who are separated, by death or otherwise, before having completed 5 years of service. The completion of 5 years of creditable service is an absolute requirement for entitlement to benefits under the present civil-service retirement system. Thus, an employee separated before completing 5 years of service is entitled to withdraw his contributions to the retirement fund, with interest, and nothing more. Neither he nor his dependents receive any real protection in line with the staff annuity purpose of the retirement system.

"The committee views with sympathy the problems of employees who fall in this category and believes that appropriate provisions should be worked out and incorporated in the Civil Service Retirement Act to provide at least minimum protection for such employees and their survivors. It is felt that legislation to provide these employees and survivors minimum social-security benefits will be appropriate and will give them adequate protection not now afforded by either the civil-service retirement plan or the Social Security Act.

"In view of the lateness in the session and the complexities of working out legislation to accomplish the purpose, however, the committee decided that it is not desirable to delay legislation to liberalize civil-service retirement benefits in order to make the necessary changes at this time. Accordingly, it was decided to postpone action to close this gap in retirement provisions for Federal employees with the understanding that the Civil Service Commission will study the feasibility of providing, for short-service employees, a plan for transferring credits between the Civil Service Retirement Act and the Social Security Act. The Commission will submit its report to the committee before January 3, 1957, together with a draft of legislation to carry out the objective of extending to these short-service employees, by transfer of credit, the basic protections of the Social Security Act. The committee expects that the proposal will incorporate these basic principles:

"The committee strongly recommends that legislation with this objective receive prompt consideration and become law at the earliest practicable date in the new Congress."

Subsequently the committee extended the time for the Commission to submit its report and legislative draft to March 1, 1957.

In response to this request, there is enclosed a draft of legislation which, if enacted, would permit short-service employees to transfer credit for Federal employment from the civil service retirement system to the old-age and survivors insurance (social security) system. In essence, the legislation provides that a Government employee who is separated before completing 5 years' Federal service will have so much of this service as was performed after 1950 while he was subject to the Civil Service Retirement Act counted under the social security system as though it were private employment. Federal employment after 1950 not subject to the Civil Service Retirement Act (or another Federal retirement system) is generally already creditable under the social security system.

This is how the transfer-of-credit plan contained in the legislation would work in the most common types of cases:

1. An individual in private employment who had social security survivor protection and who moved to Government employment would retain this survivor protection until he had completed 5 years of Federal service.

If the individual had less than a year and a half (six social security quarters) of private employment within the last 3 years, he would acquire social security survivor protection as soon as he completed enough Federal service to give him the social security-required total of six quarters of coverage. These six quarters would then consist of combined private and Federal employment.

Upon completion of 5 years' Federal service, the individual would acquire survivor protection under the Civil Service Retirement System and credit for his Federal service could not thereafter be transferred.

2. A new Government employee who had no prior private employment would acquire social security survivor protection as soon as he completed the necessary year and a half (six quarters) of Federal service. He would retain such protection until he completed 5 years' Federal service at which time he would acquire survivor protection under the retirement system.

If the individual moved from Government to private employment after completing a year and a half but less than 5 years' Federal service, he would retain and add to his social security survivor protection.

If the individual moved from Government to private employment before completing a year and a half of Federal service he could add his private employment to his Government employment and acquire social security survivor protection as soon as he completed a combined total of a year and a half of service.

3. A Government employee who, before completing 5 years' Federal service, moved permanently to private employment would have credit for his Federal service transferred to social security and counted toward his old-age or survivor benefits. This transfer of credit would be made only if and when he or his survivors applied for social security benefits.

The plan has the following characteristics which we believe are essential if any transfer of credit plan is to be adopted:

1. It is relatively simple and its operation would be generally understood by the people whom it will affect.

2. It does not entail any options or elections by the individual or his survivors. This eliminates:

(a) The necessity of the individual having to make a critical decision which he may later regret.

(b) In large measure, the opportunity for manipulation calculated to produce unwarranted benefits.

3. It requires only a one-time transfer of credit, thus avoiding the administrative difficulty and cost of retransfer and possible re-retransfer of a credit whenever the individual moves from private to Government employment or vice versa.

The draft bill excludes Members of Congress and congressional employees from the plan because the Commission usually excludes Members and congressional employees from pay and related legislation drafts and because participation of Members in the retirement system is not mandatory but optional with the individual. Members and congressional employees can be included by minor changes in the language, as indicated in the analysis which accompanies the draft.

If the draft legislation is enacted, it may also be desirable to amend the Social Security Act. The Secretary of Health, Education, and Welfare is, of course, best able to determine whether, from his point of view, any changes in the Social Security Act or in this draft legislation would be required.

We believe the bill meets your committee's stated objective of permitting short-service employees to transfer credit. However, the plan does have at least two major shortcomings:

1. As soon as an individual completes 5 years' Federal service (and assuming he is then under the retirement system), he generally exchanges his social-security survivor-benefit protection for the usually lesser retirement-system protection. This abrupt change will in many cases result in a wide disparity in benefits to the survivors of individuals who are similarly situated, except that one dies shortly before he completes 5 years' Federal service and the other dies shortly after completing 5 years' Federal service.

2. An individual who leaves Government employment before completing 5 years' Federal service will, in most cases, have residual social security survivor protection for 18 months, whereas an individual with 5 or more years of Federal service would not have this residual protection when he left Government employment.

Even if these shortcomings were corrected—and we have not attempted to do so in the draft bill because it would have exceeded the bounds of the committee's request—the plan would still not achieve the goal of worker mobility between the social security and the civil service retirement systems without loss, diminution, or duplication of benefits. This, as we see it, can be achieved only by completely coordinating the Old-Age and Survivors' Insurance System and the Civil Service Retirement System.

I should not want the committee to believe that because we have performed this technical service at the commitee's request, the Commission has receded in any particular from its position of last year favoring complete coordination of the Old-Age and Survivors Insurance System and the Civil Service Retirement System. No transfer of credit plan, however carefully devised, will provide a fully satisfactory solution of the problems inherent in the present imperfect relationship between these two Systems.

The Civil Service Retirement Act as it stands today provides an excellent staff retirement system. But, like other staff systems, it needs coordination with the Social Security System. Without the minimum protection afforded by the Social Security Act, many Federal employees suffer a relative disadvantage. And in the absence of coordination with the Social Security Act, many Federal employees reap windfall benefits. Neither result is desirable.

In the case of legislation which the Commission recommends to Congress, we ordinarily obtain the views of Federal employee

organizations. Because we are not sponsoring the enclosed draft bill, but are merely performing a technical service for the committee, we have not done so here. Neither have we sought the advice of the Bureau of the Budget as to whether the enclosed draft legislation is in accord with the program of the President.

By direction of the Commission:

Sincerely,

PHILIP YOUNG,
Chairman.

ANALYSIS OF BILL

Section 1 defines the term "tax equivalent" as an amount equal to the tax which would have been levied after December 31, 1950, the date on which "temporary" Government employees were originally covered by the Social Security Act, on the basic salary of a Federal employee who was subject to the Civil Service Retirement Act had his Federal service been covered employment under the Social Security Act. The tax equivalent is a consideration for the transfer of credit for Federal service to the social-security system.

Section 2 provides that the Federal service and salary after 1950 of any employee who leaves Government before completing 5 years' Federal service will be deemed "employment" and "wages" for social-security purposes. This has the effect of transferring credit for short-service employees. It also affords them social-security survivor protection during and after their Government employment in the same manner as though they were working in private employment. Once the employee completes 5 years of Federal service, he acquires retirement and survivor protection under the Civil Service Retirement Act, and credit for his Federal employment may no longer be transferred for social-security purposes.

Section 3 requires the Civil Service Commission to certify to the Social Security Administration a record of the service and the salary which is being transferred for credit under the social-security system. The Social Security Administration must request certification of the record upon receipt of an application for social-security benefits, but it may request the record at an earlier date if occasionally it is called upon to make an advance determination of an employee's or his survivors' social-security rights.

Because the transfer of credit is not made until the employee or his survivors apply for social-security benefits, no retransfer of credit is involved if the employee moves more than once between Government and private employment—so long as such movement occurs before he applies for the social-security benefits.

Section 4 permits refunding of a Federal employee's civil-service retirement contributions but provides for the withholding of the tax equivalent from the refund paid to a short-service employee. Should the short-service employee return to Government employment under the Civil Service Retirement Act and complete at least 5 years of Federal Service, the tax equivalent withheld will be recredited to his retirement contributions account.

Section 5 permits refunding of a deceased employee's civil service retirement contributions but provides for the withholding of the tax equivalent from the refund paid to the survivor of a short-service employee.

Section 6 requires the Civil Service Retirement and Disability Fund to reimburse the social security trust funds for the benefit costs incurred on account of transferring credit for Federal employment to the social security system. It is recommended that at the time any hearings are held on this legislation, the Committee develop and include in this section a more detailed formula for determining the benefit costs. The formula should be one which is equitable both to the Civil Service Retirement and Disability Fund and the social security trust funds.

Section 7 provides for the legislation to become effective upon enactment. Transfer of credit is permitted for all Federal service performed after December 31, 1950 (except "temporary" service which, if performed after 1950, is already creditable for social security purposes in most cases) for an employee who was subject to the Retirement Act on or after the effective date of the legislation.

(NOTE.—The legislation is worded so as to exclude Members of Congress and congressional employees from its operation. If the legislation is to apply to Members and congressional employees, Members should be included by specific references, and the phrases which exclude congressional employees should be deleted.)

A bill to provide for transfer of credit from the civil-service retirement system to the old-age and survivors insurance system, and for other purposes

Be it enacted, etc., That section 1 of the Civil Service Retirement Act, as amended, is amended by adding at the end thereof the following paragraph:

"(t) The term 'tax equivalent' shall mean an amount equal to the tax on employees under the Federal Insurance Contributions Act with respect to basic salary paid for employment wherein they were subject to this act after December 31, 1950, had such employment been covered employment within the meaning of the Social Security Act."

SEC. 2. Section 2 of said act is amended by adding the following new subsection:

"(h) Notwithstanding any other provision of law or executive order and provided he is separated before completing an aggregate of 5 years of civilian service, the service performed after December 31, 1950, by a former employee, except a congressional employee, while he was subject to this act, shall, at the time he or his survivors apply for old-age, disability, or survivors benefits under the Social Security Act be deemed to be 'employment' within the meaning of section 210 of the Social Security Act. Such a former employee shall be deemed to have received during such service 'wages' within the meaning of section 209 of the Social Security Act in an amount equal to the lesser of (1) the basic salary paid to him for such service, or (2) the maximum yearly amount which may be considered as wages under section 209 of the Social Security Act."

SEC. 3. Section 3 of said act is amended by adding at the end thereof the following new subsection:

"(k) For any former employee to whom section 2 (h) applies, the Commission shall furnish, at the request of the Secretary of Health, Education, and Welfare, a record of service wherein the employee was subject to this act, the basic salary paid for such service, and a certification that the Commission's records show that such service and salary may be deemed to be 'employment' and 'wages' as provided in section 2 (h). The said Secretary shall not reqeust such record unless and until a determination of the former employee's or his survivors' entitlement to or amount of old-age, disability, or survivors benefits under the Social Security Act becomes necessary. Such record and certification shall be final and conclusive upon said Secretary."

SEC. 4. Section 11 (a) of said act is amended to read as follows:

"SEC. 11. (a) (1) Except as provided in paragraph (2) of this subsection, any employee or Member who is separated from the service, or is transferred to a position wherein he does not continue subject to this act, shall be paid the lump-sum credit provided his separation or transfer occurs and application for payment is filed with the Commission at least 31 days before the earliest commencing date of any annuity for which he is eligible. The receipt of payment of the lump-sum credit by the individual shall void all annuity rights under this act, unless and until he shall be reemployed in the service subject to this act. This subsection shall also apply to any employee or Member separated prior to October 1, 1956, after completing at least 20 years of civilian service.

"(2) The tax equivalent shall be withheld from the lump-sum credit paid any employee, other than a congressional employee, whose separation from the service occurred before he completed 5 years of civilian service. The tax equivalent so withheld from an employee shall not again become part of the lump-sum credit unless and until he is reemployed in the service subject to this act."

SEC. 5. Section 11 (d) of said act is amended to read as follows:

"SEC. 11. (d) (1) Except as provided in paragraph (2) of this subsection, if an employee or Member dies (A) without a survivor, or (B) with a survivor or surivors and the right of all survivors shall terminate before claim for survivor annuity is filed, or if a former employee or Member not retired dies, the lump-sum credit shall be paid.

"(2) If an employee or former employee, other than a congressional employee, dies before completing 5 years of civilian service, the lump-sum credit less his tax equivalent shall be paid."

SEC. 6. Section 17 of said act is amended by adding at the end thereof the following new subsection:

"(f) The Secretary of the Treasury is authorized and directed to transfer each year from the fund to the Federal old-age and survivors trust fund and the Federal disability insurance trust fund a sum determined by the Secretary of Health, Education, and Welfare and the Chairman of the Commission as necessary to meet the benefit costs incurred during the previous fiscal year by the said trust funds on account of section 2 (h) of this act."

SEC. 7. The amendments made by this act shall take effect upon enactment. This act shall not apply in the case of employees retired or otherwise separated prior to such effective date and the rights of such persons and their survivors shall continue in the same manner and to the same extent as if these amendments had not been enacted.

A Plan To Raise Farm Income

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. COAD. Mr. Speaker, a group of Iowa farmers, at their own time and expense, have formulated a plan to assist the American farmer to raise farm income. They have worked long hours on this plan and have consulted many persons of high professional standing to double check their efforts.

Because the plan, as presented, strikes at the heart of much of the farm problem as it exists today which involves feed grains I desire to present it here in its entirety.

The authors of this plan are Mr. Elmer Stockdale, of Iowa Falls, Iowa; Mr. James Jorgensen, Jr., Mr. Laurence W. Hamilton, and Mr. James Jorgensen, Sr., all of Hampton, Iowa.

The plan follows:

A PLAN TO RAISE FARM INCOME

INTRODUCTION

While most Americans are enjoying unprecedented prosperity, feed and livestock farmers are having hard times. They can produce abundantly, but their problem is price.

Four Iowa farmers turned their attention to this problem. What are the underlying causes of low prices? Is there a sound solution?

These farmers sought ideas from members of the Farm Bureau, the Farmers' Union, the National Farmers' Organization, and the Grange. They conferred with representatives of the United States Department of Agriculture. They obtained data from the Iowa State Extension Service. Their aim was a long-range, nonpartisan, nonorganizational plan which would provide agriculture with a fair share of the national income.

The plan which they propose would apply to all farmers in the United States producing fed crops, not merely to Corn Belt farmers. Thus the southerner or westerner raising feed crops on land taken out of cotton or wheat could participate. The plan would benefit feed and livestock producers everywhere in the country.

The plan does not disturb programs on other basic commodities—cotton, wheat, rice, peanuts, and tobacco. Its authors believe that if the plan were applied to those crops, it would improve market prices; but they defer judgment to the producers of those commodities.

The four authors are Lawrence Hamilton, James Jorgensen, and James Jorgensen, Jr., of Hampton, Iowa, and Elmer Stockdale, of Iowa Falls, Iowa.

Following are their ideas. Part I states the problem. Part II contains their solution.

THE PLAN IN A NUTSHELL

1. Retain the soil bank and commodity loans.

2. Allow any feed cropland to be banked without compliance with corn acreage allotments.

3. Condition commodity loans on feed crops upon participation in the bank.

4. Achieve substantial increase in acreage banked.

5. Operate within the present framework of soil bank legislation.

6. Continue programs on other basic crops.

Part I. The problem

Point 1. Fundamental Difficulty—Too Many Feed Units

Farmers are producing more livestock feed crops than buyers will purchase at prices which provide a fair return.

Explanation: Incomes of livestock and feed-crop farmers are lower than incomes in other occupations involving similar capital, labor, and risks. This is because farmers, with scientific methods, are able to produce more than consumers will buy at reasonable prices. It is necessary somehow to bring production closer in line with consumption.

More consumption should be encouraged. But it is necessary also to deal with the other side of the problem—production.

Point 2. Soil Bank Principle Sound

The soil bank principle is sound because it aims at bringing the amount that farmers produce in line with what consumers will buy at reasonable prices, while building up land that most needs conservation.

Explanation: The individual farmer is helpless to reduce overall production. But this can be accomplished collectively through a Government program. This is the purpose of the soil bank—reducing production by retiring land.

Point 3. Corn Problem

Corn is but one of a number of feed crops, and reduction of corn production alone does not reduce total feed units or improve feed-crop prices.

Explanation: All crops grown primarily for livestock feed, such as corn, oats, barley, rye, grain sorghums, soybeans, alfalfa, cowpeas, etc., may be called feed crops. They are in competition with each other. When production of one is curtailed, production of the others tends to increase. There is but one general market for them, the livestock feed market.

Wheat may be dealt with singly in a production-control program. There is only one such principal product. When the production of wheat is reduced, the supply in the wheat market goes down and the price goes up. But when corn production is reduced, the supply in the livestock feed market does not go down proportionately. Farmers fill the demand by producing substitutes which involve less efficient use of land but meet the need. Thus feed-crop prices do not go up. Even corn prices do not rise, for cheap substitutes can be bought.

The corn problem is complicated by programs on other commodities such as cotton and wheat. Farmers reducing production of those commodities often turn to feed crops.

In the 3-year period from 1953 through 1955 there was an increase of 12 percent in the total supply of livestock feed, despite corn acreage allotments in connection with loans on that commodity.

Point 4. Livestock Problem

Increased supplies of livestock feed have resulted in increased production of livestock and lower livestock prices.

Explanation: There is a close relationship between feed and livestock prices. When farmers can profitably feed their crops to livestock they do so, and livestock production increases. When it is more profitable to sell crops as such, less feeding is done and livestock production decreases. Livestock prices are very sensitive to supply. A decrease of 1 percent in supply causes an increase of about 2 percent in price.

Recently Corn Belt farmers, with low crop prices, have produced more livestock. The non-Corn Belt farmers, growing feed on land taken out of production of allotted crops, have also produced livestock. The result in 1953 was the highest production of livestock per capita since 1908—more livestock than consumers would buy at prices which would return a profit to producers.

Point 5. Infirmities in Soil Bank—Feed Units Not Reduced

The present soil bank will not improve livestock and feed-crop prices because it deals with corn singly rather than with feed crops collectively.

Explanation: Participation in the corn soil bank is founded on treating corn alone rather than feed crops together. There must be compliance with corn acreage allotments. But while the participating farmer reduces corn, he produces substitutes and overall feed production continues to increase. As a result, market prices for corn and other feeds go down, and livestock prices follow.

Point 6. Infirmities in Soil Bank—Nonparticipation

Sufficient participation in the corn soil bank to reduce production cannot be obtained because compliance with allotments is required.

Explanation: Compliance with allotments means that a farmer cannot use his land not banked in the most efficient way. Since he must not only retire land, but also surrender freedom of operation on his remaining acres and reduce production of his most profitable crop, he often chooses to stay out of the bank.

Part II. The solution

Point 7. Feed Crop Approach

It should be permissible to bank tilled land in the United States which is in normal rotation of feed crops without complying with corn acreage allotments.

Explanation: Tilled land in the United States in normal rotation of feed crops may be called "cropland." A soil bank requiring compliance with corn acreage allotments does not reduce feed units because substitutes are produced. But if a portion of all cropland were retired, total feed units would diminish and feed crop prices would rise. Prices for livestock and livestock products would follow. Even the producer who buys all his livestock feed would thus be benefited; in addition, he would face less competition from farmers who could profitably sell their crops as such.

An increase in the supply of any particular feed such as corn would not be important, for there would be a reduction in the total feed units available to meet demand. Actually feed crops would come into proper balance as to each other, for an increase in one would result in a decrease in others and higher prices for them.

Freedom of choice of crops as to land not banked would at once increase participation in the bank and operating efficiency on the farm, for a producer would not be obligated to cut back the crops he raises most efficiently and finds most profitable. (Manufacturers faced with the problem which confronts agriculture would not cut back the items which produce the most return.) In practice one farmer might find corn best adapted to his locality and operation, while grain sorghum or alfalfa for another might be better.

Point 8. Adequate Soil Bank Payments

Soil-bank payments for cropland should be realistic in amount, based on the productive capacity of the particular land banked.

Explanation: Individual farmers considering participation weigh rental payments against the gross income from the land to be banked less the cost of farming it. Payments must be high enough to encourage participation.

Since payments would be based on the productive capacity of the acres retired, a feed-crop soil bank dollar would buy the same crop reduction on high as on low fertility land. Since operating costs are practically constant, farmers would normally tend to retire their less fertile land; and they would endeavor to put fields in the bank which in their particular operation produce the least valuable crop to them under their system of rotation. For these reasons rental payments would not need to be as high as when part of the land banked must actually come out of corn because of allotments.

Rental payments should not be so high as to incur resentment among other segments of the economy.

Participation ought not be sought by compulsion. This would eventually lead to an agriculture entirely controlled by governmental officials and insensitive to change.

Point 9. National Cropland Retirement

Sufficient cropland should be retired nationally to secure fair-market prices for feed crops, and approximately 15 percent should be retired now.

Explanation: A reduction of approximately 8 percent in feed supplies is necessary at this time in order to get prices to a proper level. But farmers would endeavor to retire their least fertile land, to produce their most valuable crops, and to increase operating efficiency. Hence 15 percent of the Nation's cropland should be retired now. Subsequent increases and decreases needed would be determined by experience from year to year.

Actually a reduction of approximately 6 percent in feed supplies would balance supply and demand. But on initial reduction of 8 percent is needed to reduce inventories and get the ever normal granary at a proper level.

Point 10. Farm Cropland Retirement

There should be no minimum or maximum acreage retirements per farm for participation, subject to the prior right of each farm to its proportionate share of the cropland to be retired nationally.

Explanaiton: There would be no limitation on the amount of cropland which could be retired per farm. But if 15 percent of the Nation's cropland was to be retired, there would be a right as to each farm to retire up to that proportion before the excess was divided.

Present provisions for the protection of tenants and share croppers would be retained.

Point 11. Commodity Loans

Feed crops now the subject of commodity loans would continue to be such, but such loans would be conditioned upon participation in the feed-crop soil bank to at least the proportionate share of the national retirement, rather than allotments.

Feed grains should be supported on a comparative feed and market value with corn.

Explanation: Commodity loans would provide an ever normal granary and credit at harvest times. As market prices improved, farmers would rely less on loans. The Government loan would become more a credit device as intended, and less a sale which sets prices.

If 15 percent of the Nation's cropland was to be retired, crops from a farm would not be subject to loan unless at least 15 percent of the farm's productivity was in the soil bank.

This requirement would encourage participation in the bank.

Point 12. Conservation Payments

Conservation payments should be restricted to actual conservation practices, and should be conditioned upon participation in the soil bank to at least the proportionate share of the national retirement.

Explanation: It is inconsistent simultaneously to promote more and less production by Government funds. Conservation payments should be limited to practices for the protection of the soil, such as erosion control.

Farmers needing conservation practices will also benefit by participation in the soil bank. If 15 percent of the Nation's cropland is to be retired, that percentage of the cropland on a farm should be banked for eligibility.

Point 13. Funds

Appropriations substantially equal to the present ones would be sufficient or nearly so to retire 15 percent of the Nation's 235 million acres that are in feed-grain crops.

Explanation: Cropland to be retired nationally is aproximately 35,250,000 acres. Some of the present appropriations for conservation payments should be made available for the soil bank, as they are being used to increase production. Adding these to present soil-bank appropriations gives approximately $850 million, or about $25 per cropland acre. This is substantially the national average of rental payment necessary to secure participation.

Point 14. Other Programs

Programs on other basic crops should remain as they are, and the feed-crop soil bank should operate within the framework of present legislation.

Explanation: The details for the operation of a soil bank are covered by present legislation. The feed-crop soil bank would not disturb programs on other commodities.

To sum it up, the plan would—

1. Permit more freedom of operation.
2. Improve operating efficiency.
3. Increase soil-bank participation.
4. Soil bank more land for less cost per acre.
5. Reduce overall production.
6. Raise agricultural income.

The Adversary Seeking Whom He May Devour

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1957

Mr. SIKES. Mr. Speaker, Rabbi Milton L. Grafman of Temple Emanu-el, Birmingham, Ala., is one of the leaders among American Hebrews. A recent appeal to the members of his congregation so impressed me that I request that it be republished in the CONGRESSIONAL RECORD. This statement was called to my attention by a very good friend, C. Davis Turner, one of the leading businessmen of Marianna, Fla., in my district. It follows:

THE ADVERSARY SEEKING WHOM HE MAY DEVOUR

I thought he was dead. So did a lot of other people. But we were wrong. Maybe there's something to this Bridey Murphy business, after all. Because there he is, big as life—and, yet, he's supposed to be dead. There he is, down to the mustache.

The Israeli—God bless them—try to joke about him. They say, "Hitler didn't die. He jumped into the Red Sea and came out a 'Nasser.'" (Nasser is Yiddish for "a wet one.") Wonderful sense of humor—with death on their doorstep, they can still laugh.

But it's no laughing matter, as in their hearts the Israelis know. The question is, Do you and I know? Do we realize that Nasser is Hitler over again, equally resolved to destroy every Jew—man, woman, and child—in Israel, if he can?

After I visited Nazi Germany in 1938, I told my congregation that Hitler and Goering intended to exterminate every Jew within their reach, if they could get away with it. I was not believed. I was not taken seriously. But, you know what happened.

Don't make the same mistake about Nasser. Don't shrug him off. Egyptian Jews have already felt his tyrannical heel. Confiscation, deportation, incarceration, each departing family leaving a hostage. This is history repeating itself—with a levantine touch.

So what? You would think this sort of thing would shock everybody, stir a fever in the blood of age and make the infant's sinews strong as steel. But that, alas, is not the reaction. Why, it isn't worth a headline, let alone an editorial. Mr. NIXON has gone to Vienna to help the Hungarian refugees. More power to him. But I'm afraid he won't go on to Cairo to look over the situation there.

We can't let the matter rest there. There are things to be done, things we can do. There are ways to help. At least, we can try to help.

We may be able to persuade President Eisenhower to respond to the plight of Egyptian Jews as he responded to the plight of Hungarian revolutionists. Each of us can write to the President. We can tell him of our gratitude for the humanitarianism he has shown. We can call his attention to Jewish sorrows in Egypt. We can implore him to give the same succor to our brethren oppressed by Nasser that he gave to Hungarians under the Communist yoke.

One other thing we can do is to give generously to the United Jewish Appeal. If you haven't made your pledge yet, do so this very minute. If you haven't given that extra 20 percent, do it now. If you have reduced your pledge, send in a new one.

I have heard the reasons given for not measuring up to this test—"business is off, taxes, expansion, reorganization," and the like. I know the psychology of givers. But I also know where real charity begins—where taxes leave off, where business is not so good as it was last year.

There is another yardstick, what ought to be a prevailing yardstick. Imagine yourself being face to face with Egyptian Jews in their misery, or with the heroic but desperate Israeli. Would they understand your excuses? Perhaps they would. With only their lives to lose, maybe they would understand.

It's going to be hard for me to sing out Happy New Year in this topsy-turvy world. It's going to be a little easier, though, because I have tried to do my part. How about you?

Partnership Faces Stiff Test

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. ULLMAN. Mr. Speaker, the March issue of the National Union Farmer includes an article which I believe will be of interest to the Members of this Chamber. The article appears at a time when the members of the House and Senate Subcommittees on Irrigation and Reclamation are again being given an opportunity to consider legislation authorizing a high dam at Hells Canyon.

Because of the importance of this legislation to the Pacific Northwest and the Nation, I ask that this article be included in the Appendix of the RECORD.

The article follows:

PARTNERSHIP FACES STIFF TEST

The Eisenhower administration is frantically trying to swim out of the whirlpool created by its own partnership power policy in the Pacific Northwest.

The situation has grown more and more desperate with each passing day, particularly for Secretary of Interior Fred Seaton, ever since the votes were counted last November in Oregon, Washington, and Idaho.

Now Seaton has announced that he will intervene in Federal Power Commission (FPC) hearings concerning the licensing of a private utility group that wants to build a low dam at Pleasant Valley downstream from the Hells Canyon site. But Senator WAYNE MORSE, Democrat, of Oregon, and 28 other Senators are not marking time for Seaton. On March 6 MORSE will open up Senate Interior Committee hearings on his bill to authorize construction of the high Federal dam at Hells Canyon.

On another front, the National Hells Canyon Association has asked the United States Supreme Court to set aside the ruling of the FPC that gave the priceless Hells Canyon dam site to the Idaho Power Co. for small spite dam development. (National Farmers Union renewed its membership in—and vigorous support of—the Hells Canyon Association in January.)

If Seaton can swallow the administration's partnership position and endorse a high Federal dam at Pleasant Valley, it will make a major change in the Administration's river basin policies of the past 4 years. It will also muddy up the Hells Canyon situation tremendously, since a high dam at

Pleasant Valley would flood out one of the three low dam sites given to the Idaho Power Co. through the FPC ruling.

But there is an even greater hazard in high dam development of the Pleasant Valley site.

If the Idaho Power Co. is not prevented from building low dams on the 2 upper sites—2 of the 3 sites that the company has already been licensed to develop—these 2 small dams and a high dam at Pleasant Valley would result in a total and perpetual loss of 6.5 million acre-feet of storage and more than 1 million kilowatts of electric power capacity.

This great loss would be caused by flooding of the logical upstream site for the high Hells Canyon dam, plus interference with the flowage area of another potential high damsite downstream at Nez Perce.

A new combine of private utilities figures in the Pleasant Valley low-dam application. It is called the Pacific Northwest Power Co., and is composed of the Washington Water Power Co., Pacific Power & Light, Portland General Electric, and the Montana Power Co.

Seaton's problem is how to satisfy the two private utility groups involved at Hells Canyon and Pleasant Valley without bringing down the wrath of the Northwest voters and of propublic power and proconservation groups all over the country.

Obviously, somebody is going to get hurt in Hells Canyon.

Another case in which the administration appears to be preparing to abandon its partnership power policy concerns the John Day Dam on the Columbia River in Oregon. Seaton's predecessor, Douglas McKay, piloted the partnership planning on the John Day project, with help in Congress from Sam Coon, Republican, of Oregon. The voters got to Coon—and to McKay, too, for that matter—in November. Now the administration is thinking of favoring multipurpose development of the Columbia at the John Day site.

While the administration is trying to angle its way out of—or around—its own partnership policy muddle in the Northwest, it is pushing partnership in California. In mid-February Seaton recommended to Congress that the Pacific Gas & Electric Co. should be permitted to build and operate the powerplants of the huge Trinity River reclamation project in California.

Evidently, the Eisenhower administration plans now to push partnership power development only in areas where it is a safe policy.

Message from Congressman John W. McCormack, House Majority Leader, to the Delegates Attending the National Convention of the Chinese Communities of the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a message that I sent to the national convention of the Chinese Communities of the United States, which convention is meeting now in Washington and which started on March 5, 1957. This message I sent to the delegates of the national convention through my very close and valued friend, Most Reverend Paul Yu Pin, D. D., archbishop of Nanking in China.

We must constantly keep in mind that an important element of strength in combatting communism throughout the world, and particularly in the Far East, is the approximately 12 million Chinese now living in, or who are citizens of the various non-Communist countries of southeast Asia. The power and influence of these fine Chinese who are anti-Communist in preventing the spread of communism into the still free countries of southeast Asia should not and cannot be underestimated by our country.

The message follows:

MESSAGE FROM CONGRESSMAN JOHN W. McCORMACK, HOUSE MAJORITY LEADER, TO THE DELEGATES ATTENDING THE NATIONAL CONVENTION OF THE CHINESE COMMUNITIES OF THE UNITED STATES

I regret very much my inability to be present this evening due to another important engagement that I cannot cancel or postpone. I extend to all present my kindest regards and my sincere best wishes for a most successful convention; also my assurances of cooperation in every way possible, particularly in combating the forces of atheistic and international communism.

The Communist hope of peaceful coexistence has been exposed, particularly by the brutalities imposed by the forces of the Soviet Union upon the people of Hungary. We must constantly be on our guard against the hypocrisy and deceitfulness of international communism and the leaders of this vicious and destructive movement which is dedicated to world revolution and world domination. We must constantly be on guard in the United States and elsewhere against those individuals and forces who would try to lull our people into an atmosphere of complacency which results in lowering our guard, which plays into the hands of the Communists. In the United States and elsewhere we must constantly be on our guard against admitting Red China into the United Nations. There are the voices of the false prophets and the demagogs among us who are pro-Communist and who are trying to lay the foundations in the United States for the early admission of Red China into the United Nations. It would be a crime against all decent mankind for the forces of destruction as represented by the leaders of Red China to be admitted into this international organization.

It is also imperative that America always be strong, not only from a military angle, but particularly from a moral angle. The people of America should also insist that our Government keep its promises and pledges made to other governments, and this particularly relates to all agreements made by the United States with the Nationalist Chinese Government in Formosa under the leadership of Gen. Chiang Kai-shek. The people of America must also keep in mind that (1) we must have an affirmative policy. A negative policy, or no policy at all, means appeasement and is the road to war. (2) That the calculated risks of an affirmative policy could be less dangerous than the calculated risks of no policy at all. (3) That America, as I have said before, must be strong militarily and morally. From a military angle it is best for us if we are going to err, to err on the side of strength and not on the side of weakness. (4) The people of America and the non-Communist world must realize that the leaders of international communism are still bent on world revolution and world domination, and it is imperative that there be unity, strength, and understanding among the non-Communist nations with the United States as their leading nation in order to successfully defeat the vicious and destructive intentions of the Communist leaders.

I again extend to you and all present my very best wishes for a most successful convention, as well as my kindest regards.

The Lawyer and the Public

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mayor Robert F. Wagner at the annual luncheon of the Fordham Law Alumni Association at the Waldorf-Astoria Hotel on Saturday, March 2, 1957:

REMARKS OF MAYOR ROBERT F. WAGNER AT ANNUAL LUNCHEON OF FORDHAM LAW ALUMNI ASSOCIATION, WALDORF-ASTORIA HOTEL, SATURDAY, MARCH 2, 1957

Mr. Schulkind, President McGinley, distinguished guests, and members and friends of the Fordham Law Alumni Association, I wish to thank you at the outset for the opportunity of being with you at your annual luncheon. As a recipient of a doctor of laws from our university, I certainly am not a stranger among you.

Every New Yorker must feel a kinship with Fordham University. Fordham is an outstanding institution of higher learning which, over the years, has brought credit upon our city and of which we are all justly proud.

I have a much closer and more personal interest in the law alumni of this university, however. During my entire term of office as mayor, I have been fortunate enough to draw upon your membership for legal advice. As you know, the office of corporation counsel of the city was held first by your fellow alumnus, Court of Appeals Judge Adrian P. Burke, and is now occupied by your fellow alumnus, Peter Campbell Brown.

There are, of course, innumerable other distinguished jurists and lawyers among your alumni. I shall have occasion to refer to some of them in the course of my remarks. But it is not my purpose here today to pay special tribute to any individual or particular group of individuals. Obviously, it would take more time than I have allotted to myself merely to enumerate and identify all of the distinguished members of the bar who are present in this room.

Rather, I would like to consider, briefly, some of the popular conceptions and misconceptions regarding the legal profession and to discuss what the bar can do to bring its true function in society and its very real contributions to progress and the general welfare more fully to the public attention. It is a topic which, I believe, merits and requires reexamination by all of us who take pride in our profession—particularly at this time when there has been so much published criticism of the bar and the course and their responsibility for the law's delays.

Criticism is all to the good, and I would be the last to discourage it or any proposals for reforms which may lead to quicker and cheaper justice. In fact, I am happy to see public interest aroused in the improvement of our judicial machinery. I recognize that our methods for achieving justice can be improved and I believe that they will be.

At the same time, I regret that the reawakened interest in law reforms has to a large extent been accompanied by charges of apathy, timidity and selfishness, directed

against the bar as a whole. Such charges, strangely enough, originate too frequently with all members of our own profession. Recent issues of the Law Journal are replete with admonition to the bar to clean its own house and to rededicate itself to its highest traditions. Again, I say, this is all to the good, but we should not permit these charges to be exaggerated out of their true proportion, in the complete picture of the activities of the bar, by the well meaning but often ill informed.

To begin with, although litigation is the bar's most publicized activity, it would help a great deal if it were more generally recognized that the great bulk of the lawyer's practice does not involve actual litigation. A large portion of the lawyer's time is devoted to advising his clients as to what they may lawfully do and how they may do it. The clients encompass individuals, corporations and all the branches of our Government. When I speak of the Government, I do not restrict myself to the lawyer in Government service. Everyone in the public service knows the contributions to Government by members of the legal profession. In carrying out this advisory function in our complex society, it is my firm belief that the lawyer does more to promote progress and the general welfare than any other profession or calling.

Throughout the history of man, however, the general public has often been given quite the contrary impression of the contributions of the bar. Our literature and the press afford but the sketchiest notion of the real accomplishments of the profession in its efforts to achieve justice. While hardly a day passes without furnishing concrete evidence of public confidence in, and high esteem for, individual lawyers, the popular attitude toward the legal profession as a whole has never been particularly favorable.

All of us are familiar with the lawyer of fiction who was held up to ridicule, opprobrium, and even to hate. It is perhaps a sign of the times, and an indication of the profession's progress, that today's fictional lawyer is less frequently portrayed as villain or rogue. Yet the classic reference to the law's delays and to the deficiencies of the bar and the courts remain to haunt us.

How often have we been reminded that, almost 600 years before Christ, Solon made reference to the slowness of justice; that Horace, in ancient Rome, also called attention to the fact; and, of course, no discussion of the subject would be complete without citation of the law's delay from Shakespeare's Hamlet. On the more pleasant side, it is gratifying to note that we appear to have passed the period when, according to Shakespeare the short-cut to popular acclaim was to raise the cry—"The first thing we do, let's kill all the lawyers."

Today's language of criticism directed against the bar is, on the whole, more moderate, but nonetheless still fairly widespread. The problem of counteracting or correcting popular misconceptions about the legal profession is one that has engaged the sporadic attention of the organized bar. It deserves the continuous attention and active support of every member of the profession.

Let me hasten to add that I have no ready panaceas to offer as to the methods to be followed. But it does occur to me that the bar might well borrow a leaf from the public relations practices of business and other professions. Instead of engaging in charges and countercharges which serve principally to add fuel to the flame of popular dissatisfaction and to engender ill will among the members of our own profession, let us analyze, more closely, the underlying causes for popular dissatisfaction with the bar. If meritorious, let concerted action to correct them be taken. On the other hand, if lacking in sound foundation, as we know many of them to be, let there be equally concerted action on the part of the bar to spread the truth. And, in connection with this educational process, let the public also be kept abreast of the widespread interests and activities of the bar, demonstrating its dedication to the service of the people.

The fundamental basis for the popular unfavorable attitude toward the bar, I believe, is the general public's failure to appreciate fully the underlying problems of the lawyer in the resolution of disputes. Selfish conflicting interests are frequently involved. No one would be happier than the lawyer to have both sides satisfied. But absolute justice is rarely attainable, and, even if achieved in theory, will leave at least one and maybe both sides disappointed. Almost inevitably, therefore, the conclusion of a legal dispute is likely to leave one side or the other with complaints about the law's delays, or the expense of justice, or the uncertainties of justice, or a combination of all and even more. The disappointed litigant generally forms a poor opinion of the law, the courts, and the legal profession. No other profession or calling faces similar problems.

To a certain degree, it therefore seems clear that it is the lot of the legal profession to resign itself to hearing constant reiteration of such criticism. Resignation to a certain amount of criticism, it need hardly be added, does not mean that the bar can afford to desist from either continuing educational efforts or from proceeding with necessarily reforms in its own practices.

The root source of another important cause for popular dissatisfaction with the bar may be found, in the familiar adage, so frequently voiced with pride, that this is a government of laws, rather than of men. No one suggests departure from this principle. But we do forget that, under a government of laws, concerted action for reform must come from the public as a whole as well as from the bar. As the result of this oversight, the legal profession is too often given the full responsibility for a failure to improve the legal system and the members of the legal profession therefore too often charged with a reluctance to adopt new ideas. Clearly the bar cannot claim an entirely clean slate on that score but neither is it totally to blame. Professional conservatism is not confined to the members of the bar. Prejudice against change is a human characteristic, prevalent in all walks of life, and it is probably no more prominent among the members of our profession than of other professions.

At most times in our history, the bar has been blessed with more than its share of progressive minds. Progress and reforms in the law cannot be effectuated by lawyers as individuals, precisely because ours is a government of laws, not men. The individual businessman, the doctor, teacher, or scientist may, on his own initiative, test new ideas and put them into practice. The lawyer may not do so. The introduction of even minor innovations in the law usually requires and quite properly, the adoption of rules by higher courts. Substantial changes must generally await concerted public opinion and resultant legislative action.

Again, if the climate of public opinion relating to our profession is to be changed or properly maintained, the educational efforts of the bar must be continued and expanded. I have cited but two examples, undoubtedly, other causes for unfavorable attitudes toward lawyers suggest themselves to you. Each deserves earnest and careful consideration so that the public be given a true understanding of the merits of its criticism. Few people have a real comprehension of the lawyer's problems, of his difficulties in effecting changes in the law and its procedures—difficulties arising from features of our law inherent in the very nature of our system of law. Few know of the constant efforts of our profession to adapt our system of law to meet changing conditions and the true needs of our time.

I deem such educational projects, or call them propaganda if you will, to be of highest importance—not in the selfish interest of the bar but in the higher interest of the general public welfare. It is the notion which suffers most when people distrust its system for obtaining justice, have no faith in its judges and look with suspicious upon its lawyers.

Happily, this cannot truly be said of our people. But the danger is ever present in the absence of reasonably enlightened public opinion. This is no idle fear. Let me remind you of the action taken in one of our States a few weeks ago to impeach the Justices of the United States Supreme Court. Here, it is true, is an extreme and fortunately rare illustration of popular mistrust of the legal profession, but it should serve to remind us that we cannot afford to relax our efforts to demonstrate to the people, again and again, that the average American lawyer is devoted to the cause of justice in the interests of all the people, in addition to being devoted to the interests of his client.

A proper understanding of the contributions of the lawyer to progress and the general public good may not always be easy to achieve, but our profession is practiced in the arts of education and persuasion. We do have a good case. It is commonsense to bring it to the attention of the people.

On the whole, the record of the bar is a proud one. The cynical may point to the few among us who fail to recognize that our licenses to practice law carry with them concomitant obligations to society. But we know that these represent a small minority of the legal profession.

From the inception of our history as a nation, lawyers have given freely of themselves to the broader interests of our people. Approximately half of the signers of the Declaration of Independence were lawyers. Substantially more than half the members of the Constitutional Convention were lawyers, and members of the bar were predominant in the ratifying conventions. This audience needs no citation of the names of the countless other lawyers who exemplify our noblest traditions by their dedication to the common wealth.

Nor need the lawyer of today content himself with looking backward. History will prove that the great men of the law of the past have their modern counterparts. The bar is amply represented among the great leaders of our day. In the United States Senate, we are today represented by 58 lawyers. Similarly, 236 Members of the House of Representatives are members of our profession. In our own State legislature, approximately 60 percent of the representatives come from the ranks of the bar. Statistics of a similar type could be enlarged upon indefinitely, but even the most detailed listing would not tell the whole story of the bar's contributions. Only a few, at any given time, achieve greatness but behind them are the masses of lawyers who, in their daily work, give concrete evidence of the fact that lawyers are, above all, actively devoted to the interests of the Nation and the service of the community. Thousands of average professional men are dedicated to thinking and acting in terms of the rights, welfare, and happiness of the average man.

I cannot allow this opportunity to pass without a brief word of the contributions of your own Fordham University School of Law. Your educational facilities have produced many members of the bar learned in their profession and cognizant of their responsibilities to the community. They have brought credit and esteem to the city as well as to the profession, your expanding educational services promise an even greater future both for Fordham and for New York.

Among us today are many of whose achievements we all have cause to be proud. I mention but a very few to illustrate the widespread areas in which the influence of Fordham law alumni is felt.

There is, for example, the present chief judge of our court of appeals, Albert Conway, whose contributions to legal thought and the administration of justice have brought him to his preeminent status as the chief of what is probably the second most important court of our Nation. Similarly, from our neighboring State of New Jersey, we have your medallist of today, the former chief justice of the New Jersey Supreme Court, Thomas J. Brogan. Recently, after many years of devoted public service, the list of distinguished of Fordham law alumni was embellished with the name of Attorney General Louis J. Lefkowitz. And I conclude with the name of one who has reached the White House itself, your fellow alumnus, Bernard Shanley, former counsel and now appointment secretary to the President of the United States.

If time allowed, I would in justice be compelled to read a large part of the roster of those here today. When I think of their achievement on all levels of the life of our community and the Nation, I am confident that I have not overstated the case for the bar as a whole, and that all that remains to be done is to convince not only judges and lawyers, but laymen as well, of the lawyer's dedication to the public service. We can move forward only so long as we have the popular support.

In closing, I am moved to quote a tribute paid to the American bar by Chief Justice Ryan, of the Wisconsin Supreme Court in 1878.

"No profession or calling has given so many great names to American history as the bar. There is no State in the Union on which the names of its great lawyers have not shed luster. An American law list from the beginning would embrace a large proportion of the names held in honorable memory by the American people. There is a passion for military glory among all nations, hero-worship. And the glory of the soldier may be more dazzling than the glory of the statesman-lawyer. But it is less solid. For the truest glory of the soldier, here at least, is to preserve the work of the statesman. The path of the soldier, however patriotic or worthy the war, is destruction. The path of the statesman-lawyer is organization; and the path of every lawyer, worthy the name, is preservation. And, in a high sense, true heroism may be in a tribunal as well as on the battlefield. Duty, fearlessly and faithfully performed, against all influences and difficulties, is the only true glory. Moral courage is a higher quality than physical. He reads American historiy superficially, who does not see the illustrious dead of our profession battling in the vanguard for all true political and social amelioration. And he who looks upon society, without seeing in the profession the sentinels of social order, sees through a glass darkly."

It is our job to assure that this eloquent tribute shall remain true of the lawyer of today and tomorrow. I know that we can count on Fordham University to produce lawyers who will make it live.

Thank you.

Tax Advantages of Big Business

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. MULTER. Mr. Speaker, since this session convened, I have received many letters regarding the unfair taxation of small business as compared with that of big business. In this connection, I commend to the attention of our colleagues the following letter from Bruce J. Maguire, of Lansing, Mich.:

DEAR MR. MULTER: I strongly urge your consideration of the special tax advantages enjoyed over the common people and small businesses by the giant corporations of this country. Among these are the 27½ percent depletion allowance allowed the oil companies and the accelerated depreciation allowed many companies for building capital assets.

Is there any reason why our giant corporations should be in a more sheltered tax position than the average individual or the average small business?

Why should the very wealthy oil companies be granted a 27½ percent deduction against all of their profits before taxes to compensate them for the using up of their oil reserves, when practically every one of them ends up each year with more proven reserves than they started with? In addition, all of their expenditures searching for oil, such as airplanes, many people on the payroll, all drilling expenses, depreciation, charges for abandonment of leases, etc., are charged directly as expenses.

Is it not true that most of the items on which the Government has granted accelerated amortization are actually for capital purposes that have a life of from 20 to 30 years and that by allowing a writeoff in 5 years or less, those corporations enjoy a great tax advantage?

It seems to me that we should reverse this picture by doing everything possible for aid to the small individual and the small business. Small businesses are at a great disadvantage in competing against the giant corporations who have the finest brainpower in the land without also being subjected to unfair tax discrimination.

For over 25 years I have been a retail jobber or distributor for large oil companies. The major oil companies generally have a policy of allowing their jobbers a gallonage margin rather than a percentage margin as is the general business practice; this results in the oil jobbers being forced to operate on a bare existence minimum. As a result, a large majority of the individual jobbers of 20 years ago have been absorbed by the oil giants.

An article in one of the trade papers a short time ago indicated that General Motors for the past 8 years has averaged, after taxes, 25 percent on its total invested capital. If this is true, does it not highlight a very real danger to the economy of our country by concentrating such great power in a few corporations?

Yours sincerely,

BRUCE J. MAGUIRE.

Cut the Budget

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1957

Mr. PELLY. Mr. Speaker, I mentioned recently the widespread willingness of Republican House Members to support an attempt on the part of the majority party to reduce Federal appropriations. I include herewith a letter revealing sixty-odd Republicans who jointly urged the Rules Committee to give the House an opportunity to set some overall limitation on Government spending. Many Republican Members who did not sign this letter have told me they would have been glad to do so. Others advise me they support the objective of the letter and are for a budget reduction, but for one reason or another preferred not to sign.

The Republican House leadership has officially stated it favors a cut in the budget. Now it is up to the majority party to start the ball rolling.

Text of the letter and its signatories follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 28, 1957.

The Honorable HOWARD W. SMITH,
Chairman, the Committee on Rules, House of Representatives, Washington, D. C.

DEAR SIR: The undersigned Members of the House of Representatives respectfully urge your committee to report Resolution 170 to the House.

We individually do not necessarily agree on the language or amount of this resolution, but we do support its objective and as such believe the House membership should be allowed to express itself on the subject of an overall limitation of appropriations.

Respectfully,

RICHARD H. POFF, 6th, Virginia; NOAH M. MASON, 15th, Illinois; EUGENE SILER, 8th, Kentucky; ROBERT HALE, 1st, Maine; ALVIN E. O'KONSKI, 10th, Wisconsin; EDGAR W. HIESTAND, 21st, California; AUGUST E. JOHANSEN, 3d, Michigan; PHIL WEAVER, 1st, Nebraska; Bernard W. KEARNEY, 32d, New York; Mrs. MARGUERITE S. CHURCH, 13th, Illinois; JOHN J. RHODES, 1st, Arizona; ALBERT H. BOSCH, 5th, New York; USHER L. BURDICK, North Dakota; WILLIAM E. MCVEY, 4th, Illinois; CRAIG HOSMER, 18th, California; JOHN R. PILLION, 42d, New York; ALVIN M. BENTLEY, 8th, Michigan; VICTOR A. KNOX, 11th, Michigan; ROBERT D. HARRISON, 3d, Nebraska; H. ALLEN SMITH, 20th, California; ROBERT P. GRIFFIN, 9th, Michigan; OTTO KRUEGER, North Dakota; JOHN V. BEAMER, 5th, Indiana; JACKSON E. BETTS, 8th, Ohio; JOHN M. ROBSION, JR., 3d, Kentucky; THOMAS A. JENKINS, 10th, Ohio; FRANK T. BOW, 16th, Ohio; PAUL A. FINO, 25th, New York; WILLIAM M. MCCULLOCH, 4th, Ohio; ALBERT W. CRETELLA, 3d, Connecticut; WILLIAM K. VAN PELT, 6th, Wisconsin; MELVIN R. LAIRD, 7th, Wisconsin; THOMAS M. PELLY, 1st, Washington; J. ARTHUR YOUNGER, 9th, California; JAMES B. UTT, 28th, California; GORDON H. SCHERER, 1st, Ohio; THOR C. TOLLEFSON, 6th, Washington; RUSSELL V. MACK, 3d, Washington; JACK WESTLAND, 2d, Washington; CHARLES S. GUBSER, 10th, California; WALTER NORBLAD, 1st, Oregon; A. D. BAUMHART, JR., 13th, Ohio; C. R. JONAS, 10th, North Carolina; ELFORD A. CEDERBERG, 10th, Michigan; WILLARD S. CURTIN, 8th, Pennsylvania; CHARLES W. VURSELL, 23d, Illinois; BOB WILSON, 30th, California; GERALD R. FORD, JR., 5th, Michigan; J. ERNEST WHARTON, 29th, New York; KEITH THOMPSON, Wyoming; JOE HOLT, 22d, California; HAMER H. BUDGE, 2d, Idaho; GLENN CUNNINGHAM, 2d, Nebraska; VINCENT J. DELLAY, 14th, New Jersey; WILLIAM E. HESS, 2d, Ohio; WILLIAM E. MINSHALL, 23d, Ohio; CLIFF CLEVENGER, 5th, Ohio; PAUL F. SCHENCK, 3d, Ohio; WALTER M. MUMMA, 16th, Pennsylvania; S. WALTER STAUFFER, 19th, Pennsylvania; HUBERT B. SCUDDER, 1st, California; ARCH A. MOORE, JR., 1st, West Virginia; LAWRENCE H. SMITH, 1st, Wisconsin.

Selection of Judges in Kansas

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. AVERY. Mr. Speaker, in the State of Kansas there is now under consideration a possible change in the method of the selection of district and supreme court judges. Needless to say, this is a most important problem. As a matter of public interest I am setting forth in this RECORD information regarding this matter.

The following are the summary and conclusions of a report prepared by the research department of the Kansas legislative counsel under the Kansas State Senate committee on the judiciary, regarding the matter of selection of judges. Elsewhere in the Appendix of this RECORD I have inserted other information and views pertaining to this vital issue. The summary and conclusions follow:

SUMMARY AND CONCLUSIONS

It seems apparent from this review of the judicial elections since 1908 that Kansas incumbent judges, like those under the California and Missouri plans, run for reelection unopposed as a very general rule. This has been particularly true in recent years.

To summarize what has been reported herein earlier, there has been only one primary contest involving an incumbent Supreme Court judge since 1940 and in each of the last four elections from 83 to 88 percent of the district court incumbents have had no opposition in either the primary or general election. Thus, Kansas voters have not had the opportunity of making any real selection of judges for a large number of judicial positions.

The facts presented herein show that Kansas voters are even more restricted than those in California and Missouri, because the voters in those two States may cast a "no" vote on the ballot and thereby reject the incumbent. The Kansas voter does not have that privilege when there is no opponent on the ballot. His only recourse would be a write-in campaign, with dubious hopes of success. There have been scattering write-ins for judicial positions but only in insignificant numbers.

The major fundamental difference between the Kansas practice and the situation in California and Missouri may be in the original selection of the judge. In the latter two States, of course, judges under the plan are appointed by the governor from a list submitted by a selection commission (Missouri) or subject to confirmation by a qualifications commission (California).

In most cases in Kansas, judicial positions have been filled by executive appointment for an unexpired term or, for all practical purposes, in the Republican primary. The governor has a free hand in making appointments to fill vacancies although he may consult with members of the bar and others. The extent to which he may be influenced primarily by the qualifications or fitness of the appointee, as against political affiliation or other considerations, obviously is not a matter of record. As for the Republican primary election, if there are several candidates, which is common where the position is "open," a minority may make the actual selection of the judge, that is, the winner may receive only a relatively small plurality. In fact, as the history of the period has shown, no candidate for the Supreme Court has received a majority in the Republican primary where a position was to be filled due to the fact that the incumbent did not file for reelection.

There is, of course, some difficulty in attempting to draw conclusions solely from the statistical facts, which show that most Kansas judges have been either unopposed for reelection or have not had effective opposition. What is lacking in this analysis is an evaluation of the record and the fitness for the position of such judges. The major obstacle to securing such an evaluation lies in the fact that the average attorney, while he may voice an opinion freely in private conversation, is reluctant, and in fact is usually unwilling, to go on record with adverse comments concerning a judge before whom he may practice. This applies fully as much to the advisability of retaining a judge in office as to comments on appointments. The attorneys who express adverse opinions are usually not willing to oppose the incumbent on the ballot or to take a leading part in campaigning for his defeat. In fairness to any judge who may have been subject to private adverse comments concerning his record, it is difficult to ascertain whether such opinions rest on resentment over a few cases or are a considered judgment on the judge's ability.

What information there is available on the fitness of a judge, consequently, is legally, for the most part, hearsay and rumor. In the past 10 years, however, the frequent recurrence of adverse comments indicates that a substantial number of Kansas attorneys do not appear to be satisfied with the current system, or at least doubt if present selection methods adequately attempt to emphasize judicial temperament and experience as essential qualifications.

While it may appear that the California and Missouri plans provide a better system than the one in Kansas for securing qualified judges, it is obviously impossible to make any finding to the effect that the judges in the former two States are in fact more competent than the ones in Kansas. There is no known objective measure for such a comparison of judicial ability in the various States. What can be said is that many members of the bar in California and Missouri believe that the judicial selection plans applicable in those States have worked well and have improved the quality of the judiciary.

Plywood Crisis

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like at this point to introduce to the RECORD a letter which was signed by 72 of my constituents who are workers and shareholders in the Washington Plywood Co. of Lowell, Wash.

The plywood industry in my congressional district is an important segment of the economy. Mills such as this in which the shareholders are the workers to a large extent, are vitally affected by the level of the plywood market. It has become a serious problem and one that we in Congress must work strenuously to solve.

This letter voices these shareholders' and workers' concern over the impact of plywood imports on the domestic industry. I have investigated this aspect of the market and find that in certain classes of hardwood board, Japanese imports alone are taking over 50 percent of the American market. This fact, plus a substantial decline in home building, has resulted in a situation where our mills are only operating 4 days a week. Such a situation is intolerable.

I believe Congress must be alert to the fluctuations of world trade levels and take appropriate steps to see that free trade is not carried to the extent that we are driving our own industries to ruin. The high standard of living supported by our domestic plywood industry should not be subjected to ruinous pressures by a plywood industry paying 11 cents per hour.

Text of the letter follows:

DEAR MR. WESTLAND: The undersigned are the workers and shareholders of Washington Plywood Co., Inc., of Lowell, Snohomish County, Wash., a worker-owned mill producing various types of plywood. We go on record as being against the bill now in Congress which would approve participation of the United States in the Organization for Trade Cooperation (OTC).

As a resident of Snohomish County and as one familiar with the economy of the Pacific Northwest, you are no doubt well aware of the recent deadline in the plywood market and its effect upon almost every mill in the industry. During the last year and one-half, the general market price of plywood produced in this country has dropped from approximately $90 per thousand feet on a three-eighths inch basis, to a low of approximately $67. This decline in prices of plywood has resulted in a substantial reduction in wages at this mill and at many other plywood mills throughout the Pacific Northwest. In fact, last fall the low plywood market forced our company to close down its mill for a substantial period, and we were left to find work in an area where a number of other plywood mills were facing the same problems of a depressed market. The decline in the plywood market has not only had a very drastic effect on the well-being of each of us and our families but has also, as you undoubtedly know, seriously affected the economy of the area.

The decline in the plywood market took place during a period of general prosperity throughout the rest of the country and in most other industries.

The reasons for such decline in the plywood market are many and involved. But we are convinced that an important cause of this situation is the rapidly increasing amount of plywood which is being imported from other countries, particularly from Japan, at prices far below those at which we or any other mill in this country can produce plywood because of the substandard wages paid workers in those other countries.

Regardless of other factors, if the amount of plywood imported from Japan continues to increase as it has during the past 5 years, the plywood business in this country cannot continue to exist.

During the last session of Congress, a bill was offered which would approve United States membership in the Organization for Trade Cooperation (OTC), an international body which would exercise substantial control over tariffs and trade among member nations through an international agency for General Agreement on Tariffs and Trade (GATT). It is reported that the bill has Pesident Eisenhower's approval.

We feel, however, that the bill is a bad one. Its purpose is to take from Congress control over foreign trade and tariffs and to tie

Congress' hands so that no laws relating to commerce or tariff can be passed without a question being raised as to whether Congress would have such authority. If the OTC bill were passed, the United States would have only one vote in the OTC. There is little doubt but that through such organization tariffs on United States imports would be lowered still further than they presently are.

The OTC bill did not get out of Committee during the last session of Congress. We earnestly request that you, as our direct representative in Congress, do everything within your power to prevent passage of this bill during this session. We are sure you realize that, with the support of the administration and under the international pressures which now exist, the defeat of this bill will require more than your merely voting against it. We know you also appreciate the vital importance of this matter to the area from which you were elected.

Please do not let us down.

Very truly yours,

WORKERS AND SHAREHOLDERS OF WASHINGTON PLYWOOD CO., INC.

Tragedy of Supreme Court Decision Regarding Segregation

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. ABBITT. Mr. Speaker, there appeared in each of the two Richmond newspapers on February 27, 1957, an editorial that points out poignantly the tragedy of the Supreme Court decision regarding segregation. On several occasions certain people have lamented the fact that others have spoken disparagingly of this highest tribunal of our land. These editorials amply explain why so many of our people not only have spoken disparagingly of the Court but have no respect for the intellectual honesty of the Court. It seems plain that the Court first arrives at how it wants to decide a certain case and then tries to conjure up reasons for its decisions. Never did I believe that the Supreme Court of the United States could reach such a low level in the opinion of the great masses of this country and particularly of the legal profession.

Under leave to extend my remarks, I desire to include the two editorials referred to heretofore:

[From the Richmond Times-Dispatch of February 27, 1957]

SUPREME COURT'S DOUBLE STANDARD

What connection is there between professional football and racial segregation in the public schools?

There's none. But keeping the Supreme Court's antisegregation decision in 1954 in the back of the mind, one will find some highly interesting comments in the Court's opinion Monday in the case of *William Radovich* v. *the National Football League*.

It will be recalled that in 1896, in the case of *Plessy* v. *Ferguson*, the Supreme Court unequivocably upheld the right of a State to provide separate but equal schools for the two races.

On May 17, 1954, the Court, in *Brown* v. *Board of Education of Topeka*, completely reversed the Plessy decision and ruled that separate but equal schools are unconstitutional.

In the interim between the Plessy and the Brown decisions, the Congress of the United States had had ample opportunity to initiate a constitutional change to prohibit segregated schools, but it did not do so. The change, then, was not by law but by court order.

What's all that got to do with professional football?

In the case decided Monday, the Supreme Court knew it had to provide some answer to why 4 years ago it had ruled professional baseball not subject to antitrust laws but now was ruling that professional football was subject to those laws. The Court fully recognized the inconsistency in those two rulings.

The Justices explained that in the 1953 Baseball case, they continued to follow the 1922 decision in *Federal Baseball Club* v. *National League*, even though they say, in effect, that they realized in 1953 that that decision was wrong. Then why didn't they reverse themselves in 1953?

Here's their answer:

"In Toolson [the 1953 case] we continued to hold the umbrella over baseball that was placed there some 31 years earlier by Federal Baseball. The Court did this because it was concluded that more harm would be done in overruling Federal Baseball than in upholding a ruling which at best was of dubious validity. Vast efforts had gone into the development and organization of baseball since that decision, and enormous capital had been invested in reliance on its performance. Congress had chosen to make no change. All this, combined with the flood of litigation that would follow its repudiation, the harassment that would ensue, and the retroactive effect of such a decision, led the Court to the practical result that it should sustain the unequivocal line of authority reaching over many years. * * *

"We, therefore, conclude that the orderly way to eliminate error or discrimination, if any there be, is by legislation and not by court decision."

So the Court in 1953 declined to reverse an earlier ruling because so much money, time, and effort had been spent in the belief that the earlier decision would remain in force; because a flood of litigation and harassment would result from such a reversal, and because the orderly way to eliminate error or discrimination is by legislation and not by court order.

Any comment from us relating the above to the public-school situation would be superfluous. No need to labor the obvious.

[From the Richmond News Leader of February 28, 1957]

THE RULE OF RADOVICH

On Monday of this week, the Supreme Court said some things about the permanence of law, and the function of both the legislative and the judicial process, which the South has been saying these past 3 years. If it were possible to persuade the Court to reexamine its decision in the school segregation cases, in the light of the sound rules the Court itself laid down in an antitrust case on Monday, perhaps the Justices would begin to comprehend what the South has been saying so vehemently. Perhaps others would understand, too.

The story is a little complicated, but it is worth tracing in some detail in order to establish a parallel.

Back in 1890, Congress adopted the Sherman Antitrust Act, and in 1914 supplemented this with the Clayton Act. The object was to prohibit industries in interstate commerce from engaging in monopolistic practices in restraint of trade.

(Back in 1866, Congress proposed, and the States ratified, the 14th amendment to the Constitution. The object was to prohibit the States from denying to any citizen the equal protection of the law.)

In 1890, professional baseball was pretty much in its infancy; but by 1914, when Mack and McGraw were fighting it out, baseball was a thriving business. In 1922, a test case was brought to determine if professional baseball violated the antitrust statutes. The Supreme Court held, as almost everyone was sure the Court would hold, that "Congress had no intention of including the business of baseball within the scope of Federal antitrust laws."

(In 1866 public-school systems in the South were pretty much in their infancy, but such school systems were functioning in the North. While the 14th amendment was pending before Congress, proponents of the measure made it clear that the amendment would not, in itself, prohibit the States from operating racially separate schools. In 1896 a test case was brought to determine if racially separate facilities violated the 14th amendment. In upholding the separate-but-equal doctrine, the Court held, as almost everyone was sure the Court would hold, that "the establishment of separate schools for white and colored children [is] a valid exercise of the legislative power.")

The question of baseball's position under the antitrust laws languished for quite a while, and then in 1953, another test case arose. This was *Toolson* v. *New York Yankees*. Members of the Court indicated they doubted the correctness of the 1922 ruling. They thought baseball should come under the antitrust statutes. But on balance, they concluded that more harm would be done in overruling the 1922 case than by letting it stand. And what led the Court in 1953 to the conclusion that it should not reverse the decision of 1922? This was the explanation:

"Vast effort had gone into the development and organization of baseball since that decision, and enormous capital had been invested in reliance on its permanence. Congress had chosen to make no change. All this, combined with the flood of litigation that would follow its repudiation, the harassment that would ensue, and the retroactive effect of such a decision, led the Court to the practical result that it should sustain the unequivocal line of authority reaching over many years."

Note, again, the considerations that caused the Court in 1953 to adhere to the doctrine of 1922: The effort that had gone into the development of professional baseball, the capital invested by clubowners in reliance upon the Court's 1922 decision, the fact that Congress had not amended the antitrust laws, the prospect of a flood of litigation, the unequivocal line of authority of many years.

(The question of school segregation under the 14th amendment languished for quite a while after the Plessy case in 1896. Then in 1927, another test case arose. This was *Gong Lum* v. *Rice*. Members of the Court indicated they doubted the correctness of the 1896 ruling as to separate schools. "Were this a new question," said the Court in a unanimous opinion upholding segregation, "it would call for very full argument and consideration." But it was not a new question. "We think it is the same question which has been many times decided to be within the constitutional power of the State legislatures to settle without intervention of the Federal courts under the Federal Constitution.")

That brings us to Monday of this week. On Monday, the Supreme Court had another opportunity to consider the applicability of the antitrust statutes to professional sports. The plaintiff in the case happened to be one William Radovich, a formed guard for the Detroit Lions. Mr. Radovich complained that he had been blacklisted by the pro football industry; he sued for damages. The

lower courts dismissed his suit on the grounds that if pro baseball were not embraced within the antitrust laws pro football could not be embraced within them, either.

But on Monday the Supreme Court reversed the lower courts. It stuck by the decisions of 1922 and 1953 as to baseball, but declared that a conspiracy in pro football, if proved, would be punishable under antitrust laws. Note carefully what the Court, in its discomfiture, had to say about all this:

"If this ruling is unrealistic, inconsistent, or illogical, it is sufficient to answer * * * that were we considering the question of baseball for the first time upon a clean slate we would have no doubts."

(What was it Taft said for a unanimous court in the Gong Lum case? "Were this a new question."). On Monday the question of baseball, the Court emphasized, was not a new question. It was a decided question. Yet suppose in 1922 and 1953 the Court had decided wrongly? The Court of 1957 would not intervene. This is what the Court said:

"The orderly way to eliminate error or discrimination, if any there be, is by legislation and not by Court decision. Congressional processes are more accommodative, affording the whole industry hearings and an opportunity to assist in the formulation of new legislation. The resulting product is therefore more likely to protect the industry and the public alike. The whole scope of congressional action would be known long in advance, and effective dates for the legislation could be set in the future without the injustices of retroactivity and surprise which might follow Court action."

Is not the parallel evident in these cases? Is not the parallel abundantly, damningly evident?

The professional baseball clubs exerted what the Court is pleased to call "vast effort" and invested "enormous capital" in their organizations, subsequent to the 1922 opinion, "in reliance on its permanence." How much more vast, we may suggest, was the effort exerted by the Southern States early in this century to develop their school systems? How much more enormous the capital they invested in schools, subsequent to the 1896 opinion, in reliance on its permanence?

The Court would not abandon its ruling on Monday as to baseball, and why? Because since 1922 "Congress has chosen to make no change in the antitrust laws." But on May 17, 1954, the Court abandoned its ruling as to separate schools. May it not be pointed out, with comparable reasoning, that the States since 1866 have made no applicable change in their constitution—and that Congress, which has power under the 14th amendment to adopt appropriate legislation, never has adopted legislation as to schools?

Everyone expects law to change in time. Ours is not a static society. But how should law be changed in areas of vast public interest in which great reliance has been placed upon the permanence of judicial decision? The Court's answer on Monday was perfectly clear and perfectly right. The orderly way, said the Court, "is by legislation and not by court decision."

That is precisely the argument Southern States have been making for months. It is precisely the argument advanced in all the maligned resolutions of interposition. It is the argument that in major questions of law, affecting whole States and vast investments and millions of human beings, no change should be made save by legislative process.

Thus we read the Brown decision of 1954, as to southern schools. Thus we read the Radovich decision of 1957, as to professional sports. The mandate of Brown cannot possibly be reconciled with the rule of Radovich. And we are told, how constantly we are told, to revere the majesty—the cockeyed, inconsistent, hypocritical majesty—of the Supreme Court of the United States.

Fluorspar: What It Did in the United States in 1956

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1957

Mr. GRAY. Mr. Speaker, as the House-Senate conferees prepare to meet to decide whether or not funds should be allowed in the emergency supplemental appropriation bill ending June 30, 1957, to provide funds to stockpile strategic minerals, one of which is fluorspar, I hope the following speech delivered by Mr. J. Blecheisen, president, Rosiclare Lead & Fluorspar Mining Co., Rosiclare, Ill., before the Colorado Mining Association meeting in Denver, a few days ago, will be of some assistance in pointing out the importance of fluorspar. Mr. Blecheisen has entitled his address "Fluorspar: What It Did in the United States in 1956."

If the conferees do not allow the funds for continuing this very important program, it will mean the closing of all fluorspar mines in southern Illinois and the lay off of several hundred workers. Mr. Speaker, we are already classed as a distressed area by the United States Labor Department with over 30,000 unemployed. We cannot afford to lose several hundred additional jobs; therefore, I hope those sitting on the conference committee will consider our plight. It will be deeply appreciated by all of the people in the important mining industry, plus insure our Government an adequate stockpile program of these very important defense minerals if the funds are allowed:

FLUORSPAR: WHAT IT DID IN THE UNITED STATES IN 1956

(By J. Blecheisen)

Fluorspar, calcium fluoride, is the only acceptable commercial source of flourine today. It has a fluorine content of approximately 50 percent. The fluorine in fluorspar is the essential element which is operative in the principal end uses of fluorspar, that is, in the metallurgy and chemistry of steel, aluminum, ceramics, and hydrofluoric acid—all being giant economic components of America's industrial empire.

CONSUMPTION

In 1956, an estimated 600,000 tons of fluorspar were consumed, all grades, against consumption of 570,000 tons in 1955, and 425,000 tons in 1950. Thus, we have had a 40 percent increase in consumption of fluorspar since 1950.

DOMESTIC SHIPMENTS

In 1956, United States domestic mines shipped 260,000 tons of fluorspar into the commercial market, excluding estimated shipments to the Government's stockpile. Such commercial shipments totaled a like amount of 260,000 tons in 1955, and in 1950 they totaled 300,000 tons. Thus, there has been a decline of 15 percent in domestic tonnage shipped between 1950 and 1956.

In addition to the decline in commercial tonnage shipped, it should also be noted that the percentage relationship of domestic commercial shipments to total United States consumption, has likewise declined. This percentage in 1950 was 70 percent and in 1956 it is 40 percent, which means that American producers were participating in America's consuming market less in 1956 than they were in 1950.

Total domestic shipments, including stockpile shipments, totaled 325,000 tons in 1956.

FOREIGN IMPORTS

Foreign commercial imports, excluding estimated shipments to the Government's stockpile, totaled 425,000 tons in 1956, a new high, against 325,000 tons in 1955, and 165,000 tons in 1950. Foreign commercial shipments in relation to the United States consumption totaled 70 percent in 1956 against 35 percent in 1950, which means that foreign shippers are obtaining larger and larger portions of America's consuming market in fluorspar, to the displacement of American producers.

Total foreign imports, including stockpile shipments, totaled 525,000 tons in 1956.

USES OF FLUORSPAR

Fluorspar is marketed in three commercial grades—metallurgical for steel, acid for aluminum, and hydrofluoric acid and ceramic for glass and porcelain enamel.

Of the 600,000 tons of fluorspar consumed in the United States in 1956, about 250,000 tons went into steel, about 100,000 tons went into aluminum, about 75,000 tons went into ceramics, glass, and miscellaneous uses, and about 175,000 tons went into hydrofluoric acid.

Of the 175,000 tons of fluorspar which went into hydrofluoric acid in 1956 (the equivalent HF production was 75,000 tons) about 60 percent went into the fluorocarbon chemicals for propellants, refrigerants, and fluorine plastics, about 10 percent went into high octane gasoline and miscellaneous uses, such as for pickling, etching, and frosting of glass, and about 30 percent went into uranium and atomic energy processes.

The rise in steel's usage of fluorspar since 1950 has not been sensational, only approximately 10,000 tons more. However, the rise in the usage of fluorspar in aluminum from 1950 to 1956 has been a 100 percent increase, 50,000 tons in 1950 against 100,000 tons in 1956; but the greatest rise in the use of fluorspar has been in the production of hydrofluoric acid, 75,000 tons used in 1950 against 175,000 tons in 1956.

It is plain, therefore, that fluorspar enters into the stream of our economy in an important way via its usage in steel, aluminum, uranium, atomic energy, and the new fluorocarbon chemicals, the latter being America's newest chemical building block. It is estimated that fluorspar consumption will be 900,000 tons in 1960, against 600,000 tons usage in 1956, and 425,000 tons in 1950.

But, as America's consumption of fluorspar continues to rise, which is a healthy condition, the percentage participation in that consuming market by American fluorspar producers continues to go downward, an unhealthy condition.

DOMESTIC SHIPPERS

In 1956, 325,000 tons of fluorspar were shipped by United States producers. Approximately 60 percent of that production came out of the Kentucky-Illinois area, approximately 25 percent from Colorado, and the remaining 15 percent from Montana, Utah, and Nevada. The Kentucky-Illinois area has been the major producing fluorspar area in the country for more than 75 years.

In the Kentucky-Illinois area the following companies are the major mining producers, each having full-scale fluorspar beneficiating mills:

Pennsylvania Salt Manufacturing Co.
Aluminum Company of America.
Ozark-Mahoning Co.
Minerva Oil Co. (fluorspar division).
Humm Mackey-Hicks Creek Fluorspar Mining Co. (a relative newcomer which opened its new heavy media plant in 1955 and expects to open a flotation plant in the spring of 1957).

Rosiclare Lead & Fluorspar Mining Co.
Kentucky Fluorspar Co.

In 1956, in the Illinois area alone, approximately 100,000 feet of exploratory drilling were done by the major mining companies, in total.

In Kentucky, Pennsylvania Salt Mining Co. opened its new Dyers Hill shaft and is now actively mining and milling domestic fluorspar for its own captive use, that is, for manufacturing hydrofluoric acid at its Calvert City, Ky., plant. Alcoa did some exploratory work on its mine holdings in Kentucky, and the Rosiclare Lead & Fluorspar Mining Co. took steps to reopen its Pigmy mine in Crittenden County, which mine for many years in the past had been a steady major producer of metallurgical fluorspar.

In Colorado, Ozark-Mahoning & General Chemical Co. operated their fluorspar mines continually throughout 1956. Alcoa did some exploratory work on its mine holdings in Colorado.

The Colorado Tri-State Mining Co. and Utex Exploration Co., Inc. (a Charles Steen interest), acquired fluorspar properties in Colorado but have not begun mining. Reynolds Metals Co. and Colorado Fuel & Iron fluorspar operations continued to be closed down in 1956.

The principal production out of Colorado came from Ozark-Mahoning, and General Chemical Co., a captive operation.

In Montana, Cummings & Roberts continued the operation of its large-scale metallurgical fluorspar property. A newcomer on the scene in 1956 in Montana was F. & S. Mining Co. which expects to be in operation during 1957 for metallurgical fluorspar.

Idaho had no fluorspar operations in 1956. However, J. R. Simplot Co. and Squaw Creek Mining Co. have holdings there which may eventually be operated, depending upon a healthy adjustment of the domestic fluorspar market.

Kaiser Aluminum and J. Irving Crowell had fluorspar operations in Nevada; those of Kaiser Aluminum were for its own captive uses, in acid grade. Metals Exploration Corp., a New York group, have acquired fluorspar property in Nevada and contemplate operation.

In Utah, a small group of associated fluorspar operators produced fluorspar during 1956, metallurgical grade.

Arizona and New Mexico had no fluorspar production in 1956. These States were former fluorspar producers. General Chemical's plant at Deming, N. Mex., continued to be closed down, as did that of Shattuck Denn Mining Corp. Ozark-Mahoning has a closed-down mine holding in New Mexico.

There is a possibility that some fluorspar producers may get underway in Arizona, and in the State of Washington, next year. There has been no production in Washington since 1945.

In summary, of the 9 traditional flourspar producing States which figures historically in the United States pattern of domestic flourspar producers—Arizona, Colorado, Idaho, Illinois, Kentucky, Montana, New Mexico, Nevada, and Utah—3 of them were shut down in 1956 (Arizona, Idaho, and New Mexico); 2 of them had only 1 major producer in each State, and both of those producers were captive operators (Kentucky and Nevada), and 1 State had token production (Utah), and only 3 States had rounded out production programs, although not full scale (Colorado, Illinois, and Montana).

FOREIGN SHIPPERS

In 1956, an estimated 525,000 tons of fluorspar were shipped into the United States by foreign producers. Mexico, fluorspar's most recent sensational producer, alone accounted for nearly 60 percent of the imports. The other countries were Canada, Spain, Italy, and West Germany.

GOVERNMENTAL ACTIVITIES AFFECTING FLUORSPAR

Following the Tariff Commission's general study of fluorspar made in 1955, as to all grades of fluorspar, a section 7 "escape clause" Tariff Commission study was made on acid grade fluorspar. The Commission divided 3 to 3 in its report made in January 1956, and the President declined to act in the matter.

The domestic fluorspar industry filed an ODM application under the National Security Amendment to the Trade Agreements Act of June 1955, but withdrew it conditionally in November 1956, when it appeared that the Federal Government might undertake stockpiling and other corrective steps looking toward an improvement in the domestic fluorspar situation.

The Government began the acquistion of metallurgical grade fluorspar during the summer of 1956 under its defense-stockpiling program, and likewise in the fall of 1956 it launched its stockpiling program in acid grade fluorspar under Public Law 733 signed in July 1956.

The Defense Minerals Exploration Administration certified two fluorspar exploration projects in Illinois and Kentucky during 1956.

In November 1956, the United States Geological Survey released the results of its latest study on fluorspar reserves in the United States, reporting that there were approximately 22½ million tons of fluorspar ore of the 35-percent plus, grade, and approximately 12 million tons in the 15 percent to 35 percent grade. The new reserves estimated by the Geological Survey today are substantially greater than the reserves which it estimated in 1944, and that, following the extraction and mining of 15 million tons of fluorspar ore since 1944.

CONCLUSION

The first recorded commercial use of fluorspar in the United States is said to have been in 1823, 135 years ago, when it was reported that 2 ounces of fluorspar were used with 4 ounces of sulfuric acid to make hydrofluoric acid. Against a commercial use of 2 ounces in 1823, we have today in 1956 a usage of 600,000 tons of fluorspar having a dollar value of approximately $30 million. These 600,000 tons of fluorspar went into 115 million tons of steel, almost 2 million tons of aluminum and 75,000 tons of hydrofluoric acid.

STATISTICS

Fluorspar, all grades (metallurgical, ceramic, and acid)

	1950	1955	1956 estimate
1. Consumption—of domestic and foreign origin (thousand tons)	425	570	609
2. Total domestic shipments (thousand tons)	300	290	325
(a) Commercial shipments	300	260	260
(b) Government stockpile shipments	0	30	65
3. Dollar value of total domestic shipments (in millions of dollars)	10	12.5	15
4. Total foreign imports (thousand tons)	165	375	525
(a) Commercial imports	165	325	425
(b) Government stockpile imports	0	50	100
5. Dollar value of total foreign imports (in millions of dollars)	2.5	8.5	12
Principal end uses of fluorspar:			
(a) Steel production (million tons)	97	117	115
(b) Aluminum production (million tons)	.7	1.5	1.7
(c) Hydrofluoric acid production (thousand tons)	35	65	75

NOTE.—Steel takes about 2,000 tons of fluorspar per 1 million tons of steel. Aluminum takes about 75,000 tons of fluorspar per 1 million tons of aluminum. Hydrofluoric acid takes about 2,200 tons of fluorspar per 1,000 tons of hydrofluoric acid.

Fluorspar production—End uses thereof

[In thousands of tons]

	1955	1956	Projected 1960 usage
1. Steel	250	250	325
2. Aluminum	100	100	150
3. Hydrofluoric acid	150	175	350
4. Ceramics and miscellaneous uses	70	75	75
Total tons of fluorspar	570	600	[1] 900

[1] Estimated.

Hydrofluoric acid production—End uses thereof (exclusive of use for aluminum)

[In thousands of tons]

	1956	Projected 1960 usage
1. Uranium and atomic energy	20	50
2. High-octane gasoline and miscellaneous uses	10	10
3. Fluorocarbon chemicals	45	90
Total tons of hydrofluoric acid	75	[1] 150

[1] Estimated.

HYDROFLUORIC ACID PRODUCERS, 1956, AND CONSUMERS OF FLUORSPAR

Du Pont Co.
General Chemical (Allied Chemical & Dye Corp.).
Blockson Chemical (Olin Mathieson Co.).
Harshaw Chemical.
Penn Salt Manufacturing Co.
Nyotex Chemical (Stauffer Chemical Co.).

Selection of Judges in Kansas

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. AVERY. Mr. Speaker, in the State of Kansas there is now under consideration a possible change in the method of the selection of district and supreme court judges. Needless to say, this is a most important problem. As a matter of public interest I am setting forth in this CONGRESSIONAL RECORD information regarding this matter.

The following is an address given by the Honorable Alf M. Landon, former Governor of Kansas, presented to the Topeka Optimist Club, February 15, 1957, in which Mr. Landon presents his thinking on this subject. Elsewhere in the Appendix of this CONGRESSIONAL RECORD

I have inserted other information and views pertaining to this vital issue.

Mr. Landon's address follows:

THE MISSOURI PLAN

What is commonly referred to as the Missouri plan for the selection of State judges is substantially the American Bar Association plan—which has been supporting the proposal since 1937.

Missouri is the only State that has adopted the American Bar Association plan for selecting State supreme court justices. California has adopted a plan that is similar to the American Bar Assocaton proposal. Alabama has adopted one part of the proposal. No other State has adopted any part of the Amercan Bar Association plan since its proposal in 1937.

A resolution is pending before the Kansas Legislature to submit to popular vote at the 1958 election that Missouri plan by amending our constitution providing that our district and supreme court judges are to be appointed by the governor from a list of 3 submitted to him by 6 representatives of the bar association and 6 laymen, appointed by the governor. The burden of proof rests heavily upon the advocates of this drastic change in the method of selecting our district and supreme court judges.

That proposed amendment takes away from the citizens of Kansas their power and right to select their judges and gives that priceless privilege to lawyers and governors.

The advocates of this Missouri plan believe that the citizens of Kansas do not know enough to elect their own district and supreme court judges.

True, they say, that the voters of Kansas know enough, but are not sufficiently informed of the qualifications, characteristics, ability, and personalities of the judicial candidates. That simply states the same argument in a different way.

That argument, if it be true, confesses failure on the part of our public leadership—newspapers, radio, politicians, the bar itself—as well as Kansas citizenry in choosing our judicial talent. To admit that premise is to admit the decay of democracy.

I don't believe there is anything in the record of the Kansas judiciary to sustain that argument.

By and large, over the years, the Kansas judiciary ranks with the best in the country.

While not a practicing lawyer, as a member of the bar and in close contact with public affairs for close to 50 years, I have known of a few mediocre State judges, lazy State judges, and political State judges.

But, I have also known of Federal judges named by presidential appointment just as mediocre, just as political—and what's more important—tyrannical.

I submit the record proves, by and large, over the years, that the State judiciary has a better record than Federal judges in the fundamental problem of government—that is—the conflict between individuals, the State, and the Nation in exercising control of economic and political power.

The sincere and well-meaning members of the bar—concerned about improving the talents of the Kansas judiciary—saying if we don't pick good judges under this so-called Missouri plan, it will be our own fault.

I believe they are only kidding themselves. Any two-term governor can make the judicial selections if he wants to and knows how.

Just as the trend of judicial opinion in the Federal courts has changed drastically with the social, economic, and political philosophy of the appointing Presidents, so can the governors of Kansas in the course of years affect the decision of the Kansas Supreme Court, particularly.

That will certainly be true if we elect the same governor for a longer period than two terms and the vacancies coincide in timing with his tenure of office.

In any event, there can be a deadlock between some governors' laymen appointees and the bar association representatives which can seriously impede the functioning of the Kansas judiciary.

Therefore, I do not believe it is a question of whether the bar associations in the district or in the State can pick better judges.

The second main argument of the conscientious advocates of this so-called Missouri plan is that it will take Kansas judiciary out of politics. I believe when the governors pick our judges, it will put the Kansas judiciary more into politics instead of less.

Finally, my greatest objection to the proposed amendment effecting the selection of our judiciary is the provision that the voters of Kansas can recall the judges at the expiration of their term if they do not agree with a judicial decision.

All familiar with government in Kansas and other States can recall at time when one issue dominated the economical and political thinking of the day. Let me remind you of the farm mortgage foreclosure riots in all the States joining Kansas in 1933–34. That none occurred in Kansas was no happen chance. I worked hard to avoid them. With the Missouri plan in effect there would have been few district judges whose term expired—survived the 1934 election in adjacent States.

During those times of economic distress and emotional excitement—when the Klu Klux Klan, for instance, exercised the power it did in some States—a substantial part of the Supreme Court could be wiped out in one election under this so-called Missouri plan. That is a more sinister menace to our judicial processes than the recall of judicial decision. That only proposed to change the decisions of our supreme courts by popular vote—not the judges themselves.

The cure is worse than the reality. It provides for a fundamental alteration in our constitutional method of selecting our judges.

The simple question is that do the citizens of Kansas want a select few and an unknown few—and worst of all—unkown influences—to name their judges. In place of the secrecy of the ballot box, the Missouri plan substitutes secret intricacies of government.

It definitely denies other Kansas citizens their right to know and to exercise their individual responsibility at the ballot box. How will that have done that job is evidenced in heavy Republican districts when Kansas Democrat Governors appointed Democrat lawyers to fill judicial vacancies on the district bench. Then these heavy Republican districts have reelected these Democrat judges, term after term.

Substituted for that citizen's responsibility is a caste responsibility. It is idle to say that that does not reduce the precious possession of citizenship. Bar association organizations are inevitably dominated by older lawyers—especially those with expense accounts and railroad passes. Therefore, the caste system of selecting our State judges will be further extended and more confined insofar as the bar associations have anything to say about it.

I grant the advocates of the Missouri-American bar plan are concerned with the quality and ability of our judges—that they are seeking the ultimate improvement of our judiciary. The inescapable fact remains that their plan injects for the first time into the Kansas Constitution the class or guild method of government.

The proposed constitutional amendment now pending in the Kansas Legislature is the antithesis of democracy. It is the negation of representative government.

No where, no time, and at no place in the selection of the bar association representatives do the citizens of Kansas have a voice or a hand in the proceedings.

That is a pure and unadulterated caste method of naming our judges as far as half of the members of the nominating commission are concerned.

That would, indeed, be adopting in Kansas the theory of government and power by a privileged few. There is even no provision requiring confirmation by the State senate of the judicial appointments.

In presidential appointment of Federal judges some control by American citizens is retained through confirmation by the United States Senate.

If a new Federal judge were to be appointed for Kansas—or a new United States Supreme Court Justice—the citizens of Kansas have a voice through our two United States Senators voting to confirm or to reject the appointment. But no such control of appointments is retained for Kansas citizens in State judges named by bar associations and gubernatorial representatives.

Essentially, the Missouri plan is the American Bar Association plan and is a return to medieval city governments by guilds.

I believe if the Kansas Legislature is going to recommend this plan by submitting the proposed amendment at the next general election, it should definitely define and include other guilds such as the chambers of commerce, the labor organizations, bankers association, and farm organizations.

Government by infinitely graded guilds still remains a class government. And class and wealth and formal education are in themselves no evidence of inherent aptitude to solve the problems of government and the human equations involved.

Even in the bar associations, intelligence and learning is not equally distributed.

My overall objection to altering our constitution by adopting this so-called Missouri plan is that I am opposed to any authoritarian restraint on the duties and responsibilities and voting privileges of Kansas citizens in selecting their own judges. At a time when there is much concern over the voting rights of southern Negroes, it is proposed to limit the voting rights of Kansas citizens.

The trouble with our judicial processes in Kansas is not the quality, the caliber, the ability of our judges. The trouble is that the supreme court, in particular, is overloaded with work.

The nine Justices of the Supreme Court of the United States turn out about one-half as many written opinions as do the seven justices of the Kansas Supreme Court. In 1956, the Supreme Court of Kansas disposed of an average of 31.5 cases a month. It is humanly impossible for any man to thoroughly study and digest that huge mass of work.

No matter how our justices are selected, it will not meet that problem.

What we need is a simple change of statutes that will relieve the supreme court of the impossible burden it is now laboring under in the volume of cases before it—instead of an authoritarian method of picking the judges.

Hon. James P. Richards

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following series of articles which appeared in the special Dick Richards Day edition of the Lancaster News issued on September 27, 1956, and welcoming James Prioleau Richards back home upon his retirement from Congress after having completed 24 years of public life:

CITY HONORS RETIRING CONGRESSMAN AFTER 24 YEARS IN PUBLIC LIFE

Today is Dick Richards Day in Lancaster and hundreds of guests, friends, and visitors have joined local citizens in honoring James Prioleau Richards as he brings to a close 24 years of service in the House of Representatives from the Fifth Congressional District. The day's activities began officially with a luncheon at 1 p. m. and will include a parade, public ceremony, buffet supper, and football game as part of the program.

Visitors and invited guests include city, county, and State officials, members of the South Carolina delegation in Congress, and close friends and associates of Mr. Richards in the Fifth District. Mayor Ledelle Steele, of Lancaster, has officially proclaimed Dick Richards Day and requested the display of flags throughout the city.

THE PROGRAM

The program honoring Congressman Richards will get under way with a chamber of commerce luncheon in the social hall of the First Methodist Church at 1 o'clock this afternoon. C. D. Gregory, Jr., president of the Lancaster Chamber of Commerce, will preside.

A musical program will precede the group singing of America, to be followed by the invocation given by the Reverend J. H. Martin, pastor of the First Methodist Church. D. Glenn Yarborough, Lancaster attorney, and a former member of the county delegation in the South Carolina General Assembly, will present the guests and introduce the speaker.

The Honorable L. MENDEL RIVERS, Congressman from the First Congressional District, will deliver the address.

Following the talk of Congressman RIVERS, a gift presentation will be made by R. B. Robinson, Lancaster merchant, to Congressman Richards, in behalf of the chamber of commerce. This will be followed by a response from Mr. Richards.

At the conclusion of the luncheon, visiting dignitaries and guests will be taken on a tour of Lancaster and historical sites. The tour is expected to last from 2:15 until 4:30 when they return to the Williams House on South White Street to participate in the parade.

The 32-unit parade will begin at 5 o'clock sharp with a police escort and color guard leading the procession followed by the Marine Corps band, and cars bearing Congressman RICHARDS, his family, and guests.

Other units in the parade will include the Boy Scouts; Senator Thomas Wofford, Senator-Nominate STROM THURMOND; the Lancaster High School band; Jaycees; Congressman L. MENDEL RIVERS; the Lancaster Rescue Squad; Kershaw band; Rotary Club; Congressman ROBERT T. ASHMORE; Congressman-Elect ROBERT W. HEMPHILL; Mayor Ledell Steele and C. D. Gregory, Jr., president of Lancaster Chamber of Commerce; the National Guard; State Treasurer Jeff Bates and Adjutant General James C. Dozier; the Lions Club; Buford band; Chief Highway Commissioner Claude R. McMillan and Secretary of State Frank Thornton; Catawba Lions; Tom Gettys and Morrell Thomas, former secretaries of Congressman RICHARDS; majorettes; Carolyn Willis, national baton twirling champion; Heath Springs band; Comptroller General E. C. Rhodes and Supreme Court Justice Joseph R. Moss; Shrine Club; Barr Street band and police escort.

The parade will proceed up Main Street from the Williams House to the Courthouse where it will disband and a public ceremony honoring Mr. Richards will be held.

AT COURTHOUSE

Dr. Ben F. Emanuel will preside at the Courthouse ceremony. The exercises will open with the National Anthem and the invocation by the Rev. John Jackson Brown, Jr., pastor of the First Presbyterian Church.

Mayor Ledelle Steele will welcome the visitors and Charles A. Bundy, manager of the Lancaster Chamber of Commerce, will recognice the guests. Crawford Billings, former Lancaster mayor and a life-long friend of Congressman Richards will speak in behalf of the citizens of Lancaster and Lancaster County.

Guest speakers will include Senator Wofford, Senator THURMOND, Congressman RIVERS, JOHN J. RILEY, ROBERT T. ASHMORE, WILLIAM JENNINGS BRYAN DORN, and Congressman-Elect and successor to Mr. Richards, ROBERT W. HEMPHILL.

C. D. Gregor, Jr., will make a gift presentation to Mr. Richards for the Lancaster Chamber of Commerce in behalf of the citizens of Lancaster County. A response by Mr. Richards and music will conclude the public ceremony at the Courthouse.

A buffet supper by the Chamber of Commerce for the visitors and attendance at the University of South Carolina-Wake Forest football game at 8 p. m. as guests of the Lancaster Rotary Club will close the day's festivities.

An American Tragedy: Russia's Ever-Increasing Lead in Scientific Manpower

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. HOLLAND. Mr. Speaker, "Russia today has the most dangerous weapon in the whole world—the atheistic, scientific, trained mind—and she has it in plentiful supply."

These words should cause every clear-thinking American to shake off his or her complacent attitude and face the stark, and up to now, inevitable, truth—that the Soviet Union has surpassed this country in the development of scientific manpower.

They were uttered, not by any wide-eyed alarmist, but by a trained American newspaperman who spent some time in Russia last year with his family, digging out the facts to prove his case.

John A. Kennedy, editor in chief and publisher of the Sioux Falls Argus-Leader, in recent testimony before a subcommittee of the House Education and Labor Committee declared that "schools and colleges—not jet planes nor H-bombs—are the greatest Russian latent threat to America and the West."

Mr. Kennedy backed up his charges with documentary evidence gathered by talking to hundreds of individuals during his visit to Russia. He quizzed school teachers, college professors, students, and the man in the street. His conclusions made a frightening picture for American mothers and fathers to contemplate.

I happen to be very much interested in this problem myself. So much so that last session I introduced a bill to encourage the training of additional engineers. The bill also provides for expanded facilities for engineering education by providing supplementary salary grants for engineering teachers and scholarships for engineering students.

According to Mr. Kennedy, Soviet colleges and universities graduated 2½ times as many engineers and scientists as we did in 1956.

Not only that, Russia has more than double the number of science students in their higher educational institutions this year than we have.

The very real and potent danger, he said, however, lies in what Russia is accomplishing at the secondary school level—where every nation should develop its future scientists.

He called their accent on education, which he said filters through to the lowest base—the 10-year secondary schools "perhaps the toughest grammar and high school system in the world."

And there—

He warned—

is where they are now establishing a lead over the United States that is going to take an almost superhuman effort to overcome.

At the university level, Mr. Kennedy pointed out that Russia has approximately 100 percent more science students in colleges than we have. Of course, the fact that tuition is free and college students are paid salaries is a most determining factor.

He said one of the most significant aspects of education in the Soviet Union is the emphasis on mathematics, physics, chemistry, and related subjects.

Training in these subjects makes engineers, doctors, and men and women of science. It makes nuclear scientists and Russia is turning them out at a rate far greater than American schools.

Mr. Kennedy declared himself amazed, just as I was, at figures by both the United States Office of Education and the National Science Foundation on the decline percentagewise in our high schools instruction in mathematics and science during recent years.

They show that today 24 percent of America's high schools offer no classes in geometry while 23 percent of them teach no chemistry or physics.

In 1900, algebra was studied by 56 percent of students attending high school. In 1955, the figure was less than 25 percent.

Also in 1900, 27 percent of public high-school students studied geometry. In 1955 only 11 percent of the students studied the subject. In physics, the figure dropped from 19 percent in 1900 to 4 percent in 1953.

I agree with Mr. Kennedy that on the basis of these figures, it is little wonder that last year only 228 new physics teachers were graduated to staff 28,000 high schools in America.

Another pertinent point on which we were in complete agreement is that American industry is defeating its own ends by employing a policy of enticing science instructors away from teaching positions by offering salaries far in excess of those paid by educational institutions.

When I introduced my bill last session, I pointed out that while American output of engineers lags, the Soviet Union has been expanding its output by leaps and bounds.

The Russians are now graduating 10 times as many engineers as they did 25 short years ago. In 1954, they turned out 53,000 engineers and scientists. In 1955, the number is estimated at 63,000—nearly 3 times as many as were graduated here in the United States that year.

In an attempt to get to the real reasons behind the engineering shortage, I went to those best qualified to judge, the deans of all accredited engineering schools in the country.

In answer to questionnaires they declared they were unanimous in their concern over the problem and they were in agreement on two main reasons for the shortage.

First, we are wasting our precious manpower in failing to enable many intelligent high-school students to continue on to college.

Secondly, the shortage of qualified teachers of engineering at the college level—plus the shortage of qualified mathematics and science teachers in our high schools are major roadblocks.

Mr. Kennedy, in his testimony, cited figures to show that in 1954, this country graduated only half as many college-trained specialists in engineering and science as were graduated in 1950.

Also, he said, in 1954 our colleges graduated 57 percent fewer high-school science teachers and 51 percent fewer math teachers than in 1950.

He blamed this on the fact that in the United States the teacher has not been accorded proper recognition and status in the community. In Russia, by contrast, teachers rank high in income and social strata.

Mr. Kennedy said according to a recent survey of professions in the United States, the average dentist's income is 2½ times that of a teacher's; a lawyer's is 2.7 times, and a physician's 4.2 times as much.

I wholly agree with him when he declared that if we continue to let the Russians go ahead of us in science education, a disaster catastrophic to our way of life is inevitable.

The situation could truly become an American tragedy. I hope and trust a way may be found to avert it.

Happy Birthday, Pope Pius XII

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News in celebration of the 81st birthday of His Eminence Pope Pius XII:

HAPPY BIRTHDAY, POPE PIUS XII

(By Harry H. Schlacht)

Today, we salute with joyous acclaim Pope Pius XII on the 81st anniversary of his birth.

From every God-loving heart, from every creed and race comes the happy refrain: "Many happy returns of this blessed day."

The Holy Father was born Eugenio Pacelli on March 2, 1876.

In his birth we have seen the unfolding mercifulness of God in raising up a figure which shines forth as a great beacon in our times.

He is a true benefactor of humanity.

He is a courageous leader of the century.

He is a man of his time.

He was the first future Pope to fly in a plane to the United States.

He was the first Vatican Secretary of State to be elected Pope.

He was the first Roman elected to the Papacy since Benedictus XIII.

He was the first cardinal of the Curia to become Pope in a century.

He was the first Pope to be crowned outside of St. Peter's Basilica since 1870.

He is the 261st successor to St. Peter.

His reign is marked by a vigorous crusade against the curse of atheistic communism, the curse of state totalitarianism.

God's truth will pierce the Iron Curtain.

Pope Pius XII fears no human power when duty bids him speak the truth.

He has proved himself a fearless fighter of injustice wherever it has raised its ugly head.

The justice of God is the inspiration of his utterance.

He is a simple man of God.

Today, we can see his tall figure bowed before the tabernacle.

His saintly face raised to the uplifted chalice.

His long, thin fingers folded in prayer.

Like a decade of Gothic spires aspiring heavenward in supplication for the prayers of mankind.

He is ready to shed his heart's blood to become the seed for the rebirth of enslaved nations.

He is armed with God's grace and a martyr's will.

He is standing at the ramparts of man's battle for liberty.

His armaments are the weapons of wisdom.

His armies are God-loving peoples everywhere.

His words echo the agony of the divine plea: "Father, forgive them, for they know not what they do."

Christianity came forth from the dark catacombs, and upon the ruins of paganism there arose the glory that is the Roman Catholic Church.

Selection of Judges in Kansas

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. AVERY. Mr. Speaker, in the State of Kansas there is now under consideration a possible change in the method of the selection of district and supreme court judges. Needless to say, this is a most important problem. As a matter of public interest I am setting forth in this RECORD information regarding this matter.

The following is an editorial which appeared in the Topeka Daily Capital, February 18, 1957, which comments on an address given by the Honorable Alf M. Landon and his views concerning this problem. Elsewhere in the Appendix of this RECORD I have inserted other information and views, including Mr. Landon's address, pertaining to this vital issue. The editorial follows:

CLOSING THE BALLOT BOX

Alf M. Landon's critical analysis of the so-called Missouri plan for selecting judges in Kansas should awaken all the people to the probable effects of this proposed departure from democratic processes. If the people thoroughly understand this scheme to take away the voting privileges in electing district and supreme court judges it is doubtful if very many of them would approve.

Under the proposal candidates for the judiciary would be named by a panel of lawyers and laymen, with the appointive power vested in the governor. Advocates of the plan say it would take the judiciary out of politics, but Governor Landon believes it would inject more politics into the equation. It is easy to agree with him, for it would take only a few years to build up an oligarchy into which only a chosen few could hope to enter.

Suppose the Missouri plan was in effect, and the supreme court rendered a few opinions that proved unpopular in certain circles—there would be a crusade to oust the offending justices when they came up for an approval vote at the next election. Such a system might place the justices at the more or less tender mercies of a few politically strong men. In other words, the "unknown influences" which our former governor suggests might prevail.

Proponents of this effort to deprive the people of the privilege of selecting their judges argue that "the people do not know enough about the candidates to vote wisely," or words to that effect. This specious argument might as well be applied to all candidates for public office, thus admitting that the electorate is too ignorant to cast ballots for any person.

All Kansans might well ponder this American Bar Association proposal to deprive them of one of the sacred privileges of living in a democracy. Governor Landon was right in stating that "In place of the secrecy of the ballot box the plan substitutes secret intricacies of government."

Tax Relief for Orthopedically Handicapped Persons

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. KEOGH. Mr. Speaker, legislation affording Federal income-tax relief to the physically handicapped taxpayer has for some time been introduced in Congress. H. R. 1154 is a bill to provide a deduction for income-tax purposes, in the case of a disabled individual, for expenses for transportation to and from work not exceeding $600 per annum; and to provide an additional exemption for income-tax purposes for a taxpayer or spouse who is physically disabled.

This bill will, if passed, grant a measure of tax relief to those physically handicapped persons most in need of it. It deserves the support of Congress in order to adjust the present inequities in the Internal Revenue Code.

The orthopedically handicapped, by reason of their disabilities, are compelled to spend substantial sums of money to aid and maintain their rehabilitated status. Their expenditures frequently include:

First. Expenses incurred for the purchase and repair of orthopedic and prosthetic devices not entirely deductible under the medical deduction provision of the law. Specially built shoes are also in this category.

Second. Unusual wear and tear of clothing caused by constant friction with orthopedic and prosthetic devices, and crutches, and falling.

Third. Additional expenses often include higher apartment rentals due to need of ground floor quarters or elevator apartment accommodations, which are naturally higher rental apartments.

Fourth. Many disabled find it necessary to hire taxicabs in going to and from work. The average weekly cost nationally is $15.

Fifth. In approximately 10 percent of the cases the disabled, as defined in the bill, find it necessary to purchase automobiles to allow for mobility. These automobiles, of necessity, must be of good condition to avoid mechanical failure. Hand controls are a requisite. The businessman can deduct transportation expenses for the production of income while his physically handicapped employee in a wheelchair cannot.

Sixth. Paraplegics often find it necessary to purchase their own homes which are specially equipped with fixtures installed at lower levels. Ramps must be built to allow for ingress and egress to and from the premises.

Seventh. The disabled are frequently compelled to hire someone to do household cleaning and repairing.

Eighth. Due to discrimination in the labor market, physically handicapped persons are frequently forced to accept lower wages and salaries.

Ninth. They are of necessity, as substandard risks, compelled to pay higher life insurance rates where they are able to afford the minimums of life insurance coverage. By the same token, they are rejected for health and accident insurance and as a result have higher medical and hospital expenses than the average taxpayer.

Tenth. The renewal of inflationary business trends has resulted in the highest cost of living index to date. This, in turn, has created havoc with the low incomes of the orthopedically handicapped.

From all the foregoing, it is obvious that the orthopedically handicapped are faced with heavy expenses and burdens.

Many physically handicapped persons could have been rehabilitated were it not for their expenses due primarily to low wages and the high cost of their rehabilitated status. Many are frequently intimidated into remaining home since their low gross income less tax deductions would give them a lower net income than if they stayed home on relief. Often, rehabilitated persons receive as low as $14 per week in wages in New York City. From these small earnings taxes are deducted.

According to figures gleaned from the 1956 United States Statistical Abstract the total number of 1955 job placements through public employment offices amounted to 14,957,977. This figure includes 264,316 physically handicapped persons who were also placed. They comprise 1.77 percent of all workers placed by public employment offices.

Of the 264,316 physically handicapped placed in 1955, there were included 57,981 persons who were rehabilitated by Government funds. Of this latter number, 23,502 persons or 40.5 percent, had amputated or missing members, impairment of extremities and impairment of other parts of the body.

First. Amputated or missing members, 6,435 persons.

Second. Impairment of extremities, 12,382 persons.

Third. Impairment of other parts of body, 4,695 persons.

Total, 23,502 persons.

Since 1.77 percent of all workers placed by Public Employment Offices are handicapped, and since there are a total of 64,165,000 gainfully employed persons in the United States, by multiplying the latter figure by the former we find that there would be 1,135,721 physically handicapper taxpayers in the United States. Then by multiplying 1,135,721 by 40.5 percent we find that there should be about 459,967 persons who would qualify under the tax exemption and deduction bill I propose herewith.

If all 459,967 taxpayers claimed the $600 tax exemption with savings of $120 each, the savings would amount to $54,395,920. If as many as 15 percent of the 459,967 taxpayers took advantage of the transportation deductions, they would save up to $8,159,388. The grand total for both types of savings would be in the amount of $62,555,308.

The granting of tax relief during this session of Congress would rectify, to a limited degree, some of the financial hardships faced by the orthopedically handicapped.

Law and the Rhode Island Election

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the March 1 U. S. News & World Report which pertains to the formal opinion rendered by the Supreme Court of Rhode Island in the controversy over the gubernatorial election.

The effect of this decision was to wrest the governorship of that State away from the duly elected candidate, Christopher DelSesto, and present it to the incumbent, Governor Roberts, by means of disqualifying absentee ballots.

It took the Supreme Court of Rhode Island 6 weeks to render a formal opinion, an opinion which attorneys for Mr. DelSesto inform me fails to set forth the contentions of his counsel, and obviously does not discuss these contentions.

It is apparent that the court merely presented one side of the argument to support its decision. It also failed to point out that New York, Florida, and Montana opinions on the points of law involved were contrary to the Rhode Island decision.

In view of these facts, the following article is commended to my colleagues' attention:

TAMPERING WITH THE BALLOT BOX
(By David Lawrence)

When the highest court of a State begins to tamper with the ballot box and sets itself up as superior to the legislature—or even to the constitution of the State—as has just happened in Rhode Island, such action is a plain usurpation of power by the judiciary.

Although the Supreme Court of Rhode Island handed down on January 1 last, a brief memorandum of conclusions, it issued only a few days ago the text of its formal opinion. It gives for the first time a detailed argument seeking to defend this amazing deviation from justice.

The absentee ballots of 5,454 citizens of Rhode Island were discarded by order of the court because they were cast before election day, while 648 absentee ballots were accepted by the court because they were cast on election day.

This rejection was in disregard of the specific wording of the law of Rhode Island which says that voting by absentees "may be done on or before said election day."

The court's decision changed the election result, giving Rhode Island a Democratic Governor by 63 votes, although the voters had elected a Republican.

Many States have similar laws about absentee voting. If the technical and tortuous reasoning disclosed in the decision of the Supreme Court of Rhode Island becomes a precedent for other States to follow, many shut-ins and persons who happen to be ill at election time will lose their right to vote.

The facts are clear: The people of Rhode Island in 1948 adopted an amendment to their State constitution which specifically says that persons "who are absent from the State, or who, by reason of old age, physical disability, illness or for other physical infirmities, are unable to vote in person, being otherwise qualified to vote at the general election held biannually, on the Tuesday next after the first Monday in November, shall have a right to vote in all elections in the State."

In that same constitutional provision was a broad grant of authority to the State legislature declaring that "the general assembly shall have full power to provide by law for carrying this article into effect and any ballot cast under the provisions of such law shall be received and counted with the same effect as if given by such elector in open town, ward or district meeting."

The Rhode Island Legislature in 1953 passed a law which authorized absentees to vote "before or on said election day." Now the Supreme Court of Rhode Island argues speciously that, while in a 1944 amendment to the State constitution military personnel were permitted to vote at any time fixed by the legislature, it was somehow significant that this wording was omitted from the constitutional amendment adopted in 1948 which opened the right of absentee voting

to all citizens, including shut-ins and ill persons. Hence the court accepted as valid only the votes of 648 absentee civilians because their ballots were notarized as having been cast on the regular election day.

Yet no restriction had been imposed anywhere in the Rhode Island constitution itself on the right of the legislature to set forth by law the details of absentee voting. Certainly, since the legislature in 1948 was given by constitutional amendment "full power" to deal all inclusively with absentee voting, it acquired the full right to provide by law exactly when and how the ballots could be cast—that is, on or before election day. Had the people wished to deprive the legislature of the power to arrange the voting at a time convenient to absentees, they would have said so.

The court's opinion notes that the legislature in 1942 had asked for an advisory opinion and that the supreme court of the State in that year had said the legislature did not have the power to permit absentee balloting before election day. But the 1942 ruling was rendered before adoption of the 1948 amendment to the Rhode Island Constitution which gave the legislature full power to deal with absentee voting. An advisory opinion, moreover, rendered in prior years by a court does not supersede the plain phrasing of a constitutional amendment adopted in subsequent years by a vote of the people themselves.

Plainly, a constitution is not a series of legislative enactments. It is a charter that grants broad powers to the legislature to carry out by appropriate laws the stated purposes of the constitution.

The Rhode Island Legislature, taking into account all the difficulties that surround absentee voting, deemed it fair and practical to let absent citizens mark their ballots before election day. This was a proper exercise of legislative power.

To count a certain number of ballots as valid and arbitrarily to invalidate others is to take away from the legislature "full power" to enact legislation that treats all absentee voters alike. The court's decision is a plain discrimination between citizens. It is a denial of "the equal protection under the laws" guaranteed to the citizens of Rhode Island by the Federal Constitution itself. It is a palpable tampering with the ballot box.

William P. Connery, Jr., Post 6

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. LANE. Mr. Speaker, I wish to include copy of the remarks of Cornelius F. Burke, contact officer of the Veterans' Administration regional office at Boston, Mass., who was the principal speaker at the 38th anniversary banquet of the William P. Connery, Jr., post 6, American Legion, department of Massachusetts, held February 21, 1957, at the Edward Harrington School, Lynn, Mass.

Mr. Burke has been a kind, sincere, and conscientious employee of the Veterans' Administration for the past 37 years, respected and admired by all of us as a real friend of the veterans.

Mr. Burke's remarks are as follows:

It gives me a great deal of personal pleasure to be the speaker tonight before my own post of the American Legion on this, the occasion of our 38th annual banquet.

I am grateful to the post for their kind invitation to be their guest speaker not only tonight, but for many years past.

When Vice Commander Connie O'Meara called and asked me to be the speaker, we discussed the subject matter of my talk. We decided that a short review of the origin of veterans' pensions in the United States, the administration of the education and training program under the Servicemen's Readjustment Act of 1944, popularly known as the GI bill, and its effect on the economy of our country would be an appropriate and interesting subject. Also to give a report of my observation and evaluation of the work of the American Legion in behalf of veterans and their dependents from the close of World War I to the present day.

I believe that it is well known to all service men and women and their families that our Government, through the Veterans' Administration, operates today the largest individual medical, hospitalization, loan guaranty, vocational rehabilitation, education, and insurance programs in the world, and grants to its beneficiaries compensation and pensions in amounts greater than any other nation on earth.

Today, we have over 22,600,000 veterans in the United States. These men and women served their country either in the Spanish-American War, World War I, World War II, or the Korean conflict.

Veterans' benefits are not new, either in theory or in practice. They are not politically fostered gratuities for the few, imposed upon the American people to keep pace with the rising economic tide of the 20th century. Since the early days of organized warfare, governments have given special grants and allowances to men and women who have performed honorable military service, not as a payment, but as a token of respect and appreciation.

The Scriptures tell us that Joshua's captains shared in the division of the promised land. Rome in her imperial days made grants of corn, oil, and land to her returning soldiers and in many instances exempted them from taxation for life.

The first veterans' benefit law on record in America was enacted in 1636 by the Pilgrims of the Plymouth Colony while they were at war with the Pequot Indians. The law stated:

"In any case of necessity require to send forces abroade and their be not volunteers sufficient offered for the service, then it be lawful for the Govr and assistants to presse in his maties name by their warrant directed to the constables. Provided if any that shall goe returne maymed and hurt he shall be maintained competently by the Colony during his life."

This law was later revised by the General Court in 1671 with the following amendment:

"That if any man be sent forth as a soldier, and be so maimed in the service, that he is disabled from following his occasions, he shall be maintained by the Colony whilst he lives, according to his quality, and the capacity in which he served: and when dead, shall have the burial of a soldier."

In October 1780 the Continental Congress approved half pay for life to any officer of the American Revolution who served to the end of the war.

In 1818 the Congress of the United States approved for the first time a pension law for disabled veterans which included veterans whose disabilities were not the result of their military service.

Special legislation was enacted following the Civil War, Spanish-American War, and World War I in gratitude to those who had served, but tonight I wish particularly to unveil the accomplishments of the greatest American challenge when this Nation granted training to returning servicemen and women under the GI bill passed by the 78th Congress on June 22, 1944, commonly known as Public Law 346.

This GI bill was conceived and nurtured by the American Legion, a child the opposition would refuse to adopt. At the time of its passage, many commentators, who lacked vision and the prize of human investment, remarked, "It will be a waste of public funds and amount to nothing more than a revived WPA on a larger scale." But as Al Smith would say, "Let's look at the record."

In June 1956 we celebrated the 12th anniversary of the passage of this law and the figures prepared for this anniversary are a glowing tribute to the Legionnaires who presented the bill—a triumphant victory for the legislators who enacted it, and an honorable fulfillment by a grateful veteran populace.

I appreciate how tiresome and confusing statistics can be but tonight I must use figures to properly present the true effects this law has had on our present economy and the future welfare of our country.

Our Nation has a long history of aid to the disabled veterans of our wars, particularly to those who incurred disabilities in the performance of their military duty, but the GI bill was the first major attempt to help the physically able veteran in that great transition from war to peace.

The American Legion in sponsoring this bill appreciated that the Government had a definite responsibility and would adequately fulfill that responsibility to those who were wounded or disabled as a result of disease or injury incurred in service.

They were concerned and sought to avoid a repetition of the chaos of unemployment and the resulting hardships that existed in 1919 when an army of 4 million demobilized veterans marched into the labor market.

The unselfish purpose of the bill was to restore to our men and women serving with the Armed Forces the position that might have been theirs had they not been called to defend the principles of liberty and equality.

Let us not forget that, in addition to the 15 million veterans to be discharged, there were 8 million demobilized defense workers who would be seeking security in the postwar upheaval, and that the majority of returning GI's knew no trade other than war. Tell me, without the GI bill, what national catastrophe might have occurred, with 23 million men anxious and eager to work out their civilian status, suddenly knocking on labor's lean door back in 1946.

We were always proud of our system of free education. We considered it the finest in the world. To our great surprise, the war exposed flaws in it.

Over 4 million men in the Armed Forces had not graduated from elementary school. The illiterates rejected in the draft would have manned 20 Army divisions.

I think we will agree that the well-being of the Nation includes the skills of its workers, the ability of its businessmen, the capacity of its professional men, and the husbandry of its farmers. No single national program ever gave so many people so many skills in so many pursuits as did the GI bill.

During the first 12 years, nationally, that is, from the enactment of the law on June 22, 1944, to June 1956, 7,900,000 of the former GI's went back to school on an educational level that ranged from grade school to postgraduate work.

Statistics further reveal that 2,200,000 went to colleges and universities, 3,500,000 went to schools below college level, 1,400,000 took on-the-job training, 700,000 combined book knowledge with practical farm experience.

Nationally, it refilled the country's dangerously depleted pool of professional and skilled manpower.

It trained 180,000 doctors and nurses, 113,000 physical and research scientists, 450,000 engineers, 711,000 mechanics.

The benefits of the GI bill have even entered into the field of theology, probably the least publicized of all its accomplishments. In Massachusetts, alone, 805 priests, ministers, and rabbis were trained to serve God and country. Throughout the United States, 44,000 were educated.

The Census Bureau now reports the GI bill advantage shows the average male veteran today has completed more than 12 years of school. The average nonveteran male a little less than 9 years.

The higher level of education, the record indicates, has served to boost the earnings of the veteran far beyond that of the nonveteran.

Another survey by the Census Bureau reveals that veterans have generally outdistanced nonveterans in earnings.

When the GI bill was taking hold in 1947, according to the survey, the average income of male veterans between 25 and 34 years of age was only $2,401, as against $2,585 for nonveterans in the same age bracket.

Six years later, in 1953, the average income of the veteran rose 50 percent to $3,631, while the average income of nonveterans rose only 19 percent to $3,065.

Government statisticians calculate that by 1970 more than 8 million veterans who were afforded training under this bill at an estimated cost of $15 billion, will have repaid the Government the full cost of the program. Because, as a result of their training, they have already attained an income level which will add an extra billion dollars a year in Federal income taxes.

Another important feature of the GI bill is the loan-guaranty program. More than 4,800,000 veterans have received GI loans valued at nearly $40 billion.

In 1944, the pessimists insisted that the veteran would not pay the money back and that Congress would eventually be forced to write it off the books as a loss.

Once again, "Let's look at the record." Grateful veterans have been the best credit risks in this country; they have defaulted in less than one-half of 1 percent of their loans.

There are many other programs operating in the VA, but time does not permit a review of them tonight.

AMERICAN LEGION

Those of us who have been members of this great patriotic and humanitarian organization, the American Legion, since its inception immediately following World War I, take great pride in reviewing the organization's accomplishments, particularly in its major programs, namely, rehabilitation, child welfare, community service, Americanism, and national security.

Its first major legislative victory was in August 1921, when it successfully advocated the consolidation of the Bureau of War Risk Insurance, the Federal Board of Vocational Education, and that part of the Public Health Service assigned to the care of veterans, into a unit to be known as the Veterans Bureau and for the specific purpose of rendering more efficient service to the veterans and their dependents.

In 1922 and 1923, the Legion proposed an increase in disability ratings and a liberalization of the requirements for granting service connection in certain disabilities.

The legion's great legislative year was in 1924 when they sponsored the World War Veterans Act, passed by Congress on June 7 of that year. This law, to the veterans of World War I, was synonymous with the GI bill for World War II veterans. The crucial difference was that the latter veteran veritably exchanged the uniform for the cap and gown or the opportunity for on-the-job training, whereas the older veteran was obliged to wait 5½ years for this law.

This act covered all phases of VA operations, including increased compensation, the establishment of presumptive periods for certain constitutional disabilities, hospitalization for nonservice-connected conditions, and less exacting requirements for vocational training.

The Adjusted Compensation Act (familiarly known as the World War I bonus bill) was enacted that same year.

Subsequently, during the years 1924 to 1932, the legion in the role of humanitarianism, successfully fought to ease the burden of veterans caught in the throes of depression, by amendments to the World War Veterans Act and the Adjusted Service Act, thereby enabling needy veterans to obtain loans against their bonus certificates.

In 1932, truly the dark ages in American history, when our great economic structure collapsed, when the doors of our banks were closed, when human bread lines dotted the cities of our Nation, when disabled veterans sold apples on street corners, the American Legion mustered all its strength and resources to protect and defend the benefit laws then on the books against the onslaught of certain organized groups who were trying to discredit the veterans by characterizing them as "Treasury raiders."

There was organized in this country at that time an organization known as the National Economy League. Local branches were formed in almost every city in the United States. There is no doubt they were acting in good faith. Their sole purpose was to reduce Government spending and balance the national budget. They directed their attack at the veteran. Unfortunately, they were not fully aware of the true veteran picture at that time.

In 70 percent of the cases, compensation to veterans was greatly reduced, cutting out entirely all pension payments to World War I veterans for non-service-connected disabilities unless they were totally disabled. It limited hospitalization to the treatment of service-connected disabilities only. They reasoned that if veterans' payments continued, the country would be bankrupt. They argued that if the current $32 billion debt reached 36 billion, the country would become insolvent. Today, a 275 billion debt finds the country still solvent.

To the bewilderment of veterans and their families, the 73d Congress on March 20, 1933, passed Public Law 2, "An act to maintain the credit of the United States," familiarly known as the Economy Act. This empowered the President to change or prescribe rules and regulations necessary, in his opinion alone, for the economical operation of the VA. Accordingly, VA appropriations were drastically curtailed. In most cases, compensation was greatly reduced, World War I pensions completely eliminated except for the totally disabled, and hospitalization limited to service-connected disabilities only.

In the final enactment of this law, Billy Connery, for whom this post is proudly and affectionately named, was one of the fey who refused to follow his party leadership and stood by the veteran in voting against the legislation. His work in Congress was dedicated to the veteran, and his name will be cherished for his devotion to the exserviceman and his tireless efforts in behalf of labor and the underprivileged.

The late Ed Hayes, of Chicago, one of the greatest national commanders of all times, and a totally disabled veteran himself, took the fight for restoration of these benefits to the people of the United States. He visited every large city in every State in the Union and invited veterans, nonveterans, members of the Economy League, civic groups, and all fair-minded citizens to join with the Legion in a move to right the great injustice done to disabled veterans.

Even after his term of office had expired, Ed Hayes was commissioned by the Legion to continue his fight against the Economy Act. Principally through his efforts and the indomitable spirit he engendered into the hearts of all Legionnaires victory loomed large and within 18 months after passage Congress restored every benefit that had been taken away on service-connected disabilities except one, and that was subsequently restored in 1949. This particular disability affected less than 200 veterans in Massachusetts. The right to hospitalization for nonservice-connected disabilities was also restored. The American Legion emerged from this fight more powerful than ever. Again they rallied to the aid of the World War I veteran and made it possible for his bonus to be paid in full in 1936 rather than 1945.

You World War II and Korean veterans should appreciate why we oldtimers are so proud of this great organization. In 1943, the Legion, profiting by their experiences following World War I, appointed a committee of the best minds within the Legion to submit recommendations for the House Veterans' Affairs Committee in the Congress on what they believed this country should do for its returning World War II servicemen and women.

The Legion committee drafted what was later known as the World War II GI bill, which I reviewed with you in the early part of my talk. The important thing to remember is that Congress had this law on the books 1 year prior to the cessation of hostilities in either the European or Pacific theaters of war.

They also passed a similar bill for those who served during the Korean conflict with practically the same benefits as were granted to World War II servicemen and women.

In conclusion, I want to emphasize that we have lived during the most wonderful and most critical period in world history—wonderful because of its scientific discoveries and advancement; critical because of the wars, unrest, and lack of character and respect by some world leaders for the rights and dignity of man.

Whether we served in World War I, World War II, or the Korean conflict, we have played a major part in our country's transition from a continental to a world power.

Down through the years since its inception in February 1919, the American Legion has been a great force for good in this country. It has remained steadfast for God and country. It has stood side by side with some of our great religious leaders as a wall against the spread of communism and other isms or crackpot ideologies in this country. Its leadership has been sound. I have never known the Legion to be wrong on any stand it has taken whether it has been for national defense, preparedness, military training, citizenship, veterans' benefits, or foreign affairs.

They may have been criticized for their stand on certain controversial issues but time has proven them to be right.

We, as veterans of the Armed Forces of the United States, should value our membership in this great organization, the American Legion, with the same reverence as we do our citizenship in this great country of ours, the United States of America. I thank you.

The officers of the William P. Connery, Jr., Post 6—the largest legion post in Essex County, Mass.—are as follows: Commander, Roger Welsh; senior vice commander, John J. Lee; junior vice commander, Cornelius O'Meara; adjutant, John J. Cronin; finance officer, Raymond Sharples; post clerk, Robert McGhee; chaplain, Emil Anderson; sergeant at arms, Charles Harvey; historian, William Ellison; Americanization officer, Thomas H. Driscoll, P. C.; service officer, Thomas J. Morrison, P. C.; and graves registration, Joseph Cirella.

The executive board is as follows: P. C. Walter Melanaphy, John Pasquale, Lester Twoomey, Joseph L. White, Eric Bannister, William Huggins, William Forman.

Dangerous Attacks on Supreme Court

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. DIGGS. Mr. Speaker, I submit for the RECORD a recent article by the eminent journalist, Roscoe Drummond, which concerns current attacks upon the United States Supreme Court, such as we have seen made by the State Legislature of Georgia in its move to impeach six judges of that branch. Mr. Drummond is but one of the many national authorities, in varied lines of public service and endeavor, who has put the warning of dangerous on such attacks and in simple language for all to understand set forth the reasons why the democratic concepts that are the heritage of the American people—not just its minorities—are jeopardized by such appeals. As the author points out, this is not criticism of the opinions of judges, but criticism of the authority of the Court which is prompted by racial prejudice. The American public ought to be alarmed because in this ugly form of bigotry its system of government is being attacked. I should like to emphasize Mr. Drummond's words as a warning to the American people that in the role as interpreter of what State and Federal laws are constitutional and what are not:

Above all else the Court does two things:
1. It prevents the Federal Government and the State governments from encroaching upon each other, thus preserving the balance of our Federal system.
2. It protects the constitutional liberties of all the people from encroachment by either the States or the Federal Government.

The full article follows:

DANGEROUS ATTACKS ON SUPREME COURT

(By Roscoe Drummond)

WASHINGTON.—Nearly every President has had to defend his constitutional powers from congressional encroachment. Mr. Eisenhower had a hard time keeping his authority to police the Federal personnel from slipping into the hands of eager Congressmen.

Nearly every Congress has had to defend its independence—sometimes not too successfully—from Presidential encroachment. For a considerable period during Franklin Roosevelt's dominance, Congress found itself more a subordinate than a coordinate branch of the Government.

It seems to me time somebody raised a voice to defend the third branch of Government, the United States Supreme Court.

The President can defend himself. Congress can defend itself. But the Justices of the Supreme Court, speaking only through their opinions, can never speak in their own behalf.

The Court is today the target of some turbulent controversy because of its trend of opinions on racial questions, even as it was the target of turbulent controversy 20 years ago when it was striking down some of the early New Deal legislation as unconstitutional.

Criticism of the Court's rulings is healthy and desirable. The legal opinions of judges should be no more sacrosanct than the political opinions of politicians. That the opinion of the Supreme Court is legally final does not make it infallible; it isn't.

But criticism of the authority of the Supreme Court seems to me unhealthy and dangerous.

The Constitution does not spell out the precise role the Supreme Court shall play. It remained for the Court itself to define its function.

It was largely through the force and cogency of the opinions of Chief Justice John Marshall that the Court established itself as the interpreter of what laws, State and Federal, are constitutional and what are not.

When some deeply resent a decision of the Court, they often attack the jurisdiction of the Court. But the fact remains that while the Court originally asserted its role as interpreter of the Constitution, no action has ever been taken, either by Congress or by the people, to alter or restrict its authority one iota.

Such a course has been open to us for nearly 150 years but the jurisdiction of the Court remains untouched.

When, in 1937, President Roosevelt tried to mold the opinions of the Supreme Coutr more to his liking by his court-packing plan, he suffered the severest defeat of his career.

Above all else the Court does two things:
1. It prevents the Federal Government and the State governments from encroaching upon each other, thus preserving the balance of our Federal system.
2. It protects the constitutional liberties of all the people from encroachment by either the States or the Federal Government.

Syria Army To Get Red Tutors

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. MULTER. Mr. Speaker, the following dispatch, written by Gaston Coblentz, from Bonn, Germany, appeared in the New York Herald Tribune of February 24, 1957.

If this is one of the Arab countries we will be aiding with part of the $200 million proposed in President Eisenhower's Middle East resolution, then I suggest that we must restrict the use of such aid.

SYRIA ARMY SAID TO GET RED TUTORS

(By Gaston Coblentz)

BONN, February 23.—The last of a group of postwar German military advisers to the Syrian Army were reported today to have been dismissed by the Government at Damascus to make way for Russian and Czech instructors.

The reported German dismissals have coincided with signs of increased Communist bloc activity in Syria in the last month, including new arrivals of Communist arms and military technicians.

Since the late 1940's successive Syrian regimes have employed up to as many as 50 German military advisers recruited on an individual basis. Some of the men involved found it advisable to absent themselves from Germany during the early postwar period.

The chief of the German group, a Colonel Kriebel, a former instructor in military tactics at the Berlin War Academy, was one of the last two German officers to be dropped by the Syrians.

On his dismissal he was received by President Shukri al-Kuwatly, who gave him a high Syrian decoration for outstanding services.

Leaders of Veterans Speak Up for Israel

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ANFUSO. Mr. Speaker, one of the finest and intensely patriotic organizations in our midst is the Jewish War Veterans of the United States of America. It has been in existence for more than six decades, having been founded in 1896. Throughout all these years, this organization has been concerned primarily with fostering programs of Americanism and with protection of the war veteran and the rights to which he is entitled under the law.

I know personally many of its members and leaders in Brooklyn and am familiar with the outstanding work they are doing to further the cause of Americanism and of the war veteran. I take this opportunity to pay a deserving tribute to them for their achievements.

On February 25, 1957, a huge rally took place at Madison Square Garden in New York which was attended by 18,000 people. The purpose of that rally was to protest against the possible imposition of sanctions against Israel in connection with the United Nations request for troop withdrawals from the Gaza and Aqaba areas.

One of the speakers at that rally was William Carmen, national commander of the Jewish War Veterans. At the conclusion of his remarks, Mr. Carmen read the text of a telegram from Mr. Dan Daniels, national commander of the American Legion.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the address by Mr. Carmen and the text of Mr. Daniels' telegram:

ADDRESS BY WILLIAM CARMEN, NATIONAL COMMANDER OF THE JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA, AT THE MADISON SQUARE GARDEN RALLY, FEBRUARY 25, 1957

I speak to you this evening as a representative of the men and women of the United States who fought and died because of diplomatic errors of another period within our lifetime.

Thirty-six odd years ago there was introduced in the world a new cancer. It came in the form of a man by the name of Adolf Hitler. It ate out the entrails of morality and decency and it brought upon the world a river of blood that will forever stain the face of this earth.

Most of us have seen with our own eyes this degradation of the human race. We have seen our people butchered and slaughtered. The phrase "political expediency" summons up remembrances of unimaginable horrors perpetrated upon the Jewish

people by the fulminations of this great monster of the 20th century.

The Jew is a blight upon mankind, Adolf Hitler cried. The Jew is the cause of all worldly ills; the hateful propaganda machine of the Third Reich pounded lie after lie into the disgruntled minds of the frustrated, and the innocent breaking down all foundations of that morality which Moses gave to the world as he stepped down from Mount Sinai many years ago.

How many of us Americans spilled our blood on the black earth of the Argonne, the white sands of Anzio and the thorned hedgerows of the French countryside so that this monster could be destroyed?

And even then we had come too late for the stench of the gas chamber and the oven had already putrified the air of Europe.

What a masterful lesson for civilization. How much blood was spilled to learn the bare rudiments of this momentous lesson?

Out of this chaos and destruction came the United Nations. A renewed morality, we thought, by the nations of the world who resolved with pious phrases that never again shall there come upon the face of this earth the scourge through which the world had just passed.

We here in America had honestly thought once and for all the conscience of the world had risen to that point where it would never again allow the slightest glimmer of an evil dictatorship to wreak havoc upon the world.

But as with most idealism, the deed falls far short of the word and today we find ourselves disillusioned by Communist imperialism, hypnotised into passiveness by fear; and yes, even political expediency. For lo and behold, a new embryo of evil has risen in the world—disregarding morality and decency as Hitler had done.

He too has come as a reformer, as a hope for his starving, illiterate and impoverished people. And he too begins his own degradation of humankind in the same manner as Hitler had done. He takes what is not his to take. He destroys without reason. Illogic and indecency are his watchwords.

And worst of all, he brings wrath upon our people with the same hatreds that our generation knows so well, bringing death, disaster and more and more destruction.

What does it take for the conscience of the world to be aroused? Nasser is persecuting innocent human beings. Nasser has made his ultimate goal clear—to push the democratic nation of Israel off the face of the earth.

We need to reflect upon the similarity of these two dictatorships because our faith is bound up in it, the fate of each one of us and our collective fate. The Soviet Communist penetration of Egypt and the other Arab Middle East States has already gone much too far for the welfare of the United States. This together with the Nazi remnants of the leadership of Adolf Hitler have created a grave warning for the free world. In fairness to the people of the United States, our allies in France, England, Israel, and the other democratic nations of the free world, we must realine our thought with the fundamental issue, that of communism plus nazism plus Nasserism versus democracy. When the problem confronting us now is overcome as surely as it will be and fairness, justice and equality banish the thought of sanctions against Israel, we who have fought in the wars which are now history—pray with you that the errors of yesterday will not be repeated again in the tomorrows ahead.

We all know the terrible outcome of World War II because of the attempt to do business with Hitler. I cannot predict the outcome of a prospective world war III should we appease and continue to do business with Nasser, but this I do know, that the ultimate result will be not only the elimination of world Jewry, but of all mankind.

I pray with you that all of the leaders of our country will guide us on the same moral course that has made and kept the United States free for 181 years.

The following telegram was sent to National Commander William Carmen on the eve of the Madison Square Garden rally, February 25, 1957, by the national commander of the American Legion, Dan Daniels:

"Speaking as national commander of the American Legion, I share the serious concern of many of our Government's responsible leaders and our fellow citizens that the United States will support a resolution calling for sanctions against Israel for failing to withdraw forces from the Gulf of Aqaba and the Gaza strip despite the absence of adequate guaranties for the safety of her citizens, for the security of her territory and economy. In the opinion of the American Legion, the United States would be guilty of a serious error in judgment if it supports sanctions against Israel. By supporting such sanctions, we would be indicating ourselves as participants in the creation of a dual standard of operation for the United Nations. Certainly this would have validity in the light of our failure to demand similar United Nations sanctions against Russia, India, and Egypt for their refusal to abide by equally important U. N. resolutions. Disciplinary measures were not applied against Egypt for denying Suez Canal to Israeli ships, against the Soviet Union for ignoring a resolution calling for an end to Soviet atrocities in Hungary, or against India for rejecting United Nations participation in Kashmir dispute.

"Israel cannot be considered a common aggressor when all except the Communist nations of the world acknowledge her right to protect her citizens against injury and death from continued raids nor should she be punished for attempting to insure the solvency of her economy and integrity of her territory against outright aggression or economic attacks resulting from the nationalization and blockage of the Suez Canal. Instead of supporting sanctions against Israel, United States should use its influence to secure the United Nations actions that will guarantee against restrictions, Israeli commerce in the Gulf of Aqaba, the Suez Canal, and conditions of stability in the Gaza area. When the United Nations has demonstrated its determination and ability to enforce such essential guaranties then our Government can audibly demand that Israel comply with U. N. requests to withdraw her forces from these areas. In the opinion of the American Legion unless and until these conditions are created we of the United States and U. N. can't approve of sanctions against Israel without establishing a dual standard of morality that must lead inevitably to the destruction of the U. N. and to the deterioration of our country's position as the recognized leader of the free world."

A Cool Man for a Hot Spot

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Oregon Journal, of Portland, on the appointment of Arne J. Soumela as Commissioner of the Fish and Wildlife Service:

A COOL MAN FOR A HOT SPOT

Soon after Douglas McKay entered the Eisenhower Cabinet, he sent back to Oregon for a friendly, pipe-smoking outdoor personality who was always cool and alert in the hottest fishing controversy over dams, irrigation, and fishing regulations. This pipe smoker is Arnie J. Suomela, then Oregon Director of Fisheries. McKay made him Assistant Director of the Fish and Wildlife Service and now President Eisenhower has nominated our congenial Arnie for Commissioner of the newly reorganized Fish and Wildlife Service.

America's fish and wildlife conservation problems are becoming more acute. It was reason for the President to turn to a leader who has had a great deal of experience, technological and administrative, in our own Northwest and Alaska, where fish and game are under heavy attack.

Behind Suomela is a life close to fish and game. He was reared among the commercial and sports fishermen of Ilwaco, Wash., near the mouth of the once fish-rich Columbia. From his father's gillnet boat he left for the University of Washington, where he was trained in biology. His work in the fishing fronts has been long, varied, and intense. He studied depletion of salmon in Alaska, Puget Sound, and the Columbia system. Because he served both the Federal Government and the States of Washington and Oregon at different times in fisheries research, he obtained valuable experience in how these different agencies can work together for the public good—and for the fish and wildlife.

We feel confident that the Senate will have no occasion to put out barbed hooks in taking up confirmation of Suomela's appointment. He should get the Senate's blessing in one filling of his companionable pipe.

Georgia Revises History

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. DIGGS. Mr. Speaker, as a follow-up to the article entitled "Dangerous Attacks on the Supreme Court," which I today submitted for inclusion in the RECORD, I also offer the following editorial comment from the New York Times on the Georgia State Senate's resolution that Congress declare the 14th and 15th amendments to the United States Constitution null and void. Whereas in the first instance the attack was upon the authority of the United States Supreme Court, in this it is upon the United States Congress. To destroy the 14th and 15th amendments, the Georgia Legislature has termed the 39th, 40th, and 41st Congresses "as nothing more than private assemblages unlawfully attempting to exercise the legislative power of the United States." The American people could not ask for a clearer picture of warning of how bigotry seeks to destroy the basic system of democratic government by striking first at one branch and then at another branch of government until only a form of tyranny remains as a substitute.

The article follows:

GEORGIA REVISES HISTORY

No doubt the Georgia State Senate accepts the fact that it was General Lee, not Gen-

eral Grant, who surrendered at Appomattox. What the Georgia lawmakers do question, in a resolution passed on Friday, is the authority of the 39th, 40th, and 41st Congresses. These bodies, we are now asked to believe, were "nothing more than private assemblages unlawfully attempting to exercise the legislative power of the United States."

The new Georgian school of historians has, therefore, asked Congress to declare the 14th and 15th amendments to the United States Constitution null and void. Frankly, we hope Congress will not do this. The 14th amendment amplified the Bill of Rights by forbidding the States to "abridge the privileges or immunities of the citizens of the United States," and so on. Without this amendment the segregation decision of the Supreme Court of May 17, 1954, would not stand. The 15th amendment stipulates that neither the United States nor any State shall deny any citizen the right to vote "on account of race, color, or previous condition of servitude."

To those who are attached to such rights as these amendments guarantee, repeal would be extremely inconvenient. Repeal might be confusing to some of those technical "persons" known as corporations, for these, too, get some protection out of the 14th amendment. On the other hand, for any majority of any other race, creed, or color wishing to injure and exploit a minority of any race, creed, or color, both amendments are annoying obstacles.

We suspect that the late Robert E. Lee, revered commander of the Army of Northern Virginia, would be the last man to have any patience with the Georgia State Senate at this moment. He knew what happened and why it happened. Now, 92 years after Appomattox, the Georgia legislators seem to have forgotten what Lee knew. Perhaps they should go back to school for a week or so—a segregated school, if that is the way they feel about it.

United States Policy Toward Eastern Europe: A Lost Opportunity

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. REUSS. Mr. Speaker, the 11th General Assembly of the United Nations will shortly pass into history. Before it does so I believe it would be appropriate to present for the record the exchange of correspondence described below.

On February 7, 1957, 19 Members of this House wrote to President Eisenhower to urge that the United States seek a United Nations investigation into Soviet intervention in the 10 captive states of central and eastern Europe. We believed that such an investigation, coming immediately after the Soviet Union's brutal action in Hungary, would be one positive step this country could take to focus world attention on the threat to world peace produced by continued Soviet oppression of the people of these states. Our letter followed a meeting with representatives of the Assembly of Captive European Nations, an organization of democratic leaders in exile from Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania. The letter reads as follows:

FEBRUARY 7, 1957.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Under article 35 of the United Nations Charter, the United States is empowered to bring to the attention of the General Assembly any situation likely to endanger the maintenance of international peace and security. Such a situation, we believe, exists today because of the interference by the Soviet Union with the right to self-determination of the peoples of Albania, Bulgaria, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania. The Soviet Union's intervention and oppression in these areas, in violation of article 2, chapter 4 of the Charter (prohibiting threats or use of force against the territorial integrity or political independence of any state) and of article 1 (listing as purposes of the U. N. the developing of friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples) has brought about the possibility of revolts which could well lead to world war.

For these reasons, we urge that the United States, at the current 11th session of the General Assembly, initiate or support an effort to include on the Assembly's agenda an inquiry into the situation in these captive states, and its threat to world peace. The fact that the Assembly on December 14, 1956, voted to include on its agenda the alleged United States intervention in the domestic affairs of these states makes it doubly important, in our opinion, that the Soviet intervention and its dangers be formally inquired into.

Respectfully,

CHARLES A. BOYLE, JOHN D. DINGELL, EUGENE J. MCCARTHY, PETER W. RODINO, STEWART L. UDALL, THOMAS LUDLOW ASHLEY, HUGH J. ADDONIZIO, JAMES ROOSEVELT, CHARLES A. VANIK, B. F. SISK, FRANK M. COFFIN, HARLAN HAGEN, HENRY S. REUSS, FRANK THOMPSON, JR., GEORGE M. RHODES, EDITH GREEN, BARRATT O'HARA, GEORGE S. MCGOVERN, TORBERT H. MACDONALD.

On February 11 the White House replied, over the signature of Bryce N. Harlow, Administrative Assistant to the President. Mr. Harlow promised careful consideration. His letter read:

THE WHITE HOUSE,
Washington, February 11, 1957.

The Honorable HENRY S. REUSS,
House of Representatives,
Washington, D. C.

DEAR MR. REUSS: The President has asked me to express to you and to the cosigners of your February 7 letter his appreciation of your taking the time and interest to give him your views in respect to the position of the United States delegation to the United Nations on the situation in the captive states of Eastern Europe. The President asked that you be advised—and this same advice is being transmitted to the cosigners of your letter—that your views on this important matter will have most careful consideration, and that he understands fully and shares your deep concern over the well-being and freedom of these captive peoples.

With every good wish,

Sincerely,

BRYCE N. HARLOW,
Administrative Assistant to the President.

The United Nations General Assembly is now drawing to a close and it is a matter of deep regret to me that the United States did not take the action which we recommended. Our lost opportunity has been well described in a statement issued by the Assembly of Captive European Nations on March 1. I present it below, together with the covering letter with which it was transmitted to me:

ASSEMBLY OF CAPTIVE EUROPEAN NATIONS,
New York, N. Y., March 4, 1957.

The Honorable HENRY S. REUSS,
United States House of Representatives,
Washington, D. C.

DEAR SIR: It was most thoughtful on your part to send me copies of the letter which you and your colleagues sent to the President of the United States on February 7, 1957.

The letter was made available to members of our General Committee and I was asked to express to you the gratitude of our organization for having so forcefully urged that the United States, at the current 11th session of the General Assembly, initiate or support an effort to include on the Assembly's agenda an inquiry into the situation in the captive states and its threat to world peace.

To our great disappointment the efforts aiming at bringing up the issue of our captive nations in the U. N. have once again been fruitless. Not even the excellent opportunity which the Soviets have offered to the free nations when they came forward with a complaint against "United States interference" in the internal affairs of the East-Central European States has been taken advantage of to set in motion an inquiry on Soviet intervention.

In enclosing a statement we have issued on March 1, 1957, concerning the record of the 11th General Assembly on matters of direct concern to us, let me stress that despite the many setbacks we encounter we shall keep on urging the free nations to listen to the plea which you have so generously espoused in your letter to the President.

With many thanks and best wishes, I am,

Sincerely yours,

VILIS MASENS,
Chairman.

ACEN GREATLY DISAPPOINTED AT TWO U. N. FAILURES

The Assembly of Captive European Nations, speaking for the silenced peoples of Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania, expressed its disappointment in the General Assembly of the United Nations' failure to take collective measures against the U. S. S. R. for its aggression against Hungary and for its reluctance to turn tables on the Soviet Union when it accused the United States of intervention in the internal affairs of the East-Central European Nations.

The ACEN statement read:

"Now that the 11th session of the United Nations General Assembly is drawing to a close, the Assembly of Captive European Nations is bound to express its disappointment in two failures of the world organization.

"First, the General Assembly has failed even to consider collective measures against the Soviet Union for its criminal actions in Hungary.

"Ever since November 4, 1956, our Assembly has been urging that sanctions, under articles 6, 41 and 42, of the Charter be applied against the Soviet Union. Such an action would have represented the punishment of a violator of the United Nations Charter and constituted an attempt to compel him to heed the 9 U. N. resolutions condemning him and asking him to withdraw his armed forces from Hungary.

"Instead of an enforcement action the General Assembly has seen fit to appoint, on

January 10, a special committee to investigate the facts of Soviet intervention in Hungary, which were in the main well substantiated. While welcoming any step designed to establish an authoritative and detailed record of events in Hungary, ACEN warned at that time against any attempt to use such investigation as a substitute for effective action or an excuse to further defer long overdue enforcement action. These misgivings were confirmed: since January 10, United Nations action on Hungary was confined to the factfinding efforts of the special committee.

"In sharp contrast to the reluctance shown by United Nations member nations to initiate collective measures in the case of Hungary, sanctions have been considered against a United Nations member state for partial noncompliance with the resolutions of the General Assembly. In the view of ACEN this is a clearcut case of double standard and self-contradiction which, in the case of a body designed to serve as a repository of the trust of the peoples of the world, assumes huge proportions and harbors gravest dangers. On the one hand, all important international action is shifted to the United Nations. On the other—a great power is given by this precedent a free hand to embark on any imperialist venture, being assured in advance that the limit of the United Nations' action will be verbal condemnation.

"Equally grave and difficult to understand is the failure of the West to take advantage of the Soviet complaint against the alleged United States interference in the internal affairs of the East-Central European nations and to turn the tables against the real interventionist—the Soviet Union.

"It is true that the debates have once again brought to the fore the undeniable fact that the misery, unrest, and bloodshed in the captive countries have but one source: The occupation of these countries by force and the continuous Soviet interference in their national affairs. It is no less true that these debates have occasioned a welcome restatement of United States support for the aspirations of the captive European nations to freedom and independence.

"Still, the enslaved peoples feel entitled to expect more than reassuring statements in rebuttal of false Soviet charges. They feel that a full-scale examination by the United Nations, of Soviet intervention in their affairs and its dangerous consequences has long been overdue. For only such examination would lead to a formal finding and hence to remedial action.

"ACEN maintains that the situation created in East Central Europe by Soviet aggression and intervention represents a continuous threat to peace and security within the meaning of article 39 of the Charter. Not only has it led to revolutionary explosions but, if not righted, it would make such explosions a permanent feature of that region. Therefore, being at the root of the present world tension, this situation must engage the attention of the United Nations if the world organization is to live up to its purpose.

"It has been said that the Soviet Union continues holding the captive countries in bondage because of an exaggerated concern for security. Such an interpretation is misleading in that it fails to stress the basically aggressive and expansionist nature of the Soviet State whose security will remain endangered as long as there exists a single non-Communist nation in the world.

"By the same token the Assembly cannot agree with the notion that a full-scale examination by the U. N. of Soviet aggression and intervention would increase the international tension and sharpen the cold war. On the contrary, turning the back on issues of global importance or pretending that they do not exist has always been conducive to wars. Only by going to the root of the existing trouble in the world and by boldly attacking the issues confronting it can the United Nations avoid the fate of its predecessor, the League of Nations."

What Is Aggression

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. DINGELL. Mr. Speaker, the following excellent article by S. L. A. Marshall, which appeared in the Detroit News of March 3, 1957, is most timely and should be read by all:

OF ARMS AND MEN: WHAT IS AGGRESSION?

(By S. L. A. Marshall)

Well, up till the turn of the century the question was relatively easy to answer. War was much simpler then than now; for example, it was distinguished from peace by a clearly defined line. Such terms as sitting war, cold war, undeclared war, hot war, and total war had not yet been born. They are all inventions of our day, along with the interminable armistice and the violence-ridden truce.

But there are a few fundamentals. Aggression, by its clearest definition, is an unprovoked act of violence, whether its victim is a nation or a man. The rule says that any man has an inalienable right to shake his fist, which right ends when his fist contacts the other fellow's nose.

Yes; that makes everything easy—simply follow the rule. It makes aggressors of Genghis Khan, Attila the Hun, and Hannibal. These rough characters didn't have to invade Europe; they had enough country of their own. Clean cases could also be made against Alexander, Charles XII, Napoleon, Hitler, and that doughty warrior, Hernan Cortez, who hexed the Aztecs into oblivion.

Now how about Abe Lincoln? He didn't have to make war on the South, which asked only to withdraw in peace. There is the answer that he was provoked, if not by the act of secession, then by a few weak guns at Sumter. Intrinsically, it was little enough sound and fury to justify a conflict costing more lives than any war in United States history.

But that was not how Lincoln saw it. He deemed the provocation sufficient to justify unlimited action. Today, no one says he was wrong, though when he started, most of his countrymen doubted he was right. Had his war become lost, history might have written a wholly different verdict on the morality of his decision.

TODAY'S ATTITUDE

Even so, things were simpler then. Today, at the United Nations, statesmen act as if they truly believe that when forces formally advance across another nation's frontier, with the intention of knocking down its defenses, that ipso facto is aggression, while practically any other power action is not.

In trying to penalize Israel for invading Sinai, the U. N. does not come out openly and say that this is its new rule for judging aggression, and that hereafter it will be applied. In fact, until now, U. N. has scrupulously refrained from charging Israel with aggression, while at the same time acting toward Israel as if it had been judged and found guilty.

There is a good reason for this ambiguity. U. N. is on the wrong side of custom and of law. There was no peace between Israel and Egypt at the time when the alleged offense was committed, for the specific reason that Egypt insisted on maintaining a state of belligerency.

U. N. had arranged various truces and armistices, which neither party respected greatly, and which Egypt used mainly to stage warlike incursions against Israel. The U. N. did not choose to regard these forays as an ultimate provocation of Israel, though in ratio, if the United States had experienced the same hurts from its neighbors, 150,000 of its citizens would have been killed or wounded. We would not likely have brooked it.

U. N. is not so constituted that it could have returned any such judgment. In any case, it would have been unwise, since it would have encouraged full-scale war. There is the other objection that no institution such as U. N. may finally acknowledge the magnitude of its own failure without losing all dignity.

So U. N. and its agent, Dag Hammarskjold, had to come right down to the wire pretending that the last armistice was working, though neither Egypt nor Israel so believed. Then when at last it became shattered beyond further doubt, U. N. still could not legally find that the act of full and formal invasion was an aggression.

There had been no peace. Egypt had insisted on staying at war with Israel. It had confirmed its attitude by repeated provocative and destructive acts. The indoctrination of its army was pointed toward full-scale operations against Israel at the first opportunity.

Lacking a legal case, U. N. therefore sought to plow new ground. Unable to return a verdict of guilty, it still sought to apply punishment. And the odd part of it is that its strangely mixed mind motive seems hardly to be questioned anywhere.

The New York Times says editorially: "Of course, Israel must be put back in its place." Walter Lippmann writes: "Israel is a lawbreaker. Why "of course"? and what law did Israel break?

SETTING THE PRECEDENT

The questions ask for answer now, for we will certainly need to know in time, unless the millennial dawn is at hand and we have banished war for all time.

War has not been outlawed by nations. Men still hold that nations, like people, have a moral right to shoot and kill in a just cause, for example, to save themselves from extinction. Israel, which got a legitimate start in life with U. N. doing the midwifery, is uniquely the one state in our day threatened with annihilation.

As proof of its intent, Egypt openly engaged in acts of war against Israel, such as blockading the Strait of Tiran. U. N. hardly more than yawned. So it can't be war per se, any more than deliberately fomented violence which constitutes the unforgivable offense in U. N. and United States eyes.

Is then the new rule for intervention, which U. N. seeks to enforce as a principle, that if a nation formally engages in war, after what it considers due provocation, it must be denied any remedy, any spoils, any possibility of corrective action? To accept that idea must say, in effect, that it is a respectable act to fight and die in self-defense but unpardonable to disarm one's assailant. Absurd, of course, but not more absurd than to call Israel a lawbreaker.

We come finally to one still more ridiculous and destructive proposition. If the waging of clandestine war, through guerrilla gangs and organized murder in the dark, is not due provocation, but a national march in the open toward a battlefield is outlawry, we have given the green light to communism and anarchy and democracy had best run for cover.

Uncalled-for Remarks of State CIO President

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. LAIRD. Mr. Speaker, we have heard a great deal in the last week about some of the uncalled for and scurrilous activities of several individual labor bosses.

Just last week Mr. Charles Schultz, president of the Wisconsin State Industrial Union Council addressed a meeting in the Seventh Congressional District of Wisconsin. Mr. Schultz on many occasions has assumed that he speaks for the individual laboring man in Wisconsin. This assumption has proved wrong on other occasions, and I am sure his statement in the Seventh Congressional District, which I have the honor to represent, does not reflect the thinking of the rank-and-file union member.

Mr. Schultz said:

If Eisenhower is for it, I am against it. However, all is not lost. He can only last one more term. He had a slight cough the other day, and I was hoping.

During the past few days I have heard from individual union members who have assured me that the State president of the CIO was not speaking for them in his wish that misfortune would overtake our President.

Mr. Speaker, under unanimous consent, I include in the Appendix of today's RECORD an editorial from the Stevens Point Daily Journal, Stevens Point, Wis., under date of February 27, 1957, entitled "Uncalled-for Remarks Made by Speaker Here":

UNCALLED-FOR REMARKS MADE BY SPEAKER HERE

Speakers at the Wisconsin Farmers Union convention held in Stevens Point the past weekend were critical of the national administration. Some of the views of the membership were expressed in resolutions that were adopted. One of them called for the replacement of Secretary of Agriculture Ezra Taft Benson. Charles Brannan, Secretary of Agriculture under President Truman and now the organization's general counsel, was a featured speaker and presented his formula for solving the farm problem.

The free expression of speech, critical or otherwise, is among the privileges of our form of government, and up to this point the convention was little different than many others where issues on controversial matters are on the agenda.

But it remained for Charles Schultz, Milwaukee, president of the Wisconsin State Industrial Union Council, to hit below the belt in a Sunday talk marked by immoderate language. During an attack on the Republican administration Mr. Schultz turned his ire on President Eisenhower in a personal way, declaring: "If Eisenhower is for it, I'm against it. However, all is not lost. He can only last one more term. He had a slight cough the other day, and I was hoping."

Hoping for what, Mr. Schultz? Laughter followed the last remark, but there was nothing humorous about it. It is one thing to discuss the health of the President, as he himself has done, with frankness. It is quite something else to hope publicly that he won't last much longer.

What general reaction the remarks occasioned among the delegates is not recorded. But some of them are known to have taken offense, and rightly so. It should be unnecessary to say here that Mr. Eisenhower, as the Chief Executive of our Nation, should have the respect that is due this high office, and that differences of opinion over policies of the administration offer no excuse for such a personal attack as was launched here.

Mr. Schultz has done a disservice to the Farmers Union and his own labor organization by his uncalled-for and repugnant remarks. Furthermore, he insulted the intelligence of his audience by saying what he did.

Indochina: Another Place Where Reds Are Losing

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MACDONALD. Mr. Speaker, from 1946 to 1955 the United States has spent $266 billion for defense and an additional $42 billion for foreign aid to some 42 nations scattered throughout the world. The chief reason advanced for our country spending this enormous amount of money is to prevent the spread of communism. Sometimes this aid has proved to be a wise policy and sometimes its wisdom is, at best, questioned.

Many Americans are today asking the question: What do we have to show for this exorbitant expenditure of their tax dollars?

I am sure that most people in this country agree that if it were not for communism, there would be no defense problem. There would likewise be no reason for SEATO or NATO which takes so many of our tax dollars. Without communism we would have a reduction of the Federal debt and perhaps a balanced budget. However, we have the problem of communism to face, for during the last 10 years communism has captured a third of the world and effectively challenged the other two-thirds. For the safety of the United States, communism must be contained. In many places, I am sure, we have not received a dollar's worth of value for every dollar expended.

Therefore, it is a great pleasure, Mr. Speaker, to point out the fact that there is one place at least in this troubled world where our economic and military aid has played, and is playing an important part in helping destroy communism, and that is in South Vietnam. South Vietnam, after a shaky start, is now making rapid progress under an anti-Communist president, Ngo Dinh Diem. Ho Chi Minh's Reds in North Vietnam are in deep trouble—harried by hard times and revolts.

During the fall of 1955 I visited southeast Asia as chairman of the Subcommittee To Investigate Trade With Red China and saw the effects of communism firsthand. While in Saigon I talked with Ngo Dinh Diem, South Vietnam's president, and came away with the impression that he was a dynamic leader who was sincerely trying to build a South Vietnam that would be free and peace loving. He was very appreciative of the help the United States was giving. He felt that American aid would eventually enable them to develop their full strength and preserve their freedom in the face of Communist threats, so that they could become independent allies of the United States. This single purpose policy of President Diem is paying off, aided by such stalwart anti-Communists as Rev. Nguyan Ba Loc, Catholic priest, who led large groups of refugees from the Communist North to the freedom of the South Vietnam provinces. It is a pleasure to report that the Vietnamese themselves are taking over their resettlement program on their own. Their recovery under our enlightened policy has reached such a state that South Vietnamese have this year produced the first exportable rice surplus since 1945.

Mr. Speaker, in order that my colleagues may have a clear picture of what is taking place in Indochina at the present time, I would like to direct their attention further to the following article which appeared in the March 1, 1957, issue of the U. S. News & World Report entitled "Indochina: Another Place Where Reds Are Losing."

INDOCHINA: ANOTHER PLACE WHERE REDS ARE LOSING

Asian "neutralists" and western cynics alike are just now beginning to accept the fact that United States supported South Vietnam is proving to be more than a match for its deadly rival, the Communist government in North Vietnam.

Two and a half years ago, after the Indochina truse divided the country, many of the top people in this part of the world were ready to write off South Vietnam as a plum ripe for Communist picking. Now it is generally realized that, in terms of international prestige, domestic stability, and the loyalty of the people, the Government headed by Ngo Dinh Diem, in the south, is drawing ahead of the northern regime under veteran Communist Ho Chi Minh.

Only in military power do the Reds still have a big advantage.

The most striking thing about South Vietnam today is its confidence. You see it in the army, training for war while uprooting the Communist underground. It is evident in public officials who have abandoned their carefully tailored suits and now work with the people in the countryside, eating simple food and wearing simple native clothing.

LEADER WITH A BELIEF

Most of all you see it in President Diem. He has turned out to be a leader who is dynamic, hardheaded and, in some ways, ruthless, a leader who firmly believes that communism in Asia can be whipped.

Two years ago, most Asian leaders considered Diem a "last gasp" leader who would stay in power only until the Reds, at their leisure, took over all of Vietnam.

What changed the attitude of Asian leaders was Diem's presentation of his own case. The President often told visitors his objective was to build a South Vietnam that was independent, Asian, free, peace-loving, and progressive. Fellow Asians questioned him closely about United States aid and the dangers of control from Washington. President Diem frankly admitted to them that

South Vietnam could not survive without help, but he said he would not turn his back on friends—such as the United States—who had helped his country to stay free.

ASSIST FROM REDS

The ruthlessness of the Communists in the north has, unintentionally, thrown weight behind Diem's drive for recognition and support elsewhere in Asia.

This Red ruthlessness took several forms. The membership of Ho Chi Minh's party was cut in half by a purge that was vast and abrupt. Communists not of peasant or working-class stock were kicked out of the party, regardless of past service with the Red Viet Minh armies. There has been an intensive drive against students and intellectuals who heartily supported the Reds against the French. A bloody campaign to enforce land reform liquidated landlords as a class. Morale dropped and open criticism of the Government was heard. Then came the climax—revolts against the Communist regime.

Refugees who have come across the mountains and through the jungles to freedom in South Vietnam testify to the widespread dislike, even hatred, that the people of the north have for the Communist Party and its policies. None of the refugees, however, predicts a major uprising. The North Vietnamese Army of 300,000 and the police are loyal to Ho's Red regime and have the power to crush any revolt before it really gets under way.

KEY TO SUCCESS

All the Communist mistakes up north would have little effect on the south were it not for Diem's positive policies, creating stability and confidence in his Government. Search for the key to his success and you find it in civil action, a political technique straight out of the Communist book.

This was what Diem faced: During the war against the French the Communist Viet Minh established village governments which went underground when attacked, then returned after the fighting was over. When the war ended, the Viet Minh withdrew its armed forces from the south. But the Reds left cadres behind and told the people they would soon return in force.

The South Vietnamese Army moved through the countryside, established security, reopened communications and assured the people the Communists would not return. Then civil-action teams went to work. Each team had nurses, teachers, and engineers. Food and money were provided for depressed villages. Seed, fertilizer, and cloth followed.

Diem established a self-help principle. If a village built a road, the Government supplied timber for bridges. The teams tried to create a feeling of national consciousness, and to prove that the Government was Vietnamese, not French.

REASONS FOR PRIDE

Despite critics who assert the Saigon Government has used Communist methods to fight communism, President Diem, now in his third year at the helm, can see many reasons to be proud of his record. French troops are no longer on Vietnamese soil, and French administrators, now called advisers, are being weeded out of the Government. The 150,000-man Army is developing faster than anyone had expected.

In South Vietnam, food reaches the cities without interference from local warlords or religious sects that formerly controlled rural areas. A Vietnamese can travel freely and safely, even at night. Living standards are inching upward as security increases. Schools are primitive, but more villages have them.

But many educated South Vietnamese, particularly young engineers, doctors, and professional men, are still hostile to Diem. For one thing, the country has an archaic, French-created bureaucracy that frowns on new ideas. And the Government is too poor to pay adequate salaries. The result is that young, energetic Vietnamese aren't attracted to Government work. Intellectuals also fear the President will end up as a dictator, if only because the problems he faces demand strong leadership.

Most of those problems are economic. United States military aid of $212 million during this fiscal year covers more than 70 percent of the Army's operating costs. Other United States help runs to $121 million a year. Without American aid, Diem's government probably would collapse.

Nearly everyone you talk with says that, 2 years ago, the Communists would have won any election in a unified Vietnam. In free voting today, it is highly doubtful that the Reds would win, even though Ho Chi Minh is still widely regarded as more patriot than Communist. If Red armies invaded South Vietnam now, they might possibly receive lip service from the majority of the people, but nothing more.

Diem's success recently prompted the Russians to denounce him in terms much like those Moscow used just before North Korea invaded South Korea in June 1950.

DANGER NOT OVER

Communist denunciation, or even the menace of invasion from the north, is not likely to shake the confident and realistic Diem. For U. S. News & World Report, the President of South Vietnam summed up this way what he faces in divided Vietnam:

"We are still in a state of cease-fire, not a peace. The danger is not yet over. If we have corruption and bribery, the Communists will win. If we are lax or lazy, the Communists will win. But we are making more progress than they are in the north. If we continue to improve and show that we are superior, then the internal contradictions and the unpopularity of the Communist will cause them to crack up.

"Then Vietnam will be unified, and it won't be under the Communists."

How Miss Lucy Upset Alabama University

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. DIGGS. Mr. Speaker, Life magazine has published a report of the after effects upon the faculty of the University of Alabama of the infamous rioting and undemocratic actions which attended the efforts of Miss Autherine Lucy, to study there on a background of academic qualification. The events which transpired at this university 1 year ago last month were both a violation of democratic principles and a defiance of the law of this land which has decreed that denial of the opportunity to seek an education at a public school of choosing on the basis of race denies a constitutional privilege belonging to all American citizens.

The subtopic of the Life article is "Shocked and Shamed by Campus Violence, Liberal Professors Go Elsewhere To Teach." At least 21 faculty members have resigned from the University of Alabama because of the violence and because of the basically un-American position taken by school board trustees.

Mr. Speaker, I know that the vast majority of Americans believe in their country and all that it stands for and they are shocked and shamed by the desecration of democratic principles in the Miss Lucy events and in other occurrences in the South today. History repeats itself by showing this Nation that bigots would always have the people believe that the majority of all other people share their views, no matter how violative of decent instincts, intellectual reasoning, and moral principles and that they act on behalf of the majority. Men know that democracy is a daily need as vital as bread to accomplish their way of life. I call attention to the words of Dr. William Lampard, a University of Alabama professor, born and bred in Mississippi:

I was absolutely in favor of integrating the University of Alabama and I could not see any reason why Miss Lucy should be treated differently from any other student. What happened to her made me ashamed, deeply ashamed, to be a southern white man, even a liberated southern white man.

This story is a poignant reminder that men have stood by like sheep, shocked and ashamed but inactive, while the enemies of democracy chipped away the freedoms belonging to all men. Surely, Americans have profited from this lesson by the sacrifice of their own sons.

The article from Life magazine follows:

HOW MISS LUCY UPSET ALABAMA UNIVERSITY—SHOCKED AND SHAMED BY CAMPUS VIOLENCE, LIBERAL PROFESSORS GO ELSEWHERE TO TEACH

A year ago in February the University of Alabama's campus in Tuscaloosa became the scene of wild rioting. The disturbances, which began when the school admitted its first Negro student, Miss Autherine Lucy, boiled on for three frenzied days and nights. During this tragic time, Miss Lucy's life was threatened, crosses were ignited on campus, college officials seeking to quell the violence were jeered and in some cases bombarded with eggs, stones, and mud. Law enforcement broke down. In the end, the school surrendered to the mob, suspending and finally expelling the riot victim. Later, almost as an afterthought, it also banished mob leader Leonard Wilson.

Peace has returned to the campus but even now, a year later, repercussions from the Lucy case are still being felt. What happened to this Negro girl has sorely troubled the consciences of many people at the University of Alabama, has even changed the course of some lives.

During the past year, 21 or more teachers have resigned from the faculty, some of them as a direct result of the Autherine Lucy case.

Associate professor of economics Harry Shaffer was one of the first to announce his intention to go. Now teaching at the University of Kansas, Shaffer says that the principles of democracy in which he believes were "so badly violated at the University of Alabama that I did not feel I could remain, in spite of my sincere love and devotion to this State, this community, and to my colleagues."

Wisconsin-born Prof. Robert T. Daland, who taught at Alabama University for 7 years prior to the Lucy clash, told Ebony that his decision to resign "was the result of a number of factors * * * However, I resigned at the time I did primarily because of what I considered to be the basically un-American position taken by the trustees * * * together with a spineless attitude on the part of the majority of the faculty members. I

have no doubt that the exodus of professors interested in decency will continue through the next several years."

VIOLENCE LED TO FOUNDING OF HUMAN RELATIONS FORUM

Little publicity has been given to the fact that even during the height of the Autherine Lucy clash there were teachers and students at the university who worked arduously to restore law and order to the campus and have Miss Lucy readmitted after her first temporary expulsion.

"A petition was circulated," says Harry Shaffer, "to request the readmittance of Miss Lucy, prior to any court order. There were only two-hundred-and-some signatures on it w'en we presented it to President Carmichael, but there were many more people who were in favor of it. They simply did not dare to sign."

In April, 2 months after Miss Lucy was expelled from the University of Alabama, about 40 students and teachers founded a human-relations forum on the campus. Made up of liberals and conservatives, it was formed "to study and discuss problems in human relations as they may affect the university community and seek * * * means for improving human relations." The group pledged also to work toward easing tensions produced by political and social changes in the life of the school and town.

Professor Shaffer says there were radicals, among whom he was included, who wanted the forum to declare that it would attempt to bring about peaceful integration on the campus. The motion was voted down. A proposal was then made that the forum say that it "believed in upholding the Constitution of the United States." This, too, failed to carry.

Weak though the final statement of purpose was, the work of the human relations forum was encouraging. "There were meetings and discussions, plans, programs," Shaffer recalls. "It was particularly elating to me to see so many southerners in our group, open and fair-minded individuals who had the strength of character to evaluate others on the basis of their worth and not on the basis of their color."

Al Horn, one of the outstanding graduating seniors in the school of law in 1956, was a typical example of this type of southerner. Although he was born and reared in Alabama, although his father and brother were member of the White Citizens Council, Al was one of the instigators of the petition to bring Miss Lucy back to campus. He was elected first temporary chairman of the human relations forum.

After one of the forum's meetings, Shaffer asked this student how he had become such a stanch integrationist when his entire family was on the other side of the fence.

"I was in the Navy," Al told him, "and there I learned what I had never had a chance to learn before—namely, that Negroes are human beings, just as you and I. I wished everybody in the South could have the opportunity to get to know Negroes as I did. All this foolish prejudice would then disappear. Education is what we need down here," he concluded, "education."

There are a few students and teachers, not all of them as outspoken as Al, yet equally sincere, who still remain at the university. "People like these," said one departed professor, "have more courage than we who left. It is easy to run away from a situation, difficult, indeed, to stay and fight to change it. In these people of courage lies the hope for a more democratic South."

MISSISSIPPIAN TOOK PAY CUT IN ORDER TO LEAVE ALABAMA UNIVERSITY

The majority of the teachers who left the University of Alabama because of the treatment accorded Miss Lucy were from northern or "border" States. But at least one, Dr. William Lampard, was from the deep South. He was born and bred in Mississippi.

"I was absolutely in favor of integrating the University of Alabama," Dr. Lampard told Ebony, "and I could not see any reason why Miss Lucy should be treated differently from any other student. What happened to her made me ashamed, deeply ashamed, to be a southern white man, even a liberated southern white man. Once before, I moved away from the South in disgust. A year before the Lucy case broke I went back, believing that the South had come to its senses. I was wrong. The Lucy affair showed me how wrong."

In going to the University of Vermont, Dr. Lampard took a $1,200 salary cut. He feels, though, that he took the right step. "I did not want my children to grow up in that type of environment," he said. "Personally, had I remained in the South, I would have preferred to put up with all the problems of integration that might have arisen than have them live in a segregated and prejudiced society." He does not consider himself "noble," though, for moving away. "I admire," he says, "those people who can stay there and fight for what is right and just. In my case, I was not willing to put my wife and children through the ordeal that would follow if I said, and did, all of the things I knew should be said and done. The liberals who stayed are the heroes."

Francis J. Sinnott: His Life and Character

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. KEOGH. Mr. Speaker, to have known Francis J. Sinnott, late county clerk of the county of Kings was to have known a distinguished, dedicated public servant and American. He was, until his death, my friend and adviser and throughout my public life I was most fortunate to have had his sound, courageous, and foresighted counsel and the benefit of his broad, objective and constructive criticism and thinking. He was a good man, truly great and unselfishly dedicated to American politics—and one who proud to be of politics—added distinguished luster to the word "politician." For he was always of, with, and for the people. It is worthy, therefore, that his life and character, compiled with the assistance of his devoted friends and deputy, Stephen C. Sanzillo, be spread for those interested in the cause of good government to read and study.

Francis Joseph Sinnott was born on July 3, 1891, at 118 Arlington Avenue, Brooklyn, N. Y., where he resided all of his life, the 3d of 5 sons of James Peter and Frances Carroll Sinnott.

In 1897 he entered St. Malachy's Parochial School, in East New York, where his father had attended before him and his four children after him. Upon graduation in 1905 he went to St. John's High School and in 1909 entered New York University where he graduated with a degree in civil engineering.

Upon completion of his education in 1913 he joined the firm of Frederick L. Cranford as an engineer. On May 19, 1917 he joined the Army in World War I. He went to Plattsburgh Training Camp for Officers with the 15th Regiment and was commissioned as second lieutenant of Engineers. He was transferred to Fort Belvoir, Va., for advanced training and went overseas with the 302d Engineers of the 77th Division. He participated in the Baccarat, Vesle River, Aisne-Marne, and Oise-Aisne offensives. It was in the Aisne River on September 5, 1918 that he was severely wounded in the left leg which awarded him the Order of the Purple Heart. He was hospitalized in Paris and was there when the armistice was signed. He returned to the United States and was discharged on May 20, 1919 at Camp Upton, Long Island as a captain, Company A, 302d Engineers, 77th Division. His discharge carries the following notation: "A most capable, efficient, and fearless officer."

While in France on August 25, 1918, he visited the grave of Lt. Quentin Roosevelt, son of President Theodore Roosevelt, who had been shot down in aerial combat on July 14, 1918, near Chaucery. At that time, Lieutenant Sinnott had a suitable white headstone made by Pvt. Leland Easton, a stonecutter in his company, which was placed on young Roosevelt's grave. Five photographs of this event, suitably framed, with historical data will be presented to the Roosevelt collection at Sagamore Hill, Oyster Bay, Long Island, by his widow, Mrs. Marguerite B. Sinnott.

Upon returning from the war, Mr. Sinnott became secretary in the office of the transit construction commissioner from 1919 to 1921. This was the predecessor to the board of transportation and the start of young Sinnott's long and honorable public service career. In 1921 he became engineering adviser for the special transit committee, board of estimate and apportionment, corporation counsel's office. During his tenure of office he was in charge of the investigation of the famous Malbone Street railway disaster. Here he supervised the investigation and resulting report which was cited as a most complete and comprehensive report with outstanding constructive suggestions for the future safety of the railway system in New York City.

In 1924 he became the first secretary of the board of transportation in which post he served until 1933. While with the board he took an active and practical part in every new subway project then in progress. It was his habit to leave the safety of the office, don his boots, and enter the subway pits with the men to supervise the construction, shoring, and dynamiting phases of the subway. Many of the safety factors that went into the independent railway system of New York were the brain children of Mr. Sinnott. Here he also, as in his war years, gained a reputation far and wide for his humane manner in handling men whether they were laborers or engineers. His anxiety for their well-being and safety brought to him a devotion that is still talked about by the oldtimers in the new transit authority.

In 1933 he was appointed postmaster of Brooklyn by President Franklin D.

Roosevelt, where he served until December 31, 1939. Here he revamped many of the old systems and brought into the Brooklyn Post Office a new relationship between the postmaster and the men and women in the service. Here again his personal attention to the individual employee brought to him the cooperation which resulted in a great uplifting of the morale of the office and better service to the public.

On January 1, 1940, he was appointed county clerk of Kings County, N. Y., by the unanimous vote of the members of the appellate division of the second department of New York. He was the first county clerk to be appointed; the office having been an elective one. In this office he continued to demonstrate his amazing ability to administrate, and brought many systems in the office up to date which resulted in monetary savings and better services. He also brought into being the now famous historical division of the county clerk's office which material had laid dormant for over 100 years industry files and corners. At the behest of Mr. Sinnott, Mr. James A. Kelly, deputy county clerk, was appointed Brooklyn Borough historian which position he still retains besides his duties as deputy country clerk. Thousands of documents and books were cleaned, bound, and indexed, and today Kings County truly boasts the finest collection of borough history to be found in the United States.

On March 17, 1949, at the request of Mr. Sinnott, Gov. Thomas E. Dewey signed a bill authorizing a county seal for Kings County. This seal, depicting the 6 original townships of Brooklyn with the colors of Holland, is the only descriptive county seal of the 62 counties in New York State and was originated by Mr. Sinnott and Mr. Kelly.

During his term of office he also interested himself in the early township history of Brooklyn and caused to have printed 6 detailed historical books, 1 on each township, which were made available to many educational institutions in Brooklyn. Together with Mr. Kelly, he also proved beyond doubt that Sir Winston Churchill's mother, Jennie Jerome, was born in Brooklyn and was successful in bringing the Prime Minister to the ancestral home on Henry Street.

As county clerk he was also in charge of calling, qualifying, and empaneling jurors in the county. Here too he brought the system up to date and received the highest commendations from members of the bar and bench for the high type administration he introduced for the benefit of the service and for better relations with the public.

At the time of his death on September 16, 1956, he was deeply engrossed in the plans for his office in the new building which he watched each day rise across the street from his office. He left behind a complete detailed layout of where all equipment, furniture and material were to be placed in the new building. His great engineering mind functioned to the last for that which was always highest on his list—service to the public.

Frank, as he was known to his friends, was born to politics. His father, who came to East New York from Collinsville, Conn., as a young boy with his widowed mother, entered into the doings of the village at an early age. He won local fame as a baseball player and good sport in all that he partook. In his youth he met John Maguire and together they battled the entrenched Adams-Sutter dynasty in East New York Democratic circles. After many bitter defeats, Maguire succeeded in unseating Adams and became the Democratic leader. On April 29, 1901, Maguire, a young attorney of note and uncle of the now president of the board of elections, James M. Power, turned over the leadership to his trusted aid James P. Sinnott. The elder Sinnott stayed in the leadership until his death on September 10, 1928. During this time he welded one of the strongest political machines ever seen in New York City district politics. In 1917 he was successful in convincing Tammany leader Charles F. Murphy to recommend John F. Hylan for mayor. From then on the Sinnott political star was in its ascendency and continued that rise when young Francis J. Sinnott took over the leadership of the 22d Assembly District Democratic Organization in October of 1928. He also held the leadership until his death 28 years later and forged an even stronger organization than his father had left to him. His fame as an honest and civic-minded leader spread far and wide and on July 28, 1950, he was elected Kings County leader of the Democratic Party. He stepped down from this post on December 29, 1952. During his term of leadership he recommended the nomination of and elected to Congress three outstanding Members of the House of Representatives: David O'Connell, Stephen A. Rudd, and Eugene J. Keogh. The latter has served the district for the past 20 years. He was succeeded in his leadership by his assemblyman, Anthony J. Travia.

On December 9, 1922, he married Marguerite Babcock, of Richmond Hill, Queens. Of this marriage came four children, Edith, Gloria, Francis, and James. Edith is now Mrs. Paul Cullen, residing in East Williston, Long Island, with 6 children; Miss Gloria Sinnott was, until recently resigned, secretary to Federal Judge Leo Rayfiel, of Brooklyn; Francis Sinnott, a graduate of Kings Point Merchant Marine Academy is an official in the Alcoa Co., and is married to Florence Fagan. They live in Mineola with their 2 sons, Michael and Jeffrey. James Sinnott is studying for the priesthood at Maryknoll, N. Y.

Of his four brothers, Desmond, residing in Nashville, Tenn., is a retired naval captain and, Paul, who resides in New Rochelle, conducts his own insurance firm in Manhattan. Two other brothers, Carroll, formerly of the National Transportation System, and John, son-in-law of the late Mayor John F. Hylan, died a few years ago.

Mr. Sinnott was a member of the Kings County Democratic executive committee; Democratic State committee; Elmer E. Bennett, Jr., Post, No. 725, American Legion, Cypress Hills National Cemetery Pilgrimage Committee, American Legion; 302d Engineers Post, Agonist Benevolent Association; Cypress Hills Board of Trade, and took an intensively active part in the Red Cross and Boy Scout drives of the country.

I shall pass through this world but once;
Any good that I can do, any kindness that I can show to any human being:
Let me do it now, let me not defer it or neglect it,
For I shall not pass this way again.

That was Francis Joseph Sinnott.

Comments on the Report of the Select Committee on Small Business

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. REECE of Tennessee. Mr. Speaker, my colleague, the distinguished Representative from Colorado [Mr. HILL], addressed the House on January 17 with reference to the work of the Select Committee on Small Business during the 84th Congress. The gentleman from Colorado spoke on behalf of the Republican members of the committee.

He said:

In the 84th Congress, we are convinced, the Select Committee on Small Business did not fulfill the purpose for which it was created. The objections which the minority has had to the committee's operation and procedures have been called to the attention of the House by the minority on several occasions. The minority is frank to say that if the committee's business is to be conducted in the same manner during the 85th Congress the committee has outlived its usefulness.

He suggested that if this select committee is to serve any useful public purpose the majority and minority members must work together in complete cooperation and in good faith. The gentleman from Colorado said:

The absence of free and frank intercourse, which was the case during the 84th Congress, has defeated the very purpose for which the House established the committee. Actually, as I stated on May 2, 1956, the methods of operation which were in vogue during the 84th Congress made the minority sometimes doubt whether or not we were actually members of the committee. The minority does not propose to submit to another 2 years of discourteous treatment or to political exigencies which only serve to create prejudice through the subordination of facts. The minority does not propose to sit idly by and view the spectacle of the committee or its staff depriving the minority of its rights as members of the committee and publishing numerous documents and other media which have not been properly presented or passed upon by all members of the committee, and especially by the minority members of the committee.

The report of the Select Committee on Small Business for the 84th Congress has now been published. Mr. William Ullman, the Washington correspondent of the publication Automotive News, in their issue of February 18, made certain observations with respect to this report.

His comments lend great weight to the statements made by the gentleman from Colorado.

Under unanimous consent, I request that Mr. Ullman's article may be included as an extension of my remarks so that all of my colleagues may be aware of the impression this report has created among responsible Washington observers.

We must stop playing politics and step up to a very serious national problem, namely, the assistance of small business without the destruction of big business:

There's a prophetic statement in the latest report of the House Small Business Committee. "The [Republican] minority is convinced," it says, "that if this final report is published in its present form, it will reflect little or no credit on the committee, its members, or the House of Representatives."

The report was published the other day, all 191 pages of it, and it looks as if the minority prediction was correct.

Counting the tables in the appendix, this free-wheeling attack on big business runs some 111,000 words, the equivalent of 2 good detective novels.

The minority portion of this heavy work covers only nine pages; the majority report, which seems to have been composed by the committee chairman, takes up the bulk of the book. The chairman of course, is Representative WRIGHT PATMAN, Texas Democrat.

No one can deny that the report takes up a subject which is both serious and important. It is concerned with the needless destruction of small business through sheer abuse of big business power.

But PATMAN has attacked his subject in the same way that Carrie Nation attacked Demon Rum with her hatchet. He has run through the world of business and Government swinging his ax, hoping that enough wild swings will chop down a few sinners.

The Republicans who disagree with PATMAN's methods do not claim that some corporations never have abused their great power. They admit, in addition, that small-business men face tough problems today.

But they point out that few will agree with the report that small business is subject to a giant conspiracy conducted by the heads of the country's largest corporations and by highly placed officials of the Federal Government in this or any other administration.

LIGHTS OUT ON MAIN STREET?

PATMAN doesn't claim the existence of such a conspiracy in so many words. He just hints at it. He bobs and weaves like the old professional he is. When he's short on facts, he quotes letters from citizens. Here's part of a typical one:

"You know the situation is bad in your home town. Salesmen are all talking about the empty store buildings on Main Street. The street is dark. Unless one is content to work for a chain or corporation or the Government, there is no incentive to risk anyone's capital in the face of such discouraging odds as we now face."

PATMAN identifies the letter as coming from a small-business constituent of one of his colleagues. He fails to stat the man's business or the size of his town or the economic conditions in his area. He simply throws the letter into the record for what it is worth, hoping the casual reader will accept it as evidence that the lights on Main Street are going out all over America.

When he gets to the Small Business Administration, PATMAN really hits his stride. He complains that SBA is making smaller loans than ever. While the average loan in 1954 was $53,000, he reports, it had dropped to $39,000 by mid-1956. From this, PATMAN concludes that "Government credit assistance to small business (has) declined drastically."

BANK LOANS AND SBA

The figures could more logically be interpreted to mean that SBA is making more loans to really small firms, but PATMAN refuses to entertain this possibility.

To back up his charges that SBA isn't doing anything for the little guy, he switches back to quoting somebody else. An official of the Pittsburgh Small Manufacturers' Council, he said, complained as follows:

"If you can get a loan from the SBA, you can certainly get it from a bank. You can't get an SBA loan unless you sign away your property and your wife's property."

SBA, of course, is not in competition with private banks. It doesn't even accept a loan application until a businessmen's local banks have turned him down.

But there's another point here. SBA, like private banks, demands adequate collateral. By quoting the Pittsburgh executive, PATMAN leaves the impression that he believes collateral requirements to be unfair. But he doesn't say so, and you can bet that he never will. The day that a Government agency starts handing out unsecured loans totaling millions of dollars, taxpayers will really have reason to complain to their Congressmen.

UNFORTUNATE COMPARISON

Finally, PATMAN criticizes SBA for failing to lend as much money as its predecessor agency, the Reconstruction Finance Corporation. Anyone who recalls the scandals and investigations connected with some of the RFC loans will wonder at PATMAN's making such a comparison.

It is hard to decide whether PATMAN really wants to take constructive steps to help small business or whether he simply wants to make as many people angry as he can.

The majority report of his committee is of practically no value in helping the administration and private business groups to understand the genuine problems of smaller firms. It is so wordy, so full of half-truths and insinuations, so crammed with emotional broadsides, that it is nearly impossible to separate the facts from the bunk.

As the minority forecast, it reflects no credit on the committee or the House.

If needed small-business legislation is approved this session, it is going to have to be preceded by careful factfinding and a clear statement of small-business problems. The unemotional findings of the President's Cabinet Committee on Small Business are a good starting point for both parties.

Twelfth Anniversary of Rumanian Enslavement by Communist Forces

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. ZABLOCKI. Mr. Speaker, today marks the 12th anniversary of the date on which the Rumanian Nation was enslaved by the Communist forces of the Soviet Union.

This anniversary should bring to our minds the tragic plight of the nations which are still suffering under the chains of Communist bondage.

I would like to take this occasion to express my hope that full freedom and independence will soon be restored to those countries which, like Rumania, are still dominated by Soviet Communists.

A New Dairy Program

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. LAIRD. Mr. Speaker, last Wednesday, before the House of Representatives, I outlined the need for a new program for the benefit of America's dairy farmers. Under unanimous consent, I include in today's RECORD a copy of an editorial appearing in the Hoard's Dairyman magazine entitled "What Are the Prospects for a Better Dairy Program?"

It is my hope that Members of Congress and dairy farmers will find time to consider the proposals which I made last Wednesday and also this editorial.

I invite the comments and frank appraisal of all interested individuals.

WHAT ARE THE PROSPECTS FOR A BETTER DAIRY PROGRAM?

For the first time in print, the much-discussed proposed dairy stabilization program is outlined, beginning on page 169. Obviously, many questions will be raised in addition to those included in the article. Many will involve the prospects for the adoption of the program.

Four years ago the National Milk Producers' Federation advanced its self-help program. Experience in Congress indicated that some modifications were needed before it would be considered favorably. To serve that end, Hoard's Dairyman suggested a two-price proposal as an amended self-help bill.

During the past 3 years there has been a growing realization that both proposals needed additional work and refinement. About a year ago the National Grange moved to establish a policy committee on dairying. It was the function of this group to review the entire dairy economic picture, possible solutions, and make a recommendation for a peacetime dairy program that was not a warmed-over wartime program which had failed to meet the peacetime need of dairy farmers.

To serve on this committee, Herschel Newsom, master of the National Grange, invited a working group representing many interests and areas. Yet the group was small enough to make steady progress. In addition to four State grange masters, Newsom invited the president of the largest dairy-farmer organization in the New York milkshed, the president of the major dairy-farmer organization in the Chicago market, and a representative of the State milk-control markets of the Southeast.

In addition, Newsom invited officers of the National Milk Producers Federation and the editor of Hoard's Dairyman because of their interest in and sponsorship of dairy proposals in the past. These men served only in an ex officio capacity, however.

The committee's chairman was a manufacturing milk producer from Minnesota.

WHAT COMMITTEE SAW

When the committee met for the first time last summer, here is what it saw:

1. After 4 years under the present price-support program, supply and demand were not in balance. The Government was still buying about 5 billion pounds of milk a year, trying to support the price.

2. The Government loss the previous year was $449 million.

3. Dairy farmers' hourly income had been reduced about 50 percent in 5 years.

4. Under the present program price supports could drop another 30 cents per hun-

dred, to 75 percent of parity, beginning April 1.

5. Reliable Government and industry forecasts were that supply and demand would not be in balance, under the present support program, for another 9 years, or 1965.

This information, plus much more, was ample reason for the committee to buckle down in a series of long sessions to develop a sound peacetime program. Their conclusions to date are recorded on page 169.

It should be emphasized that these are the findings of these men as individuals. On the basis of their long experience in the dairy industry, they came to an agreement on the proposal. They could not and did not imply by their actions that their organizations would approve the proposal. Such endorsements can come now only from their memberships, either through annual meetings or by action of boards of directors.

CONSTRUCTIVE SUGGESTIONS REQUESTED

When the committee first met, Mr. Newsom emphasized repeatedly that the findings of the committee were not to be considered a proprietary property of the National Grange. If that happened, the prospects for approval by Congress would be dim because of the ever-present existence of farm and dairy organizational competition that exists on the national scene. The program was to stand on its merits alone. All groups were to be in a position to contribute their thinking to the proposal and then support it as a dairy stabilization bill.

This first report on the program now goes to farm and dairy organizations for review and suggestions for improvement. Particular attention will be given to the personal opinions and reactions of dairy farmers.

Members of Congress will be consulted to obtain their counsel on the proposal.

Armed with this information, the committee will complete its work.

MAY DEPEND ON SECRETARY'S ACTION

Now what are the prospects for its passage and subsequent approval by dairymen?

In our opinion, it depends heavily on the action of the Secretary of Agriculture prior to April 1. If he decides that there is an adequate supply and drops supports to 75 percent of parity, or 30 cents per hundredweight, the proposal would almost certainly be approved quickly by Congress and dairy farmers.

If, however, the Secretary continues to support manufacturing milk prices at $3.25, the acceptance of the new program will depend directly on organized support, shown by dairy farmer groups.

Incidentally, if the Secretary drops price supports 30 cents, it will affect all farmers, not just those selling manufacturing milk. This is true because the base price on almost all fluid milk is the manufacturing price. To this is added a premium for grade A production.

In our reporting of the new program we made some assumptions for purposes of illustration. Since they may be questioned, we would like to comment on them.

It will be noted that we allowed for a possible decrease in sales as a result of an increase in the retail price. Using the commonly accepted demand-price ratios, we estimated an initial loss of 4 billion pounds. Incidentally, any such estimated loss would be taken only the first year when the retail price was raised. Many experienced dairy observers claim that no such loss will be incurred. If not, then the market-surplus ratio could be 97 to 3.

EVERYONE PARTICIPATES

In some quarters it has been suggested that small producers should be exempt from the market-surplus ratio. To do so would wreck the program, in our opinion. No matter how large or how small the producer, he benefits under the program.

Some may question the reference in the article to converting surplus to export sales. The State Department is on record favoring a properly drawn two-price proposal over the present price support program. And we think they should feel this way. Whether administrative or foreign policy in future years will give dairymen this opportunity only time will reveal.

What about the markets for new producers and those farmers who want to increase their herd size? Was the committee unrealistic in its recommendations?

You will note that, under the program, the new producer and the enlarging producer will still be better off than they are under the present program. Will this defeat the purpose of the program?

Only experience can provide an answer. Men on the committee felt, however, that farmers quitting dairying and the continuing consolidation of farms would offset the possible production increases from new or enlarging producers.

Certainly the dairy farmers elected to the Dairy Stabilization Board will watch this part of the program closely during the first few months of its operation.

HISTORY OF DISSENSION

A key question on the future of the proposal hinges on the attitude of the Secretary of Agriculture and the White House.

It is known that the Secretary is personally favorably inclined toward this type of program. He was seriously disillusioned 4 years ago, however, and he has not forgotten the experience. At that time, he appointed a Dairy Task Committee to do exactly what the Dairy Policy Committee has done. But 4 years ago the Secretary's committee failed to agree on anything in the way of a new dairy program.

If farmers and processors do not squabble among themselves or with each other on this proposal, we are confident that administration endorsement may be received. In other words, if farm, dairy, and processor groups take a constructive rather than a negative attitude, the Dairy Policy Committee can reconcile many differences before the proposal reaches bill form. Then strong, near-unanimous support may be shown Congress.

The Foxes and the Chickens

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. MULTER. Mr. Speaker, as the intent of Congress is to guard "consumer interest," I am sure all of our colleagues will be interested in the following editorial which appeared in the New Republic of March 4, 1957:

THE FOXES AND THE CHICKENS

We have ached for months to devote a whole column to the Federal regulatory commissions. These are the seemingly dull, faceless agencies that protect the consumer. They are the anonymous fourth branch of Government which regulates your life and mine in ways past imagining—the kind of radio program you get, the kind of protection you get on the stock market, the degree of monopoly permitted to the men who sell you goods.

As Voltaire did not say, "I care not who makes the law so long as I pick the regulatory commission that enforces it." The type of man selected is likely to have more to do with the result than any legislation Congress passes.

There is a sullen feeling now in the business community that Eisenhower is too radical, that he has gone over to the New Deal. It shows how naive American business really is. These commissions in Washington have been carefully, steadily, and methodically stacked against the consumer interest and for the business interest since Eisenhower took office. The result sets the tone of Washington as much as any other one thing. We doubt if Eisenhower knows how far the process has gone. His subordinates pick the men, he names them, the conservative coalition in Congress confirms them, and that is that.

There are 8 main regulatory commissions with 50 members and a dozen minor cases. Regarding the Big Eight the Congressional Quarterly made an interesting discovery a year ago. The tradition of reappointing commissioners whose terms expire, it announced, had been broken. Not one single commissioner first named by a prior administration had Eisenhower reappointed. At that time he had filled 27 of the 50 posts. In the Big Eight we can find only one reappointment—Chairman William Martin of the Federal Reserve Board, leading exponent of the tight-money policy.

At his press conference January 30, Eisenhower said he knew nothing about the forthcoming vacancy on the three-man TVA. Commissioner Curtis' term expires May 18. "You have given me my first intimation of it," the innocent President said. Yet on a desk in the White House is a dossier an inch thick of possible replacements to this crucial post. Eisenhower named Gen. Herbert Vogel to replace Gordon Clapp in 1954 after consumers' champion Clapp opposed the Dixon-Yates grab. But Vogel has been constantly out-voted by colleagues Curtis and Paty. Now he will boss the show after May 18 if and when Curtis leaves. The whole direction of future TVA policy hinges on it.

Almost certainly the President does not bother about these things. That was Harry Cain's experience when he tried to take his fight from the Subversive Activities Control Board to the White House. He never got past Sherman Adams until he made a national outcry and then, of course, was dropped.

Take another pending vacancy. Thomas Murray's term on the Atomic Energy Commission expires June 30. He is the sole Truman dissenter left. The AEC has been dragged into politics, involved in the Dixon-Yates case, and made the exponent of private industry control of atomic energy by Admiral Strauss, the Chairman. You will see Murray's head roll soon.

EISENHOWER'S GENIUS

It would take too long to list all the cases—but the fact is, Eisenhower has shown a genius for naming men to regulatory commissions whose antecedents indicated their hostility to the goals professed. The steady process of purging liberals and the consumer-minded has never stopped. Some appointments are shocking.

Albert Cole as a Kansas Congressman was an arch foe of public housing; he was made administrator of the housing agency.

Ex-Congressman Joseph Talbot was a Taft Republican who voted again the Reciprocal Trade Agreements Act; he was put on the Tariff Commission.

For 20 years Edward Howrey was a leading lobbyist before the Federal Trade Commission for clients accused of antitrust violations. He was made chairman of the FTC. (He has since resigned; his work, as he said, "completed.")

And so on. Chairman Jerome Kuykendall of the Federal Power Commission was originally a lawyer for gas utilities in rate cases; ex-Chairman Guy Farmer, of the Labor Re-

lations Board, previously was an adviser of management; Chairman George McConnaughey, of the FCC (whose authority includes long-distance telephone rates), was a Bell System lawyer.

Your eye will not pick out a single distinguished advocate of the consumers' interest on the list of Eisenhower commission appointees. Roosevelt at one time or another had William O. Douglas, Ferdinand Pecora, Joseph Kennedy, Jerome Frank, James Landis, Sumner Pike, and Leon Henderson on the crucial Securities and Exchange Commission. Who is there now? Senator Lehman protested in 1955 that Eisenhower had replaced all five sitting members of the SEC with men representing the industry they were supposed to regulate.

BIPARTISAN BOARDS

Some of these commissions are required by law to be bipartisan. Eisenhower has taken to picking Eisenhower Democrats to meet this condition. The Republican National Committee admittedly cleared Harold Patterson, picked to fill a Democratic vacancy on the SEC. Again, Miami corporation lawyer Louis Hector, a registered Democrat who voted for Eisenhower in 1952 and 1956, last month went on the Civil Aeronautics Board. (He replaced Joseph Adams, an outstanding liberal, who made a spectacular fight for consumers.)

These individual appointments are too inconspicuous for the public to sense their meaning. Now and then one creates something of a stir—like the failure to reappoint Gordon Clapp, ex-Senator James Mead (FTC), Frieda Hennock (FCC) or the like—but only rarely. Yet nothing like this mass exodus and subsequent upheaval has occurred in a generation. Now Representative OREN HARRIS, Democrat of Arkansas, chairman of the House Commerce Committee, plans an investigation. We can tell him right now that it is here—here—that the foxes are being let in to guard the chickens.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Enemies Within the House of Labor

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD remarks made by James B. Carey, secretary-treasurer, AFL–CIO industrial union department and president of the International Union of Electrical, Radio, and Machine Workers, AFL–CIO.

Mr. Carey made the statements at the 20th convention of the Pennsylvania State CIO in the Sheraton Hotel, Philadelphia, on February 27, 1957.

The title of Mr. Carey's address is "Enemies Within the House of Labor." Mr. Carey was one of the militant leaders in the CIO in the driving out of the union Communists who sought to control the labor movement. In addition to his battle on Communist infiltration, he was ever alert in exposing undesirable characters who were trying to muscle in and gain control for personal gains.

I feel at this time that, with the many investigations being suggested and going on, the public should be aware that the great majority of the unions in the United States were engaged in keeping the house of labor clean.

Mr. Carey's remarks follow:

ENEMIES WITHIN THE HOUSE OF LABOR

This, the 20th and last regular convention of the Pennsylvania State CIO, is both a solemn and portentous occasion.

Presumably before the end of the year this mighty organization—one of the greatest State labor bodies in the history of the Nation—will have merged with its counterpart of the American Federation of Labor to create a new united Pennsylvania labor movement of unprecedented numbers, prestige, and power. Representing as it does nearly three-quarters of a million men and women, the Pennsylvania State CIO will bring to this united labor movement one of the most brilliant records in all trade unionism for militancy, solid economic achievement, legislative pioneering, and social and political progress.

I am profoundly proud of having had the opportunity of addressing both the first convention of the Pennsylvania State CIO and its last convention. And if, in this final convention, we are inclined a bit toward sentimentality that indulgence is not only justified but appropriate. We would be less than human, we would be unfeeling toward our own hectic history if we did not, during these 2 climactic days, glance backward over the long, long path we have walked and run during the past 2 decades. It would be surprising if we didn't look back even with a touch of nostalgia to the excitements and turbulences of our early years.

Those years have started to take on something of a rosy, romantic glow, haven't they? It's an astonishing thing but today, looking back over the receding years, it somehow doesn't seem so terrible that we had our heads clobbered by Pearl Berghoff goon squads or took beatings efficiently administered by Pinkerton thugs. The pain somehow seems to have disappeared from our recollections of broken arms and legs handed out by Baldwin-Felts professional strikebreakers. Today we look back on bloody noses given us by Railway Audit detectives or by Chowderhead Cohen almost as the equivalent of a merit badge or a distinguished service medal.

One reason, I believe, for the slightly romantic glow with which we are beginning to surround those early years is the fact that we won and our enemies were defeated. True, we lost battles—that is to say, we lost strikes and lost organizing campaigns—but we won the war. We are here today, but the once-powerful union-busting outfits and labor spy rackets have fallen into unmourned oblivion.

This 20th convention of the Pennsylvania State CIO demonstrates that labor in this State continues to grow larger and stronger.

Yes, the world has changed in the 20 years since the Pennsylvania CIO was born, but it's not enough to say merely that. The world has changed because we change the world. The upsurge of the American labor movement in the depths of the great depression became one of the greatest moral and ethical crusades in history, a crusade that responsible historians have termed "a second American revolution."

We of the CIO more than any other group changed the moral and ethical climate of our country. For the first time in American history we made employers moral and made the Government moral.

We made employers moral by compelling them to abandon their ancient dog-eat-dog economic philosophy and forcing them to accept the fact that labor is not a commodity but a grouping of individual human beings with the same rights, privileges and capacities as employers. We made employers moral by compelling them to understand that their responsibilities did not begin and end with profits, but that they had inescapable social and economic obligations to the workers who created their wealth, their leisure, and their luxuries.

We made the Government moral by helping elect an administration responsive to the needs of the people and by erasing forever the concept of government as an instrument in the service of big business and industry. We made the Government moral by insisting successfully, for the first time in history, that government has a responsibility to alleviate the mass unemployment, hunger, and homelessness created by the free enterprise system. We made government moral by establishing its obligation to bring humanity and decency to the cut-throat economic jungle cultivated by big business and industry. We made government moral by demonstrating that it had both the right and duty to intervene in the prescription of minimum wages, maximum hours, healthful working conditions, the prohibition of child labor, the right to bargain collectively, old-age security, and a host of other benefits and protections.

Pennsylvania was the birthplace of the CIO; therefore, it must be counted as the birthplace of the moral and ethical crusade that became the "second American revolution." Your organization, therefore, has special reason for pride. When the CIO held its first constitutional convention in Pittsburgh in November 1938, your Pennsylvania Industrial Union Council was its host. In addition, Pennsylvania achieved the first successful unionization of such industries as mining, electrical, radio and machine manufacturing, and steel.

If we are investing those early years of the CIO with something of a romantic aura we may also be starting to forget the enormity of the strides we made in those early days.

For example, just 3 days from today, next Saturday, is the 20th anniversary of the signing of the first contract between the United Steelworkers of America and the United States Steel Corp.

That first contract was a revolution in steel. Among other things, it jumped the pay rate for common laborers to 62½ cents an hour. The significance of this can be judged by the fact that during the previous 37 years, from 1900 to 1937, the rate for common laborers had increased only 15 cents, up to 47 cents an hour in 1937.

No wonder, therefore, that one of my sharpest recollections of that first Pennsylvania CIO convention 20 years ago is that we were people in a terrible hurry back in 1938. We were in a hurry to change the face of the American labor movement and in a hurry to change the world we were living in.

God knows the world we were living in did need changing, and changing in a hurry. One of the resolutions passed by that historic first convention pointed out that there were at that time 13 million American workers unemployed. The American economy in 1938 was only slowly dragging itself out of the most devastating and degrading depression in history; mass unemployment, homelessness, and hunger still stalked the richest land on earth.

It's a fascinating fact that today, 20 years later, most of the moral and ethical issues that occupied your first convention are still moral and ethical issues for American workers in 1957. To mention just a few of them:

Improved unemployment compensation, expanded social security, better minimum-wage legislation, a national housing program, an equitable Federal labor law, and effective civil-rights statutes.

There was, I recall, still another issue that provoked an angry resolution and even angrier discussion at your first convention 20 years ago, and that issue, interestingly enough, is just as worrisome for the Pennsylvania CIO today as it was back then—the issue of runaway shops and runaway plants.

I said these were moral and ethical issues, and indeed they are. They involve economic and social morality and such ethical concepts as justice, decent living standards, and human dignity. They are moral and ethical issues, moreover, because they affect not simply trade-union members but all the Nation's wage earners, the economic health of their communities, and the economic health of the Nation as a whole.

I want to suggest to you today that your forthcoming creation of a great, new, unified labor movement in Pennsylvania should be the occasion for a fresh evaluation of the moral and ethical responsibilities both of trade unionism and of business and industry.

Such a reappraisal is vital for two reasons:

First, the essential purposes of establishing a new, unified trade-union movement are moral and ethical insofar as we seek to create a more effective instrument in the service of human welfare and social good. Second, a reappraisal of business ethics and morality may disclose whether unionism and business share, to any degree, common ethical and moral objectives.

Turning first, therefore, to trade unionism, let me put the problem to you—as I see it—as frankly and as bluntly as I possibly can.

The American labor movement today is faced with a moral and ethical problem as crucially important as the problem that produced the CIO and the "second American revolution" in the mid-1930's.

Very possibly it is an even bigger problem, because this one has arisen not outside the labor movement but from within. This is a problem—a crisis, if you wish—that has emerged not from any external situation, not from defects in our economy, not from union-hating employers, not from antilabor legislation.

On the contrary, this problem, this crisis, has been generated almost entirely from within the labor movement. We cannot, justifiably, blame others. Whatever eventuates—for good or for evil—the labor movement must accept the responsibility.

The cancer of labor racketeering, of corrupt unionism, menaces not only the good name, the prestige and reputation of the labor movement today; it also threatens the very future of our development as a free labor movement.

By itself labor racketeering is immoral and unethical. But it may also have three other direct effects.

First, labor racketeering—no matter how limited—smears all labor with the foul taint of corruption.

Second, labor racketeering places incomparable propaganda weapons in the hands of union-hating employers to render organizing work either impossible or enormously more difficult.

Third, labor racketeering provides the excuse and justification for savagely repressive antilabor laws in Congress and State legislatures.

But here let us make one thing extremely clear. We do not and cannot confine our definition of union corruption to statutory crimes, to indictable offenses. Corruption is not demarcated by such felonies as bribery, extortion, theft of union funds, shakedowns of employers, financial alliances with the underworld of gambling and vice, or kickbacks from the investment of welfare and pension funds.

There is such a thing as venal corruption. There can be crimes in the labor movement that are not illegal but morally reprehensible.

Venal corruption, I think, can arise when union officials are men who view their organizations not as a sacred trust, not as a brotherhood, not as the preliminary realization of an ideal, but rather as a business enterprise, a cold-blooded commercial undertaking.

Venal corruption can arise when enormous gaps develop between the living standards of union members and the living standards of union labor leaders, when union officers start to own large business enterprises, apartment houses, stables of race horses.

Venal corruption can arise when union officials come—consciously or unconsciously—to think of the labor movement as a means to personal enrichment, huge bank accounts, swimming pools in their front yards, and artificial waterfalls in their living rooms.

Those who, either legally or illegally, use unionism solely as a means to personal enrichment deserve to be hounded out of the American labor movement as fast, as furiously, and as finally as we can find the means to do it.

Such men are not unionists, but antiunionists. They are not labor, but antilabor. They are more dangerous to the democratic labor movement than the worst of union-hating management. They are more poisonous than professional spies and strikebreakers. They are more destructive than the union-busting goon squads of two decades ago. They are more contaminating than any kind of decay that can afflict a labor union.

Because they betray us and our ideals from within the labor movement, they are doubly abominable and doubly dangerous. Because they exploit the sanctuary of union brotherhood to despoil the very name and idea of brotherhood, they bring a loathsome contagion into our midst.

We can fight reactionary employers, we can hold our own in combat with union-hating managements because we know pretty thoroughly where they stand. They don't pretend to be the opposite of what they are. They don't (at least not often these days) attempt to betray our organizations from within. Our fighting with management in recent years has become increasingly aboveboard. We know who our enemies are in the arena of economic conflict.

But we're not so sure today that we know who our enemies are within the labor movement. We know, however, that they are there, using the labor movement as a shield for their despicable practices. We know that trade unionism has been and is still being perverted into a protective cover for criminal activities.

The undeniable fact is that the house of labor has termites and, therefore, needs a fumigation.

There's no sense in trying to reassure ourselves with the fact that the number of termites is limited. And we risk self-deception by repeating to ourselves that only a very small percentage of unions and workers are involved in racketeering.

But the fact of the matter is that we do not know today how far the termites have eaten into the foundations, nor actually how extensive the infestation is.

Of one thing we are certain, however. One single national union that is corrupt is one too many. One single local union that is run by racketeers is one too many.

Corruption anywhere in trade unionism is morally indefensible. In only one other institution in contemporary society—our religious bodies—is there a greater obligation to moral purity than in the labor movement.

Business and industry are institutions erected frankly to the purpose of profit. They make little or no pretense of being either altruistic or humanitarian. Hence there is a minimum of hypocrisy when business and industry operate unethically or for immoral ends. The public has been conditioned to accept business immorality—and even business criminality—as an inevitable part of the dog-eat-dog world which business and the free enterprise system have created for themselves.

But there's no such immunity for organized labor, because labor professes to be an altruistic and humanitarian movement. More than that, we aspire to the highest moral and ethical ideals, and proclaim that our only motivations are brotherhood, ecoonmic justice, human dignity, and the national welfare.

Within such a spiritual framework as this, consequently, there can be no room for moral laxity or lapses from high principle.

More than any other organizations in our society, trade unions ought to be able to live inside out. They should be able to disclose themselves fully to public view, to scrutiny by friend and foe alike. More and more unions find it possible to do so. It is to be regretted that in other instances the complete disclosure of union finances and resources might very well become an open invitation to employers to risk a strike or undertake a decertification campaign.

Yes; it is true that only a very limited area of trade unionism—as far as we know—is affected by corruption, and only a small percentage of unions and workers are victimized by racketeering.

But that fact doesn't mean a thing to big business and industry. The truth is that every union represented in this convention is finding that new organizing has been made immeasurably tougher by the continuing disclosures of corruption and racketeering in the labor movement.

Organizing has become tougher because: (1) Unorganized workers have read the newspaper stories and concluded that because one union or two unions are corrupt all unions must be; or (2) employers are actively exploiting the corruption disclosures as antiunion propaganda.

Either way I'm afraid that for thousands upon thousands of unorganized workers the tremendous accomplishments of organized labor over many decades can be obliterated by a few screaming headlines dealing with isolated cases of labor racketeering.

We cannot know, for example, but we can easily guess what psychological balance was achieved by two different occurrences here in Philadelphia last week.

One was the dedication of a wonderful new $1,500,000 union health and medical center, the realization of a longtime dream of 28 Philadelphia unions. Here was a manifestation of union brotherhood, humanitarianism, and social conscience at its best.

The headlines were fair; however, it was a one-shot news story for the local press.

But in the same Philadelphia newspapers on that same day—and every day since, as far as I can ascertain—there has been another kind of headline and another kind of news story dealing with labor.

This running news story has recounted the sordid and sickening history of a flagrantly racket-controlled local union here in Philadelphia, a union run by criminals and ex-convicts for the sole purpose of defrauding workers out of tens of thousands of dollars while at the same time extorting additional thousands from their employers.

Here is one of the foulest stenches ever to afflict the city of Philadelphia where the American labor movement was born and where so much union history has been made.

Discussing as we are the question of union morality you will, I am sure, find particularly interesting the moral safeguards established by the constitution of this local union.

If it were not so tragic and vicious it could be comic. The ex-convicts, the goons who run this racket union, who offer kickbacks from members' dues to employers, who try to sign sweetheart and sellout contracts, who employ coercion and terror on employees and employers alike, these men who represent virtually everything that is hateful to honest unionism, these creeps had the brazen effrontery to write a local union constitution which declares in article I—and get this—"an applicant for membership must be of good moral character. * * *"

Which do you think has made the deeper and more permanent impression on the average, nonunion citizen of Philadelphia—the dedication of the wonderful new union health center or the disclosures of a rotten racket outfit masquerading as a labor union? Which will be remembered? Which will do most to shape and color public attitudes toward labor? I'm afraid we know only too well.

In the face of screaming outrages like this one are we to console ourselves with the recollection that, still and all, only a tiny

portion of labor is involved? In the face of similar abominations dredged up by congressional investigating committees, are we to take refuge in percentages and in pious hope that such conditions will remedy themselves?

No; of course we can't. The labor movement has already waited far too long to cut out these festering sores. We are paying a heavy penalty already for allowing them to continue, and we are likely to pay even heavier penalties in the future.

Probably every union represented in this convention, as I remarked earlier, has had organizing made tougher by these revelations of union corruption. Antiunion employers from coast to coast and from Canada to the Gulf of Mexico have jumped gleefully on these disclosures and now are using them as clubs with which to clobber union organizing campaigns.

Our IUE organizing campaigns, for example, have recently had to confront that type of propaganda weapon in the hands of huge corporations and small companies alike. The stories of union corruption are being hurled at us by officials of the billion-dollar General Electric and Westinghouse companies, among others.

To cite only one instance, the IUE is currently conducting an all-out campaign to organize a new General Electric plant in Hendersonville, N. C. GE, it is clear, would like to brainwash its employees into believing that union dues are entirely devoted to providing union leaders with luxuries and the means for riotous living. The GE employee newspaper in Hendersonville reported in a recent issue, for example, that a congressional committee discovered that one union leader had "used union funds to pay his personal bills; another official allegedly used money from the membership to finance his stable of race horses and pay for the upkeep of horse vans, and additional union money was used to buy and repair this same official's personal automobile."

And so it goes. GE hopes, of course, that some of the mud it flings will stick to the IUE, and that some workers will associate the charges of misused union funds with our international union.

Make no mistake, we're going to have more of this kind of vicious propaganda thrown at us. Management likes it; management believes it works. I'm afraid that maybe it does; so are other union officials I've talked to.

There, then, is part of the picture of how employers can use—and do use—a few instances of union corruption to smear the entire labor movement.

But that doesn't end it. Those few instances have also put potent antiunion weapons into the hands of reactionaries in Congress and in State legislatures. Yesterday as the Special Senate Committee on Racketeering in Labor and Management opened hearings in Washington we learned for the first time that the investigation is now scheduled to continue for a full year. Its chairman has been quoted as saying, even before the hearings opened, that legislation is necessary because "working people must be protected from a form of extortion, theft, and embezzlement."

In nearly a score of State legislatures new and more repressive antilabor laws are being prepared, more often than not at the instigation of industrial employers. And the excuse for these new laws will be, more than ever before, the disclosures of union corruption and racketeering.

The influential New York Times, for example, in an editorial on abuses in the administration of union welfare funds first demanded that Congress pass legislation to outlaw these abuses, then added, "and State Legislatures throughout the country should enact their own laws."

We can well imagine what kind of laws will be proposed in States that already have right-to-scab laws in operation, States that encourage local municipalities to enact statutes requiring union organizers to buy a license and pay daily fees for the right to organize.

Those are the penalties under which we're suffering today because we allowed a handful of racketeers and businessmen masquerading as unionists to continue their criminal careers inside the labor movement.

Let me emphasize right here that I have no intention nor desire to paint a picture that is entirely dark. On the contrary, there are dramatically bright aspects, features in which the labor movement can take pride.

We can, for example, ask ourselves: What other movement has set out voluntarily to eradicate the evil elements inside itself, even at the risk of weakening its organizational strength?

What other institution or major organization in American society has undertaken to police itself, to cleanse its own ranks of wrong-doing and wrong-doers?

Have you ever heard that the United States Chamber of Commerce or the National Association of Manufacturers expelled, suspended, or even denounced a member company found guilty of corruption or other crimes?

The extent to which trade unionism is determined to drive the termites from the house of labor was shown earlier this month when the AFL–CIO executive council, with only one dissenting vote, approved a set of codes of ethical practices. In this unprecedented action, the AFL–CIO in effect declared war on corruption and racketeering. At long last the entire American labor movement was provided the means with which to free itself from corruption and the perversion of union ideals.

I am personally proud that a week before this announcement, the IUE adopted its own code of ethical practices designed, as we declared, "to prohibit any conduct that would countenance racketeering, racism, corruption or undemocratic practices of any kind."

Our code of ethical practices sets new precedents as a comprehensive document, covering such areas of union operations as organizational work, administration of health-welfare-pension programs, the conduct of local union affairs including membership rights and elections, the management of local union funds, and enforcement.

Among other requirements, the IUE code calls for strict financial accounting and control of union funds. In general, it is intended "not only to promote the principles and practices of trade-union democracy but also to encourage the expansion and diversification of democracy within our union."

The IUE, therefore, is determined to erect every possible barricade against the invasion of unethical practices or corruption. I feel sure that the adoption of similar codes of ethical practices by other unions is inevitable.

Let me point out that both the AFL–CIO codes of ethical practices and the IUE code of ethical practices deal not only with illegal activities, but also with activities that are simply unethical. Both codes, therefore, seek not merely to penalize criminal actions but also to establish higher principles and standards of conduct for unions and union officials.

We have got to make these codes of ethical practices work. They must be made to function swiftly and vigorously against corruption and racketeering wherever they are proved to exist.

The codes can and should also be employed to eliminate the businessmen disguised as union leaders or, at the very least, convert them into unionists. The codes can and should have the effect of making union leadership more sensitive and more responsive to rank-and-file needs. They should help narrow whatever unreasonable gaps have grown up between the membership and leadership of unions.

The labor movement has delayed overlong the decisive action necessary to its renewal as a great moral and ethical crusade. The labor movement can make up for that lost time and for the indulgence of corruption in its ranks by hitting hard and fatally now at labor racketeering wherever it can be found.

We can redeem our mistakes and insure a healthy and accelerated growth for American trade unionism by not waiting for grand juries, State legislatures, or congressional committees to do our work for us.

We can justify the vast trust placed in us by millions of American workers and prove worthy of the heritage of sacrifice and dedication bequeathed to us by the men and women of labor who have preceded us only if we guide this greatest of all free labor movements to new high levels of morality and integrity.

In that lies both the hope and the need of the labor movement's future; the need of our Nation's future also.

Railroads—Their Future

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting and informative address made on February 27, 1957, by the Honorable Anthony Arpaia, a member of the Inerstate Commerce Commission, at the third Michigan railroad management seminar, sponsored by the Transportation Institute of the University of Michigan and the Michigan Railroads Association, with the cooperation of the Association of American Railroads, which address was made at Ann Arbor, Mich, entitled, "Railroads—Their Future."

The remarks made by Commissioner Arpaia are particularly interesting, i n view of his specialized knowledge and experience in the field of transportation, and particularly in connection with the future of the railroads of our country. His views are not only of interest to those who are in the transportation business, and particularly in the railraod part thereof, but to all persons—because transportation by rail or truck or otherwise is a matter of great importance to all of our people:

RAILROADS: THEIR FUTURE

The subject of this seminar is the future of American railroads. The recent rash of articles in our newspapers and leading periodicals which have taken a rather dim view of their prospects makes the selection of this topic timely. If the future of the major agency of transportation in this country is in doubt, then, by all means, it should be seriously discussed. At the outset, I can tell you that I share neither the prevalent pessimism nor the unscientific and loose reasoning behind it. For that reason, I am glad to have the opportunity to express my views.

Before getting into a discussion of the future, I should like first to discuss a few of

the misconceptions which seem to surround the entire subject of transportation. An understanding of the facts may stop the underrating of our railroads' potentialities and the over-estimation of their obstacles. Each of the points I shall make could be discussed at length, but since I am before an audience of experts, I shall touch upon them only briefly. I approach the matter out of a desire to be constructive—to help remove the underbrush of misunderstanding which seems to foster current misapprehensions. In my opinion, they are due to dark imaginings which grow out of the simple lack of full information. The misconceptions which I shall discuss, as others for which I do not have time, are always expressed in terms of sweeping extremes. For example:

Misconception No. 1 is that automobiles and trucks are the enemies of railroads.

To conclude that motor vehicles have hurt railroads would be to view vast social and economic changes superficially and without analysis. The fact is that the boundless industrial growth of this country has been in large measure due to the automobile. Without the automobile which gave the American people new freedom to locate, new desires, new demands, new employment, our total economy would not have developed to the extent it has.

With increased production and movement, has come a higher standard of living. And with a higher standard of living, there developed an increased demand for more goods, including such basic commodities as cement, steel, rubber, aluminum, copper, building materials, and every other product which goes not only into trucks and automobiles but into highways, bridges, powerplants, factories, schools, churches, libraries, homes, as well as all the things and services that people need and use in a society with an advanced economy.

Since our economic system is inseparable, the benefits which flow from progress touch every segment of it. Trucks and automobiles are not merely competitors of railroads; they have created a new economy in which railroads now operate. Today rails carry more freight than all forms of transportation did in 1939 and about twice as much as they themselves did in 1939. The present volume of freight which rails enjoy is directly attributable to the expansion of our economy in which motor vehicles have played a major part, directly and indirectly.

Misconception No. 2 is that all of the motor freight and passenger business is competitive with rails.

As I have just pointed out, without the existence of motor vehicles, much of this new traffic would not have been generated in the first place. Secondly, a sizable proportion of this traffic is not accessible or appropriate to rail service. What has happened is that the type of traffic which was originally handled by horse team and carriage has been greatly extended in area and location and increased in volume.

The use of statistics can be distracting. For that reason, I am trying to avoid them in this talk in which I am trying to establish perspective. However, it is noteworthy that, according to estimates by the Bureau of Public Roads, in 1955, 94.58 percent of the trips made by trucks were for distances of less than 100 miles. Now this does not mean that the volume of traffic handled by 94.58 percent of the trips is anywhere near that percentage. It does, however, indicate a use factor which is significant and reduces the commonly understood area of actual competition. It is because of increased dispersal of population and industry and the relatively short distances involved that the truck is performing this type of intercity traffic. Much of the transportation performed by motor carriers for longer distances is to newly developed areas where rail service does not exist at all. If the rails are not participating in greater measure in the long-haul traffic carried by motor trucks, it is partly their own choice as I shall point out later.

Misconception No. 3 is that if railroads could reduce their rates at will, they would get a substantial amount of this newly created competitive traffic.

The greatest proportion of the traffic not hauled by the rails is going to exempt and private carriage. The explanation and cure for this is too long a subject to discuss now. But looking only at the traffic handled by regulated motor carriers, the significant thing is that present rail rates are generally lower than motor rates. But let a recent magazine writer put it in his own words: "So today the railroads are producing more than 2½ times as many ton-miles as the truckers, but are getting $7 billion less for doing so." And this does not mean that truckers get all of the high-grade traffic. The manufactures and miscellaneous commodity classification still makes the largest contribution to rail revenue.

What this does indicate is that price is not the only attraction to shippers. Therefore, when shippers choose to use the service of trucks, they are influenced by other factors. Among them are: (a) Specialized or better service, and (b) less total overall costs to certain classes of shippers in spite of higher rates. Some of the obvious advantages for such shippers by motor include the ability to maintain lower inventories, which permit less capital investment and warehousing; fewer plant interruptions or slowdowns due to the failure to meet delivery schedules; less handling and fewer loss and damage claims.

Shippers are hard-headed businessmen, who measure not only the immediate cost of transportation but their overall costs. And, under present conditions, if they can't get the service they need from public carriers, rail, motor or water, the larger shippers are able to provide it for themselves. To sum up, reducing rates without improving service does not begin to solve any problem now facing transportation.

Misconception No. 4 is that the law and the Commission hold an umbrella over rates of modes of transportation which compete with the railroads to the detriment of the public.

This misconception requires some preliminary discussion. One of the major legislative recommendations of the Cabinet Committee Report on Transportation is that the present provisions of the Interstate Commerce Act be amended so that carriers could further reduce selected rates without restraint as long as they cover out-of-pocket costs. There has been much talk that the Commission did not favor this phase of the Cabinet Committee proposal because it would clip it of some of its powers. The position of the Commission with reference to this change is based on entirely different reasons than those motivating motor carriers, water carriers or railroads.

Carriers are primarily concerned with advocating what they think will benefit them. There is nothing reprehensible in that. It is natural that they should. The Commission's position, however, is governed by its concept of the overall public interest. To make this proposal for greater freedom in competitive ratemaking eupeptic, the generality is advanced that it would "benefit the public;" or, as Fortune magazine improvidently put it, that the present system "forces the Nation to pay billions more than it needs to for transportation." Let us test the validity of such notions.

We have been living in an inflationary period. No individual, no industry, is immune from inflation. The increased costs of labor, material and supplies affect us all, including carriers. However, labor costs constitute at least as large a proportionate item with trucks as with rails. If it were true that the present law is permitting expensive truck transportation to supplant rail transportation by holding an umbrella over truck rates, why do rails enhance the trucks' competitive advantage by raising the general level of existing rail rates? If, in fact, the level of rates were the only facet to this problem, the best ally the trucks have when costs go up are the rails. The rails ask for the increases first, the trucks are then secure in asking for theirs.

If such were, in fact, the real answer, the economics of inflation would succeed in doing for the railroads what they claim they are now prevented from doing—obtain even greater price advantage over high cost motor carriers. Furthermore, if the railroads were so anxious to "benefit the public" through reduced rates, and the subject were that simple, why do they oppose other railroads' efforts to reduce specific rates? The answer is, it just isn't that simple.

The question arises, whose rates would be reduced by this proposed ratemaking freedom? Disregarding whether they would be those of powerful shippers or little shippers, we must remember that the Interstate Commerce Act was originally passed to prevent special treatment for the select few. At any rate, since the rate reductions could not apply to all shippers, some shippers, some industries would have to bear the burden of keeping overall rail revenue at an adequate level.

Of even greater importance is the fact that drastic rate reductions to meet competition would necessarily produce rate disparities between competing shippers who have, and those who don't have, the service of other carriers. From the very beginning of public transportation, shippers' chief concern has been with rate relationships which would assure them access to competitive markets. This has been far more important to them and the national economy than the level of rates. Every shipper and traffic man knows that. And every time railroads protest another railroad's proposed reduction, even though compensatory, their principal argument is that, in order to maintain market relationships, the reduction will inevitably spread thereby unnecessarily dissipating needed rail revenue. It should be obvious that the proposed amendment would recreate conditions which existed in 1887 when the original act to regulate commerce was passed, besides setting in motion a deterioration of transportation services.

Any fairminded, disinterested person, and there are many rail people who acknowledge it, knows that the solution offered by the Cabinet Committee legislation is impractical and fraught with danger. Its effect on carriers and the public would be disastrous. The Commission is trying to meet responsibility to the public, to prevent it from getting slugged in this potential toe-to-toe donnybrook, which the writers of recent magazine articles and others would recklessly incite. Such an experiment would not only not benefit the public but in the long run would seriously undermine railroads and public transportation in general.

Misconception No. 5 is that rails are now shackled by administrative limitations on their ability to compete.

This one is variously stated: That "outmoded, archaic regulations established when rails were a monopoly," prevent dynamic competition; that the Commission by its administration of the law divides traffic among various forms of transportation on some fair-share theory; or again, that the dead hand of regulation stifles managerial discretion, and so on.

Now that is a rather severe indictment of the present system of transportation regulation. But what are the facts? I have said many times before that there is plenty of freedom to compete; that the ICC does not initiate rates; the carriers make their own rates; that all the ICC does is to prevent rate

ward, breakneck competition and disturbance of rate relationships. Now let's see how often and to what degree the ICC interferes with the managerial discretion of railroads in making rate changes.

Railroads alone file with the ICC an average of over 3,000 rate changes every working day of the year. During the year 1956, how many rates out of the million or more rate changes filed by railroads were adjudged to be unlawful by the Commission after protest by competing forms of transportation? Ten thousand? Two thousand? One thousand? One hundred? No. Just exactly 12. Now how much traffic was involved in these 12 cases? In other words, how badly hurt were the railroads by our finding that these rate changes were unlawful? If they had been able to obtain every single pound of the traffic involved, from competing forms of transportation, which, of course, is hardly likely, they could have added only $1,228,879 to their gross revenue; $1,109,359 of this amount from water carriers and a mere $119,520 from motor competitors. This represents only eleven one-thousandths of 1 percent of the total revenue of railroads for the year 1956.

The actual loss of net railway operating revenue, making the violent assumption that the rates were compensatory and as profitable as the average of all freight, and again assuming that the shippers gave them every pound of freight involved, would amount to $299,846. Now these are all liberal, maximum computations. Now, I ask you, is this strangulation? Is this gross interference with managerial discretion? Does this constitute arbitrary allocation of traffic? Is this holding a wide and benign umbrella over other carriers? Is this what Fortune magazine can describe as a heavily regulated industry, a kind of state-run cartel?

However, there is an even mor telling figure. It is a computation of the difference in the rates in dispute and the going rates. In other words, the amount the public—the shippers—could have saved through these proposed rate reductions. How much do you think that amounted to? Exactly $378,170. To say that $378,170 is costing the American public billions of dollars is fantastic and egregious exaggeration, to put it mildly. It may be that those who inspire such articles have not consulted too closely with railroad commerce counsel before they turned public-relations experts loose.

An unprejudiced examination of our decisions will show that the Commission has been very liberal in permitting competition to have the freest and fullest play so that the public will have available to it the cheapest rate by the carrier of its own choice, without permitting a disruption of sound transportation. There is dynamic competition in fact, but what the proponents of this legislation don't realize is that it would give competitors the opportunity to dynamite competition to the disadvantage of the public.

As I said at the outset, much more could be said about the misconceptions which I have enumerated and others I could mention. Within the limits of this discussion I have tried to weigh the foregoing few on more accurate scales.

Before proceeding to give you my views on the prospects of railroads, I should like to describe some of their present attributes. Within the past several years, the railroads have accomplished more by way of innovation, modernization, and improvement than they have in the preceding 3 decades. Their accomplishments in this respect have been formidable. Even though these advances have not yet been universally applied by all railroads, the advantages to those progressive railroads which have pioneered, and to the public, are impressive and rewarding. Even more dramatic improvements are imminent since the railroads are now engaging in research to continue this forward progress. To give a comprehensive list of what they have done in this respect and to describe the effect on their operations would be worth a speech in itself. I shall recite only a few, as examples of how far-reaching these improvements are.

The diesel has not only provided greater tractive power but, because of its flexibility, has eliminated the need for investment in separate standby locomotives for each class of service, as was the case with the steam locomotive. More powerful gas-turbine locomotives are now a reality. The diesel has greater wheel life, reduced brake shoe wear and, with its better control of slack action, has reduced damage to lading and equipment. Welded rail not only reduced track maintenance but increases track life, improves riding quality and permits greater speed. Centralized traffic control, automation in classification yards, automatic electronic train identification, train radio communication systems, use of closed circuit television, automatic ticket selling, improved billing procedure and maintenance of car record accounts, automatic hot box detectors, roller bearings, ingenious machines for replacing track ties and laying track, Adapto and other types of equipment for all purpose loading; all of these innovations make for greater efficiency at less cost. The introduction of modern lightweight passenger equipment, also dome cars, slumber coaches, double deck cars, and Budd self-propelled cars have vastly improved the quality and attractiveness of passenger service.

The mere enumeration of these advances attest to a great record of achievement in a comparatively short time, which indicates that railroads are conscious of competition and are trying to meet it not by only pricing methods but by giving better service. All this has helped them and will continue to do so. This progressiveness has paid off. The railroads' profit position, as a result, has improved greatly. Some of them have enjoyed the best years of their history. Those poorly situated or not well managed have not done as well. But even in the flourishing steel business, there is a Follansbee.

The future of the railroads is bright—I was going to use the word brilliant; it would still fit. It can be circumscribed, in my opinion, only to the extent to which their thinking remains patterned after that of the canal operators of the 19th century—to wit: blind, unyielding opposition to any new developments in transportation.

In the light of changes in transportation conditions, the railroads can no longer look upon their service as separate and exclusive. Unfortunately for them and the Nation, for too long a time, the railroads' attitude suggested the peculiar reiteration of the poetry of Gertrude Stein. Instead of "a rose, is a rose, is a rose," just substitute, if you will, "a railroad, is a railroad, is a railroad." Some oldtimers regarded the identity of a railroad as sacred and singular, to be preserved as a separate and distinct form of transport at any cost and not to be sullied by dealings with other forms of transportation. And this characteristic still prevails not only among some railroaders but among members of other forms of transportation. However, we are here discussing the part railroads can serve in the cause of improving their future. In my opinion, because they are the predominant agency of transport, they should properly take the leadership in making transportation truly a functional and efficacious system rather than a collection of individual carriers of various types.

Railroads own collectively almost 21 million acres of land. This is more land than there is in the whole State of Maine. About 4 million acres of this land is connected up in a private right-of-way which links every center of population from coast to coast and border to border. This constitutes a tremendous physical asset for themselves and the Nation. To make the fullest use of it, railroads should recognize that our economic geography is not the same as it was a quarter of a century or more ago.

While some of them are still cautiously temporizing, they are now on the right track, and I may add that the ICC has encouraged coordinated service each step of the way. They have begun to associate with other media of transportation either in combination or through coordination. Instead of thinking in terms of orthodox and conventional railroading, they are broadening their outlook and beginning to give vitality to transportation service. This is the real key to their future.

Only by such steps can they help produce the best and cheapest service to the public at a greater and more secure future for themselves and all of public transportation. These steps are various and progressive. Substituted service by motor which is auxiliary and supplemental to rail service has already produced substantial benefits. It has permitted railroads to eliminate many way freight trains by placing express, less-than-carload freight, and mail on trucks; has helped them to do away with unprofitable passenger trains; has helped to speed up remaining passenger schedules and thereby to reduce or eliminate losses on passenger runs. This is one step.

To the extent that some of them have engaged in the use of railroad-owned trailers or containers on flatcars, they have made another distinct gain. It has given them an opportunity to give better and faster service with less damage and handling to shippers who need and want the advantage of trailer-on-flatcar service. Some of them have taken a further step to provide trailer-on-flatcar service in combination with motor common carriers. By so doing, they are able to add new traffic whereas rail-owned trailers-on-flatcars service is essentially limited to traffic already within their control. Until these steps are fully perfected and become equally applicable to connecting lines, the full benefits are lost.

The fourth step is to work out a complete combination of services with every existing form of transportation. Up until now the railroads have been squeamish about entering into through routes and joint rates with independent motor carriers. There is only one railroad in the entire country which has done so. Yet commonsense dictates that this is the one way that public transportation can make substantial and impressive advances. It would permit a fluid, flexible service from any point to any point in the country. But of even greater value, it would develop new sources of traffic at hundreds of points off line and open dozens of new gateways for rails. This may change the present pattern of traffic with its attendant problems but the ultimate pattern would be efficient, economical, and logical.

Furthermore, it would make unnecessary the issuance of some motor-carrier certificates. In May of 1953, I made the following observation:

"Shippers often endorse applications for movement of certain types of commodities long distances merely because delivery is to be made at locations off the railheads. Why couldn't the rails find ways of providing through service to these points by joint service with existing motor carriers, thereby retaining the long haul, maintaining the identity of each form of transportation, and eliminating the need of another competitor? They resist the shippers' needs right down to the last ditch. A motor carrier grant in such cases is sometimes uneconomic and inappropriate but the railroads' attitude leaves no alternative for the shipper. It becomes more imperative, therefore, for

transportation leaders to study every means of coordinating diverse services by developing equipment, facilities, units, containers, and other devices to permit efficient and easy interchange between them."

Since that statement was made almost 4 years ago, rails have opposed hundreds of applications for motor service. Yet, in not one instance did they try to work out for shippers the service they actually needed. This is where the rails must take some of the responsibility for losing out to motor carriers on a portion of the long-haul traffic, in other words, the 5.42 percent of trips over 100 miles made by trucks to which I referred previously. They have resisted the grant of certificates but have never offered shippers a solution which would have answered their purposes.

Isn't it senseless to keep saying ruefully, "We're going to get this traffic back on the rails where it belongs"? Traffic belongs to shippers, not to any form of transportation. To assume that they can be forced to give it to one or another form of transportation is foolish. The shippers' choice will depend on what meets their needs. Give them what they want and they will use it. Shippers want solicitude as well as solicitation for their freight. There is overwhelming evidence of the demand for a flexible, integrated, coordinated service. Regardless of which form of transportation gets the immediate advantage the ultimate benefits to all of them and to the public are undeniable and should be paramount.

Railroads should not stop here. They should encourage rather than resist developments in existing forms of transport and newer ones such as slurry and liquid pipelines, rubber railroads or conveyor belts, etc., or any others that may be invented at any time in the future. They should help perfect such new devices and bring them to the rails, rather than let them develop independently and pass them by until they become independent competitors. Their attitude should be, we can do it either singly or in combination better and cheaper.

They cannot excuse themselves on the theory that regulation holds them back either for existing forms of transportation or those yet to be devised. Such excuses are psychosomatic, not real. There is nothing in the act now and there never has been any restriction against the use of joint services by all types of transportation. The present limitations are only on ownership, and those are limited.

Transportation leaders of all forms of transportation are giving too much energy and attention to day-to-day competitive incidents—looking at the trees rather than the forest. Actually we are living in a new society. The commercial realities of the present require flexible, adaptable service in which each form contributes to economical and efficient transportation within the fullest measure of its capabilities. What is most needed at this stage is bold new outlook and planning, and an objective, conciliatory and cooperative approach by all transportation people and a realization that transport techniques will not remain stationary. All the other conditions are present. You cannot compound a successful transportation system out of antagonisms.

Perhaps the rails have the ambition to integrate all these services under their ownership, without first integrating the services now permissible. Such hope is premature until a competitive scheme of combined services is established. It also revives the suspicion, that once under their control, railroads would sacrifice developments and improvements of other types of transport to the detriment of the public. This theory is reinforced by the present insistence, in some quarters, on the power to make destructive rates. In this sense, the Cabinet Committee report has been a disservice to railroads since it has engendered a renewal of these fears by those who must rely on motor or water service exclusively. On the other hand, if the public became accustomed to efficient joint transportation services, this resistance would evaporate. Regardless of the ultimate outcome, it would seem futile to try to resist or delay the inevitable since, in one way or another, joint services of all forms of transportation will eventuate if the public is to be served.

In closing, I cannot refrain from twitting my favorite monthly publication, Fortune magazine. In the January issue, it contends in an article beginning on page 102 that the economy of the country is being harmed by present transportation policies. On the other hand, the best thinking of the editors on page 1 of the same issue boasts that, "The year 1957 will be the best year ever. This makes the third consecutive 'best year ever' that Fortune has predicted."

He who proves too much, proves nothing. With only 6 percent of the world population, we have attained the highest productive capacity on the face of the earth and the highest standard of living the world has ever known. Does anyone believe that this could have been accomplished with a transportation system that has gone haywire? The magazine's economics must be badly coordinated if it thinks that our economy could have developed to such heights without a transportation service to match it.

Transportation is such a vital and essential service, that every existing avenue of improvement should be carefully explored before more drastic steps are undertaken. Changes should be progressive and evolutionary, not revolutionary, if we are to retain the blessings which the finest transportation system in the world under private ownership has brought to us.

Tribute to Northwestern Mutual Life Insurance Co.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. WILEY. Mr. President, on Saturday, March 2, the people of Wisconsin proudly celebrated the 100th birthday of one of the great institutions of America—the Northwestern Mutual Life Insurance Co.

This company was chartered by the Legislature of Wisconsin on March 2, 1857. During its first 100 years, Northwestern Mutual has come to occupy as warm a niche in the hearts of literally millions of people as it is conceivable for an organization to achieve. It has been a financial bulwark in innumerable personal lives. It has been a bulwark in Wisconsin, in the Great Lakes area, where 35 percent of Northwestern assets are invested—and it has been a bulwark in the Nation.

The statistics of Northwestern's growth are awe inspiring. It is the 14th largest business enterprise in the United States in assets; it is 6th among life-insurance companies; and it is largest west of the Atlantic seaboard.

To living policyholders, it has paid during its first 100 years $3,053,000,000. To beneficiaries, it has paid $2,653,000,000.

As of December 31, 1956, it held as assets for the benefit of policyholders and their beneficiaries, $3,600,000,000.

It has received a total in premiums of $6,850,000,000. There have been left with the company for settlement a total of $1,026,000,000.

Its dividends have averaged 23 percent of its premiums, the ratio being, total of premiums, $6,850,000,000; total of dividends, $1,560,000,000.

But these breathtaking statistics do not begin to convey the human story of what Northwestern Mutual has meant to its policyholders. It is an insurance company with a heart. It is also an insurance company with a sound head. It has been conservative in its policies, and yet, it has been pioneering in its new efforts.

Some people may not realize the important role played by insurance companies on the American scene today as great reservoirs of the savings of Americans. Let it be noted, therefore, that the 1956 annual report showed that more than $2 billion of Northwestern Mutual is invested in government, utility, and industrial bonds. Some $45 million is invested in stocks; $673 million in residential mortgages; $83 million in farm mortgages; $363 million in business and institutional mortgages; and over $70 million in income properties.

Every single working day the company gets around $2 million of investment and premium income, and it pays out about $1.2 million to policyholders, beneficiaries, and others.

Truly, insurance has become today one of the great pillars of America's economic system. But, in this as in other instances, a pillar is no stronger than the men who have constructed and who maintain the pillar.

Northwestern Mutual has been fortunate to have had at its helm as outstanding a group of business leaders as any insurance company in America has possessed. Its president, Edmund Fitzgerald, is one of the great civic leaders of my State. Vice Presidents Robert E. Dineen, Philip K. Robinson, and Howard J. Tobin, likewise, are the sort of high-caliber men who are constantly being called upon for civic service.

Throughout this land of ours, vast numbers of Americans rejoice in the 100 candles on Northwestern Mutual's birthday cake. They rejoice that a great company is now in its second century. They know that this company is great, not simply because of its size, but because of the faithfulness of its trusteeship of the people's assets, the efficiency with which the people's needs are met, and similar high criteria.

I convey my warmest personal greetings to the officers and trustees of the company, to the policyholders and friends of the company everywhere, and wish them well in Northwestern's second century.

I send to the desk several articles from the Milwaukee Journal, issues of Saturday, March 2, and Sunday, March 3, together with an editorial giving high and well deserved praise to President

Edmund Fitzgerald—one of the great men of Wisconsin.

I ask unanimous consent that these articles and the editorial be printed in the Appendix of the RECORD.

There being no objection, the articles and the editorial were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of March 3, 1957]

INSURANCE FIRM HAD $3,500 CRISIS IN 1859—NORTHWESTERN MUTUAL'S HUMBLE BEGINNING RECALLED AS CONCERN NOTES 100 YEARS

There was quite a crisis in the insurance office that day in November 1859.

The first North Western road train to run from Janesville to Fond du Lac had hit a cow and jumped the track. Two policyholders had died.

Their insurance policies totaled $3,500. And the company had $1,500 to its name. What to do?

The policies gave the company 60 days to pay. But a delay would not add to public confidence in a firm just 2 years old. The president, S. S. Daggett, borrowed $2,000 on a personal note, put the money in the company till and the claims were paid.

COMPANY IS 100 YEARS OLD

That was the first and probably worst crisis in the history of the Northwestern Mutual Life Insurance Co., which was 100 years old Saturday. It is now the 14th largest business enterprise in the United States in assets.

Sixth among life insurance companies and largest west of the Atlantic seaboard, the company is worth well over $3½ billion. Its loans and investments average about $4 million a week. It acquires new policyholders at the rate of 300 a business day.

Though it has paid out death benefits totaling more than 100,000 times as much as that first claim, it has encountered no such difficulty. The total sum paid to living policyholders and the beneficiaries of dead ones, plus the sums held for their benefit, is approaching $10 billion.

The company traces its beginning from the notion of Gen. John C. Johnson, whose rank was granted in the New York State militia. He bought a big farm near Janesville and moved there in 1854.

THE GENERAL WAS 70, BUT YOUNG IN IDEAS

He was already past his 70th birthday, but was the kind of man who could entertain a new idea at any age. The mutual life insurance companies of New York and Boston were about 10 years old. The general set out to organize one in the West.

He buttonholed residents in Janesville, Madison and Milwaukee. Finally he persuaded 36 of them to petition the 1857 legislature for an insurance company charter. The legislature itself was less than 10 years old—Wisconsin became a State in 1848. It breezed the charter through.

On March 2, 1857, the Mutual Life Insurance Co. of Wisconsin was formally born. Its name was changed to the present one in 1865.

* * * * * *

With the growing statistics on which to estimate risks, the company has pared away policy restrictions until suicide, war, and a few other special considerations set the only limits.

However, the company still prides itself on accepting only the best candidates for a long life. According to its 1956 annual report 23.3 percent of its buyers were professional people and public employees, 29.5 percent were in trade and transportation, and only 17.8 percent were in manufacturing jobs.

"CLASSIFIED RISKS" ALLOWED

In that year it opened its doors for the first time to "classified risks"—people who are not quite as good bets as the standard on which coverage is based, but who may pay extra premiums and get protection.

* * * * * *

The conservatism of its policy writing has spared the company some headaches, Northwestern officials say. It has repeatedly declined to compete with other companies by offering policy gimmicks and has stuck to a simple portfolio of life, endowment, and term plans.

COMPANY GIVEN PRAISE BY SENATE COMMITTEE

A Metropolitan Insurance Co. president once said: "You can tell an Equitable agent by his checkered vest, a Prudential agent by his kit and a Northwestern Mutual agent by his halo."

This was said in fun, but when the Senate temporary national economic committee made its business investigations in 1939 and 1940 in an atmosphere regarded by many businessmen as hostile, it singled out Northwestern for commendation on cost performance, persistency of business, elimination of conflicting interests in the connections and activities of its directors, and other items of business ethics.

Conservatism has not kept the company from initiating practices when it considered them sound and desirable.

It was the first, for instance, to provide sustained income rather than lump-sum settlement of claims if the policyholder desired it.

PIONEER ON FARM MORTGAGES

It pioneered a whole new field of life insurance in which a company may insure the lives of its executives for its own benefit in case the services of top men are lost.

It was the first firm to accept farm mortgages, and its money contributed greatly to the development of midwestern agriculture.

Last January it announced a system of proportionately lower premiums on big policies, reflecting lower processing costs.

* * * * * *

CONTROL BY COMMITTEE IS A COMPANY FEATURE

One of the characteristics of Northwestern's business organization is its control by committee.

The policyholders—really stockholders, for this is a mutual company—are represented by 36 trustees who meet quarterly. If any of them misses three meetings in a row he is automatically dropped.

Early in its history, the trustees formed a five-member executive committee with interim authority. Shortly the executive committee found itself spending most of its time on investment problems. It became the finance committee. Later, an executive committee was reinstated, but the finance committee continued as a separate body.

At lower levels of decision, the committee system is carried along. Yet company officials say they have "secured the advantage of collective judgment without submerging the operating executive in a mire of collective inertia."

HAS EXAMINING COMMITTEE

One unique group in the insurance business is the Northwestern policyholders' examining committee. Composed of five persons who have no connection with the company except that they are insured in it, the examining committee not only hires independent auditors to check the books but can, and does, poke into any phase of operations that catches its interest.

In annual reports to the trustees, it suggests changes and innovations in policy and generally guards against having policy made exclusively by those immersed in company routine.

OFFICIALS OF COMPANY ALSO CIVIC LEADERS

Since many burdensome duties of top management are fanned out, the operating bosses can devote big amounts of time to public service. To cite a few examples:

Edmund Fitzgerald, president, served as president of the United Hospitals fund, chairman of the Community Fund, chairman of the Milwaukee Foundation committee, president of Columbia Hospital, YWCA trustee, Red Cross board member, treasurer of the Wisconsin Antituberculosis Association, Milwaukee-Downer College trustee, Milwaukee Art Institute, and in various other civic posts.

DINEEN HELPED A STUDY

Robert E. Dineen, a vice president, headed a special governor's committee on metropolitan problems, and is a Milwaukee Children's Hospital and Columbia Hospital, Corp. member and a member of the advisory committee of the Marquette University Law School.

Philip K. Robinson, another vice president, is a former county supervisor, chairman of the Memorial Center, trustee and secretary of the Citizens' Government Research Bureau, governor of the American Red Cross, and was Community Chest general chairman in 1945.

Howard J. Tobin, another vice president, is president of the Greater Milwaukee committee, a member of the county expressway commission, and the auditorium-arena board.

[From the Milwaukee Journal of March 2, 1957]

UNDERDEVELOPED AREAS LIKENED TO UNITED STATES IN 1800's—WORLD BANK PRESIDENT IS AMONG SPEAKERS AS NORTHWESTERN MUTUAL NOTES CENTENNIAL

The underdeveloped countries of today's world are much like the United States of a century ago and have similar potentialities of political and economic strength, Eugene R. Black, Washington, D. C., president of the World Bank, said in a speech prepared for delivery here Saturday.

He was the principal speaker at a luncheon for some 125 civic and industrial leaders, at which the Northwestern Mutual Life Insurance Co. started its centennial celebration. The company was chartered by the State legislature March 2, 1857. The luncheon was held in the 8th floor auditorium of the company's main office, at 720 East Wisconsin Avenue.

Others to speak at the affair were Governor Thomson, Mayor Zeidler, Edmund Fitzgerald, the company president, and Louis Quarles, one of its trustees.

NOTES LOW PRODUCTION

Among the characteristics of our own past mirrored elsewhere in the world today, Black listed "low money income, low levels of production, financial instability, great dependence on foreign markets and capital, and absorption with internal problems that breeds indifference to trends in world affairs, and, finally, nationalistic pride and sensitivity to criticism."

However, he said, there are countries "on nearly every continent" whose rate of economic growth compares favorably with our own. Belief in the future and desire to do things the democratic way are growing, he said.

"The form in which these institutions begin to crystallize is of the utmost importance to us. In a better economic environment, there is a better chance for men to realize those dreams of freedom and democracy which mean so much in the West and so little in Moscow," he said.

GOVERNOR PRAISES FIRM

Governor Thomson, in his prepared speech, praised the company as "a sturdy pillar for America's economic and social strength."

Said the governor: "The strength of any nation is reflected in the willingness of its people to plan with care for its future; to provide economic stability for each family

unit, and to work for a relationship of trust and mutual responsibility among those who administer its precious savings.

"On the basis of these fundamental measurements the Northwestern Mutual Life Insurance Co. and its superb 100-year record of service to Wisconsin and America demonstrates the enduring aspirations and strength which have brought our America to its present position of honor and leadership among nations."

Because of its "marks of accomplishment and earned recognition, this distinguished insurance company has given our State the satisfaction of having a key role in making a voluntary savings and family security plan part of the very warp and woof of America's social structure," Thomson said.

CONFIDENCE IS EXPRESSED

Fitzgerald expressed confidence in the future of the city, the State, and the Great Lakes area in which, he said, some 35 percent of Northwestern assets are invested.

"I think it well to remember that by its nature a life-insurance company is a service institution and a financial intermediary," he said. "It doesn't create capital or credit, but rather it gathers in and pools funds with which to pay claims and expenses, and to make investments."

The company, he said, gets about $2 million of investment and premium income each working day, and pays out about $1,200,000 to policyholders, beneficiaries, and others.

"Despite references to the past, we are much more interested in the future on this first day of our second century," he said.

TABLET TO BE PRESENTED

Quarles, a Milwaukee attorney, on behalf of the company's board of trustees, was to present a bronze tablet rededicating the company to the service of the policy owners.

The text on the tablet, to be mounted in the main lobby of the company's building, was taken from a resolution adopted by the board commemorating the beginning of the firm's second 100 years as a mutual life insurance company. It said:

"Today the Northwestern Mutual completes 100 years of trusteeship. We salute the courage and imagination of those who built this company. As we begin our second hundred years, we rededicate the Northwestern to the service of policy owners and enjoin those who follow to apply the tested principles of the past with vision and determination."

The tablet was to be accepted by Taylor French, the company's assistant director of agencies and its youngest officer, and Claude Degler, who with nearly 51 years of service, is the company's senior employee, on behalf of the home office staff.

[From the Milwaukee Journal of March 3, 1957]

FIRM TO HELP UNIVERSITY OF WISCONSIN STUDENTS — NORTHWESTERN MUTUAL TO GIVE SCHOOL $25,000 FOR SCHOLARSHIPS

A pledge of $25,000 for University of Wisconsin scholarships was announced by the Northwestern Mutual Life Insurance Co. Saturday.

The announcement was made by Edmund Fitzgerald, president of the company, at a luncheon for about 125 business and civic leaders in the eighth floor auditorium of the company's main office at 720 E. Wisconsin Avenue.

* * * * *

Fitzgerald said that the $25,000 would be spent in the next 5 years for students in the fields of insurance and applied mathematics.

The money will be turned over to the university without other qualifications, a company spokesman said. The university will determine the conditions of eligibility, the number of scholarships and their size, and similar details.

HELPED MARQUETTE UNIVERSITY PREVIOUSLY

Announcement of the ways students can receive aid will be made later.

The company has for some years made grants to Marquette University and to the Wisconsin Foundation for Independent Colleges.

[From the Milwaukee Journal of March 1, 1957]

FOR BEING SO USEFUL A CITIZEN

Too many of us think we "haven't time" to be as civically active as we are asked or would like to be. It is humbling, if not downright demoralizing, to contemplate a man with enormous responsibilities in his business life who nevertheless plunges into community affairs by the dozen, with eagerness and real achievement.

The shoe fits no man in Milwaukee more notably than Edmund Fitzgerald. The Cosmopolitan Club so recognized Wednesday in making him the 1957 recipient of its distinguished service award. This is one more in a string of citations that mark a continuously crowded civic career dating back to the 1920's, and to his twenties.

A former industrialist and banker, Mr. Fitzgerald in 1933 became No. 2 executive of Northwestern Mutual, one of the Nation's greatest life insurance companies, and will round out 10 years as No. 1 next month. He has been requisitioned for national leadership in that business field, and at one time or another as a director of so many of Milwaukee's biggest industries that eyebrows once were raised in Washington, with misplaced zeal, at such a one-man army.

Yet he has managed through the years to have "spare" time to do more than we have spare room to list, just for instance: As a leader in the Community Chest and the Red Cross, as long time president of Columbia Hospital, a trustee of Milwaukee-Downer College and Seminary, a director of the YWCA, a War Memorial board member, a leader in his church, a Wisconsin Turnpike commissioner, president of the United Hospitals Fund drive—and a baseball fan withal.

Edmund Fitzgerald is a seemingly relaxed, gracious and charming man, and it takes nothing from the worth of his tremendous civic contribution to remark that he really likes these activities; being so useful a citizen, beyond the call of duty, is his hobby.

We salute him, admiringly and affectionately, on what, by purest coincidence, is his 62d birthday.

The Coal Industry

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. SAYLOR. Mr. Speaker, during the course of the bearings by the Coal Research Committee participating members have obtained highly illuminating reports on the coal industry and on the communities and people who are a part of that industry. I am confident that the subcommittee will soon be in a position to make recommendations regarding what must be done to assure the maintenance of a vigorous coal industry. As the industry moves forward, so too will there be a welcome resurgence in those communities where coal is the substance of economic life.

My reference to the subject today is not to be construed in any manner as an attempt to make a progress report on the subcommittee's work. Our chairman, the highly capable and most conscientious gentleman from Oklahoma, will decide when it is time for the Congress as a whole to be apprised of our findings. I wish only to discuss coal communities and the opportunities which may be available to them in the years ahead. My remarks are prompted by a report on natural resources made several months ago and presented in the Iowa Business Digest. I do not know whether this report reached very many of our coal communities; I do know that any resident willing to accept this analysis would no doubt be frantically looking for greener pastures if in fact he has not already taken leave of the old hometown.

I shall not include the Iowa report in the RECORD because I do not believe that its contents would justify printing expenses. I think that it can be summarized with a comment that it reflects only the most pessimistic view of the coal industry; for this reason I feel duty-bound to analyze some of the more hopeful signs that are beginning to appear over coal-producing regions. As representative of a district which depends to a large extent upon the success of the coal industry, I want the rest of the country to realize that we are doing everything possible to develop a more substantial and dynamic economy in our coal areas.

Increased demands upon coal as America's principal source of energy in the years ahead are a certainty. The difficulty in keeping on the course of progress and expansion is attributable to Government policies standing in the way. I am confident that the coal industry would by now be producing from 10 to 20 pereent more coal if it were not for the iniquitous and inequitable Federal policies that have persisted entirely too long. Foreign residual oil should not be permitted to be shipped into this country in excessive amounts to the detriment of the coal industry. The Federal Power Commission should be instructed to take conservation into consideration when it rules on applications for new natural gas pipelines; so authorized, the Commission would be in a position to prevent such wasteful practices as dumping of natural gas into industrial plants at the expense of the coal industry. I am also convinced that the coal industry should be granted a higher depletion allowance rate. These and other considerations are matters which should be adjusted by Congress as quickly as possible. Meanwhile coal and allied industries, with the support of the citizenry of mining areas, are doing everything possible to raise themselves from the economic straits.

I recently placed in the CONGRESSIONAL RECORD an article from the Pittsburgh Press describing the accomplishments of townsfolk in Indiana, Pa., a community which over the years had relied to a great extent upon the success of the coal indus-

try. When coal output went down, unemployment went up throughout the area. Indiana, through courage and faith and daring, was able to obtain new industries that have absorbed considerable of the surplus labor and today is looking to the future with hope and optimism.

The anthracite fields of Pennsylvania have been perhaps hardest hit of all industrial areas in recent years. In the 10-year period that has elapsed since the conclusion of World War II, anthracite production has been halved. Residents of producing districts have of course been greatly discouraged, yet they have been so resourceful as to bring a variety of new industries into their communities. There is still a long way to go in the anthracite field, and I hope that the program to be recommended by the Coal Research Subcommittee will aid in combating the economic strife in that region. Meanwhile the businessmen, local government officials, and labor responsible for progress that has thus far been made are to be congratulated for their ingenuity and determination.

The Iowa Business Digest report was correct in pointing out that there has been a decided drop in coal employment over the past 30 years or so. The United Mine Workers of America recognized, as did coal operators, that mechanization of mining equipment and methods would produce capability of mining more coal with fewer men. The union nevertheless refused to stand in the way of progress. Mechanization has reduced coal's labor force by at least one-third, but at the same time it has made it possible for the industry to share with the working force more and more of the income from the sale of the product. To provide work for those men displaced by automation, management and labor have cooperated admirably in the campaign for new industry.

One of the most encouraging developments in the past year or so is the establishment of aluminum reduction plants in bituminous regions along the Ohio River, a phase of which was recognized in the Iowa report. One of the plants, when completed, will employ 4,000 workers; the other will employ 1,200. An executive of the Kaiser Aluminum & Chemical Corp., whose producing facilities are being constructed at Ravenswood, W. Va., last month made this statement in connection with the project:

> There is a special significance in Kaiser's Aluminum Ravenswood's works. It will be the first operation in the United States aluminum industry based on the fact that coal is the most economical source of energy for the production of aluminum when located close to major markets and a direct transportation route for raw material.
>
> Recognition of this fact led Kaiser to the Ohio River Valley site at Ravenswood—where low-cost coal-based power is readily available, where 70 percent of the Nation's aluminum consumption is within a 500-mile radius, and where the company is able to move materials from mine to fabricating plant in a direct line over a short all-water route.

According to a recent issue of Newsweek magazine, the advent of the aluminum industry in Ravenswood has reversed a 50-year decline, added 350 new homes, three restaurants, and a 56-unit apartment development. Farther down the river, at Evansville, Ind., the Aluminum Company of America is constructing another big smelter which will use coal generated power. Irving White Wilson, president of Alcoa, which incidentally employs many individuals from my congressional district said recently:

> As far as we can see, which is 1960, we see aluminum's growth continuing without any major let-up.

With so bright a future for the aluminum industry, coal stands to achieve almost proportional advances. I recall this excerpt from the President's Material Policy Commission Report published in June 1952:

> Such electroprocess industry as aluminum have the opportunity, by turning to coal and lignite, to break loose from their long dependence on closeness to cheap hydroelectric power sources for low cost energy.

Other industries are also beginning to recognize the advantages of locating plants near the most inexpensive sources of power and heat. Expansion of capacity in electric generating stations, steel mills, cement plants, and other traditional coal uses bids further to bringing advantages to coal communities.

For these reasons it is in error for anyone to write off coal communities as thriving centers of American economic and cultural life. The residents of these towns have demonstrated their resourcefulness and self-sufficiency. Despite the unfair burdens inflicted upon them through unwise policies of the Government, they have withstood attendant hardship and are now planning to participate in the industrial surge that is taking place nationally. To lighten the load for this hard pull, Congress should enact immediately the legislation necessary for clearing the road to coal's progress.

In conclusion, I want to thank my colleagues who participated in the hearings of the Coal Research Committee at Ebensburg, Pa., on February 13. I assure you that your presence was in itself an inspiration to our people, for it indicated the concern of Congress in our problems and gave interested parties an opportunity to appear personally before a congressional committee.

The Late Honorable Antonio M. Fernandez

SPEECH
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1957

Mr. BOW. Mr. Speaker, our late colleague, TONY FERNANDEZ, was a man with whom I had much in common. Like him, I served on the Committee on Interior and Insular Affairs before moving to the Appropriations Committee, and thus we had many shared experiences.

I respected him as a diligent and devoted representative and cherished his friendship. I know that he spoke often of returning to New Mexico to the practice of law, and doubtlessly there are many of his friends who wish now they had urged him more strongly to follow this inclination. Had he done so, and spared himself the heavy schedule of a conscientious representative, he might still be with us today. Instead, however, he chose to fulfill what he considered his responsibility to the people of his native State.

To Mrs. Fernandez and their children I extend my deepest sympathy.

Poisonous Drugs in Food

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BURDICK. Mr. Speaker, in view of several articles which have been brought to my attention regarding the addition of various chemicals and drugs to foods consumed by the public, I wish to have inserted in the RECORD my news release on the subject. There is evidence to show that many drugs and chemicals now in general use as food additives are not only detrimental to the health of human beings, but some of them have been shown to be capable of creating cancer, as proven in experiments on laboratory animals.

Because of the widespread use of chemicals as preservatives in foods, or for other purposes added to many items of human diet, I believe that no time should be lost in conducting a thorough and far-reaching investigation by Congress.

YOUR CONGRESSMAN COMMENTS

(By USHER L. BURDICK, of North Dakota)

POISONOUS DRUGS IN FOOD

WASHINGTON, D. C.—Dr. Harvey W. Wiley was installed as Chief of the Chemical Department of the Department of Agriculture in 1883 and held this position until 1912. Through his efforts the Pure Food and Drug Act was passed by Congress in 1906 and that act is still on the books. It made it a crime to adulterate foods, but the law has never been enforced, so that today poisons are being injected into food without limit, while the people believe they are protected by this law.

To show that the system of drugging food is still continuing unabated, Mr. Folsom, Secretary of Health, Education, and Welfare in 1956, made this statement:

"A recent compilation shows that approximately 500 chemical materials are being added directly to food for various purposes. The Food and Drug Administration estimates that 150 of these 500 chemicals have not been adequately tested to show that they are harmless."

The Consumer Reports for 1956 reads, "An important group of chemicals thought to be safe are synthetic dyes used to color food, drugs, and cosmetics. Today 16 have been certified by the Federal Drug Administration for use in food. Since 1945, 15 food dyes have been reexamined for toxic carcinogenic

(cancer-forming) allergenic properties. Only one of these has been conclusively shown to be harmless."

The poisons used in Coca Cola are clearly in violation of the Wiley law, but the Coca Cola business goes merrily on. A tooth immersed in this drink has been proved to be totally dissolved in 30 days, yet chemicals are used in city-water supplies to prevent tooth decay, without any competent analysis to indicate what deleterious effects may result.

In 1953 the production of surface-action chemicals, many of which are used to improve the stability of such foods as bread, cake mixes, and desserts, reached 921 million pounds. Agene was used for 30 years to bleach flour, until the University of Aberdeen, Scotland, found it caused running fits in dogs and affected the mentality of humans. After several years this Agene was replaced with a chemical called Alloxan, a poison used in experimental laboratories to induce diabetes in animals.

Over 1,000 chemicals have been used in foods. About 500 have now been discarded, and of this 500, 150 have not been scientifically tested. Of those which have been tested several have been found carcinogenic (cancer-causing).

I am receiving material and protests on this subject from all parts of the country. As one example indicating the serious danger of this practice, I quote Dr. William E. Smith, of Englewood, N. J., cancer researcher, who said "cancer-inducing chemical additives and dyes are going into food for human consumption."

There seems to be a well-formed conspiracy between the big chemical companies and the American Medical Association and the Food and Drug Administration to inject these poisonous chemicals into food, not for the safety of public health, but for the profits arising from the manufacture of the chemicals. An examination of the records leaves little in doubt as to the facts of this conspiracy.

The proper committees of Congress should make a thorough investigation of this matter, which they can do without any extra cost to the people. If we have ample laws now, they should be enforced. If not, then new laws should be enacted. One way to avoid cancer is to not create it by eating poisoned foods. The public has a right to rely on the protection Congress and the Attorney General's office can give it.

Friendship Day

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. KILDAY. Mr. Speaker, today, March 7, is the 20th anniversary of the observance of Friendship Day in Texas. On June 6, 1947, the Legislature of the State of Texas designated March 7 as Friendship Day. On March 18, 1954, the United States Senate passed Senate Concurrent Resolution 70, expressing the sense of Congress that March 7 of each year be known, designated, and observed by the people of the United States as Friendship Day. During that same Congress a subcommittee of the Committee on the Judiciary favorably reported my resolution (H. Con. Res. 100) to the full Committee on the Judiciary. However, the resolution was not reported to the House by the Committee on the Judiciary.

The General Federation of Women's Clubs, the Texas Federation of Women's Clubs, and the National Society of Arts and Letters have endorsed the observance of Friendship Day. In these parlous times any action which we can take to promote friendship among our own people and among the peoples of the world is well worth our effort. I have today offered a House concurrent resolution expressing the sense of Congress that the 7th day of March of each year be known, designated, and observed by the people of the United States as Friendship Day. It should be noted that my resolution does not create a new holiday, rather it designates 1 day of each year for the thought and promotion of friendship among our people. I hope that favorable action can be taken.

A Flagrant Abuse of Civil Rights

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of the Members of this body an editorial by Hon. David Lawrence which appeared in the Monday, March 4, edition of the Washington Evening Star. Mr. Lawrence's editorial pointed out the gross abuse of the constitutional rights of certain of the citizens in Anderson County, Tenn. I am surprised, amazed, and a little disappointed that none of the outspoken advocates of the so-called civil-rights legislation have condemned the abuse of constitutional and human rights of certain American citizens as a result of the Clinton, Tenn., school cases. I have heard certain organizations and groups in our country protest bitterly when Communists or Communist sympathizers were thought to be denied some right, and I cannot understand the silence and reluctance to come forward by these groups in defense of the persons cited for contempt in Clinton, Tenn.

I have introduced a bill, H. R. 3768, which will guarantee to persons accused of contempt of Federal court due to acts committed outside of the presence of the court the right of a trial by jury.

I respectfully request that the Members of this body give consideration to this bill not just as a bill to protect the rights of the people of the South, but as a bill designed to protect the right to trial by jury of all American people:

A FLAGRANT ABUSE OF CIVIL RIGHTS—QUIET MOVE BY GOVERNMENT VIEWED AS IMPERILING JURY-TRIAL GUARANTY

Maybe there is no need for civil-rights legislation after all. Congress will certainly be interested to discover how the Department of Justice just a few days ago, in a move that has gone unnoticed generally, simply substituted the words "the United States" for the names of a local school board as a party to a lawsuit in Federal court. By that device the 18 defendants arrested for allegedly hindering the Federal injunction at Clinton, Tenn., can be deprived of a trial by jury and put in jail as unfairly as if they were living in some totalitarian country.

While the laws of the land under the Constitution of the United States do permit Federal judges to punish for contempt certain offenses committed in a courtroom, or even outside, when the principals to a controversy refuse to obey a court order, a jury trial can usually be obtained on request. But it is something novel when a lawsuit has been started by private parties to find the Department of Justice petitioning the Federal court to amend the original petition and substitute the words "United States" for those of the complainant. This automatically bars a jury trial.

If the Federal judge in Knoxville, Tenn., approves this request and it is sustained on appeal by the courts, it will not be necessary for the Congress to legislate on civil rights. All that will be needed is for the Department of Justice to write out the orders and the courts will uphold them.

This is a flagrant abuse of power—much worse than any cited in the recent hearings before the House Judiciary Committee by the critics of the proposed civil-rights legislation.

It is ironical that the American Civil Liberties Union—which on February 26 made a commendable statement criticizing the Federal court injunction issued at Clinton, Tenn., as being too broad—didn't know that on February 25 the same Federal judge was being asked by the Department of Justice to deprive citizens of a chance for jury trial. The Civil Liberties Union statement had rightly criticized the injunction as too broad and had said that "to the extent that it enjoins speech in opposition to or advocating ignoring of the order, or peaceful picketing for these purposes, it is invalid."

In that same statement, moreover, the right to jury trial was vigorously upheld by the ACLU even for those defendants who had been charged with actually hindering or obstructing the operations of a court order. The ACLU said:

"Under the Federal law a person in contempt of a Federal court order enjoining acts which are also in violation of the Federal or State law is entitled, if he requests it, to a trial by jury. This protection of individual rights was originally written into the law to guard against possible biased judicial decisions in labor injunction cases and now covers all contempt issues. * * *

"Similarly, as the acts charged against the 16 persons now facing trial allege violations of Federal and State laws, these defendants can ask for a jury trial. Therefore, no civil liberties issue is raised unless the jury trial is denied, which is unlikely in view of the clear instruction of the law."

But what the ACLU didn't know when it issued that statement, and what most people throughout the United States didn't know because it wasn't reported in the press generally, was that the Department of Justice had resorted to a stratagem by seeking to make the United States a party to the suit, which—according to a law of Congress governing contempt cases—eliminates trial by jury.

Some critics not long ago pointed to the case of John L. Lewis as a precedent because he was fined once for contempt by a judge and was not given a jury trial. But those same critics failed to notice that the United States itself was a party to the suit. This was because the Government, acting in accordance with a wartime statute, had seized the coal mines and hence any action taken by a union or its leaders to defy a court order was a defiance of the United States Government itself.

There is no such parallel here. The school board officials at Clinton, Tenn., were whole-

heartedly complying with the desegregation order of the Federal court when they found certain persons in the town were organizing a movement to discourage attendance at an integrated school. Hence these school officials asked the court to enjoin anyone attempting to interfere with the school board's operations. But a local school board is not a part of the Government of the United States and it is difficult to imagine any Federal court judge consenting to the substitution of the United States for a local school board.

Even, however, if this strange petition does not win the approval of the court, the amazing thing is that anyone in the Department of Justice would try such a trick of circumvention in the very week when prominent lawyers from various States were warning Congress that to pass the civil-rights legislation now being proposed would lead to grave abuses of power.

The Perseverance Band of Lebanon, Pa.

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MUMMA. Mr. Speaker, in the old days, nearly every town in Pennsylvania, large and small, had a band. Of course some were better than others, but each one meant a great deal to its own community and brought that community much enjoyment and prestige. Many of those bands are gone. A few have survived, one being the perseverance band of Lebanon, Pa., which proudly celebrated its 101st year on March 3.

I had the honor of attending this celebration which was held in the high-school auditorium at Lebanon. It included an excellent program of well-played selections before an enthusiastic audience of more than 1,000 persons.

In accordance with the privilege granted me, I include an account of this celebration, as contained in the Lebanon Daily News of March 4, 1957. It is as follows:

PERSE BAND PRESENTS ANNIVERSARY CONCERT

The perseverance band, utilizing the experience and pride of 100 years, started off its 101st year yesterday afternoon with an excellent program of exceptionally played and roundly applauded selections.

The band, which was organized on March 2, 1858, thrilled more than 1,000 local and area music lovers who took advantage of the cold but clear weather to pack the Lebanon High School auditorium for the anniversary concert.

In addition to being an afternoon of fine music selected to satisfy the taste of almost every lover of music, the 2-hour program also was highlighted by many richly deserved words of congratulation and encouragement for the band's splendid record of 100 years of consecutive service to the community.

Special guests were Mayor Frederick D. Miller, Congressman Walter M. Mumma, Maj. Gen. Anthony J. Drexel Biddle, State attorney general, and James G. Krause, county chairman of the Democratic Party, and his wife. All were greeted at the entrance to the auditorium by Arthur Strohman, chairman of the band's anniversary committee.

Mayor Miller, who was introduced by leader Hower Steiner after the program opened with the National Anthem, said he was honored to congratulate the band on its anniversary and to thank it for its 100 years of service to the city.

He pointed out that all United States history is woven around bands since the "Spirit of '76."

"All of us wish the band another 100 years of progress, service, and good luck," he declared.

Krause, who introduced General Biddle, said it is fitting on the occasion to have as honored a guest as the general who was the special representative of Gov. George Leader.

REPRESENTED GOVERNOR

Biddle, former Ambassador to Poland and France, said he is happy and proud to meet the members of the Perse band and greatly honored to represent the Governor at such a distinguished ceremony.

"The Governor," he said, "sends his warmest good wishes and congratulations, and I want to add my own sincere good wishes on such a splendid record."

He said he feels a close relationship with the band because the son of one of its members, Col. R. D. Miller, is one of our ablest officers at Indiantown Gap.

He also said he feels a close relationship with the community because it is represented in the National Guard by two outstanding military units: Company C, 165th Military Police Battalion and Battery D, 899th Antiaircraft Battalion.

He said the guard is proud of the fine units because of the spirit and record of performance they reflect.

He said there also is pride in the community and band at the Gap because they are such close neighbors.

Congressman MUMMA said he was happy to get an invitation to the concert. He said he remembers the band from the early days of his youth along with other outstanding bands of the State.

Now What About Niagara?

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. RADWAN. Mr. Speaker, I wonder if the distinguished Governor of our State, Mr. Averell Harriman, is aware of the fact that every year's delay in resolving the Niagara power issue has been accurately estimated to cost the American people $60 million worth of power.

Heretofore I had introduced a measure, not in the form of compromise but merely to gain time pending a break in the costly deadlock on this question. But because I enthusiastically support the present compromise known as the Ives-Javits-Miller bill, I am refraining from reintroducing my bill at this time.

I submit herewith an appropriate editorial which appeared in the Buffalo Evening News of March 4, 1957:

NOW WHAT ABOUT NIAGARA?

Governor Harriman may have infuriated some of the public-power fanatics, but he showed good commonsense in approving St. Lawrence power contracts with Reynolds Metals Co. and the Niagara Mohawk Power Corp.

In all consistency, it's a pity that he can't apply a little of the same brand of commonsense to the far more important problem of getting congressional approval of the Niagara power project, for the issue here is almost identical.

Instead of playing socialistic politics with St. Lawrence power, the Governor is permitting it to be marketed by the State power authority in a businesslike way, the largest single bloc to make possible the establishment of a basic aluminum industry in the industry-hungry north country; much of the remainder to be distributed to domestic and rural users through the existing lines in the Niagara Mohawk franchise area.

The two contracts represent a basic decision to market the power in accordance with good economics, instead of hoarding large blocs for ultimate sale to the now largely nonexistent preference customers, municipal and cooperative systems, which the public-power fanatics dream of bringing into existence someday.

Needless to say, this decision on St. Lawrence power should make it much easier for the State power authority to sell its bonds for the Niagara power project as a sound investment, when and if the authority gets an O. K. from Congress to start the project.

But the Niagara issue, alas, is still deadlocked, thanks largely to the fact that Governor Harriman is playing the opposite kind of politics there. With every other New York State official now supporting the Ives-Javits-Miller compromise bill, the Governor has done his best to scuttle the hope of putting the compromise through immediately by holding out for the full set of extremist, socialistic preference clauses of last year's Lehman bill.

How this stand can possibly be squared with the Governor's action on St. Lawrence power we fail to see. What is most fantastic about Mr. Harriman's position on Niagara, however, is that he—the Governor of New York—is fighting against his own State's interest in marketing the power according to its own laws and in favor of a Federal requirement that New York give an absolute preference to municipal and cooperative customers as far away as Pennsylvania and Ohio. We can understand why Senator CLARK, of Pennsylvania, might be sponsoring such a bill, but it defies all reason to find the Governor of New York not only supporting it, but playing right into the hands of those who would block all Niagara legislation rather than let the falls power be developed without the socialistic preference clause.

We hope the Governor knows what he is doing, and we also hope he is aware of the heavy onus that will be on him if his political grandstanding on Niagara results in keeping that vital project deadlocked beyond this year.

Soviet Enslavement of Rumania

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert the text of a letter and enclosure I have received from Mr. Mihail Farcasanu, president of the League of Free Rumanians. I understand that March 6 marks the 12th anniversary of the enslavement of Rumania by Soviet totalitarianism.

To the enslaved Rumanian people, as to all other captive peoples behind the Iron Curtain, I can onyl repeat what can never be overstated and that is that the people and the Government of the United States are as one in their determination and belief that the right of freedom and self-determination will one day be the right of freedom-loving men everywhere, even behind the Iron Curtain. I express the hope that the suffering people of Rumania will know that we appreciate their burning desire for independence and hope that their day of peaceful liberation is not far distant. When that day arrives, as come it surely will, the United States stands ready to lend every practicable assistance at that time.

THE LEAGUE OF FREE ROMANIANS,
New York, N. Y., March 3, 1957.

The Honorable ALVIN M. BENTLEY,
Representative from Michigan.

DEAR CONGRESSMAN: This 6th of March 12 years will have elapsed since the Soviet enslavement of the Rumanian Nation in 1945, through overwhelming Russian military and political pressure. You may perhaps remember the spectacular deployment of brutality and diplomatic ruthlessness conducted at that moment by the late Andrei Vishinsky and Marshal Malinovski. Today Rumania is still occupied by Russian troops and subjected to the Moscow directed total suppression of political and human rights and to a savage economic exploitation.

We will be most grateful if you can say a few words on this occasion and so help tear the shroud of oblivion and indifference which threatens to engulf the tragedy of Eastern Europe despite her enormous sacrifices and suffering for freedom. It is of great importance for the future of liberty in the world that the hope of the subjugated be maintained. They are sincere friends of the United States in their efforts to achieve international order based on freedom and peace.

Knowing your farsighted and courageous stand on the problem of the captive nations, we take the liberty of addressing to you this appeal on behalf of our oppressed and tortured Rumanian people.

Yours respectfully,
MIHAIL FARCASANU,
President.

Two weeks after the Yalta Declaration—on February 27, 1945—the late Andrei Vishinsky deliever a brutal 2-hour ultimatum to King Michael of Rumania for the ousting of the legal government of General Niculae Radescu (who later came as an exile to the United States and founded the League of Free Romanians). The Red army had already disarmed the police force, occupied the government's buildings and was patrolling the streets with tanks. Behind Vishinsky's arrogance and violence were the guns of Marshal Malinovski. Rumania was at that moment occupied by the Red army while 19 Rumanian divisions (336,334 men) were fighting alongside the Allies in Hungary and Czechoslovakia. It is under such circumstances that a Communist quisling government was imposed in Rumania.

The puppet government installed by Vishinsky was recognized in January 1946 by the United States and despite the bloody and fraudulent elections conducted by the Communists in November 1946, the United States signed a peace treaty with them, February 10, 1947. This treaty has been constantly and systematically violated by the stooge government in Bucharest. The human rights and political liberties of the Rumanian people have been absolutely destroyed. The military provisions of the treaty have been cynically infringed and the country transformed by the Soviet agents into a Russian base directed against the West. Notwithstanding the quisling Bucharest government has been received at the United Nations in December 1955 by means of the famous "package deal."

After the Hungarian uprisings the Russians have tightened even more their control on Rumania. A new wave of terror and persecution is reported from Rumania; arrests, deportations and the whole gamut of police vexations are mounting. The barbaric economic exploitation has greatly impoverished a country which was previously considered as the granary of Europe and possesses the most important deposits of oil on the Continent outside Russia.

Bulletin of Smaller Business Association of New England Reviews Report of House Small Business Committee

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the feature item of the Bulletin of the Smaller Business Association of New England, for February is a review of the final report of the House Small Business Committee for the 84th Congress.

This report of the Small Business Committee, which was accepted by the majority members of the committee, is a lengthy report and covers most of the principal problems facing small business. The report is 182 pages long.

I believe, however, that the Smaller Business Association of New England has given the report a completely fair and impartial review. Furthermore, the reviewer has shown considerable discretion and good judgment in pointing out those sections of the report which are most important where the small-business problems are most acute. I believe that this review, which follows, will be helpful to the Members in keeping the many small-business problems in their proper perspective:

REPORT OF HOUSE COMMITTEE ON SMALL BUSINESS

In a report released recently, the House Small Business Committee of the 84th Congress predicted that: Within 18 years, all manufacturing business and most of the distribution and service business of the Nation will be controlled by corporations having more than $100 million of assets—if small-business failures and big-business expansions continue at the rate of the past 5 years. Referring to increasing monopolization of the means of production the report shows that the corporate giants in manufacturing owned 47 percent of all of the corporate assets in 1951, now own 59 percent.

Reviewing the committee's studies in other fields, the report found:

In commercial banking, the 50 largest banks own 39 percent of the assets.

In life insurance, the 50 largest companies own 90 percent of the assets.

In public utilities, the 50 largest companies own 79 percent of the assets.

In transportation, the 50 largest companies own 92 percent of the assets.

Analyzing the economic factors behind the deteriorating position of small business, the report blames most of the small-business difficulties on the discriminatory tax structure and runaway big-business prices and profits.

Pointing to increasing profit rates of the top corporations, and a new upturn in the cost-of-living index, the report says:

"While advancing consumer prices in periods of acute shortages, as in the period of the Korean hostilities, are fully understandable, more difficult questions are posed by price advances in periods when most consumer goods are in surplus supply and, indeed, when farm prices are falling and producers of automobiles and other consumer durables are cutting back production."

Excessive big-business profit-taking is blamed for the so-called inflation and for restrictive credit policies which are squeezing small business.

The committee makes 21 recommendations as minimum steps necessary to save the American economic system of private competitive enterprise. These include proposals for progressive tax rates on corporate incomes, liberalized tax treatment of unincorporated firms, a full-scale investigation of corporate prices and profits, and antitrust law amendments to curb such things as discriminatory pricing practices and mergers. In a chapter on taxes, the committee concludes that big firms shift the corporate income tax to consumers and other economic segments, while this tax actually comes out of the pockets of smaller and more competitive firms.

The report finds that the Small Business Administration has supplied much propaganda but little help to small business: Several hundred SBA employees have set aside only 1 percent of the value of the defense contracts for small business, while small firms obtained 21 percent of the value without benefit of the set-aside. SBA's lending to small business was stepped up shortly before the November elections, but the 3-year total of its loans has been insignificant. In 3 years through June 1956, the World Bank had lent 16 times as much to finance projects abroad and the Export-Import Bank had lent 20 times as much for business abroad. The report states that aside from foreign nationals, these latter loans are principally of benefit to United States big business in financing their exports. For 7 years prior to its liquidation, the RFC lent more money to small business each year than the SBA lent in 3 years.

The report is also critical of SBA for failing to help small firms get a share of the Federal subsidies for research and industrial advancement. Referring to the Government as the biggest buyer of research, the committee said that Federal agencies are paying almost two-thirds of the country's total bill for research and development. The Department of Defense is giving out about $1.5 billion a year in such funds, but more than 95 percent goes to big business. Criticizing the administrative agencies for allowing big corporations to take out and control patents on Government-financed inventions, the committee said this: "Subsidy to bigness is contributing immeasurably to an already dangerous degree of industrial concentration."

The committee's 21 recommendations follow:

TAXATION

1. That the Internal Revenue Code of 1954 be amended to effect a substantial reduction of the corporate income-tax rates on small corporations, and, without reducing total Federal revenues from the corporate income tax, to impose a uniform system of progressive tax rates, so that corporations receiving

progressively larger net incomes will pay progressively larger rates.

2. That the appropriate committee review section 1031 of the Internal Revenue Code of 1954, and the regulations of the Commissioner of Internal Revenue pertaining to this section, and draft appropriate legislation to remove undue obstacles, if any, which stand in the way of unincorporated business firms making effective use of the provisions by which they may elect to be taxed as a corporation.

3. That the appropriate committees consider legislation to amend the Internal Revenue Code of 1954, either: (1) to impose the capital-gains tax on the owners of a business firm who sell the firm's assets in exchange for corporate stock, or (2) to remove the capital-gains tax in the case of such assets when sold for cash.

4. That the appropriate committees consider legislation to amend the Internal Revenue Code of 1954 to give the taxpayer the option of paying the estate tax over a period of up to 10 years, with reasonable interest charges, in cases where the estate consists largely of investments in closely held business concerns.

5. That the appropriate committees consider legislation to repeal the excise taxes imposed during World War II, or reimposed during the Korean period, and that the necessary revenue which these taxes might yield be provided for in setting the progressive rates on corporate incomes, as already recommended.

PRICES, PROFITS, AND CREDIT

6. That appropriate committees make an investigation into the causes of the continuing price increases, in the nonagricultural segments of the economy, to determine in what segments increasing prices are having their origins in shortages, and in inadequate productive capacity, and in what segments increasing prices are resulting from inadequate competitive restraint and unwarranted profit taking.

7. That the House Select Committee on Small Business in the next Congress consider the proposition that there should be created a Federal Small Business Bank, to have authority and capital equal to that which has been provided the Export-Import Bank for financing sales of capital equipment and new businesses abroad, to assist in the financing of small-business operations and expansion within the United States.

FEDERAL PROCUREMENT, BUSINESS ASSISTANCE AND SUBSIDIES

8. That the appropriate committees make a thorough study of the Government's policy concerning the acquisition and use of patents on inventions made as a result of Government-financed research and development work.

9. That early in the next Congress, the House Select Committee on Small Business consider and make a prompt recommendation on the question whether a special joint Senate-House committee, or a Special Joint Executive-Congressional Committee should be established, with adequate appropriations and staff for its purpose, to make a thorough investigation and study of the manner in which Government contracts for materials and services, grants of funds for research and development, tax amortization certificates, and other incentives and subsidies are distributed, and the policies and methods by which these contracts are distributed, with a view to determining the impact of Government contracting practices on the competitive structure of American business, and with a view to drafting appropriate legislation for, if need be, a fundamentally new approach to the problem of the Government acquiring necessary products and services.

10. That the Vinson bill to amend the Armed Services Procurement Act of 1947, which was passed by the House by a vote of 372 to 2 in the 84th Congress, be enacted into law.

11. That legislation be enacted establishing the Small Business Administration as a permanent agency and making the agency independent of the executive branch of the Government.

ANTITRUST AND TRADE REGULATION

12. That the equality of opportunity bill which passed the House (as H. R. 1840) in the 84th Congress by a vote of 393 to 3 be promptly enacted into law.

13. That section 4 of the Clayton Antitrust Act be amended to provide that, in the case of private damage suits arising from a violation of an antitrust law, the amount recovered in excess of the damages sustained shall not be treated as taxable income for Federal tax purposes; and that the tax liability for the damages collected be computed over the tax years in which the damages are shown to have been sustained.

14. That the laws authorizing the independent Federal regulatory commissions and boards be amended to provide that the chairman of each respective commission and board shall be selected by its members; and that the Budget Act of 1921 be amended to provide that the independent Federal regulatory commissions and boards shall make their requests for appropriations directly to Congress.

15. That the appropriate committees consider legislation to amend section 7 of the Clayton Antitrust Act to provide an automatic injunction against a merger of big corporations, above a specified size, until the law-enforcement agencies have first been notified of the proposed merger and have been provided with the market information necessary for determining whether or not the merger is likely to result in a "substantial lessening of competition or tendency to create monopoly," and these agencies are then given a reasonable period in which to determine whether legal proceedings will be brought.

16. That the Clayton Antitrust Act be amended so as to make cease and desist orders issued by the Federal Trade Commission, under this act, automatically final within 60 days unless appealed within that time.

17. That legislation embodying the principles of the freedom of choice in trade bill be enacted.

18. That the House Select Committee on Small Business in the next Congress make an investigation and study of the extent and competitive effects on small business of the present state of interlocking boards of directors among corporations and, in light of its findings, recommend to the appropriate committees legislation to modernize and make effective section 8 of the Clayton Antitrust Act.

19. That the recommendations of this committee in its report, entitled "Small Business and the Aluminum Industry," (H. Rept. 2954) be implemented and effectuated by the executive agencies of the Government having the administrative functions in these fields.

20. That the Small Business Act of 1953, as amended, be further amended so as to direct the Small Business Administration to carry out the intent of Congress and to discard the numerical definition of small business now used for procurement purposes, and set up in lieu thereof an industry by industry definition in accordance with and subject to all provisions of the act.

21. That the House of Representatives establish in the 85th Congress a Select Committee on Small Business.

Waste Not, Want Not

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by Mr. N. H. Bergstrom, president of the Bergstrom Paper Co., Neenah, Wis., entitled "Waste Not, Want Not." The address pictures quite vividly the program of a great paper industry—the progress that has been made not only with our reforestation program but also to the end of developing processes to use what historically was waste material.

WASTE NOT, WANT NOT
(By N. H. Bergstrom)

Today there is a wondrous stream of time, money, and effort being poured into our reforestation program. This deserves great commendation for its vision, being a program undertaken for the benefit not only of the present, but also for the benefit of the future.

But I sometimes wonder at our inconsistency, particularly when my tax bills are raised to build a new incinerator, and I see smoke, as from a forest fire, rising from the city dump. We spend thousands of dollars building massive incinerators whose yawning mouths will consume countless truckloads of trash and reduce it to a barren mass of ashes. I wish I knew how much fiber is destroyed along with this trash, or the number of square miles of forest it would require to compensate for the great amount of wastepaper destroyed at public expense. I do know one figure, 26 percent of the paper consumed in 1 year will find its way back for reuse.

The other 74 percent of wastepaper not collected represents the same amount of tonnage as the world consumption of paper, less that portion consumed by North America.

All paper consumed probably winds up in 1 of the 4 following ways:

1. Some is collected and reused.
2. Some is stored in libraries and files.
3. Some is lost via the sewer.
4. The rest is burned.

If we take a consumption of 34.5 million tons of paper in 1955 and subtract the 9 million tons reused; and say all sanitary tissue is destroyed via the sewer; and that paper which is stored in libraries and files eventually finds its way out where it could be collected, I think we would be able to hazard a guess that over 20 million tons of paper are burned each year.

The 26 percent collected represents the wastepaper industry which now, according to the best estimates, is pushing the 10-million-ton mark in the consumption of wastepaper.

Now, let's take a look at this industry. Comparatively little money is spent in research and practically none on an organized associated basis to salvage this material.

I do not in any manner wish to belittle the efforts of various companies and collectors who have energetically pursued the subject of increasing the use of wastepaper through research, whereby techniques and machinery have increased in quality as well as investment until today a deinking plant is really a pulp mill. On going through such

a plant, anyone who is familiar with a pulp mill will recognize that, if wastepaper is substituted for wood chips, the two processes are quite similar: cooking, multistage bleaching, screening and, in some cases, a continuous process instead of the historical batch process.

There is another similarity. At the present time the pulp mills are using woods which in the past were impossible to use. So, too, in producing white pulps from wastepaper we are now using types of paper which in the past had to be carefully sorted out. It is possible now to control the qualities of the finished wastepaper pulp in practically any phase of tests that you care to make, including strength. With the multiplicity of grades being sorted by the collectors at the present time, this blending for quality, coupled with the advances in pulping, deinking and bleaching, produces a white pulp with controlled qualities as desired.

The pulp producer has his contamination problems due to acts of nature: bark, cinders, knots, lignin, and so forth. The wastepaper pulp producer's contamination problems are manmade. They consist of those materials put on the paper by the graphic arts people, or put into the paper by the paper mills themselves; and those materials which are added to the paper by paper converters, who may apply them in almost any manner.

These additives are necessary to the growth and prosperity of the paper and paperboard industry without which markets would be very limited. Thanks are due to paper manufacturers, paper converters, and suppliers of chemicals, coatings, and plastics for widening the horizon of the industry.

On the other hand, these additives must be coped with by the users of wastepaper. Great strides have been made by users of wastepaper, aided by producers of chemicals and equipment, in developing processes to remove these additives and prevent them from interfering with production of, or impairing the quality of, pulps derived from wastepaper. Only recently have we been smart enough to realize that the easiest and most economical way to accomplish our objective is to change the additive itself, and thereby eliminate the difficulty. Even now, this has been accomplished in some cases. Better late than never.

Let me cite you a few successful examples. Less than 2 years ago, mills, printers, and converters were splicing paper with many kinds of adhesive mediums, all of which, when the waste was thrown back into the beaters, caused either specks in the finished paper or spots on the fourdrinier wire due to sticky substances.

Through the efforts of the Waste Paper Utilization Council, of which I will have more to say later, adhesive manufacturers were alerted to the problem. As a result, in a matter of months a splicing tissue was devised which is water soluble and yet adequate for use on nearly all presses and converting operations, including wet operations. Thus, this problem was eliminated. That was a quick and fairly easy one.

Another example. A hot melt plastic material was devised for binding magazines together. It was used by one of the larger magazines, with a great apparent saving in cost, only to discover that it made their magazines absolutely useless as wastepaper. As a result, they suffered the loss of the salvage value of their waste. In a great many cases, this waste is a large item in the profit and loss figure and sometimes equals their entire profit. Even today, these magazines must be thrown out because of the impossibility of identifying the good from the unusable magazines. That mistake will plague us for the next 10 years.

The bright side of this picture is that these mistakes are being caught rather rapidly, but they must be caught before they happen. Otherwise, I repeat, the collection system is contaminated with great loss to all concerned, including the producer of the waste.

The American Paper and Pulp Association was formed and exists, among other reasons, for the purpose of promoting the welfare of the paper industry by means of cooperation and communication, scientifically and statistically. It is a large complex organization with many divisions and subsidiaries. The wastepaper industry is in dire need of promoting similar objectives. It has made a start, but should expand and needs help to sell the idea, not only within itself, but among the industry in general, of doing the same type of thing as the A. P. & P. A.

For years, a committee of T. A. P. P. I. has been active in a study of the problems involved in the de-inking of printed wastepaper. In 1956, this committee published the fruit of its work in the form of monograph No. 16, outlining the basic principles of the de-inking process.

The committee is not resting on its laurels, but is setting up a research project to study the elimination of synthetic adhesives in de-inking processes. Other problems are to be dealt with in turn.

In 1931, the Waste Paper Institute was formed as a division of the National Association of Waste Material Dealers.

Prior to this time, there were only 10 classifications of grades of wastepaper. Through the efforts of this institute, there are now 43 grades with definite specifications. This resulted in having grades produced which could be used for blending to achieve certain qualities in the finished pulp, as mentioned previously.

In January 1953, the Waste Paper Utilization Council was formed here in New York through the efforts of the Materials Committee of the American Paper and Pulp Association. Its purpose was as follows:

1. To promote an increase in the use of wastepaper.

2. To gather, organize and collate a bibliography of information relating to the use of wastepaper.

3. To study the technical problems encountered because of the presence of various solids in wastepaper which interfere with the recovery of usable fibers therefrom; to determine where research is necessary in the solution of such problems; and from time to time, engage in special research projects in an endeavor to arrive at a solution thereof.

4. To cooperate and consult with industry organizations and with individual business organizations having problems similar to those set forth above.

5. To disseminate information concerning the use of wastepaper and the solution of the problems set forth above, to consuming members and associate members and to such other persons, firms and corporations as the executive committee of the council may from time to time determine.

It has three classes of membership: regular membership which consists of the consuming mills; associate membership, which consists of the collectors, brokers and jobbers; and advisory members, which have to do with the graphic arts and other technical organizations, such as adhesives and so forth. While this organization is not affiliated with the American Paper and Pulp Association, it has received a great deal of aid from it, particularly in its formative stages. This assistance has been greatly appreciated.

In spite of its youth and its very limited budget (around $40,000), its accomplishments have been phenomenal. Practically all of this has been done by effective communication. The aid received from its associate, and particularly its advisory members in research work and in the prevention of contamination has been excellent. Due to the youth of this organization and budget limitations, it has not done much beyond the work of the fireman in "putting out fires."

The basic need is in the virgin field of altering the concepts of many people in order to effect changes in present materials which contaminate wastepaper. Let me illustrate. The amount of pulp and paper consumed in producing milk cartons, ice-cream cartons, and similar items using paraffin is tremendous. I am convinced that with proper research a noncontaminating plastic could be devised so that this material could be collected after use and utilized for pulp. Milk cartons have long, strong fibers and would make a highly desirable deinked pulp with little loss in processing and so command a good price as waste. There is in Wisconsin a milk company using plastic-coated cartons. Unfortunately, they are not reusable. However, I believe the same thing could happen in this instance as happened in my earlier illustration of the hot-melt binding. The only work that has ever been done that I am informed of is an attempt at removal of the paraffin from waste with the idea of salvaging both the paraffin and the fiber. This appears to be a very difficult technical problem and so far has not been successfully solved.

The presence of contamination in waste paper and the expense of its removal is the chief item in the high cost of converting waste paper into pulp. This tends to limit the consumption of wastepaper by depressing its price in order to have it compete with virgin pulp. The cost of converting waste paper into pulp must be lowered in order to increase consumption and thus have a new incentive for collection of wastepaper.

From the beginning printing was based on the use of a pigment and an absorbing and drying vehicle. The pigment was carbon and the vehicle linseed oil. The combination is still in use. Its chief virtue is that it is cheap.

In order to deink papers printed in this manner, it is necessary to cook it with alkali and screen out the "fines," including the carbon. This alkali yellows the ground wood pulp, so we cannot deink newsprint.

After many decades, we still use carbon and linseed oil. Is it impossible to devise a pigment and vehicle just as satisfactory as these, yet removable with a simple chemical in the beaters? Must we continue to burn thousands of tons of ground-wood papers? Do you doubt that research can solve this problem? I do not.

If this could be accomplished, the waste newsprint and the finished product could both be produced close to the volume markets of consumption, with great savings in freight.

There is little hope of reducing the cost of converting appreciably except through the concept that all additives be such that they can be quickly and simply removed. That is, to me, the key which would enable the industry to pay more for waste and still be competitive with virgin pulp. The price paid for waste paper measures the volume saved. That is axiomatic. So much so that today wastepaper pickups are practically limited to large plants which generate waste. This waste must be picked up even if the collector has to be paid to burn it.

Bear in mind that while the trend of consumption of wastepaper has been upward, its proportion to consumption of wood pulp is downward. This trend should be reversed. Long-term economics dictates this.

On the basis of the Stanford report for the United States and the American Paper and Pulp Association's report on world per capita consumption, using straight line projection, we arrive at a figure of 54 million tons of paper and paperboard for North America and about 88 million tons for the world in 1975. Realizing that North America is already an exporter of paper or pulp, and trying to visualize where this tonnage came from; it seems to me conclusively evident that we ought to begin to think about con-

servation in terms of greater reuse of our waste paper. Our misgivings in regard to adequate supplies of pulp for the future could be allayed if we could raise that figure of 26-percent salvage of wastepaper today to 52 percent. This figure could be further enhanced by eliminating contamination which prevents the reuse of paper. Incidentally, such an achievement would have the further advantage of saving some tax money by cutting down on the size of our trash incinerators and the volume of trash collections.

We take great pride in our paper industry. We take great pride in the versatility of our product. Among other things, we brag about its usefulness and its economy. But let's look at the challenge presented by the usefulness of paper, seeing the overall economy of the reuse of waste paper. I submit, let's have "progress without contamination, for reuse."

The Federal Budget

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. WILSON of Indiana. Mr. Speaker, my home State of Indiana is in the very heart of grassroots America. People out there believe in the fundamentals on which this Nation was founded and has progressed. The same fundamentals guide them in their own personal conduct and in the management of their homes, their families, their lands, their businesses, and other activities with which they may be connected.

A keystone of their philosophy, Mr. Speaker, is commonsense economy in all operations, whether in their homes or in the local, State, and national governments they help to maintain. For a long time the people of Indiana have been worried about the national debt, about the size of our Federal budgets and many other problems incident to an ever-expanding Federal bureaucracy.

When the budget for fiscal 1958 was proposed, a budget calling for Federal expenditures of $71.8 billion, these people literally "hit the ceiling." Their demands for economy, for a downward revision of the budget, have poured into Washington from all corners of Indiana. My own mail from folks at home now is the heaviest it has been during my entire 17 years of service in this great body, and most of that mail demands budget cutting and a more realistic pattern of Federal spending.

My eight Republican colleagues from Indiana are getting similar protests and in great quantities. They share very deeply the concern of their constituents. They are experienced and conscientious Members of this great Chamber, and they feel that substantial economies in this 1958 Federal budget can be effected and are very much in order.

We Republican members of the Indiana House delegation recently met and drafted a statement expressing our belief that the budget can be reduced without damaging the economy or the security of the country. Our delegation is committed to this drive for economy as the following statement will indicate:

The Indiana Republican delegation in the United States House of Representatives, after careful study and evaluation, has unanimously agreed that a substantial reduction of the $72 billion Federal budget will be in the best interest of the people of the United States.

It was further agreed that every proposed reduction in the budget, which does not curtail essential services or endanger the security of our country, will be supported.

This action is in accord with the admonition of President Eisenhower and Secretary of the Treasury George M. Humphrey that Congress exercise its independent control over Government spending.

CHARLES A. HALLECK, 2d District; F. JAY NIMTZ, 3d District; E. ROSS ADAIR, 4th District; JOHN V. BEAMER, 5th District; CECIL M. HARDEN, 6th District; WILLIAM G. BRAY, 7th District; EARL WILSON, 9th District; RALPH HARVEY, 10th District; CHARLES B. BROWNSON, 11th District.

Inaction in Hungary Issue

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of an article by Bishop Dwyer, of Reno, Nev., regarding the inaction of this country in the case of Hungary, and taken from the January 12 issue of the Tablet:

SCORES INACTION IN HUNGARY ISSUE—RENO PRELATE DECLARES AMERICANS ARE LAZY AND INDIFFERENT

(By Most Rev. Robert J. Dwyer)

Shakespeare's phrase for it would be the "expense of spirit in a waste of shame." It exactly describes the magnificence of Hungary and the ignominy of the rest of us.

Here, for anyone who cares about such things, is the supreme example of heroism in our age, the test case of the meaning of Christendom, the most glorious vindication of the human spirit we have known.

The classic instances, Thermopylae, Pickett at Gettysburg, the defense of the Alcazar, fade as the stars before the mounting sun. Here is an expense of spirit so lavish as to enrich all history.

But then, by contrast, our wasteland of shame. We have cited all the prudential reasons why we should work through channels; we have marshaled all the arguments for avoiding a world conflict of incalculable risks and dangers; we have even called upon the moral theologians to assure us that no revolution, however just, should be undertaken without reasonable hope of success; but the fact remains that while we have been talking a nation has been murdered.

NOTHING BUT TALK

Our shame is that we have been able to do nothing but talk. But it goes deeper than that. It lies in the fact that we have allowed ourselves to be maneuvered into our present embarrassment, and that we did so pretty well with our eyes open.

It might have been foretold by anyone with a glimpse of vision that the precise concatenation of circumstances we accepted would produce the precise results we now so grievously deplore.

There would have been no need for a prophet; a mathematician would have done as well. William Lloyd Garrison's burning words, "A covenant with death and an agreement with hell," may have been abolitionist rhetoric, but they could well serve as a plain unvarnished statement of what we let ourselves in for when we signed on the dotted line at Yalta.

BLAME SHARED BY ALL

There is not much point now in trying to foist the total blame for the great sellout on certain individuals, living and dead. If we were to assess it completely, we might have to go back much farther than the hypothetical rivet in grandfathers' neck. Blame Karl Marx for Stalin, blame Mr. Secretary Cecil for Winston Churchill, blame William James for F. D. R.

It is a line of reasoning which obviously gets nowhere, for the simple reason that it ignores the blunt fact of personal responsibility.

If there is blame to be assessed, it is to be shared by all of us. We consented to the fact. We were too lazy, or too indifferent, or too occupied with making money to bother our heads about it.

We consented to a world half free and half slave, and we entered into a compact with the slave power which literally bound us to the maintenance of that peculiar institution over one-quarter of the habitable globe.

We dressed it up with pious phraseology, of course, to placate the ghost of Father Abraham, and we even (God forgive us) talked about the new types of collective democracy. We knew what we were doing. Now we are paying the price.

IDEALS BLASPHEMED

Not that we are suffering physically. Our gas supply is not rationed, our cities are intact, our holiday crowds are not being machinegunned. All these things are happening in Hungary, and Hungary is a long way off.

But we are suffering in our conscience. It comes home to us that this is actually the result of our doing. We have blasphemed the ideals that are the most sacred inheritance of America, and now they rise up like blood-stained furies to haunt us.

We open our gates to 25,000 Hungarian refugees, and every one of them is a living reproach to the criminal stupidity that ruined them.

In a few more days we will celebrate the Christmas of 1956. We will sing the old carols, recalling the eternal hope of peace on earth to men of good will. We will salve our conscience with the reflection that if there is precious little peace and even less of good will, we at least are not wholly to blame, and even if we were, there is nothing we can do about it. Which is, precisely, to miss the entire meaning of Christmas.

For the whole point of Christ's coming is that we are to blame for our sins and that we are responsible for the world we live in. The Nativity was not a sentimental gesture for our comfort but the divine answer to our absolute need for salvation. Christ came not as a gentle visionary but as the supreme realist to change the face of the earth.

Christianity is actually far less theory than it is the stern practice which places the burden of justice and charity exactly where it belongs, in the hands of each individual. Our Christmas joy would necessarily be incomplete were even one human soul denied its God-given liberty. With Hungary in agony and half of Christendom ensalved this is a Christmas more of hope than of joy. May that hope come quickly, as the day star from on high.

Resolution in Support of the Jenkins-Keogh Proposal

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. COLLIER. Mr. Speaker, from time to time legislation has been proposed to permit the many self-employed professional people of this country to establish retirement income plans which most of the citizens of the Nation now enjoy.

Up to this time the Congress has not provided for any arrangement which enables our professional people to participate in such a plan. I believe that the failure to recognize the need for equity of such legislation is a discriminatory condition.

I have received recommendations from numerous of my constitutents who are in professional fields suggesting that they be permitted to establish retirement income plans or funds for themselves as individuals under the same tax equities that are now provided for the beneficiaries of corporation-sponsored plans. May I point out further that this would relieve the professions of this discriminatory tax inequity and permit them to establish savings funds which would substantially foster the anti-inflationary policies of the Federal Government.

I quote herewith the resolution offered in this connection by the Illinois State Dental Society, to wit:

Whereas the members of the Illinois State Dental Society feel that it is unjust and inequitable for the self-employed not to be granted tax equality with the employees of corporations in connection with amounts contributed to retirement and pension plans: Therefore, be it

Resolved, That the members of the Illinois State Dental Society do favor the principle of the Jenkins-Keogh proposals, H. R. 9 and H. R. 10, to give self-employed individuals comparable rights to tax savings on amounts contributed to voluntary pension or retirement programs to those enjoyed by corporate officials and employees; and be it further

Resolved, That the membership of the Illinois State Dental Society urges the 85th Congress to act favorably and promptly upon this proposal.

May I add that the Chicago Dental Society has also prepared a similar resolution adopted by its board of directors urging the support of H. R. 9 and H. R. 10, which follows:

Whereas self-employed persons such as the members of our profession are not permitted to realize the tax benefits that are available under the Internal Revenue Code to officers and employees of corporations with respect to funds placed in private pension and retirement programs; and

Whereas this is patently an unjust discrimination; and

Whereas the recently proposed H. R. 9 and H. R. 10 introduced by Representative JENKINS, Republican, of Ohio, and Representative KEOGH, Democrat, of New York, embody the principles that have underlain similar bills introduced by these two men in the past several years and gained the approbation and support of both major parties, of the President, of our leading tax authorities and millions of self-employed persons; and

Whereas we feel that the plan has been instituted in other countries and found workable and feasible and because it is a sound program of saving and providing for future retirement funds which is of advantage to the country at large as well as the particular individuals involved; be it

Resolved, That the Chicago Dental Society support the principles of H. R. 9 and H. R. 10, sometimes referred to as the Jenkins-Keogh proposal and urges the Congress to enact it into law.

Mr. Speaker, it is my hope that the other Members of this Congress will appreciate the need and justice of such legislation and will wholeheartedly support these bills when they are reported out of committee.

What Can Be Done To Lighten Workload of Congressmen?

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, heretofore granted, I am pleased to insert herewith a copy of an editorial which appeared in the Monday, March 4, 1957, issue of the Birmingham (Ala.) News, one of the fine daily newspapers of my district. It is felt that the Members of Congress will derive some satisfaction from the fact that there are others who realize that the life of a Congressman is a difficult one:

WHAT CAN BE DONE TO LIGHTEN WORKLOAD OF CONGRESSMEN?

Only a casual following of Washington news should be enough to bring realization that our Congressmen face a tremendous workload. Many Americans must wonder how Senators and Representatives prepare themselves to pass upon the numerous matters which come before them. The lawmakers themselves well realize they are often hard put to it in trying to do that.

The Senate Government Operations Committee recently reported that Senators are overburdened with work. This group said its studies showed that between January 5 and July 27, 1955, 7,250 legislative proposals were considered in committee meetings. It is in such sessions, the report pointed out, that more than 90 percent of the work in the legislative process is done.

But on most of the days in this period the Senate itself met for an average of 6 hours daily.

Of course, besides Senate and House meetings and committee gatherings, many other demands are made on the time of Congressmen. They need much private study. They must try to keep up with conditions especially affecting their constituents. They have many callers. They have much correspondence. They ought to have recreation and exercise. They have social obligations.

How well members stand up to all these demands is impressive.

Of course, the committee system is essential. Obviously every Congressman cannot give detailed, exhaustive study to every matter upon which he may have to vote. The committees carry out most of such consideration. Subcommittees deal with many assignments.

In the whole process, naturally, lawmakers come to have especially broad knowledge of certain subjects. Much reliance is placed on such knowledge.

Even so, great numbers of proposals eventually must be voted on by Members of Senate and House generally. Of course, they all desire to be as well informed as possible. How can efforts to that end best be pursued?

Every Member must, of course, strive to solve his own problems in this regard as well as he can. How can a conscientious Member avoid much stress and anxiety in striving to do so?

The Senate Government Operating Committee recommended consideration of possible Senate rule changes so that more time would be available for committee work.

"The committee feels," it said, "that, in view of this situation, appropriate action should be considered in order to develop a better balance of time between sessions of the Senate and committee members so as to speed up, improve and bring about better coordination of the legislative process."

The committee recalled that Congress in 1946 considered a study group's recommendation that the Senate and House meet every second day instead of daily, as it now does in many weeks.

We agree that fresh consideration should be given to this whole problem. We don't think any complete solution is going to be found. In the nature of things, our Congressmen are bound to carry heavy loads. But things can be done to improve procedures and rules. Fewer full meetings of Senate and House may be feasible and conceivably could help a lot.

Timely Salute to a World on Wheels

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MACHROWICZ. Mr. Speaker, we are all familiar with the maxim, "distance lends enchantment," but today I would like to paraphrase that with: "distance sometimes lends distortion." For I submit that all too often we lose sight of what reciprocal trade really means to nations less fortunate than ours.

I was reminded of this recently by an unusual advertisement which appeared in the Detroit newspapers. The advertisement, entitled "Timely Salute to a World on Wheels," appeared on behalf of the Watchmakers of Switzerland, a trade group representing the Swiss watch industry. It pays tribute to our great automotive industry and to the technological skills with which we have consistently produced the very finest automobiles. In the words of the advertisement, the industry's new cars have been winning "a paean of praise for automotive genius that is purely American."

But the ad goes beyond simple praise of our autos. The Swiss watchmakers contend that the superiority of our cars is the direct result of the industry's fierce competitive spirit and constant striving to make a better car. And free competition is the soil that flourishes and the

spur that inspires the desire to make only the best. Although typically American, the zeal to do it better is found equally in other lands, too.

As a Member representing the industrial section of Michigan, home State of our great car and truck industries, I am naturally pleased to see this recognition by a foreign trade group. However, it is not pride alone but a sense of our own self-interest which compels me to speak on the subject. For Michigan has an abiding and profitable relationship with Switzerland and trade statistics prove that so does every other State in the Union.

With the exception of New York, Michigan sells more products and goods to the Swiss than any other State; Switzerland purchases about $15 million worth of Michigan goods yearly, including machinery, metals, metal goods, autos, and trucks. And it is worth noting that the Swiss buy our products with cold cash—in fact, she is our best cash customer in all Europe.

The principle of sound commercial relations with other nations is not new to us, of course. In a very real sense America owes its existence as a strong and independent nation to the concept of free trade. Our Founding Fathers, concerned with our economic growth in the critical years following the Revolution, laid down the basic tenet that favorable and friendly commercial dealings with other lands spelled economic prosperity, independence, and peace for our country. In our own time we can point to the reciprocal trade policies formulated and developed by Cordell Hull, and others, as the logical continuance of those farsighted trade principles.

A true yardstick of the value of our reciprocal trade program is eloquently demonstrated by the trade growth between United States and Switzerland since the Reciprocal Trade Treaty was signed in 1936. In the previous year our trade with the Swiss amounted to only $7 million. It has since jumped 2,200 percent, with the Swiss buying a half-billion dollars or more from us in the last decade. In the first 11 months of 1956 Switzerland sold $150 million in goods and products to us; they purchased $191 million worth of American products in return. Thus, in terms of what this means to both peoples—a better standard of living, a happier way of life—the reciprocal trade concept stands as a basic necessity in our way of life.

But there are those who seek to subvert this tried and proven trade practice to their own narrow interests. In Switzerland's case a powerful group of protectionists has inspired our Government to impose a series of restrictive and punitive measures against Swiss watch imports. Beginning with the 50 percent watch tariff increase in 1954, this protectionist campaign has now culminated in the demand that watch quotas be instituted, under the highly questionable premise that our watch industry requires protection because, supposedly, it is essential to defense.

We should all be seriously concerned with this flouting of our official trade position of trade, no aid, because it is far from an isolated case. A survey by the respected Journal of Commerce reveals that in 1955 more than 11 percent of Western Europe's exports to the United States faced trade restrictions. We challenged $257 million worth of shipments of the total exports of $2,293 million from Western Europe's 13 countries. English woolens and bikes, German clocks, French woolens, Italian cheese—these and other items faced our trade barriers aimed at their exclusion in 1955.

Recent amendments to our trade laws reflect this dangerous appeasement of the high-tariff forces within our country. The peril-point and escape-clause provisions, the essentiality amendment, the quotas on woolens and cottons, the tariff increases on watches and bicycles—all imposed in the belief that they will alleviate whatever ills our corresponding industries are suffering from—do untold harm to our allies and the other friendly nations overseas.

It would be something less than naive, however, to expect these countries to face our trade harassments without some action in return. In a word: retaliation.

Already there are indications that the west European nations are joining together to protect their commercial trade against tariff restrictions. I refer to their current activities to form a common market, in which the member nations will enjoy very low, and, eventually, no tariff restrictions on their exports to each other.

And in a more specific instance, last July the French Parliament passed a law which levies an annual tax of 100,000 francs, or $287, on automobiles with 16 fiscal horsepower and over. Significantly, the tax affects mostly American-made automobiles in France. It should be noted without comment that we protested to the French that the tax was discriminatory, but to no avail.

Representing Michigan, I am especially concerned over these recent developments because our auto industry will be among the first to be affected by a high tariff war. One need not be a genius in economics to realizes that this kind of action opens the way to trade discord and hardship for all parties.

The Swiss watchmakers' ad implies that only through the pressure of free competition will a product be forced to compete at its very best—to the benefit of consumer, industry, and nation. I am in complete agreement with this viewpoint. I say that a superior product, be it a watch, bicycle, automobile, or whatever, should not be penalized for the very thing that makes it noteworthy—namely, its excellence.

In the area of economic trade, I find the golden rule to be quite applicable—let us do unto our trading partners as we would have them do unto us. From World War II we gained the lesson that we cannot live in political isolation. Today it is equally essential that we learn we cannot live in economic separation either.

It Is a Matter of Simple Justice to the Colleges of the Nation That the Federal Government Pay at Least a Part of the Cost of Providing Facilities for the ROTC Program

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. VAN ZANDT. Mr. Speaker, I have recently introduced as H. R. 3419 a bill which I believe merits the study and support of all Members of the House.

This bill would strengthen our officer-training system for the Armed Forces, and also greatly help more than 300 of our colleges and universities meet their pressing-demands for space and facilities.

The legislation would provide Federal aid for the construction of Reserve Officers Training Corps facilities at the more than 300 colleges and universities—public and private—which maintain ROTC units of the Army, Navy, and Air Force.

At present the Federal Government—which relies on the ROTC as its principal source of officers, both for the Regular and Reserve components of the Armed Forces—pays no part of the cost of supplying classrooms, office space, drill fields, storage space, and the like for this program.

The colleges are responsible for construction, repairs, and maintenance of all facilities, storage space for supplies and equipment and, in the case of the Army, for providing personnel to have custody of the equipment.

The armed services furnish only military instructional personnel, textbooks, and equipment.

It may come as a surprise to many Members of the House to know that a survey conducted in late 1955, through the cooperation of 5 associations of colleges and universities, revealed that the ROTC program was then using space valued at more than 190 millions of dollars in our colleges and universities.

This was on the basis of full-time use of space.

This is a conservative figure as a few institutions did not respond to the survey.

The same survey also showed that between 1950 and 1955 the institutions reporting graduated nearly 135,000 students from the ROTC program of all services.

Of these, more than 71,000 completed the Army ROTC program for commissioning. More than 51,000 the Air Force program and more than 11,500 the Naval ROTC program. These, again are conservative figures.

All these young men assumed an obligation to serve from 2 to 3 years in the armed services and most of them did so serve.

Aside from the comparatively small number in the Navy's Holloway plan pro-

gram which pays the tuition fees and subsistence of its students, none of these men received any support from the Federal Government during the first 2 years of their program and approximately $30 a month during the academic year in the last 2 years.

The colleges supplied all instruction, except that in military subjects in addition to all facilities.

Mr. Speaker, there is no possible controversy or difference of opinion about Federal aid to education involved in H. R. 3419.

It is a matter of simple justice that the Federal Government pay at least part of the cost of providing facilities for a program which supplies most of the officers for the National Defense Establishment, Regular and Reserve.

We all know of the tremendous problems our colleges and universities face in providing facilities and staffs to meet present and future needs.

We are all concerned about the shortages in science, engineering, and other critical fields.

Enrollment in these fields has been increasing sharply, I am happy to say, in the past 3 years.

Both the Scientific Manpower Commission and the Engineering Manpower Commission now say that the most acute problem is not one of arousing the interest of potential science, engineering, and other students, but of providing facilities for their instruction and staffs to teach them.

All types of institutions of higher education involved in the ROTC program are united in the support of legislation for the general purposes indicated in H. R. 3419.

Late in 1955, the American Council on Education conducted a poll of ROTC institutions of all services which was jointly sponsored by the council, the American Association of Land-Grant Colleges and State Universities, the Association of American Colleges, State Universities Association, and the National Catholic Educational Association.

Ninety-five percent of all institutions expressing an opinion were in favor of ROTC facilities legislation.

It has been approved in principle by the Reserve Forces Policy Board of the Department of Defense and by the Army, Navy, and Air Force separately.

There are differences of opinion as to one or two features of the proposed legislation.

H. R. 3419, as introduced, provides that Federal funds would be available to match up to 50 percent of the cost of construction of ROTC facilities.

Some institutions feel that the Federal Government should pay 100 percent of the cost for such a national defense program.

My bill does not carry a retroactive feature.

I understand that some institutions believe that the legislation should be retroactive to 1945 when the Navy in installing its present ROTC program, made a commitment to seek legislation to provide Federal aid for half the cost of the facilities the colleges were asked to construct or furnish.

The arguments pro and con on these points can be considered by the Armed Services Committee and this House during hearings on the legislation and a decision reached as to what should be done.

My personal opinion is that the legislation should be made retroactive by suitable amendments.

I am unaware of any disagreement as to the general merits of the legislation in some form.

We have a well-established policy of providing aid for training facilities for our Reserve components and we should have such a policy in respect to the facilities for training officers for the Reserve and Regular components.

If this legislation is adopted the colleges and universities will still be carrying a major portion of the cost of the ROTC program by providing maintenance and upkeep of facilities and all instruction except that of a strictly military nature.

At the service academies the Federal Government pays 100 percent of the cost of training officers.

The cost of this legislation will not be high and will be spread out over a period of years.

Survey results indicate that on a matching basis the cost would not exceed an average of $10 million a year over a period of 8 or 9 years even if a retroactive feature were included in the bill.

We have already authorized $500 million for Reserve facilities and legislation is pending to raise this to $750 million.

I hope sincerely that the Department of Defense will provide an early and favorable report on this legislation in order that it may have full consideration by the Armed Services Committee at an early date.

Your Finest Investment

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. COOLEY. Mr. Speaker, on Wednesday evening, February 20, 1857, in the Rick Hotel in the city of Rocky Mount, N. C., the Junior Chambers of Commerce of Nash and Edgecombe Counties held a joint meeting. This meeting was unique in that perhaps it was the first time that several junior chambers of commerce had met in joint session for the purpose of awarding distinguished service awards to young men who had distinguished themselves in the field of public service. Special and select committees were appointed and charged with the responsibility of selecting the young man of a particular community who had rendered great and distinguished service in his community during the year 1956. We have 4 junior chambers of commerce in the 2 counties. One is located in my home town of Nashville, N. C., the others are in Spring Hope, Rocky Mount, and Tarboro. As strange as it may seem, when the selection of the secret committee had been made public and the names had been announced, one was a preacher, one was a lawyer, one was a doctor, and one was a farmer. The place of the meeting was ideal for the reason that the city of Rocky Mount is located in both Nash and Edgecombe Counties. The main street is the dividing line between the two counties and incidentally between two congressional districts. The young men receiving the distinguished service awards have all rendered such outstanding and distinguished public service that their selections met with enthusiasm and approval. All of them have rendered great public service in many activities and endeavors which have reflected great credit upon themselves, their families, and their communities. I am certain that these fine young men will continue to make great and grand contributions to the welfare of the people of the communities in which they live. I commend and congratulate them upon their splendid achievement.

Frequently, on such occasions people prominent in the political life of either State or Nation are invited to deliver the principal address, but for this great meeting the program committee selected a very fine representative of industry, Mr. Merritt D. Hill, general manager of the tractor and implement division of the Ford Motor Co. At the awards banquet Mr. Hill delivered one of the finest speeches I have ever heard, and I take great pleasure in presenting this splendid speech to the Members of Congress in the hope that it may be read by people throughout the Nation. The speech was well prepared and extraordinarily well delivered. The title of the speech was "Your Finest Investment."

On behalf of all the people of both Nash and Edgecombe Counties, I want to thank Merritt D. Hill, of the Ford Motor Co., which he so well and ably represents, for having accepted our invitation to visit our State and to deliver the principal speech at this very unique meeting. The banquet hall was packed and jammed and everyone present and all of those who listened over the radio will long remember this splendid address.

YOUR FINEST INVESTMENT

(By Merritt D. Hill, general manager, tractor and implement division, Ford Motor Co.)

Thank you very much, Mr. Davenport, for your introduction and for the many other kindnesses which you and your committee have shown.

We have so many people in our organization who speak so warmly and enthusiastically about Nash County and the fine people of Nashville and Rocky Mount that tonight I am a stranger who feels right at home.

Back in 1950, a fine motion picture was made in Nash County and the premiere of that picture was one of the most unusual ever staged. It was a picture about agriculture and about farm folks and how they were progressing under the guidance of the land-grant colleges. So instead of holding the premiere in a big city before an audience of top Government officials, it was

decided to keep the premiere in character with the picture. And it was held near the site where part of the picture was filmed—in Nashville. And the Government officials were brought to Nashville.

Unfortunately I could not atend. It was decided that someone had to stay home and keep shop. And I was stuck. But I was told that you folks in this area turned in a tremendous job. Our people still say that if you want to experience cooperation and hospitality of the highest order, you need look no further than Nash County, N. C.

Some 15,000 folks came to town that day to see the tremendous parade that your local committees organized and to see and hear a star-studded official group headed by Congressman COOLEY, the Secretary of Agriculture, several governors, and scores of other Washington dignitaries.

Dearborn Motors Corp., which enjoyed this fine cooperation from you during the premiere for Waves of Green, no longer is in the farm machinery business. Those activities have been taken over by the tractor and implement division of Ford Motor Co. But there are many now in the Ford organiaztion who recall with pleasure the areawide wave of cooperation and enthusiasm which was extended to that very successful and pleasant film premiere nearly 7 years ago.

A year ago last June, a favorite son of North Carolina came up to Michigan and participated in the ceremonies dedicating the farm machinery research and engineering center which we were opening up near Birmingham.

In a speech made before Henry Ford and others in a large group of leaders in business and industry, he did quite a selling job on his favorite subject.

I do not need to tell you folks that when Congressman HAROLD COOLEY winds up and takes off on the subject of keeping the record straight about American agriculture, he really lays it on the line. And I am sure you know him well enough to make a sizable bet that he would not overlook the opportunity to touch on one or two Democratic points for the benefit of that largely Republican audience. And you would have won that bet.

But the burden of what Congressman COOLEY had to say that night transcended all party lines and interests. He put forth most eloquently the need for a public-relations program for agriculture, the need for all friends of American agriculture to join efforts in seeing to it that the public had a better understanding of the farmers' key role in our way of life.

And those of us in that audience that night felt that his message pointed up a great national need. In fact, action on a number of the points he suggested already has been taken.

Tonight, it is my pleasuree to return the visit of your genial and able Congressman and talk with you on another subject that transcends political parties, regional preferences, or even national interests.

Tonight I would like to talk with you about your finest investment. First, let me say that while I lost one of the prime requisites for membership in the junior chamber of commerce nearly 20 years ago, the years have served to strengthen one conviction which I have always held. And that is, there is nothing that cannot be done, and done better, by your generation than it has ever been done by a previous generation.

At a time when America's industrial might, her electronic machines, her matchless economic expansion are demanding more and keener leadership manpower, we can be thankful indeed for organizations like the junior chamber of commerce. It is here that young men have ample opportunity to grow and develop into the kinds of leaders that our Nation must have.

Tonight, as you present the Man of the Year awards, you symbolize a new awareness that business as usual is not enough. You recognize the close relationship between business achievement and community service.

The Jaycee program has been summed up by the phrase, "Young men learning civic consciousness through constructive action."

Young men—young in the sense of having reached maturity yet still being youthful in the world of the community and in the world of business. You are members of the only comparable organization in the world which stresses youth as its unique characteristic.

Young men learning—learning skills and habits in the Jaycees that will serve you well for the rest of your lives. The continuing education you get through this organization will be one of your most treasured assets.

Young men learning civic consciousness. Graduates of the Jaycees are noted for becoming leaders in all phases of civic activity.

And when you learn through constructive action, you put your lessons to work. You learn to build up, rather than tear down. Throughout the world, members of the Jaycees are recognized as specialists in getting things done—and getting them done well.

In short, we might say that effective participation in the Jaycee program can equip you to make your finest investment.

How do you go about making your finest investment?

It's very simple. Those being honored here tonight, as well as some of the rest of you, already have paid the first installment.

Stated simply it is this: Invest your life in the lives around you. It's a short phrase, but it encompasses virtually every decent and worthwhile motive of mankind. Invest your life in the lives around you.

Our very presence at this event tonight is testimony that this principle has made great strides in the business life of this Nation. Most of you represent a business firm, a firm that recognizes that as a Jaycee you can make a stronger contribution to life in your community. Your membership attests to that.

Just as isolationism is a thing of the past for our Nation, so is the viewpoint that business has no responsibilities outside of the profit and loss ledger. Our society is too closely interwoven, our business, our recreation, our civic, and our worship ties are too intertwined to permit anything resembling complete independence of action and interest.

Farsighted men who are leaders in our professional, industrial, and business fields recognize this interlacing of interest. And they have been moving more and more in the direction of actively supporting such basic institutions as our educational system, our hospitals, the agencies which support our health and welfare programs, and, yes, constructive politics.

Perhaps it is on the community level where this new awareness of corporate citizenship is most apparent. Any businessman who sincerely wants the good will and respect of the community in which he operates must earn that good will by being a good citizen and a good neighbor in that community.

Ford Motor Co. considers this activity so important that we have established 45 community relations committees composed of the top company managers in cities where the company has sales or production operations. The job of these men is to see that Ford Motor Co. plays its part—financial and otherwise—in maintaining and improving the welfare of the entire community. Our people are encouraged to become active in civic affairs, to joint worthwhile organizations, and to provide leadership, if it is wanted, for various community projects.

Today, business has a golden opportunity to demonstrate that it has a heart and a conscience. Many companies have developed elaborate programs of civic aid.

In Chicago, the Marshall Field department store has a special vice president in charge of civic affairs.

In Houston, each year the Humble Oil & Refining Co. lends a full-time staff of 100 Humble employees to help organize the united fund drive.

In Seattle, Boeing Airplane Co. lends six of its bright young executives to the Seattle Community Chest. The company pays their salaries for the 3 months spent in organizing plant solicitation drives.

In Atlanta, Richard H. Rich, head of the city's major department store, keeps a careful check on how active in civic affairs are his supervisory people. "The minute a man or woman becomes a supervisor," said Rich, "we urge him to get into civic work. We believe it is part of good leadership to be a good citizen."

Out in Los Angeles, Vic Carter, a hardware merchant and banker, was so busy that he had to make a choice. And that was, either cut down his civic activities or his business. His decision—he sold one of his business interests to allow him more time for community affairs.

Gentlemen of the business world, don't let anyone in this age of enlightened businessmen get away with the general accusation that business has no heart and no conscience.

The battle is by no means over. There undoubtedly remains a small, hardheaded minority of businessmen who have not yet seen the light. And almost as bad are the letterheaders—the fellows who believe they have fulfilled their civic obligations by lending their name to civic programs without lending their time and interest. But we can be grateful that they are in the minority.

In recent years there has been a noticeable and welcome increase in the numbers of young men who are sharing the load, and experiencing the warm satisfaction of civic service. And tonight we certainly have with us this area's finest examples of young men who are serving their community.

I am sure that both you and the firms you represent have learned that civic service pays dividends far beyond its contributions to your community. You have found that it gives you invaluable experience, that you have an opportuntiy to meet top people on a common ground, and that you have learned to talk and think on your feet and to meet people easily. These are the byproducts of civic service. These are extra dividends from your finest investment.

Your officers tell me that a No. 1 program of the Jaycees in this area is to help bring new industry into this section of the country.

I am confident that already you have explored the possibilities of cooperation with other organizations and firms which also have an interest in such a program. Such firms as the local light and power companies and railroads often are willing to contribute money and manpower. In Michigan, we have an industrial development commission which serves to coordinate efforts to attract industry. But often it is the spark of enthusiasm from an organization such as yours that is required to ignite the flame of progress.

The technique that seems to work, judging by the progress made in other States such as Georgia and Florida, is that of coordinated effort. Attracting industry involves a broadgage promotion and advertising program. And to be done on any scale designed to get substantial coverage, requires a first-rate job of organization and coordination.

Frankly, I am no expert on new plant locations. This has come to be a very exacting science involving exhaustive studies. But I can tell you this. There is no more important characteristic of a good industrial location than the business climate of that community. And the most important ele-

ment of the business climate is people. Yes, people.

And I don't mean simply how many people there are to supply the labor needs. I mean, how do the people feel toward industry; how do they feel toward their community? Is it a well-adjusted, progressive community with a proud record of accomplishment as a community?

It seems to me that by the attitudes indicated in this group tonight, in the high regard in which you hold public service and community spirit, you most certainly have, or can have, a business climate that would be most attractive.

Let's look at another area in which business is demonstrating that it has a heart and a conscience. I refer to the vital field of education.

Within the memory of many of us in this room there was a day in which a majority of business firms felt that the taxes they paid more than covered their responsibilities for educating our young people.

Today, the tax money still flows. But no thinking business man believes that he has no further obligation to education. He knows that a better educated America means higher standards of living that will require more and more of the goods he produces. He knows that his business operations of tomorrow and the day after tomorrow will be only as efficient and as progressive as are the people who operate it—the educated people who operate it.

I am very proud of a recent step taken by Ford Motor Co. when it gave Henry Ford's home, Fair Lane, the surrounding grounds and a sum of $6.5 million to the University of Michigan. It will be used for the creation of a branch of the university in Dearborn.

This gift is unique in the annals of American education. It is an excellent example of the steadily increasing cooperation among business, government, and education.

The third area of citizenship in which business has an important stake is politics.

A young bachelor friend of mine is quite a politician—in a rather specialized sense of the word. Some time ago I walked into an airport terminal and found him feeding quarters into one of those machines that automatically issues $5,000 insurance policies for anyone making a flight.

"What's the idea of taking out all those insurance policies?" I asked. "You aren't even married."

"I always do this when I take an air trip," he explained. "I send a $5,000 insurance policy to each of my girl friends, naming her as my sole heir. You'd be surprised how well I make out with those girls when I take them on dates next time I'm in town."

His is not the type of politics that I recommend to men in business. I refer to a deep concern for good, responsible government. And while a company as such may choose not to take sides in local issues, certainly as an individual the modern businessman will want to take an active role in deciding the issues of the day. And he will encourage his associates to make their voices heard in politics. With government reaching into just about every facet of business as well as personal life, he can and should do no less.

It is one area in which his interest and his efforts can be used to insure that our hard-won American ideals will not succumb to indifference and inaction.

The sooner that American businessmen learn that politics is not a nasty word, or a sleazy game played only in smoke-filled rooms, the more healthful for the growth of business will be the political climate.

Way back in 370 B. C. the Greek philosopher Plato wrote in his The Republic, "The punishment that the wise suffer who refuse to take part in the government is to live under the government of worse men."

And in our own time, over 2,000 years later, the same sentiment was expressed by President Eisenhower when he said, "Our American heritage is threatened as much by our own indifference as it is by the most unscrupulous office or by the most powerful foreign threat."

Yes; we businessmen have a vital personal interest as well as patriotic interest in politics and in good government.

There is still another area of service that is seldom mentioned as a responsibility of business. But I want to say to you frankly tonight that I believe it to be an essential ingredient in the makeup of the successful, well-balanced modern man of business. And that responsibility is in the service you render to the church of your choice.

Looking back over these four areas of service, you will note that there is a change in the major area of responsibility. In the first area of service to civic programs, the company as a corporate citizen as well as the individual has a major responsibility.

In the second area—education, the company has a major responsibility which must be supported by the interest and efforts of individuals within the company.

Our third area was politics. And here it was pointed out that because government reaches into virtually every facet of business as well as personal life, companies as well as individuals have a responsibility for good government. But in many areas of active, constructive politics, it is the individual, rather than the company, which bears the direct responsibility under our American democratic system.

In this fourth area of service where you have an opportunity to make your finest investment—namely through service to the church of your choice—the responsibility lies entirely within the individual. But it is the type of responsibility that, when assumed conscientiously and worn devotedly, adds a quality and depth to a man that is clearly evident every minute of his business life.

In considering the Golden Rule and its application to business life, I am reminded of a reply given to a reporter who asked a White House aid if President Eisenhower had laid down any hard and fast rules for the behavior of the White House staff. The aid replied, "Yes; and they are very simple. He laid them down to the staff right after he was inaugurated, and he tells them to each new staff member. They are as follows:

"I want everybody smiling around here. Always take your job seriously, but never yourself. And don't forget to pray."

That, I submit, is a pretty good code for any business operation. Ladies and gentlemen, I have been a salesman all of my life. And it's hard to get out of the selling habit. To be honest about it, I guess I don't want to get out of the habit, because much of my life seems to involve selling something or some idea to someone.

One of the trademarks of a real salesman is that he always asks for the order, he always attempts to close the sale.

And so, down through the years, I have made it a practice when talking to groups such as this to ask for the order.

Tonight that task is easy. Many of you already have the order blank at least half filled out. Many of you are well on the road toward making your finest investment by investing your life in the lives around you.

But I am confident that every one of us here tonight would not hesitate to say that his or her investment could well use some additional input of interest, energy, and enthusiasm. For this investment in the lives around us cannot be satisfied with an initial lump installment. We must keep adding regularly to the investment. In asking for your order tonight, may I suggest that we actively seek new ways in which we may invest in the lives around us.

There is a very familiar quotation that seems to fit this occasion and to sum up what I have been trying to say about as well as it can be put into words. I am sure you know it well:

"I shall pass through this world but once. If, therefore, there be any kindness I can show, or any good thing I can do, let me do it now; let me not defer it or neglect it, for I shall not pass this way again."

I congratulate you on the steps you have taken toward making your finest investment.

Your Tax Bill

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. HOFFMAN. Mr. Speaker, the President's budget calls for the appropriation or expenditure of $71.8 billion—this in addition to an estimated $70 billion now supposed to be on hand.

Subsequently, the President said that he hoped the budget could be cut. Still later, Secretary of the Treasury Humphrey said:

If we don't over a long period of time (reduce expenditures of this terrific amount, the terrific tax take we are taking out of this country) I will predict that you will have a depression that will curl your hair, because we are just taking too much money out of this economy that we need to make the jobs that you have to have as time goes on.

The actual budget receipts for 1956 were $68.1 billion, the estimated receipts for 1957 are $70.6 billion, and for 1958, $73.6 billion. If all goes as anticipated, that would leave a surplus of $1.8 billion.

Living costs continue to go up. Millions who are forced to live upon a fixed or a decreasing income are forced to purchase less nutritious food, inferior merchandise.

It is axiomatic that, unless dollars can be saved, a new business cannot be established, an old one expanded, hence no additional jobs. The Federal Government is, in my judgment, today's most wasteful and exorbitant spender. If you think the Federal Government intends to quit wasting money, reduce your taxes, you are certainly an optimist, with disappointment certain.

To force a tax reduction, a resolution was introduced by me to repeal the 16th amendment, which has to do with the levying of the income tax. Do not forget to pay your income tax not later than April 15.

An editorial from a Long Island, N. Y., paper characterized the proposal as "the most ridiculous legislation of all."

The News-Palladium, of Benton Harbor, captioned an editorial, "Thanks for Trying." My answer: Never did catch any fish unless I went fishing.

One from the Niles Daily Star, "Don't Let the Patient Die," suggested that my proposal was similar to "killing the dog because his tail had become infected." If I had a dog whose tail was malignantly infected, I would have that tail

cut off before the dog died. Last fall, when the surgeon was about to take a look at my "innards," I said, "If you find anything wrong in there, cut it out." He did. Would have been dead if he had not. No one is now suggesting that I am dead.

Ever hear of a candidate who promised practically everything everybody wanted, plus a cut in his tax bill? When elected, how many keep that promise?

Just as long as a majority in Congress can tax, collect, spend, and get reelected, they will continue to do it. You will get no relief from excessive taxation. Shift the power to tax incomes to the State legislatures, where you can really get at your representatives, and the Federal Government will be forced to economize.

No Diplomatic Recognition of Red China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial that appeared in the Standard-Times, of New Bedford, Mass., on February 23 and which calls attention to a fallacious argument being made in support of recognition of Red China:

GREEN'S ERROR ON CHINA

Chairman GREEN, Democrat, of Rhode Island, of the Senate Foreign Relations Committee, has suggested the United States should extend diplomatic recognition to Communist China sooner or later. In the wake of the inevitable controversy this remark provoked, the Senator added he did not mean this country should recognize the Peiping government forthwith.

Senator GREEN's point of view modified by these qualifying phrases of time, is not quite clear, but it would seem he believes that, although it is not now desirable to recognize Red China, it will be the thing to do at some future date. It would be interesting to know what factors Senator GREEN considers likely to change.

It is a fact that Red China fought the United Nations and the United States in Korea and was largely responsible for nearly 150,000 American casualties. It also is true the Chinese Communists continue to prevent the political settlement in Korea which was supposed to succeed the armistice after 6 months.

Whether one considers recognition of Communist China sooner or later, it seems unlikely that either of these factors can or will change to reflect to the benefit of Peiping.

Could it be economic factors that Senator GREEN has in mind, or the pressure of American allies?

The fact is that any broadening of economic relations with Communist China would benefit the United States last and least of all. Other nations can supply what Peiping wants cheaper than the United States can, because of lower living standards and production costs.

As for allied pressure, the United States might please some western nations by recognizing Red China, but it would displease important eastern friends of long standing, such as Formosa and the Philippines.

Does Senator GREEN think time may show that the Chinese people really support the government of Mao Tse-tung, even though it never has held an election in all the years it has held power by force?

This seems highly unlikely, since, as in all Soviet satellites, dissension apparently is growing, not decreasing.

As of last year, 210 anti-Red underground organizations operated in 22 mainland provinces of China. As recently as last week, Tibet, Inner Mongolia, Yunnan, and Sinkiang were reported slipping away from Red rule because of the growing resentment of minority groups. A major attack in Kwangsi Province, involving 20 counties, also was reported this month by the People's Anti-Communist National Salvation Army, in existence ever since the Communists came to power in China in 1949.

One wonders why Senator GREEN, who occupies an important position in American Government, saw fit to make this remark—which is likely to encourage the Communists and discourage those Chinese who are attempting to oppose the Reds. For it will be no more necessary or desirable for the United States to recognize Red China tomorrow than it is today.

Spotlight on Freedom

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BECKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Long Island Press under date of March 4, 1957, which I think will be of interest to each and every one of us who is interested in keeping American history alive:

SPOTLIGHT ON FREEDOM

A precious historical document will be exhibited next month on Long Island.

It is the original manuscript of the Flushing Remonstrance, a document that had a great deal to do with the preservation of religious freedom in the United States.

It is 300 years old and is being brought here in connection with Long Island's observance of the tercentenary. It will be shown at Queens College Library and the Flushing branch of the Queens Borough Public Library, along with related documents.

The Remonstrance of 1657 was a protest by the freeholders of Flushing and Jamaica to the Dutch colonial governor, Peter Stuyvesant, because of his order forbidding Quakers living among them from holding religious meetings.

It had far-reaching effects, and we today can thank the courageous early settlers who stood up to be counted 100 years and more before the Declaration of Independence.

Now we are to have a chance to see this famous document. The board of regents has authorized the State librarian to lend it to Long Island for a brief period. Historically minded persons certainly will wish to see it. We hope that lots of young people will, too.

In voicing Long Island's appreciation, we'd like also to throw in a suggestion:

Why not revive the Freedom Train idea? Why can't the State department of education, say every 5 years or so, put a traveling patriotic and historical show on the road?

In 1947 and 1948 the national Freedom Train—"the Spirit of 1776"—drew a sensational response. So did the State's Freedom Train which was sent out in 1950.

What better way to make history a living thing? What better way to give added meaning to the lessons of history and patriotism taught in the schools?

As we see it, a Freedom Train (or bus-trailer hookup) is worth considering as a part of the State education department's program.

Nature as an Instructor

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Roseburg (Oreg.) News- Review of Thursday, February 28, 1957. It contains information which I believe to be of important to the lumbering industry and tells of a 5-year study of natural reproduction of the Shasta red fir species:

RED FIR STUDY SHOWS NATURE IN CHARGE

(By Chuck Grell)

Nature apparently can take care of its own in the regeneration of a forest tree which holds promise of importance to the lumbering industry.

The tree is the Shasta red fir, which comprises the greatest volume of merchantable timber in Douglas County after the Douglas fir, according to Hank Gratkowski, research forester for the Siskiyou-Cascade Forest Research Center here.

He recently completed a 5-year study of natural reproduction of the species in its mile-high habitat near Crater Lake and farther south. He found the Shasta red fir will reseed itself naturally in clear cuttings, provided the cuttings aren't over 15 to 20 acres in size.

Had it been proven necessary to hand-seed or plant new stands, foresters would have faced an expensive operation. But nature already was on the scene with her own methods.

MILE-HIGH HABITAT

For example, the species grows at elevations of a mile and above. Summers are short at the height, and any artificial regeneration would have required accurate timing to take advantage of good seeding conditions.

The expense would have been increased because of poor quality of seed peculiar to the red fir—it would have taken more seed to reproduce a forest.

Then nature has it fixed so that brushfields and herbaceous growths—a bugaboo in artificial reforestation—fail to develop extensively in clear cuttings at a mile elevation. Thus, new forests have a quicker start.

The experiment was started by W. I. Stein in 1951, when a good seed crop occurred.

THIRTY-FIVE ACRES SELECTED

Stein selected a clear-cut area of 35 acres about 20 miles west of Crater Lake. The area received the seed, shaken from the cones of nearby red fir, and distributed by the wind over the area. A second bumper seed crop occurred in 1953.

Nature proved herself from those two seedings. In 1955, when Gratkowski inspected the 35-acre site, he found 1,218

fourth-year and 2,604 second-year seedlings per acre.

Then he compared the seeding results against nine other clear cuttings located near Prospect and east of Ashland. The incidence of reseeding found in the 35-acre area was borne out in the other cuttings.

Gratkowski said it appeared natural regeneration will result best when clear cuttings are held to 15 to 20 acres in size. Otherwise, the area is too great to be covered by the wind-borne seeds, which are equipped with wings to make them sail like a maple key.

AREAS LOGGED, BURNED

Only two of the Ashland cuttings were poorly stocked, but Gratkowski said they had been logged and slash burned during the period of seed fall.

All the areas studied were in the Rogue River National Forest.

The Shasta red fir and subalpine types may gain prominence in the lumbering industry. They were practically untouched because of access difficulty until 1951, when the Forest Service made its first sales in the high elevations.

Potential importance of Shasta red fir to Douglas County is shown in statistics included by Gratkowski in a review of the study which will be published this spring in Northwest Science.

FIVE BILLION FEET

It shows that Douglas-fir volume is 76.96 percent of the merchantable timber total in the county. Shasta red fir is in second spot with 9.25 percent, or 5,302,000,000 board-feet. Sugar pine comprises about 6 percent of the total, ponderosa pine about 3 percent, and incense cedar, 2½ percent.

Shasta fir is one of the true fir types. It ranges from the vicinity of Crescent Lake southward into the Sierra Nevada, and that California range has the bulk of the red fir forest.

The tree grows up to about 4 feet in diameter, so it isn't of the huge Douglas fir size.

But it produces much clear lumber suitable for building. Kratkowski said full potential uses of the tree haven't yet been seen from the Diamond Lake cutoff route south of Union Creek.

STANDS COMPARE WELL

Pure stands, according to Gratkowski, will contain 100,000 board-feet an acre, comparing well with Douglas-fir.

Actual purpose of the test was to discover of the species is adaptable to the staggered setting system of clear cutting. The Forest Service can work from results of the study in the programing of timber sales to provide a continuing yield of timber from the species.

High Taxes Will Continue To Hound American Taxpayers Unless We Trim the National Budget by Insisting on a Reduction in the Cost of Government

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. VAN ZANDT. Mr. Speaker, the American people are in unison in demanding that every possible effort be made to reduce the national budget and thus make it possible to reduce high taxes that for years have had a stranglehold on every segment of our economy.

The following editorial titled "Must Trim Budget" appeared in the March 2, 1957, issue of the Altoona (Pa.) Mirror and is a graphic account of the economic evils that follow in the wake of high taxes:

MUST TRIM BUDGET

One of the greatest tasks facing Congressmen these days is the big budget presented to them by the administration. It is the duty of our elected representatives in the House and Senate to see to it that the budget is drastically reduced. Uncle Sam, the silent partner in every business and industrial concern in this Nation, is taking too much of the national earnings via his drawing account, the income tax.

Business partners who withraw too much of their earnings for personal expenses end up in the bankruptcy court. Continued heavy withdrawals from any business in the long run will destroy the business. Something must be left in the till for the other partners, and something more must be left for reasonable growth and expansion.

In Pennsylvania, where the Federal Government takes 52 percent of the gross net income and the State takes 6 percent more, the other partners in the enterprise have only 42 percent left with which to pay the owners of the enterprise and to meet the other expenses to which ever-growing business is subjected. Just to meet the rising cost of the tools with which to do business, prudent management must set aside at least half of the remaining profit after taxes to pay the increased costs for necessary replacements. The partner that makes the heaviest withdrawals from the business does not share in this cost, although he does participate in the allowable depreciation.

Most of the tax experts in the National Capital agree that a cut of 10 percent in the budget would not work too severe a hardship on any department of our Government if the cuts were equitably made. This modest 10 percent paring of the budget would allow a savings of around $7 billions.

Cutting down the national debt is highly desirable, but we believe that if at least $5 billion of the $7 billion that can be saved by budget trimming were allowed for tax reductions, there would be a healthy stimulation to the entire economic picture. If businesses, for example, were allowed the 5-percent cut in income taxes that was due them 5 years ago they might be able to make sizeable reductions in their own debts which stand as a potent threat to their continued existence.

It must be remembered that business debt must be paid off from the 48-percent profit left them after the income tax is paid. In Pennsylvania there is only 42 percent left after the State income tax is paid. It also must be remembered that other taxes also have been collected from business before the gross net profits have been figured, so that the actual tax take from gross earnings quite often exceeds 70 percent of the net profit of the business.

People who work for the industrial concerns and business establishments of the Nation do not always realize the big stakes they have in the successful operation of the employers. It is only when a plant or an industry is forced to close down that they fully realize the importance of a healthy financial state for their employer.

In most modern industries a great portion of the money left after payment of taxes is reinvested in the industry with only a small fraction of the net profit being distributed to the real owners of the business.

If debts have been incurred in the founding of the business or in the expansion of existing business, a large part of the money that is left after taxes is applied to debt reduction. This is of great importance because business cannot survive a period of recession or depression unless it has good credit resources. Financial institutions usually lend money with a definite stipulation that a regular reduction in the principal amount must be made and at regular intervals.

When taxing authorities take away such a big portion of the profits as they have been doing in recent decades there is a tendency on the part of business to extend the periods for repaying their debts. There is also a marked tendency to delay further expansions until debts have been liquidated.

All reports from Canada indicate that our northern neighbor is enjoying one of the greatest booms in the history of the nation. Canadians, however, are little worried about the flight of American capital to Canada where the tax situation is favorable to invested funds. The money that is being used to build new industries and to provide new jobs in Canada could be used here if budgets were trimmed and taxes reduced.

Puerto Rico, Cuba, and a number of other neighbors also are experiencing real economic growth because of the flight of American industry and capital to these more desirable tax climates. Quite a few European concerns have been helped to a great extent by American tax dollars and many American concerns have found it profitable to establish foreign branches because of a favorable tax picture.

As we said in the beginning, our Congressmen have a big job to do. We feel sure that they will do it better if they are told by the people who put them into office that they are interested in the way their representatives are doing their homework.

For a great many years now our elected representatives have been hearing from folks back home asking that more and more Federal funds be spent to promote something in the representatives' political backyards. This year could be a year in which people asked their spokesmen to insist on helping out back home by cutting down on the budget and reducing the taxes so that the folks back home have a little chance to help themselves.

Memorandum From the Slovak League of America

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of a memorandum dated March 2, 1957, and sent to the President and the Congress of the United States from the regional conference of the Slovak League of America held at Detroit, Mich., on that date:

MEMORANDUM TO THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES OF AMERICA FROM THE DETROIT REGIONAL CONFERENCE OF THE SLOVAK LEAGUE OF AMERICA, DETROIT, MICH., MARCH 2, 1957

Assembled in the Slovak Home, Detroit, Mich., in the interest of the welfare and security of our America and the rest of the free world, we solemnly declare that—

1. We rededicate ourselves to the preservation of the basic principles set forth in the American Declaration of Independence and of the basic law of our land, the Constitution of the United States of America.

2. We condemn all forms of tyranny, every form of totalitarian political system. We recognize the godless philosophy of material-

istic communism as the greatest conspiracy against free humanity, as a political system which threatens all mankind with utter enslavement. Therefore we cannot subscribe to the policy that doing business with the Soviet Union and its satellites is in the best interests of the United States and the rest of the free world.

3. We commend our Government for its efforts to resist and resolutely counteract the aggressive policies of Soviet imperialism with all the spiritual and material forces at our command and we heartily endorse all actions of our Government to expose, demobilize, and outlaw the evil forces of brutal, godless communism in our country—the forces which are dedicated to our destruction.

We strongly denounce the intervention of the Soviet Union in the internal affairs of Poland and Hungary, as well as in other countries of Europe and Asia. We express our deepest sympathy with the peoples of Hungary and Poland and urge our Government to denounce in the strongest terms the massacre of these liberty-loving and liberty-seeking peoples, immediately initiating all steps to end the brutal treatment and repression of the Polish and Hungarian nations. As the first step, we urge our Government to demand the withdrawal of all Soviet forces from non-Soviet territories and in the event that the demand is not met that our Government immediately break off all diplomatic relations with the U. S. S. R. and its satellites.

4. We oppose the admission of Red China into the United Nations and fully endorse the principle that our Government shall refuse recognition to every form of government and political formation which is imposed on any nation by the force of an alien power.

By the same token, we respectfully request that this policy be followed even in the case of the nation we are descended from, the Slovak nation, which is today tyrannized by the Czecho-Communist regime of Prague in flagrant violation of the political will of the Slovak people and of the fundamental principles of the charter of the United Nations, and in utter contempt for the basic principle of the American foreign policy of self-determination.

Furthermore, we again respectfully request the President and the Congress of the United States to reexamine the question of the destruction of the Slovak Republic in 1945, because we are certain that the political will of the Slovak nation was violated thereby. We also respectfully request our President to instruct our delegate to the United Nations to ask for an investigation by the United Nations of the destruction of the Slovak state in 1945, the independence of which was proclaimed by the duly elected representatives of the Slovak people on March 14, 1939, and eventually recognized by 27 countries.

5. We deeply resent the fact that our Government is inclined to recognize and favor former Slovak and Czech politicians who are, in a large measure, responsible for the present terrible plight of the Slovak and Czech nations. We refer particularly to the politicians who promoted the pro-Soviet and anti-Slovak policies of the late Dr. Edward Benes—the Czech Socialists and Judas Slovaks now organized in the so-called Council of Free Czechoslovakia, who collaborated with Moscow and the Communists until February 25, 1948, as members of the Communist-dominated national-front government of the Benes-Gottwald coalition.

We respectfully request the President and the Congress of the United States to reexamine the so-called Czechoslovak policy of our Government, which is still based on the information and actions of Dr. Edward Benes and other Czecho Socialists, all of whom were adamantly opposed to Slovak freedom and independence. It is embarrassing to us, as it also should be to our Government, that members of Benes' pro-Soviet political clique are still employed by various departments and agencies of our Government. They have exploited and compromised the good name of the United States of America entirely too long and, therefore, should no longer enjoy our trust and favor.

The Slovak League of America, with the organizations affiliated with it, has expressed itself clearly and forcefully in the past more than once on the subject of United States policy in regard to Czechoslovakia, and particularly in regard to the Slovak nation. Representing the vast majority of organized Americans of Slovak descent, the Slovak League of America feels that it has the right and the obligation to speak for them in matters of general and particular concern, both domestic and foreign. As loyal Americans, we are not, we trust, overly presumptuous in assuming that we merit at least the same measure of consideration and trust from our Government as the bankrupt, pro-Soviet political entourage of Dr. Edward Beneš, which suddenly became "anti-Communist and democratic" after February 25, 1948, when the Communists, with their collaboration, seized all power in Czechoslovakia.

6. We respectfully request the United States and the United Nations to exert pressure for the liberation of Slovakia from Moscow and the Cezcho-Communist rule of Prague, for the dissolution of the dreaded Czech secret police, for the abolition of all concentration camps, for the immediate liberation of all Slovak bishops, priests, and religious, and political leaders, and for the independence of Slovakia.

7. We stand opposed to the concept that the power and size of the Federal Government of the United States should be increased at the expense of the powers of the individual States of the Union. We therefore respectfully request the adoption of the recommendations of the Hoover Commission in this respect as speedily as possible.

8. Finally, we commend the President of the United States, Dwight D. Eisenhower, for his stand on the crisis in the Middle East to oppose and condemn all aggressors and violators of others' natural rights.

Adopted unanimously this 2d day of March 1957, by the Conference of the Detroit Region of the Slovak League of America. Copies of this memorandum are to be sent to the President and Members of the Congress of the United States, the Honorable Henry Cabot Lodge, Jr., Secretary of State Dulles.

For the conference:

Philip A. Hrobak, President, Slovak League of America; Lawrence Gombár, Paul Pasternák, Saginaw, Mich.; Victor Wallo, Felix Potkan, Flint, Mich.; Vojtech Baláz, conference chairman, John Bachleda, Detroit, Mich.; Karl J. Piaček, Mike Remenár, Owosso, Mich.

War Is Still a Three-Branch Effort

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. EDMONDSON. Mr. Speaker, one of our Nation's great naval leaders, Adm. Harry D. Felt, recently made a profound impression in Oklahoma with an address at Tulsa. The Tulsa Daily World had this editorial comment:

In this age of supersonic flight and nuclear bombs, there is a dangerous tendency to overemphasize air power as the key to ultimate victory in future wars. And while it is comforting to know that in air power the United States is at least on a par, and possibly stronger than any potential enemy, the basic values of our Navy and Army must not be lost sight of.

In Tulsa Thursday was the No. 2 man in the United States Navy, Adm. Harry D. Felt, with some blunt reminders of the essential need for a strong, manuverable fleet as the backbone of all-out military effort on or away from these shores.

Admiral Felt, unlike some hidebound military authorities, gives full emphasis to the Air Force and Army as vital parts of any military operation. Each, he believes, "is dependent upon the other, and each has a special function and capability absolutely essential to a successful united effort."

How right the admiral is. And how timely is his reminder that the United States' best line of defense is now, as it has always been, the Atlantic and Pacific Oceans. In future wars, the admiral concedes, much of the retaliatory strength of the United States will be vested in its Air Force. Yet, at one and the same time the Nation will of necessity be following a basic maritime strategy. The United States is not, for war purposes, self-sufficient, and on the oceans lies the critical area of decision—the route of supplies.

Over the oceans, Admiral Felt points out, more than 95 percent of all war materials must be transported. The Army must be moved—with its equipment, weapons, and other essentials. The Air Force can meet many of its own materiel requirements, yet the problem of supply in fuels and foods—not to mention ammunition—is still an overland operation.

Admiral Felt's reminders are timely in this National Defense Week observation, and any cool analysis of the global front must recognize that the United States Navy is indispensable for hot, cold, localized, or general warfare.

Mr. Speaker, the text of Admiral Felt's timely message, worthy of note by all Americans, follows:

ADDRESS BY ADM. HARRY D. FELT, UNITED STATES NAVY, VICE CHIEF OF NAVAL OPERATIONS, BEFORE THE TULSA NATIONAL DEFENSE WEEK FORUM, TULSA, OKLA., FEBRUARY 14, 1957

Commander Dericks, Mr. Kirkland, Mr. Chairman, members participating in this Tulsa National Defense Week forum, this is an occasion which I appreciate very much. To us fellows in uniform it is most encouraging to know that groups similar to this one are so actively concerned about the security of our country.

Let us be reminded that we are engaged in a team effort—one in which the four armed services plan and operate under civilian authority. This is the American system of which you and I are a part.

The Navy believes profoundly in this fundamental.

We believe that each of the Armed Forces is dependent on the other and that each has a special function and capability absolutely essential to a successful, unified effort.

The problem is to maintain a flexibility, a versatility which gives the United States a freedom of choice as to action to be used in any international situation.

Affecting our lives is the fact that Communist dictators are dedicated to spreading their control over other lands and peoples. Their objective is to smash the social structure of the free world. We can be sure that the No. 1 task of the Communists is to separate the United States from her friends and allies.

However, the Communist bloc is almost surrounded by nations of freemen who are our friends. An interesting and significant feature of geography is that these countries border also on the seas of the world and are

linked to us by seaborne trade. Together with these countries we form a great oceanic confederation of free peoples. We are bound by treaty or moral obligation to come to the defense of our overseas friends should the Communists venture to use armed force across land borders in aggression against them.

In this connection, it is well to remember that the Communist rulers are extremely sensitive to their maritime frontiers. The lead article appearing in the Communist Party newspaper, Pravda, on Navy Day, 1952, had this to say:

"The sea borders of the Soviet Union, extending over 40,000 kilometers, are too long; therefore, in time of war, Russia is very vulnerable, especially if the war is being fought against superior naval forces."

From these observations, we can draw certain conclusions:

First, we cannot abandon our friends. Besides our obligations to them, there is the fact that we need them. Despite the human, agriculture, and mineral resources of our country, we are not self-sufficient. We are a maritime nation to a large degree.

Second, this means then that in future wars, as in the past, we will follow a maritime strategy. The oceans will be critical areas of decision. (Over them move 95 percent of all war materials.)

Third, the vulnerable wet flanks of the Soviet bloc are weaknesses which should be exploited in event the Soviets initiate an armed conflict.

And lastly, in strength at sea lies the key to our security.

Against that backdrop, let me talk a bit about the current employment of our naval forces.

Our fleets are pretty well dispersed around the world. Far out in the Pacific, the 7th Fleet roams the waters from Japan in the north down into the South China Sea. In the Mediterranean, the 6th Fleet trains at sea from the shores of Spain eastward to the waters off the Levant. Off our own coasts, units are on stations to protect the homeland from attack through the ocean approaches.

Units of the fleet represent a show of force to would-be armed aggressors and give encouragement to governments whose backs are close up to totalitarian countries. We make no secret of the fact that carrier-air groups embarked in their carriers have the capability of delivering a tremendous weight of nuclear bombs. Demonstrated openly and frequently is the capability of the carrier task force to jump into and take effective action in scraps where nuclear weapons might not be suitable. Our foreign friends understand the display of naval power and like it.

Liberty parties ashore in foreign ports are living proofs of our sincere intentions. Our officers and men study the customs of the local peoples before they go ashore, and they hit the beach prepared to get acquainted and learn more. The real hand of friendship is offered by our enlisted men. The white hat of the United States sailorman is a respected and loved symbol of Americanism abroad. You have every cause to be proud of our sons in uniform representing their country overseas.

When one reflects on this matter of showing our strength, he inevitably concludes that the stabilizing effect of the 6th and 7th Fleets has held many rimland nations within the treaty organizations of free men.

One wonders what Tito's decision would have been regarding asserting his independence if a hostile fleet had been in control of the Mediterreanean. Would he have been able to defect? I think not.

We live in the shadow of all-out nuclear war. Wholesale destruction and astronomical loss of life, for both sides, are the predominant considerations in this kind of war. Where does the balance of power fall after a terrible exchange of nuclear and thermonuclear weapons? We must control the balance, and to do so, we must survive to fight on after an initial attack. Some advocate digging in and hardening our fixed bases; however, for fighting forces to be effective, they must move. Dispersal of land-based forces is advocated but one wonders what one buys when the radioactive effects of modern weapons are contemplated.

To survive and continue the fight we must look to the oceans. There, in huge expanses of the world's surface, is found the opportunity for infinite dispersal of fighting forces constantly on the move. It is not a new opportunity, but in this nuclear age, it is infinitely more meaningful.

We say that the mission of your Navy is to control the seas wherever it is necessary for us to operate and to exploit them to the fullest in time of war. Nothing particularly novel and new in that statement, is there? Note the use of the word "exploit," however. Its use conveys our intention, for instance, to destroy any kind of enemy unit at its base of operations which is in position to threaten our forces at sea. We mean to take the war to sea and to enemy territory where it belongs. Mahan, the father of modern naval strategy, is still solidly with us. To quote him:

"The fundamental principle of all naval warfare is that defense is assured only by offense."

I think we can be quite sure that our fleets at sea are of major concern to an enemy bent on armed aggression against any one of our friends. This is particularly so if the fleets are utilized to disperse a significant part of America's nuclear striking power.

Fleet forces pose a tremendous threat which puts a heavy drain on an aggressor's resources. Ships are elusive targets, hard to keep track of. They are not fixed in our homeland. They are a significant part of our country's armed strength which deters the Soviets from embarking on overt military aggression.

We in the Navy think that naval forces are indispensable for hot war, cold war, localized wars, general war. In recent years, your Navy has had some pretty decisive influence on the course of world events. The Korean War could not have been fought without the Navy in control of the seas. In fact, the Reds figured that Korea would be captured quickly, but they figured without understanding the importance of the sea flanks. Reflect for a moment on some additional affairs: Formosa, the "passage to freedom", in Indochina, Suez. Your Navy was there when it was needed—ready for any kind of action.

As we plan for the future, we are developing weapon systems with greater tactical range and effectiveness. The Attack Carrier Task Force is a good example of the point.

Such a force is a very flexible tool. Its essence is offense. It is designed to strike the enemy in his homeland. Its objective is to turn off the threats to our control of sea areas at their spigots.

An attack carrier task force is a well-protected, dispersed, mobile assemblage of airbases.

The fighters in the carriers will be supersonic. Perhaps you remember the F8U Crusader which won the Thompson Trophy Race last fall flying at over 1,000 miles per hour. Operational squadrons will soon be flying this plane.

Our light attack plane holds the world's speed record for a 500-kilometer closed course.

You may remember also that during last year's National Air Show, A3D Skywarrior heavy attack aircraft took off from a carrier steaming off the coast of Mexico, circled Oklahoma City, and returned to the carrier—a flight of 2,600 miles. Thirty-six hours later, A3D's took off again, their carrier then being off the coast of Oregon, flew over Oklahoma City, and then on to Jacksonville, Fla.—a flight of 3,000 miles. These flights were nonstop, nonrefueled. A3D's are now operating from the carrier *Forrestal* deployed to the Mediterranean.

Ships in our task forces also reflect the astounding advances technology has made in the past few years. Some are modernized World War II ships like the cruiser *Boston* with her antiaircraft guided missiles. Some are newly built like *Forrestal* and *Saratoga*.

Guided missiles are replacing guns which are inadequate to defend against the modern air threat.

Antisubmarine devices, weapons, and systems have been developed to cope with a new order of submarine threat which *Nautilus* has demonstrated to us.

We intend to utilize all the advantages inherent in nuclear power.

The experience with *Nautilus* has exceeded our most optimistic hopes. During 2 years she has steamed over 62,000 miles without refueling. Think what that means—a new order of mobility, endurance, and resistance to battle damage. A nuclear-powered cruiser is now being built. We are asking Congress to authorize a nuclear-powered carrier. We see no reason why powerplants cannot be designed to fit into destroyer types.

The men in these aircraft and ships are highly skilled. The basic philosophy behind our training programs is to attain a readiness to deliver weapons with accuracy and precision. Incidentally, you may be interested to know that 44 percent of our officers are Reserves on active duty. Our problem is to keep them with us for a longer period of time and cut back on the costs of training replacements. About 90 percent of our enlisted ratings are Regulars, but here also we have a tremendous problem of training replacements because industry makes the outside look so attractive to these highly skilled technicians.

In essence then our attack carrier task force program is to maintain an effective strike capability which can coerce an enemy with precise power, both in the form of conventional and nuclear weapons, and not necessarily to destroy his lands and his peoples. We feel that lack of capability to engage in war using small yield weapons delivered precisely may leave the United States with no alternatives except to yield to an enemy's political demands, or to engage in a war of mutual extinction.

To supplement the offensive potential of the attack carrier task forces, we are forming two other kinds of attack systems.

Submarines are being converted or newly built to carry and launch guided missiles. The missiles are designed for destroying surface targets with nuclear warheads. Submarines so armed and on submerged stations will be potent deterrents to any aggressor with ideas that nuclear surprise attack will pay off. Incidentally, all newly-built submarines will have nuclear powerplants.

The Navy is pioneering with a jet seaplane attack weapon system. The Martin Seamaster promises to give us an even greater capability for dispersal of the Nation's striking power. You can imagine the possibilities—a high performance airplane which can be sent to advanced areas where it needs only a water runway and an austere amount of ship support.

We are not unmindful of countering the threat of enemy aircraft and submarines which have left their bases before our offensive strikes are driven home to enemy territory. Coming submarines out of ocean waters and shooting down enemy aircraft over the ocean approaches are among the defensive tasks assigned to certain of our naval forces. The mission of our submarines is one example of this. Their primary task is to hunt down and kill enemy submarines. Nuclear power has given them the true submarine, completely self-sustaining for long periods of time without even

the need for breathing the air of the atmosphere.

A word about the amphibious assault part of your Navy. It, too, is making a start toward modernization. Many situations demand that we have ready for instant use the capability of landing troops in assault on foreign territory. The marines have developed a new technique of landing behind enemy defenses by using helicopters launched from specially built ships. The technique will avoid frontal assault, cut down casualties and put another large drain on enemy resources if their sea frontiers are to be guarded.

Those of us who have a hand in shaping the Navy of the future believe that loss of the seas is tantamount to certain defeat. We would lose our allies, our bases, all but our own resources, our freedom of action.

Bearing this in mind, we believe in a few musts:

The United States must continue to honor her international commitments;

The Navy must keep open the supply lines of our friends, our overseas bases, and our forces deployed in other lands overseas;

The Navy must defeat the submarine threat;

The Navy must defeat the air threat to its own forces and contribute to the defeat of the air threat to the Continental United States;

The Navy must be an instrument for projecting United States fighting power into enemy territory.

I hope you can agree with us.

Waging Peace

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. SCHWENGEL. Mr. Speaker, recently I have had the distinct pleasure of reading, and more recently, rereading, a most worthwhile book, Waging Peace, by C. Maxwell Stanley, a constituent of mine from Muscantine, Iowa.

Lest I appear to be prejudiced, I call to the attention of my colleagues a review of Mr. Stanley's book as written by Charles F. Ransom and printed in the Des Moines (Iowa) Sunday Register of March 3, 1957.

The review follows:

AN IOWAN'S BOOK ADVOCATES A STRONGER UNITED NATIONS

(By Charles F. Ransom)

C. Maxwell Stanley is a consulting engineer and a partner of the Stanley Engineering Co., of Muscatine. He feels strongly that modern technological warfare offers the United States only two choices: peace or devastation.

In this book, subtitled "A Businessman Looks at United States Foreign Policy," he analyzes his country's position as a consulting engineer would a company's. He recommends a drastic rorganization, with a clear blueprint of the intermediate steps to get there.

SEVEN POINTS IN HIS PROGRAM

His major recommendations form a seven-point program. No. 1—to maintain military strength—is already Government policy. His Nos. 2, 3, and 7 are at least partly adopted, in United States foreign aid, United States support of the U. N., and the United States championing the principles of peace and freedom.

That leaves his points Nos. 4, 5, and 6 as the most distinctive parts of his message. Taken together, these amount to converting the United Nations into a world federation able to make just and binding laws, enforce universal disarmament, and protect individual freedom.

He recommends doing this by means of a U. N. Charter review conference in 1958 or 1959. The question of holding such a conference will come up again in the U. N. General Assembly in the fall of 1957. This would postpone until 1960 or so the threatened Soviet veto of any fundamental change in the charter. By then, the Soviet Union might be willing to go along—or the rest of the world might be willing to go ahead without Soviet cooperation—leaving the door open to Soviet entry later.

MISGIVINGS ABOUT NATO PLAN

Stanley fears that a Federal union of the 16 North Atlantic Treaty Organization countries alone might divide the world more sharply—rather than be a step toward world federation—since the NATO nations are all white in race and form an anti-Soviet military alliance.

The book is well and clearly written and grapples with many of the practical problems; for example, fair representation, by giving alternatives instead of a single dogmatic solution. If fair representation in the Iowa legislature is a tough one, fair representation in a world federal government is vastly more difficult.

Stanley's book is a valuable addition to the growing literature which is preparing the minds of men for the world order which must somehow be erected soon if the world is to avoid catastrophe.

Passport Service Improvements

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. TABER. Mr. Speaker, pursuant to the consent granted to me, I am submitting an article which appeared in the New York Times of March 3 on the Passport Office in New York City, which calls attention to the way that service in that office has improved:

PASSPORT SERVICE IMPROVEMENTS—THE HUMANIZING TOUCH LIGHTENS THE BURDEN OF AN OLD ORDEAL

(By Morris Gilbert)

Applying for an American passport to go abroad has had a reputation for decades as an ordeal only exceeded by that of facing the Internal Revenue fellow. But now there has been a switch. The New York passport offices, on the mezzanine floor of 630 Fifth Avenue, are reconditioned, redesigned, expanded, and humanized. The purpose is to speed and simplify delivery of passports, and to make the process less trying for applicants.

Miss Frances G. Knight, Director, since May 1, 1955, of the State Department's Passport Office, has thought of almost everything which has to do with getting passports. After all, she had to produce almost 560,000 last year with a staff somewhat less than the present 353. She has thought of so many things that nowadays passports, in average cases, are issued within 3 days of application. When the big rush comes next April, May, and June, this period will extend to 10 days, although Miss Knight hopes to get it down eventually, even in such seasons, to a week.

MANY CHANGES

Miss Knight, who looked over the New York field office a while ago, has instituted many changes and developments since she took charge. Washington headquarters has been moved into three floors of a handsome air-conditioned Government building at 1717 H Street NW., from a musty, inadequate antique called the Winder Building. She and her staff have filed a backlog of 1 million unfiled or partially filed documents from the old regime which had been stored in scattered boxes, under tables and atop cabinets. They have instituted an improved so-called "shelf-filing system" to replace the earlier cabinet files, involving 6,500,000 files.

By simply returning birth evidence and other private documents to applicants for passports, instead of storing them away, great space has been saved as well as much unconstructive correspondence and a good deal of paper work.

EFFICIENT FIELD OFFICES

But the major developments, as far as average applicants are concerned, are in the field offices, notably here. A new field office has recently been set up in Los Angeles. Streamlining of the Chicago field office is getting underway, to be followed by similar complete reorganization in San Francisco, New Orleans, and Boston.

"The whole purpose," said Miss Knight in the New York offices recently, "has been a general humanizing of the business of supplying passports. It had to be done some day, because the crowding and delay were getting beyond belief."

On the day of the interview, 456 new applications were processed at the New York office, an average of more than 50 an hour. When the peak days arrive, this quantity is expected to rise to 650. Applications for passport renewals which, of course, must also be processed, run about 10 percent of the new ones.

The first essential, Miss Knight pointed out, was more space, and the quarters were much expanded. This allowed a separation of functions. Whereas, formerly, applicants had to queue up to get application forms and a sheet of instructions from the agents on duty, these are now available in a simple, clearly marked rack in an outer room, just beyond a newly installed information counter. Thus the first queue was abolished.

Spacious counters are placed in the outer room where applications can be filled out. If an applicant has brought two passport photographs (one of Miss Knight's innovations is that these can even be smiling ones), a birth certificate or other similar document, and a witness to identify him, he can pass right on to the agents' counters in a second spacious office for immediate processing.

FUNCTIONAL COUNTERS

The new counters were designed after considerable study. They were zigzagged so that each agent's section allows for two people—the applicant and his witness—to stand together before him in comparative privacy, while the queue for that compartment stretches at an angle behind.

Under average circumstances, the swearing in of the applicant and witness and the processing of the application, plus the payment of the $10 (for a first passport, $5 for a renewal) can be comparatively speedily accomplished.

A series of cushioned, comfortable benches has been installed in a wide area of the inner room, where applicants or members of families can relax quietly. These, too, are innovations. Two huge wall maps of the world adorn the inner and outer rooms. They are marked with symbols indicating the situation of American embassies, legations, consular agencies, special offices, and missions around the world.

Passports themselves are processed here, as well as in the other bureaus, and Miss

Knight installed a series of "pick-up windows" where applicants who prefer not to have their passports mailed can get them.

Miss Knight's exploration of the convenience of passport seekers has extended to obtaining expert advice on colors for the walls of the office. "Cool colors keep people calm and not so conscious of the time," Miss Knight said, "so the general wall color scheme is a cool gray. But we want to keep them happy, too, so one wall is bright." It was a strong brownish red.

The year 1956 showed an increase in close to 6 percent in passport applications over 1955, despite the fact that requests for passports dropped last November and December below the level of those months the previous year, thanks to the Suez crisis. Last January, Miss Knight said, "the workload was 12 percent below that of January 1955, thanks to the same cause."

"But," she said, "the slightest change in the international or economic atmosphere can have a chain reaction. The passport offices must be ready for a bigger inrush at any time."

In fact, Miss Knight is looking ahead to the commercial jet age, which she estimates will be well under way by mid-1959.

BIG INCREASE EXPECTED

"It will be quite possible by then," she said, "for people to think in terms of weekend visits to Europe. Businessmen will be planning to get back and forth for a day's meeting, or a 2-day conference, overseas. The proposed jet planes will be carrying 150 passengers instead of the current 90 passengers seated in the big piston transports; and the jets will go almost twice as fast as present piston planes." In view of those prospects, Miss Knight estimates that passport applications in 1960 will have jumped more than 45 percent—that is, to 814,000—over last year's.

The Ghost of Judas Walks in Hungary

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks, I wish to include the text of an article entitled "The Ghost of Judas Walks in Hungary," notwithstanding the fact that the Public Printer has estimated its cost to be $231. This article, which is taken from the publication News and Views, of Wheaton, Ill., was sent me by Mr. Edgar C. Bundy, general chairman of the national laymen's council of the Church League of America. It deals with the ill-timed and regrettable visit to this country of certain pro-Communist clergy from Czechoslovakia and Hungary which I opposed 3 years ago:

THE GHOST OF JUDAS WALKS IN HUNGARY

The full story of the betrayal of the Hungarian people has not been told by the secular or ("recognized") sacred press to the American people. This story is well known inside intelligence circles of the governments of the Western Allies and the Iron Curtain bloc. The details of the role played by liberal Protestant churchmen who are puppeteers of the Soviet Government is shocking and disgusting beyond description.

In order to comprehend the part played by these wolves in sheeps' clothing, it is necessary to go back into a few years of recent history.

On July 7, 1953, there appeared before the Committee on Un-American Activities of the United States House of Representatives in executive session, New York City, Joseph Zack Kornfeder, a graduate of the Lenin School of Political Warfare in Moscow and former member of the National Committee of the Communist Party of the United States. Mr. Kornfeder was asked by Representatives SCHERER of Ohio what methods the Communist leaders adopted in Russia, shortly after the Bolshevik revolution, for taking over the churches, and church-supported institutions.

Mr. Kornfeder stated that at first the Bolshevik leaders used crude tactics, such as attacking religion openly and ridiculing sacred institutions. However, the Red leaders soon found out that this was not accomplishing their purpose, namely, the destruction of religion in Russia and the supplanting of the some with antheism. So, they adopted a new tactic—to infiltrate the church via the age-old method of hypocrisy; or, now known as putting on a front. The Reds were advised to join the churches; obtain teaching positions on the staffs of seminaries; edit church literature; not to destroy the Bible, but rather reinterpret the teachings of Christ and the Apostles to suit Communist ends. That is, anything in the Bible which could be twisted and distorted to serve Communist ends was to be utilized by these false religious leaders to destroy the faith of the Russian people.

This plan worked so successfully in the Soviet Union that it has since been adopted as standard procedure by the Reds for penetrating the sphere of religion over the entire world.

Other witnesses who appeared before the same committee hearing—on the subject of Communist penetration of religion—not only testified to the exact same thing but stated that it was successful beyond the wildest dreams of the Communist Party.

J. Edgar Hoover, Director of the Federal Bureau of Investigation, has stated in his article "God or Chaos" (Red Book magazine, February 1949) that the Communists "have operated under the guise of some church commission or religious body and it is ghastly to see the monster atheism being nourished in the churches which it seeks to destroy."

The strategy laid down by Lenin and Stalin was put into full operation in the nations of Eastern Europe by the present day Soviet leaders shortly after the end of World War II. They installed, in these countries, Communists and Communist sympathizers, as church heads; as professors in the theological seminaries; and as editors of church publications and Sunday school material.

Once these Communist clergymen were put in positions of power, they used their offices to attempt the brainwashing of the religious people of the eastern nations in favor of the world Communist conspiracy. The evidence to back up these charges would fill volumes. This evidence is not only in the hands of churchmen throughout the world but it is stacked up in the United States State Department, the intelligence agencies, and is known by many statesmen of the Western World who are afraid to open their mouths for fear that they will be accused of attacking the churches.

The most shocking thing about this whole story is that the United States of America, which is supposed to represent the hopes of free people and oppressed people everywhere, has in recent months entertained these Red wolves as house guests.

Here is the story in chronological sequence:

August 1948: World Council of Churches formed in Amsterdam. Six regional presidents elected, including a Communist, Dr. T. C. Chao, of Peiping, China, who welcomed Mao Tze Tung's armies in their conquest of Free China. Prof. Josef Hromadka, No. 1 Soviet Communist clergyman from Prague, Czechoslovakia, elected to powerful central committee of World Council of Churches along with Bishop Albert Bereczky, Communist head of the Hungarian Reformed Church. World Council of Churches planned to hold its next world meeting in the United States in 1952 (world meeting scheduled every 4 years) but McCarran-Walter immigration and security laws were passed by United States Congress forbidding entry of Communists or Communist sympathizers into the United States.

September 16, 1951: Theologian Karl Barth, of Switzerland, accuses Bishop Bereczky (Hungary) of openly approving communism and that Bereczky's church press service sounded like the official releases from the Soviet Union.

August 15–28, 1952: Conference on faith and order of the World Council of Churches in Lund, Sweden. Large group of American Protestant clergymen, representing about 29 denominations, met in secret session with Communist Clergymen Hromadka and Bishop Bereczky.

March 11, 1953: The radical Christian Century spearheads attack on McCarran immigration law in an editorial entitled "McCarran Act Revision a Church Priority." Christian Century is the recognized voice of the religious liberals in the United States of America. Editorial states that "unless the McCarran-Walter Immigration Act is revised in the current session of Congress its operation will probably keep out of the country many of the church leaders who should come from abroad to the 1954 World Assembly of Churches in Evanston."

April 8, 1953: Senator McCarran replies to Century's attack in a letter, and says: "(1) Untrue or (2) a shocking charge against many of the church leaders who should come from abroad."

October 7, 1953: Christian Century, in an editorial entitled "Evanston Storm Warnings," urges local pastors to do a brainwashing job on members of their congregations so as to prepare them for the shock of Communist clergymen coming into the United States for World Council meeting. Century says that reporters who will cover World Council meeting "have been carefully briefed." Doesn't say by whom, but implies that they, too, will help out with the brain-washing job. The Century warns that there will be severe criticism of the United States, and that there should be. "A certain species of 'patriotism' will deeply resent this." The Century then uses the hypothetical case of Professor Hromadka, insisting that "the church not only can and does survive under communism, but that it grows in spiritual vigor." This leftwing magazine then gives its formula for making the American public receptive to such charges. It will instruct the pastors in a series of editorials as to how to attack all those who oppose the Communists, including other churchmen and patriotic societies.

October 15, 1953: Dr. Henry P. Van Dusen, chairman of the World Council of Churches study department committee, addresses University of Pennsylvania audience and states that there will be some resistance to the Red delegates from behind the Iron Curtain, but that "this resistance will fail and the delegates will be admitted into the United States."

November 17, 1953: National Council of Churches, which is host for the World Council meeting, holds it national board meeting in Washington, D. C., and pressurizes the President of the United States, Dwight D. Eisenhower, into being its honored guest. Councilite figures in the Eisenhower administration, John Foster Dulles, Arthur Flemming, and Harold E. Stassen, along with Bishop Oxnam, Bishop William C. Martin (Methodist, president of National Council of Churches) and Dr. John Mackay, moderator

of the Presbyterian Church U. S. A. and World Council Missionary head, welcome the President. Dr. Visser 't Hooft, General Secretary of the World Council of Churches, was brought from Switzerland to address the meeting to help pressurize the President into accepting an invitation to appear on the platform and address the World Council of Churches meeting in Evanston.

November 22, 1953: Same Dr. Visser 't Hooft occupies pulpit of the National Presbyterian Church while President and Mrs. Eisenhower attend the service. Further brain-washing.

December 9, 1953: Same Dr. Visser 't Hooft, leaving for Geneva, Switzerland, declares at New York luncheon of "Friends of the World Council of Churches" that he had been impressed by the attitude of Government representatives of the United States. "In plannings for the Assembly we have had all the help that we could possibly expect from them. They have shown real understanding concerning the admission of church delegates to the Assembly from the Iron Curtain countries. Our invitation to the President to address the Assembly was also received with genuine cordiality and we have every hope that he will be able to be with us."

December 16, 1953: Bishop G. Bromley Oxnam, president of the World Council of Churches for North America, and sitting on Capitol Hill as Washington area Bishop of the Methodist Church, addresses a Christmas greeting letter to all pastors under his jurisdiction in which he states, "I am happy to say that several conferences with Mr. John Foster Dulles, to whom the church owes an increasing debt of gratitude, have resulted in reasonable assurance that the delegates to the coming Assembly of the World Council of Churches will be admitted without difficulty. By the way, have you written Mr. Dulles and the President a note of appreciation for their courageous refusal to tolerate Senator McCARTHY's attempt to substitute 'a big bully' policy in foreign affairs for the dignified and fruitful 'good-neighbor policy.'

December 23, 1953: Christian Century publishes editorial regarding tribute Visser 't Hooft paid to the "seriousness with which the Reformed and Lutheran Churches of Hungary are pushing their preparations for the 1954 Assembly of the World Council. No other churches in any part of the world," Dr. Visser 't Hooft testified, "have devoted so much time to study of the Assembly topics or presented such extensive and searching reviews of the preliminary report."

March 17, 1954: American Legion, First Division, Cook County Council, Ill., passes resolution demanding United States State Department refuse the granting of visas to Red clergymen from Iron Curtain countries planning to come to World Council meeting.

March 20, 1954: Second Division of the American Legion, Department of Illinois, comprising 13 countries, unanimously adopts same resolution.

March 24, 1954: Christian Century viciously attacks American Legion and fundamentalists for trying to prevent entrance of Red clergymen to the United States.

April 1, 1954: National and World Council's publicity men enraged over publicity given American Legion resolutions. Call for meeting with Illinois Legion officials. Attempt to smear individual legionnaires and anti-Communist clergymen at meeting with officials.

April 8, 1954: Rev. Alton M. Motter, on leave for 8 months as executive director of the Chicago Sunday Evening Club (platform for leftwing speakers), in order to handle public relations for World Council meeting in Evanston, addresses letter to Illinois Legion official demanding to know if Legion will push its opposition to Red clergymen further and adds further smear attacks in letter against individual Legionnaires. Legion replies to Mr. Motter in 9-page letter rebuking him for smears and setting forth documentation regarding Communist clergymen and their attacks on the United States.

April 10, 1954: World Council smear attack fails as American Legion Department of Illinois, representing 226,000 Legionnaires, passes first and second division resolutions unanimously.

April 28, 1954: Christian Century again attacks American Legion in editorial and asks: "Why doesn't the organization try to learn the truth about the World Council of Churches?"

May 4, 1954: Illinois resolution received by national executive committee of the American Legion in Indianapolis, representing 3½ million veterans. World Council's press agent, Motter, and Indianapolis Presbyterian minister, Jean Milner, protest the resolution at executive committee meeting. Over 50 clergymen in Indianapolis area support the American Legion's resolution. Highest ruling body of Legion passes Illinois resolution and instructs the national commander of the American Legion to call upon the President of the United States and the Secretary of State personally and urge them not to admit Red clergymen.

May 5, 1954: Christian Century carries article by National Council of Churches lawyer, Charles C. Parlin, who was also made special chairman of the World Council's press and broadcasting committee, with further attacks and smears on those opposing entrance of Red clergymen.

July 1, 1954: Dr. Daniel A. Poling, leading Baptist clergyman and editor of influential Christian Herald, denounces World Council of Churches Red clergymen and calls them puppets of communism, who are coming to Evanston not to spread unity but to propagandize for communism.

July 15, 1954: World Council of Churches officials announce from New York City, via the American press, that 16 Communist delegates will be admitted by United States State Department.

July 17, 1954: Secretary of State Dulles asks United States Justice Department to admit "11 delegates from Communist Czechoslovakia and Hungary to the United States." (Keep in mind Mr. Dulles was one of the founders of the World Council of Churches and also chairman of a powerful commission of the old Federal Council of Churches.) Chicago Tribune reveals names of 11 Red clergymen, including 5 from Hungary: Bishop Laszlo Dezsery, Bishop Peter Veto, Bishop Albert Bereczky, Bishop John Peter, and Dr. Laszlo Pap, all from the Lutheran and Reformed Churches of Hungary. The State Department, in official press release for same day, states that "contacts with the spiritual life of America could have a beneficial effect upon these delegates and out of this experience could come a spiritual strengthening of the churches in Hungary."

July 22, 1954: Representative ALVIN M. BENTLEY, of Michigan, formerly in the diplomatic service in Hungary, makes major speech on floor of United States House of Representatives identifying the Red clergymen as Communists, false churchmen, and said that allowing them to participate in the conferences at Evanston "is a shame and an affront upon those other Czechslovakian and Hungarian religious heroes who attempted to oppose the Communists and suffered imprisonment or worse as a result. The State Department, in recommending the admission of these delegates, is hampering and sabotaging the work that so many of us are trying to do in exposing the real truth about international communism. When the Department hopes that spiritual contacts in this country might have a beneficial effect upon the Communist delegates * * * it is in effect destroying much of the work of combating Communist propaganda that our own organs * * * are carrying on."

July 26, 1954: State Department is besieged with protests from all over the Nation. Dulles instructs special assistant John W. Hanes, Jr., to send out a stereotype form letter to the protestors saying that "the Secretary has given this delicate and difficult matter his most careful attention."

July 30, 1954: Arthur J. Connell, national commander of the American Legion, states in letter that the Legion's protest against the admission of the Red clergymen was addressed to the State Department and the Attorney General in May but that "to date we have not received a reply from either the Secretary of State or the Attorney General."

August 1, 1954: The Daily Worker, official mouthpiece of the Communist Party, United States of America, on page 5 devotes five-column spread to a welcome for the World Council of Churches meeting in Evanston with a cartoon depicting an upraised arm and hand labeled "Humanity," holding a scroll entitled "Negotiations for World Peace." The Worker attacks the American Legion and praises the efforts of the World Council.

August 4, 1954: Christian Century explodes with most vicious attack yet on those opposing entrance of the Red delegates for the World Council meeting in an article entitled "Differences at Evanston," by Ralph L. Roy, Union Theological Seminary student and later employed by the notorious Fund for the Republic.

August 15, 1954: World Council of Churches meeting opens in Evanston mid great fan-fare from radio, press, and TV. Red clergymen are received as honored guests, participating in the committee and assembly deliberations and are guest speakers in American churches. President Eisenhower appears on platform with Red agents who later used their American reception for propaganda purposes behind the Iron Curtain. World Council adopts peaceful coexistence but gives it another name. Substitutes term "living together" in order to escape "some of its (peaceful coexistence) current political implications."

August 28, 1954: Chicago Sun-Times reveals Christian Century denounces Committee on Un-American Activities, its chairman, Representative HAROLD VELDE, Senator WILLIAM E. JENNER, and the United States Senate Subcommittee on Internal Security, and Representative Bentley who had sent a telegram to the Hungarian delegates inviting them to tell about so-called "freedom" in Hungary to the congressional committee.

Attorney Parlin, Bishop Oxnam, and Dr. Franklin Fry were furious over Bentley's proposal. The Century charges congressional committees "had sent undercover agents into Evanston to spy on Assembly delegates." It waxes eloquent in its denunciation: "What a business for committees of the United States Senate and Congress to be in, spying on a World Assembly of Churches of Jesus Christ."

September 1, 1954: World Council delegates head for home. Communists score great victory. They add two more to their number on the powerful central committee which directs the affairs of the World Council between Assemblies. Communist Professor Hromadka reelected to the committee. Communist churches received with the right hand of fellowship. The Archbishop of Canterbury publicly apologizes to Communist delegates before the entire World Council Assembly because free Czech exiles picketed the Assembly on the public sidewalk and carried signs denouncing these Communist wolves. The Assembly by resolution states that these Iron Curtain delegates "in supporting the Communist order were loyal to Christ." The World Council meeting was silent on the subject of Communist penetration of the churches of the free world and its program to capture them.

February 6, 1955: World Council of Churches executive committee calls for a conference of clergymen between the Communist East and the Western World to formulate a policy for presentation to world political leaders. American clergymen sat with the Communist clergymen in this meeting.

February 15, 1955: The American Legion, through its publication, the Firing Line, reveals vicious attacks made against the United States by Communist clerical delegates upon their return from the World Council meeting to their homes. The United States of America was denounced for "the horrors of American life," "the fingerprinting of delegates which was humiliating treatment reserved only for gangsters," so-called indignities suffered at the hands of customs officers who "squeezed a tube of toothpaste in their search for Communist propaganda in Bishop Bereczky's luggage"; "the savagery of the American press, the stories of murder, vice, and flying saucers and of war propaganda"; "a father with two loaded guns terrorizing his young son in a sick bed and then forcing him to take a bitter medicine" (this was a father with toy pistols playing sheriff as he offered his boy some castor oil); attacks on the American Legion, "that Fascist organization of war veterans, and all kinds of European exiles"; "FBI interrogations," etc., etc.

March 15, 1955: Red Hungarian church press reports "Pastors of the Budapest Reformed Presbyteries observed the 10th anniversary of the liberation of the Hungarian Capitol." This was the liberation of free Hungary into the hands of the Communists. The main speaker at the liberation rally was Communist Bishop Albert Bereczky, president of the Hungarian Reformed Church and leader of the World Council of Churches. Communist Deputy Premier of East Germany sent a congratulatory message to Bishops Veto, Peter, and Bereczky, on the occasion of this anniversary celebration.

April 1, 1955: Red Hungarian Church press announces addition of Dean Laszlo Pap, Communist church leader, to the executive committee of the World Presbyterian Alliance of which Dr. John Mackay, of Princeton Seminary, United States of America, is president.

April 10, 1955: Attacks by the "Red house guests of the U. S. A." on America after their return to Iron Curtain protection causes the Chicago Tribune to write a full length editorial inferring that the American Legion's opposition to admitting these Reds may have been correct and that the World Council might ponder the question of how men who know not the truth can be expected to preach the gospel."

April 15, 1955: The Communists, now delighted with their successful penetration of the World Council, and the brotherly love with which they were received by World Council leaders become bolder and bolder. Communist Hungarian Church press reports that the Reformed Theological Academy of Budapest would confer the doctor of divinity degree upon leaders of the ecumenical movement including Dr. John Mackay, Bishop G. Bromley Oxnam, and the Reverend James Edgar Wagner, of the United States.

August 1955: Communist Bishop Janos Peter, of Hungary, upon invitation of the Presbyterian Church of England, pays visit to England.

September 8, 1955: American radio and press services carry announcement Bishop G. Bromley Oxnam (Methodist) will receive honorary degree from Communist-controlled Reform Theological Academy in Budapest, Hungary, thus lending prestige and comfort to the enemies of the Hungarian people.

September 15–20, 1955: Bishop and Mrs. G. Bromley Oxnam and Rev. James E. Wagner, president of the Evangelical and Reformed Church, United States of America, attend Red controlled Budapest Theological centenary celebration. Oxnam and Wagner receive honorary degree. Dr. John Mackay (Presbyterian), president of Princeton Seminary, received a degree in absentia. Also attending the celebration for the Communist churchmen from Iron Curtain countries were World Council of Churches leaders from other countries, and Communist State officials including President Janos Horvath and Deputy President Jozsef Varga, of the State Office for Church Affairs.

October 6, 1955: General board of the National Council of Churches announces plans for a two-way exchange of religious delegations between Communist Russia and the United States. American delegation to be headed by president of the National Council of Churches, Dr. Eugene Carson Blake (Presbyterian).

October 15, 1955: Communist Hungarian Church press announces Metropolitan Nicolai, of Russia, receives Soviet Union's Red Flag Order of Work. Hungarian Communist Bishop Bereczky sends his congratulations. Nicolai is invited to United States by Dr. Blake (Presbyterian), president of the National Council of Churches.

November 17, 1955: Hungarian Church press reveals Communist Bishop Lajos Veto is a member of the Communist Hungarian Parliament. "He paid tribute to the fruitful effort of peace-loving humanity for the defense of peace," in behalf of the Communist World Peace Council. Hungarian Church press also announces Reformed Church was represented at the central committee of the World Council of Churches meeting in Switzerland by Bishop Veto and that the next central committee meeting will be held in Communist Hungary in the summer of 1956. World Council central committee elected Bishop Peter as member of the Commission on the Relation between State and Community. Communist Bishop Veto was elected to the Commission of the Churches on International Affairs, and Communist Dean Pap of the staff of the Reformed Academy of Budapest was elected to the World Council's financial committee. This all took place at the central committee meeting in Switzerland attended by self-styled Protestant leaders from the United States and other countries.

February 1956: National Council of Churches newsletter announces exchange of Communist church leaders with American church leaders for March and June. Russia's Metropolitan Nicolai sends brotherly love greetings.

March 1956: Nine liberal Protestant leaders headed by Blake of National Council go to Moscow.

March 18, 1956: Soviet Spy Chief Maj. Gen. Georgi Karpok, head of the so-called Religion Section in the dreaded MVD headquarters (secret police), entertains American church delegation at lavish dinner.

April 7–10, 1956: Metropolitan Nicolai attends Communist World Peace Congress in Stockholm.

May 13, 1956: Dr. Daniel A. Poling, world famous Baptist leader, denounces National Council of Churches leaders for their visit to Moscow. Declared that visit of United States clerics to Russia played right into Soviet hands.

June 1956: Eight Communist clergymen headed by Nicolai arrive in United States and begin tour of major American cities. Large demonstrations break out against them led by Eastern European exiles.

July 28, 1956: World Council of Churches central committee meets in Communist Hungary. Reception committee headed by top Red churchmen of Hungary, including Bereczky, Veto, Pap, and Peter. General Secretary Visser 't Hooft of World Council of Churches states, "Churches under differing systems must learn from one another."

September 1, 1956: Presbyterian Life, official magazine of the Presbyterian Church, United States of America, reveals World Council of Churches is now ready to sit down with Red church leaders from Russia in January of 1957 and discuss participation of Russia Orthodox Church in the World Council of Churches. Door now open to receive Communist-controlled churches into membership. Same publication photographs American Protestant churchmen with Communist church leaders.

September 22, 1956: Dr. Hans Asmussen, noted German Protestant theologian, hits Protestant leanings to U. S. S. R. Describes Russian church leaders as "political tools of the anti-Christian Communist regime." Says cooperation with Communist church leaders only benefits the Kremlin.

OCTOBER 23, 1956, REVOLUTION BEGINS IN HUNGARY

Patriots refuse to pay salaries of Communist clergymen formerly paid by the Communist state. Specific mention made in reports from Hungary of same Communist church leaders who came to World Council's meeting in Evanston in 1954, including Bishop Veto, who was elected a member of the Central Committee of the World Council.

Bishops Veto and Deszery, Communist government puppeteers forced to resign from the Lutheran Church. Bishop Albert Bereczky, awarded the Hungarian Communists' Order of Labor, deposed from the Hungarian Reformed Church. Bishop Janos Peter deposed also and labeled "the worst kind of Stalinist." The editor of the Communist Hungarian Church Press resigned and a new paper titled "Reformacio" was begun. The officers in the state office for church affairs lost their jobs when the office was abolished.

November 14, 1956: The Christian Century forced to admit that these very same Hungarian Communist church leaders, who were exposed by the American Legion in 1954, and now deposed by the Hungarian people, were false bishops and foisted on the Hungarians by the Communist government.

The Hungarian church people, however, enjoyed but a few brief hours of freedom. The Russians moved into the picture by invading the country, massacring large sections of the population, destroying public buildings, including churches and hospitals. It is anyone's guess as to what has happened to the genuine Christian church leaders who were restored to their rightful positions by the people after the Communist puppet clergymen had been deposed.

Have the Soviets restored the Communist church leaders to their positions? What has happened to the true shepherds of the flock?

No one seems to know.

EPILOG

National and World Council leaders frantically sent cables to Metropolitan Nicolai of Russia asking him to use his influence to stop "the bloodshed and oppression in Hungary." Nicolai sends hypocritical message back saying, "Our government (the U. S. S. R.) is giving material aid to those who suffer in Hungary and we shall devotedly and unceasingly labor for peace." This is the same "government" which sent its armored might into Hungary and slaughtered thousands of Hungarians. This sounds like "material aid."

How long will it take for these "be kind to Communists" clergymen of the United States to wake up to the fact that you can't do business with the Communists?

December 1, 1956: Chicago Tribune writes full length editorial entitled "Bishop Peter's Loud Silence." The Tribune recalls the visit of the Hungarian Communist clergyman to the World Council meeting in Evanston and that many individuals and organizations in the United States opposed their visit. The Tribune states that Bishop Peter participated in the drafting of the World Council's

report on the Christian witness in Communist countries. It says that leaders of both the World and National Councils have long cherished illusions about communism and the possibility of religious freedom in Communist countries. It declares that Dr. Blake came back from Moscow last March talking nonsense about the position of the churches in Russia. In the light of the Russian onslaught against Hungary the Tribune hopes for Dr. Blake's progressive enlightenment.

Judging from past experience, we wonder if this is too much to hope.

We now see the National and World Councils of Churches in the United States "getting in on the act" for Hungarian relief. These are the same men who hobnobbed with the persecuters of the people.

Strangest spectacle of all—Garfield Bromley Oxnam, who accepted a degree from these same Red church leaders in September 1955 in Hungary, stated on November 29, 1956, in Wilmington, Del., at a meeting of the Wilmington District of the Methodist Church, that these men were "puppets and he had come to know them over recent years and expected their rejection when the time was right."

America's Aging Citizens Need Greater Security

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. ANFUSO. Mr. Speaker, I am pleased to introduce a bill to amend the Social Security Act so as to provide a greater degree of economic security for our older citizens in their declining years of life.

There is a growing interest in the problem of our aging population, whose number is steadily increasing. Economic and social problems have arisen as a result of the growing number of elderly people in the country. Instead of appreciating the fact that medical science has made great progress in extending the longevity of our life span, we tend to forget the human factors involved in supporting an aging population or we simply ignore them.

By ignoring the problems of old age we are committing a grave injustice to millions of our elderly citizens, who have every right to expect better treatment and greater security at a time when they can no longer be economically productive. It is my view that we must give more serious consideration to these people and to their problems from a more realistic and more humane point of view. I believe that we must provide them with the opportunity to spend their declining years in greater comfort and fewer economic worries.

Fortunately, we have established a fine social-security system to provide for some of the needs of these people by giving them a certain degree of economic independence. Some two decades have passed since this system has been set up and, although some changes have been made in its structure and benefits have been somewhat liberalized, it still does not answer the needs of the elderly people. The fault is not theirs. Inflation has taken a sizable chunk out of the social-security dollar. Whereas 5 years ago or more an elderly person or couple was able to get along on the monthly social-security payements, they are today struggling to make ends meet on the same amount.

There are other serious deficiencies in the social-security system which need to be corrected, such as the limitation on outside earnings, the inadequacy of the payments to those who receive only the minimum benefits, and the like. It is for the purpose of correcting these deficiencies and improving the system that I am introducing my bill. Specifically, my bill seeks to improve the social-security law in four ways:

First. Increase the minimum benefits to $40 per month.

Second. Increase the amount of outside earnings to $125 a month or $1,500 a year.

Third. Lower the retirement age for both men and women to 60 years.

Fourth. Permit States to disregard income up to $50 per month in determining need for old-age assistance.

Mr. Speaker, allow me to explain each of these amendments in some detail.

MINIMUM BENEFITS

Under the social-security system as presently constituted, the minimum monthly benefit is $30. How it is possible for an elderly person to subsist on this niggardly sum for a whole month is something which I cannot comprehend. It is hardly enough for rent, let alone food, clothing, and other essentials. This is not only inadequate, but in many instances almost heartrending, since most of these people are physically no longer able to earn even the limited outside income permissible under the law. No wonder many of these older citizens receiving the bare minimum benefit are bitter and resentful and feel that they are the forgotten people of today.

I propose to increase the minimum monthly payments to $40, an increase of only $10 per month. Even at the rate of $40 a month, the daily average comes to only about $1.30, which is hardly enough to take care of the most elementary needs. Yet, small as this increase is, it would be most welcome to many elderly people and give them a greater feeling of security and dignity. I believe it is fair. I believe it is urgent.

OUTSIDE EARNINGS

Those eligible to social-security benefits are permitted under the law to earn up to $100 per month or $1,200 per year without deduction or loss of their benefits. Many of these older folks are still in fairly good health, they wish to keep themselves occupied for a few hours each day in some useful and productive manner. They are still able to render fine services to the community and should not be deprived prematurely of this opportunity. Part-time work is not only desirable for many of these people, but will enable them to maintain a greater degree of economic independence.

For this reason, I propose that the so-called work clause of the Social Security Act be amended to allow these people to supplement their income through part-time work and to make it possible for them to earn up to $125 per month or $1,500 per year. This, too, is a fair request and will be appreciated by many of our senior citizens who prefer to be on their own for as long as they are physically able to do so.

RETIREMENT AGE

It is becoming more and more apparent that the present retirement age will have to be lowered. I was glad to see Congress take the first step in that direction last year when it voted to lower the retirement age for women from 65 to 62. I supported that proposal and voted for it when it come up for consideration in the House. I feel, however, that we have not gone far enough. The retirement age for men still remains at 65. A lowering of the eligibility age for retirement for both men and women should be given serious consideration.

The present age limitations account for many hardships to people in the age group between 60 and 65, who are suffering from ill health and are no longer able to earn a livelihood. Many of them are forced to become charity cases. Women over 60 have practically no chances of obtaining any kind of employment. Unless they have children to help maintain them, they must turn to public welfare assistance and to swell our relief rolls. Certainly this is a case of false economy.

It is believed that most of those in the 60 to 65 age group would prefer to continue working and earning their livelihood. Some in this group, however, have become too ill to work or have become disabled. They must wait until they reach the retirement age before they can become eligible for social-security benefits—or else become public charges. Surely, this is no way to treat these people who have given a lifetime of work and effort to help build our country and to make it what it is today.

I am, therefore, proposing in my bill to lower the retirement age from 65 to 60 years, and it is to be applicable alike to both men and women. The claim that this will cost us a substantial sum of money is undoubtedly true, but social security has paid for itself from the very first. Each time an effort is made to improve the system and to liberalize its benefits we hear the same arguments, yet the social security system is more solid today than it ever was and its benefits reach more people than ever before. It has been proved time and again that the American people are willing to pay for the benefits accruing to them in their old age.

DISREGARD OF CERTAIN INCOME

Finally, I propose to amend the Social Security Act to permit States to disregard income up to $50 per month in determining the need for old-age assistance. In other words, under this amendment, recipients of old-age assistance would be permitted to earn up to $50 per month without having that amount deducted from their subsistence grants.

Let me explain this proposal. Under the present system, those who receive old-age assistance are discouraged from working. Several years ago the Department of Health, Education, and Welfare

established that the average age of these recipients is over 70 years. Surely, they do not constitute a threat to the labor market. They perform certain small tasks, casual labor, odd-and-end jobs, and the like. Under the present system it is required that any money which they earn in this fashion must be deducted from their old-age assistance.

This situation is a holdover from the depression period a quarter of a century ago when the intention was to discourage older people from competing for jobs, no matter how small, because of the huge unemployment in the country. Today there is no longer any need for this. Elderly people should be encouraged to do whatever small tasks they are physically able to do, for the benefit of the community and for their own benefit. Constant leisure and the feeling that their services are no longer needed cannot account for a healthy or a happy state of mind.

Therefore, I believe that it would be a very wise policy to allow these elderly people to perform whatever services they can perform and to enable them to benefit from this small income, without endangering their old-age assistance to which they are entitled. Only, to avoid the possibility of any abuse, I would limit this benefit by making it applicable to the first $50 of such income per month. In other words, the Federal Government is to allow the States to disregard the first $50 of earnings by people who are eligible for old-age assistance and not insist that this income be deducted from their monthly subsistence payment. All earnings over $50 are to be deducted. This, too, I consider as fair and sensible.

In conclusion, Mr. Speaker, I believe that we must take cognizance of the problems of our aging population, and the sooner it is done the better for them and for us. If we continue to ignore this situation it may someday burst upon us with such force that it might disrupt our entire present social-welfare system and cause untold misery to millions of elderly people.

By enacting the changes proposed in my bill, we shall take a decided step forward in the direction of providing greater economic security for them and preventing needless misery and heartache. The amendments I suggest are reasonable and practicable. They will help to eliminate some of the deficiencies of our social-security system. They will make it possible for our older citizens to look forward with greater confidence to receiving adequate economic protection in their old age. This is the least we can and should do for them.

Foreign Policy Linked With Oil

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MULTER. Mr. Speaker, it is tragic to realize that our foreign policy must be made in the light of dollars rather than of moral honesty. The following excerpt from an article written by Drew Pearson appeared in the Washington Post and Times Herald of March 6, 1957, and makes most interesting reading:

FOREIGN POLICY LINKED WITH OIL

(By Drew Pearson)

Eagle-eyed Senator MATT NEELY, of West Virginia, spotted a point which the administration doesn't like to have spotted, while hearing the testimony of Stewart Coleman, head of the Middle East Emergency Oil Committee, before the Judiciary subcommittee.

Senator NEELY accused Coleman of wearing two hats, of representing the Government and at the same time representing the oil companies as a longtime executive of the Arabian-American Oil Co., now vice president of Standard Oil of New Jersey.

NEELY went further. He poked a finger into the inner financial sanctum of the Secretary of the Treasury, where most Senators fear to probe. Pointing out that Secretary Humphrey had not sold his stock in the M. A. Hanna Co., as Charlie Wilson did his General Motors stock, NEELY said the Hanna Co. owns 482,256 shares of common stock of Standard of New Jersey. Value: $26,885,722.

He also pointed out that the M. A. Hanna Co. owns 187,500 shares of Seaboard Oil. Value: $11,671,875.

Senator NEELY wanted to know if this wasn't a moral conflict of interest. He also speculated regarding the fact that President Eisenhower spent a vacation on Humphrey's luxurious Georgia plantation at the very moment when the Middle East crisis required vital decisions.

GEORGE ALLEN RELAXES

Senator NEELY could have gone further in probing into the possible effect of oil on American foreign policy. Here is the rollcall of other personalities who might be influenced by oil:

George Allen, close friend and bridge-playing partner of the President, also with him at the Georgia plantation. Allen has been chairman of the Yemen Oil Development Co.

Chris Herter, the new Under Secretary of State, is indebted to Standard of New Jersey for his wife's fortune.

John Foster Dulles' law firm represents Standard of New Jersey.

Ex-Secretary of State Acheson's law firm also represented Standard of New Jersey.

Ex-Under Secretary Herbert Hoover, Jr., was an executive of Union Oil, which is interlocked with Gulf Oil, which gets its oil from the Gulf of Persia.

These are all honest men. But it's hard for even the most honest public official not to be influenced by subtle, economic pressures.

Largest stockholders in Standard Oil of New Jersey are the Rockefellers. The Rockefeller family contributed $152,604 to the Republicans in the recent election. The Mellon family, which owns Gulf Oil, contributed $100,150; the Pew family, which owns Sun Oil, put up $216,800. Other oil men plunged heavily for Ike. Almost no oil money went to the Democrats.

At the glamorous state dinner given by Mr. Eisenhower to King Saud the board chairmen of the major oil companies interested in the Near East were present, plus the heads of the Rockefeller banks which back them. The guest list included Fred Davies, chairman of Aramco; Ralph Follis, chairman of Standard of New Jersey; Brewster Jennings, chairman of Socony; Augustus Long, chairman of Texaco; Monroe Rathbone, president of Standard of New Jersey; Jack McCloy, chairman of the Chase Bank; and William Kleitz, president of Guaranty Trust. Many of these were also GOP contributors.

Next day the presidents of the same companies were invited to dine with Secretary Dulles and King Saud. The chairman of the boards rated a White House dinner with Ike, the presidents with a dinner with Dulles.

Washington's Huge "Gimme" Budget

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Globe-Democrat of March 4, 1957, entitled "Washington's Huge 'Gimme' Budget":

WASHINGTON'S HUGE "GIMME" BUDGET

Who is responsible for the galloping extravagance that has bloated Federal spending almost 20 percent in 3 years? And mark the fact. These have been nonwar years, climaxed by the biggest peacetime budget in American history.

The handiest whipping boy for our splurge prodigality is, of course, the administration. There is some plausibility in dumping the fault on White House steps. The President's budget is inflationary and exorbitant.

But that is a too-easy "out." Mr. Eisenhower has struggled in the past to pare down Federal spending. He succeeded for a while, but his progress has been wiped out in a flight of budget ballooning. He asked Congress to slash the new money schedule. His Secretary of the Treasury has warned in biting phrase of the path we are marching to profligacy. Ike could do more.

Congress bears a brunt of blame, for Congress passes the rising appropriations. Congress exerts pressures to throw governmental economy critically out of kilter. Yet Congress is not the sole fiscal sinner.

Bureaucracy has a tremendous stake in the orgy spending habits to which we have succumbed. Every big and small agency in the Federal complex wants more, fights for more, lobbies and exerts political strategy to expand its orbit. But the answer is not fundamentally here, either.

The reason for the tumorous growth of Federal lavishness is, in the last analysis, the average citizen and the maze of his special interests from one end of the Nation to the other.

Because the ordinary citizen not only tolerates but adds to the pressure for wilder, bigger Federal outlays, the budget pyramids and taxes continue their harsh burden.

Most of us haven't the fortitude to insist that the multibillion allotments for Federal programs be slashed.

One of the sacred fiscal cows is defense. No one in possession of his reason would have the United States strip itself of essential strength at this time. But commonsense and a little examination shows pretty definitely that appropriations for the armed services can be cut in many categories.

The military must have adequate support. But probably no arm of National Government is so wasteful and extravagant. The several services duplicate missile programs of research and development, duplicate plane development projects, duplicate base and airfield facilities. The military always buys the best, not merely the adequate. It is riddled with rivalries and keeps a buttoned lip over wastes many of its leaders know exist.

In varying degrees other branches of Government are as culpable. Because the defense arm is the most costly, we allude to its practices. Total dollar outlays for defense have soared from $12,900,000,000 in 1949 to a

requested $43,300,000,000 for the 1958 fiscal year.

Other divisions of Government show just as bad a spirit of Federal thrift. Foreign-aid spending is loose. Counterpart funds dished out lavishly to traveling dignitaries, including Congressmen, are symptomatic of the drunken-sailor spending.

Rivers and harbors projects, public buildings, grants, loans, bounties, benefits of all sorts, and myriad pressures—all go into the pot of soaring Washington costs.

The average citizen sits on his hands about the situation. Or more often he, too, has his hand out for some special favor from the endless stream of Federal paternalism.

Maybe it is money for housing, a monument, more social security, a new post office, power development, or school subsidies. Strong and facile arguments can be made for everything everybody wants.

It all adds up to giant Federal expenditures, rising inflation, and eventually financial bust. The philosophy is for Government to curtail someone else, but give us individually all we demand.

This is the era of "grab and gimme" government. And we, the people, are responsible.

It will not stop until we have the courage and sanity to curb our own demands, ease our own pressures and force a reduction in the astronomical spending that is leading toward national crisis.

One Hundred and Fiftieth Anniversary of the Founding of Dover, Ohio

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BOW. Mr. Speaker, the city of Dover, Ohio, will celebrate its 150th anniversary tomorrow and I regret deeply that the business of the House makes it impossible for me to join with the citizens of Tuscarawas County in the ceremonies marking this historic milestone.

Dover is now a busy, prosperous center of diversified industry and one of Ohio's most progressive cities.

The first settler, in 1806, was Christian Deardorff, who purchased 2,175 acres of land that had been granted Col. James Morrison, of Lexington, Ky., in recognition of Revolutionary War service.

Deardorff, who was joined by Jesse Slingluff, established a gristmill on his land, and in 1807 they founded the village of Dover.

This was historic country even then. In 1772 Moravian missionaries to the Delaware Indians established the village of Schoenbrunn a few miles southwest of the present city of Dover. Schoenbrunn was the site of the first church and the first school in what is now Ohio. Later Fort Laurens was established a few miles north of Schoenbrunn. Both Schoenbrunn and Fort Laurens were abandoned during bloody battle warfare in the final years of the Revolution. Dover was in a sense a new beginning of this earlier pioneer settlement.

A post office was established at Canal Dover, as it was then known, in 1817. The village grew slowly thereafter, until the opening of the Ohio and Erie Canal in 1830 gave it new impetus and it became a grain and flour mill center for the area.

Local resources of ore, coal, and clay brought other development in midcentury. A blast furnace was established in 1855 and a steel rolling mill in 1866. The first brick factory was built about this time. During the Civil War, Dover was an important recruiting center. Camp Meigs, where hundreds of Ohio men entered military service, is now the county fairgrounds.

Dover was incorporated as a village in 1842 and became a city in 1900.

Today it is a handsome Ohio city with the familiar square and tree-lined streets that are characteristic of our area. Many other cities depend on Dover for their supply of coal, steel, and brass castings. The city is famous for supplying brass bushings for ocean liners.

Coal, clay, limestone, shales, molding sand, petroleum, natural gas, and salt are the raw materials furnished by Tuscarawas County for the manufactured products of Dover.

Among the many products of Dover are building brick, fire brick, electric appliances, screw products, tanks, boilers, steel fabrications, drawn tungsten wire, cold rolled strip and stainless steel, chemical and plastic products, wire, stone, steel sheets, roofing, stove and furnace pipe, buckets, tubs, wood stoves, and castings.

Almost every conceivable service and need is available, from watches to diesel trucks, in the 178 retail stores found in Dover.

The city has its own municipal light plant and water system, park, stadium, modern public and parochial high schools, 4 new grade schools and a parochial grade school, 3-story YMCA, Legion Memorial Hall, 20 churches, and a Salvation Army building.

Tuscarawas County fairgrounds and Union Hospital are a part of Dover.

Boating, fishing, and swimming are all available in a short drive from Dover in any one of the Muskingum Watershed lakes. The famous Muskingum Conservancy District, one of the world's outstanding examples of conservation, has its headquarters here.

One Hundred and Seventh Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. FLOOD. Mr. Speaker, today, March 7, is the 107th anniversary of the birth of Thomas Masaryk, the father of Czechoslovakia, who is regarded throughout the world as a symbol of freedom. It is particularly important to celebrate his birthday now that Czechoslovakia has lost her freedom and lives under the oppressive yoke of Soviet totalitarianism. The people of Czechoslovakia have not forgotten Masaryk any more than we would forget George Washington. He remains an inspiration to them despite the efforts of their Soviet masters to picture their first president as a reactionary and one who opposed the will of the people. The Czechoslovak people know in their minds and feel in their hearts that the life and teachings of Masaryk have a meaning for today, however much the Communists may claim his influence is a closed chapter in history. When we join in celebrating Masaryk's life we give the men and women of Czechoslovakia new courage and strength to resist the degradations to which they are subjected by their Soviet overlords.

Masaryk worked long and hard during the First World War to present the case of Czechoslovak independence. He came to the United States in 1918 and gained the support of Woodrow Wilson for his cause. Indeed, the Czechoslovak Declaration of Independence was formally published in Washington, D. C., on October 18, 1918. Masaryk felt close to America, both because his wife was an American and because of our democratic government. In 1918, he said:

> For myself, I feel nearest to and accept the principles of American democracy. At this time I can declare that those principles always were, are now, and ever shall be, the guiding principles of the political aspect of my life, because they are near to our Nation, and because our people accept them for their own, and will ever be united by them with America, united in this spirit of freedom and democracy.

The nation which Masaryk founded on the ruins of the crumbling Austro-Hungarian empire was a showcase of democracy throughout central Europe. It seemed symbolic of a new era, an era of democracy for all the world which was to be ushered in by the allied victory in the great war. That new world of which Czechoslovakia was the first fruit did not become a reality. It was decisively smashed by the blood bath of Hitler's totalitarianism which was followed almost immediately by Russian communism.

Adolf Hitler was able to end the dream of democracy for Europe because other nations refused to stand united in opposition to this aggression. Czechoslovakia was the first to fall. As Masaryk is the symbol of freedom to a world where today only some may live in freedom, so also he is the symbol of the way in which that freedom must be defended. Today it is important for the free world to celebrate the birthday of Thomas Garrigue Masaryk because his life has a vital lesson to teach us. It is a simple but a profound and tremendously important truth in the world of today. It is the truth that the free nations must be economically and militarily strong and united in opposition to the aggressive expansion of Soviet totalitarianism. Otherwise our democracies too will fall by foreign conquest. Today Masaryk is a hope and inspiration to the subjugated people of Czechoslovakia and he should be a goad to us that we continue to build a close alliance with other members of the free world in order that democracy may not fall piecemeal before the onslaught of dictators.

The Transport Revolution

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. EDMONDSON. Mr. Speaker, a timely editorial on the subject of our Transport Revolution appeared on March 4, 1957, in the Tulsa Tribune. The editorial has particular significance in Oklahoma, where the entire State has united in support of a great program to bring water transportation facilities to the Arkansas River.

The editorial follows:

THE TRANSPORT REVOLUTION

Sweeping changes in methods of transportation are not only altering the face of America, but they are beginning to produce profound economic changes in American business. Oklahomans, who have lived on a sort of arid plateau, industrially speaking, should consider what these innovations could mean to the future prosperity of the State.

An article entitled "The Second Transport Revolution," by Marvin Barloon in the current Harper's magazine, points out that American industry, originally built on the pattern of railroad freight rates, is now adapting itself to many other methods of moving goods. Last year for the first time the railroad share of the total intercity freight haul dropped to 49 percent.

This doesn't mean that the railroads are through. It does add force to the railroad argument that now, since they are no longer a monopoly, they should be relieved of restrictions that have forced them to charge higher-than-necessary rates on high-class goods, which circumstance has naturally been turned to advantage by the truckers. Railroads should be permitted to battle freely in the highly competitive hauling field.

Highway transport, which now amounts to 40 percent of the ton-miles carried by rail, has suburbanized light industry. Such industry is no longer tied to railroad trackage, but can be freely placed on cheap country real estate. The products of most light industry bear high value as compared to shipping costs, and flexibility of trucks and door-to-door delivery to customers are important.

At the other end of the spectrum inland water transportation for bulk goods has seen a rise of 1,000 percent between 1929 and 1955. The old-fashioned packet boat of Mark Twain's day carried only about 300 tons of freight. A modern diesel towboat pushing 15 barges can propel up to 25,000 tons, the equivalent of 400 freight cars. With radar, towboats no longer have to tie up at night. And the average cost per ton-mile on the river is one-half cent, while the average railroad cost is 1.5 cents and the truck cost 6 cents.

That is why water transportation up the Arkansas River and the Verdigris to the vicinity of Catoosa will be of immense importance to the future of Oklahoma. Everyone who can should attend the annual meeting in Tulsa Friday of the Arkansas Basin Development Association where this project will be discussed by the experts who have brought its development to the beginning stage.

Last week saw the beginning of shipments of powdered coal, held in suspension in water, via pipeline from Cadiz, Ohio, to Cleveland powerplants. Still blocked by rail opposition is a proposal for a 103-mile conveyor belt to carry a continuous stream of coal from the Ohio River to Lake Erie and a continuous stream of iron ore in return.

The use of air freight has boomed, although its percentage to the total freight movement is still negligible. It is being used chiefly to move perishables, like cut flowers, emergency shipments like machinery parts, and high-cost items like high-style dresses where a store wants to avoid large inventories. But the next 10 years may see freight-carrying planes like the proposed C–132, which will break through the explosive ton-mile barrier and permit air shipment of medium-cost goods.

This would eliminate the advantage of the big city retailer who has enjoyed a special ability to cut prices because of his nearness to suppliers and warehouses. He has not had to maintain large inventories since he can replenish many of his supplies in an hour. Big-time moderate-cost air freight would mean that a Tulsa concern need only stay 6 hours ahead of demand on many items instead of 2 to 3 weeks. This would revolutionize our retailing.

More efficient transportation will mean that more people can afford more things. The picture is going to change swiftly, and landlocked States like Oklahoma will profit most from the coming water-borne and air-freight boom.

Expert Predicts Cut in Money Demand

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Financial Writer J. A. Livingston, which appeared in the Washington Post and Times Herald of March 6, 1957:

BUSINESS OUTLOOK
(By J. A. Livingston)
EXPERT PREDICTS CUT IN MONEY DEMAND

NEW YORK, March 5.—In the higher echelons of economic thought, 2 plus 2 never equals 4, a straight line isn't the shortest distance between 2 points, and the whole is not necessarily equal to the sum of its parts. Economics is the zany science, and nature, which performs such wonders as protective coloration for grouse, a folding head for the turtle, and ink pots for the squid, is certain to do something about it.

In the years to come, Economic Man, instead of having a backbone, will have a protruding down-covered spinal column. He'll carry his own couch around with him, so that anywhere, at any disturbed moment, he'll be able to unburden his inner schisms to an on-the-spot psychiatrist.

Such psychiatric assistance is indisputably necessary in a world in which man, given a silver lining, finds the cloud. Consider the estimate just made by Girard L. Spencer of the demand for long-term money in 1957. He figures demand will be less intense by 20 percent. On its face, that's bullish for Wall Street. Bond and stock prices ought to levitate. But do they? No. And not because Spencer's not an authority.

He is a partner in the highly respected New York Stock Exchange firm of Salomon Bros. & Hutzler. It specializes in institutional securities, such as Government issues, finance paper, high-grade bonds of all types. It can't afford to be wrong on money trends. If it is, its capital account makes like an accordion closing on itself.

So Salomon Bros. tries to "know" whether interest rates will go up or down. Therefore, Spencer makes a yearly study on where the long-term money's going and where it's coming from. As he sees it, the supply of money this year will be just about as big as it has ever been, $22.1 billion. Here are his estimates:

Source of supply:	*Billions*
Life insurance companies	$5.4
Mutual savings banks	2.0
Savings and loan associations	5.2
Private pension funds	2.3
State and municipal pension funds	1.7
Fire and casualty insurance companies	.6
Other long-term funds [1]	4.9
Total	22.1

[1] Charitable organizations, personal trusts, individuals.

Against that, Spencer estimates these demands:

1. Net mortgage financing of $11.9 billion.
2. Net State and municipal requirements of $3.4 billion.
3. Net corporate and foreign financing of $7.9 billion.

That totes to $23.2 billion. So, there's a deficiency in supply of $1.1 billion.

But does that mean money's going to be tight? Does that mean corporation treasurers will be running around from insurance companies to banks and banks to insurance companies with high interest rates in hand? To the logical mind, it does. But Economic Man is not one to be beguiled by 2-plus-2-equals-4 arithmetic. That's too direct, too simple. Economic Man believes in comparative analysis. And by comparative analysis, money's not going to be tight.

Money was tight in 1956 when demand for long-term funds was $26.3 billion. Then there was a deficiency of about $3.5 billion in supply. In 1957, demand's only $23.2 billion. What's a $1.1 billion deficiency to Economic Man? Why, supply and demand are almost in balance.

So, suggests Spencer, interest rates ought to be comparatively stable. In 1956, money flowed like honey at an outdoor Eskimo picnic. In 1957 it ought merely to flow like honey—not too slow, not too fast.

Does that cheer Economic Man? Hardly. What's good for the money market isn't necessarily good for General Motors. Easier money implies economic slack. Auto sales won't be so furious. Steel operations may slump. Building may slow down.

Sure, Economic Man has said all along that we need to stretch our prosperity, do a little less all at once. But a little less industrial tension means lower profits for corporations. Lower profits mean lower prices in Wall Street; lower stock prices mean—don't say it, please. Dr. Menninger, where's my couch?

Reclaiming the Dust Bowl

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. KITCHIN. Mr. Speaker, on Tuesday of this week the President of the United States sent to the Congress proposals for drought relief in a number of Great Plains and Southwest States. In this connection, I desire to direct the attention of the House to a letter to the editor of the Washington Post, dated January 9, 1957, from Dr. Hugh H. Ben-

nett, formerly Chief of the Soil Conservation Service and a native of my hometown, Wadesboro, N. C., on the subject Reclaiming the Dust Bowl.

I also wish to insert an editorial from the Greensboro Daily News, Greensboro, N. C., on Hugh Bennett's Optimism.

The letter and editorial follow:

[From the Washington Post and Times Herald of January 9, 1957]

RECLAIMING THE DUST BOWL

Your timely editorial of December 26, 1956, calls attention to a prodigious land disaster at the heart of the Nation, and what to do about it. Drought, wind erosion, dust, dunes, and fruitless fields are fast undermining the economy of the afflicted area.

We have had much experience combating wind erosion, dust and drought. It may profit us to look back to the drought of the thirties and what was done about it. That was a prolonged, dusty, and disastrous drought that extended across the Great Plains from Canada deep into Texas and adjacent New Mexico. The whole vast area was parched, including even the deep alluvial soils of river bottoms.

And there was "dust pneumonia" and frightening duststorms that blotted out the sun over the Nation's Capital and New York. The biggest one laid dust on the decks of ships hundreds of miles off the Atlantic coast.

Then the rains came with good crops of wheat and sorghum. The people forgot. They plowed up more virgin grassland along with much of what farmers had gradually reestablished with the assistance of soil conservation.

"Suitcase farmers" came in, leased land, tore down fences, plowed up everything, and seeded wheat. Some of them made fortunes, repacked their suitcases, moved out, and forgot their crimes against the public. But nature neither forgot nor forgave. Accordingly, we are being punished once more for our interference with the stern laws of nature.

Not all has been forgotten—and that is what I want to point out. Experience sometimes gives us valuable suggestions. I have reference to the experience of the Soil Conservation Service whose birthday corresponded closely with the great duststorm of May 12, 1934. That "black blizzard" was the first of its kind since the coming of the white man to America.

The Soil Conservation Service ran head on into this catastrophic drought of the thirties and its attendant evils without combat experience or proven implements of attack. Fortunately the service was founded on the concept that soil erosion can be coped with only through the use and protection of land according to the needs and capability of the different kinds of land a farmer has, making use of those adaptable measures and combinations of measures required for sustained productivity of the soil.

Every proven measure was utilized and many new measures were quickly developed by trial and error. The old practice of listing was amended by contour application. Crop residues were carefully protected from overgrazing. Good results came from using wheatland for what, grassland for grass, and sorghum land for sorghum. We harvested seed of all the good grazing grasses of the region and planted them in contour furrows within their known range limits.

Pasture areas were contour furrowed; even hole-digging machines were used on the contour on some of the more vulnerable lands. Wild sunflower—a weed—was planted in some of the more scorched areas. Every implement and every planting were held to the contour. It probably was the world's greatest contour movement, with the exception of the practice of bench terracing, which had its origin in ancient times.

The work proved successful where properly applied and maintained. To a considerable degree wind erosion was stopped throughout the Great Plains.

Not all of this work has been forgotten. The Dalhart area in the Texas Panhandle is a notable exception. This was in one of the worst wind-whipped, drought-stricken areas in the whole afflicted region. Here it was that a plain's raven had built its nest of bits of wire picked up from farmsteads in the absence of vegetable materials for nest construction.

Finally the situation in this area was put under control. Even the dunes that had blown up were leveled and controlled with contour plantings of sorghums. And here the farmers have held on to their conservation practices; today these farms are in much better shape than those where the conservation practices were neglected or plowed up. The Dalhart area stands out like an oasis in the midst of drought and want; but what is more important, it is a place plains farmers can go for conservation information and renewed hope.

I mention these matters because they give me faith to predict a successful outcome of the new battle that apparently is to be fought to the finish.

HUGH H. BENNETT,
Formerly Chief, Soil Conservation Service.
FALLS CHURCH.

[From the Greensboro (N. C.) Daily News of January 15, 1957]

HUGH BENNETT'S OPTIMISM

President Eisenhower's trip to the Great Plains will dramatize for the Nation the plight of thousands of drought-stricken farmers and cattlemen.

The specter of the thirties haunts that great area—the black blizzards that blew topsoil in the air and carried it as far as Washington and New York, and the bankruptcy and abandonment of farms that followed in their wake.

From central Texas to Wyoming and Nebraska, to west Kansas and Oklahoma today, feed and water are dangerously short; normal credit has vanished for farmers who haven't had a good crop for years and for ranchers who have cut their foundation herds to a minimum. But good times and jobs have helped carry over many a family; these are not depression days—yet.

Pessimism attended the President's departure. Many of the oldtimers who fought the Dust Bowl back in the thirties haven't much hope.

The nature of man, they say, is to forget the lessons past—to plow up virgin grassland painfully reestablished by soil-conservation methods. In times of prosperity and parity "suitcase farmers" move in, lease land, tear down fences, plow up everything, plant wheat, make a fortune, pack up their suitcase and move out, leaving land despoiled.

But amid the President's departure there was a notable exception to the pessimists: Tar Heel-born Hugh H. Bennett, beloved former Chief of the Soil Conservation Service, who now lives in Falls Church, Va. In a letter to the Washington Post he expressed his faith to prodict a successful outcome of the new battle.

He recalled the methods used to reclaim land once so afflicted that ravens of the plain had to build nests from bits of wire picked up from farmsteads in the total absence of vegetable materials for nest construction: Every crop was contoured; cattle were not permitted to overgraze; wheatland was planted in wheat, grassland in grass and sorghum in sorghum; wild sunflower was planted in the scorched areas.

"It was," he wrote, "probably the world's greatest contour movement." And it was successful where properly applied and maintained.

So even if the memory of man is short, Hugh Bennett is not dismayed. The new Dust Bowl can be made to bloom again.

America Recognizes Amerigo Vespucci

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. SANTANGELO. Mr. Speaker, I have today introduced a resolution to commemorate the birthday of one of the world's greatest explorers, Amerigo Vespucci. America, which adopted the name of this explorer, has failed to do honor to the birthday of the man, and I have, therefore, introduced this belated resolution to correct the omission.

At a recent ceremony in the executive chambers at the State capitol in Albany, N. Y., attended by Hon. Enzo Gaspari, associate counsel to the Governor; Hon. Nina Rao Cameron, assistant commissioner of commerce and public events, city of New York; Jack Ingegnieros, State president of the Federation of the Italian-American Democratic Organizations of the State of New York, Inc.; and Orlando Oliva, political action coordinator, United Automobile Workers, AFL-CIO, who recognized the worth and the contribution of this intrepid Italian explorer who sailed under the Spanish and Portuguese flags, Averell Harriman, Governor of the State of New York, proclaimed this Saturday, March 9, 1957, as Amerigo Vespucci Day.

I, therefore, feel it fitting and proper that continued reecognition should be given to the explorer who first saw the mainland of the American continent, and it is for this reason that I have introduced my resolution.

The following is the proclamation issued by Governor Harriman:

PROCLAMATION

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany.

Amerigo Vespucci, one of the great navigators and explorers of history, was born in Florence, Italy, more than five centuries ago—on March 9, 1451.

All his life he was a student of geography. As a navigator, he was the greatest expert of his day in calculating latitude and longitude, having acquired by his own studies an excellent practical knowledge of astronomy.

Moving from his native city to Spain, Vespucci led several important exploring expeditions westward across the Atlantic—two of them under the Spanish flag, and two under the flag of Portugal.

On his voyages, Amerigo Vespucci was, if not the first, at least one of the first to sight the mainland of a whole new hemisphere, which was later named America for him.

All of Italian descent are proud of the achievements of this great explorer, and on this anniversary of his birth it is fitting that we join with them in paying tribute to his memory.

Now, therefore, I, Averell Harriman, Governor of the State of New York, do hereby proclaim Saturday, March 9, 1957, as Amerigo Vespucci Day in the State of New York,

and call upon our people to participate in all appropriate observance of the occasion.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 28th day of February in the year of our Lord 1957.

AVERELL HARRIMAN.

By the Governor:
[SEAL] JONATHAN B. BINGHAM,
Secretary to the Governor.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. NEAL. Mr. Speaker, we are fast approaching a time when Federal Aid to Education will occupy the most intensive thought and concern of which the Members of this Congress are capable. In all fairness to proposals which have received wide publicity in the field of Federal aid to education, I do not think that we should be totally unapprised that there are other solutions, possibly less complicated, than the ones now occupying newspaper headlines, radio programs, and TV screens.

Therefore, I think it of considerable interest to the Members of this House to read the following editorial written by Mr. Charles Hodel, publisher of the Raleigh Register in Beckley, W. Va., concerning a bill introduced by my distinguished colleague Representative ERRETT P. SCRIVNER, of Kansas.

The editorial appearing in the edition of Sunday, March 31, 1957, is self-explanatory:

HERE'S HOW UNCLE SAM CAN AID SCHOOLS

If there must be Federal aid to schools, Representative ERRETT P. SCRIVNER, of Kansas, has come up with the best possible means of accomplishing it—simply and directly.

In fact the Scrivner plan is so simple and so protective of States' rights that it completely confounds the Washington bureaucrats. There is nothing in it for them. At the same time it promises to assuage the pain and panic of the school people that they might have to return to first principles of education—Mark Hopkins on one end of a log, the student on the other.

Of course you, the reader, are wondering how such a sound, simple, yet comprehensive plan has been devised. Your next wonderment will be that you didn't think of it yourself.

Here it is, as stated by Mr. SCRIVNER himself in the CONGRESSIONAL RECORD:

"My proposal, simply stated, provides that the collector of internal revenue in each State or Territory shall remit each quarter, for educational or school construction purposes, to the State treasurer a sum equal to 1 percent of the personal and corporate income tax collected during that quarter."

Just like that. No folderol. No expense. And, as Congressman SCRIVNER himself adds: "The money stays where it is earned to be used for educational purposes or school construction just as the people themselves, through their State representatives, decree."

How would West Virginia fare? Well, Mr. SCRIVNER has that figured out, too. During the fiscal year ending last June 30, this State would have retained $2,919,000. Not a big item when modern construction costs are taken into account. 'But it is all directly applicable—doesn't have to be discounted by the cost of bureaucratic restrictions, direction, and control.

Augmented by increased local financing of schools through direct property tax equalization, just a few years would see the raising of a great deal of money for better education in West Virginia.

At present rates of income taxation the annual total of school aid for all the States would amount to $630 million—hardly more than half the $1.2 billion proposed in the Eisenhower budget, which would include the useless cost of Federal administration, control, and interference.

And if that proved inadequate, the take could be increased to 1½ or even 2 percent, the entire amount of which could be saved by applying the same direct process to some other Federal functions, as pointed out by the Hoover Commission.

Beyond that, there would not be tacked onto such a bill a strangling amendment like that of Representative ADAM CLAYTON POWELL in the 84th Congress, excluding from Federal aid the States that do not integrate their schools. States' rights would be completely satisfied in the very nature of the money-raising process.—C. H.

Integration in New York Schools

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 4, 1957:

INTEGRATION HERE, TOO

Refusing to be awed by a campaign of misrepresentation, selfish obstructionism, and in some cases prejudice, the board of education has courageously approved in principle a program to equalize educational opportunity in New York's schools by reducing de facto racial segregation as much as possible and improving teaching standards where needed. The action was unanimous. The board president, Charles H. Silver, rejected counsels of delay.

The board specifically reserved to itself the right to proceed deliberately and reasonably with the implementation of the reports on zoning of school districts and on teacher assignments that had come from its commission on integration. Zoning, or rather better zoning, means that school district lines will be drawn wherever possible to encourage integrated schools instead of segregated schools.

Segregation has never had official sanction in New York; where the student body is all-Negro, for instance, it is because a residential neighborhood is all-Negro. With the best of good intentions it is not easy to cope with such a situation. However, where rezoning cannot immediately improve a situation teacher transfer and—this is important—other related improvements can greatly alter for the better the educational opportunity in a "difficult," or "subject," school. This is where the other report, on teacher assignments, comes in.

Now in principle the difficult school will begin to get the best of things and of personnel. It will be manned by experienced teachers; if they cannot be obtained by voluntary action they will be obtained by assignment. The lot of the teachers in such schools will be improved, with smaller classes, more free time, and so on; in spite of all the assurances given, some teacher organizations fear—as usual when any compulsive change is suggested—a loss of teacher "morale." We think too well of the rank and file of our teachers to believe this. Anyway, as Dr. Jansen and Mr. Silver have noted, "the needs of the children are primary."

This commendable action by the board, prepared for and assisted by such fine organizations as the Public Education Association, brought its loud protests. But how could the decent people of this city have held up their heads today if the board had declined to take it? How could we have answered our conscience? What could we have said to our friends in the South?

Lower Retirement Age for Social-Security Benefits

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. DINGELL. Mr. Speaker, today I am reintroducing a bill to lower the minimum retirement age for social-security benefits to 55 for women and 60 for men.

Legislation of this nature is desperately needed by many of our older citizens who, through no fault of their own, are unable to work or to find a job in their late middle age.

Congress has not been altogether unmindful of the problems of the people in these dire circumstances. Last year, over the objections of the administration, we passed two amendments to the Social Security Act which show great potential for making this program truly responsive to the needs of the American people. The significance of these changes last session—the reduction of the minimum retirement age for women to 62 and the institution of cash disability benefits for disabled workers age 50 or older—is not entirely in the provisions of the amendments themselves. Their full importance comes from the fact that Congress has finally recognized that there is nothing sacred about age 65 as a factor in determining a person's need for benefits. These amendments recognized the fact that disability, age restrictions on employment, and other circumstances can just as effectively force an individual's retirement as his chronological age.

The lowering of the age for women—the first such retirement age reduction in the 22-year-old history of the act—was a step in the right direction. It was, however, a mincing step and one that was not without its inequities. True enough, the widow or dependent mother of a deceased worker may now receive a full benefit at age 62. But on the other hand, a working woman who may have been contributing to social security for 20 years must be content with 80 percent of her full benefit, and a retired worker's wife will receive only 75 percent of her benefit.

Those who defend these reductions argue that a woman has the freedom of choice to delay her retirement until 65 and receive a full benefit. Such an argu-

ment, however, ignores the simple fact of life that a great many men and women are retired in fact long before they reach age 65. For these individuals there is no freedom of choice. They need their benefits at the time of their actual retirement. Any substantial time lag between the time they leave their jobs and their eligibility for benefits means hardship and suffering.

A recent survey by the Department of Labor indicates that employers are not hiring older workers because they believe that they are less productive and greatly increase insurance and pension costs. The administration maintains that it will remedy this situation by an educational program which will convince private and governmental employers of the wisdom of revising their hiring practices in regard to older workers. These efforts, appear to have slackened considerably since the election, and have had an imperceptible effect on the problem. It is difficult to imagine, moreover, that this approach is more than a token attempt to alleviate the basic economic problems of this unfortunate group of older workers.

The amendment I introduce today will go hand in hand with any effort—regardless of how ineffectual—which is designed to provide employment opportunities for older persons. But in contrast to the administration's proposed solution, this amendment is directed at what I believe is the heart of this problem—the provision of minimal income for this segment of our population which is in need of immediate aid. Instead of offering people the faint and pious hope that employers will sometime listen to these pleas, this amendment proposes a concrete solution to this pressing problem.

There are those who maintain that legislation such as I propose will cause a great voluntary exodus from employment. However, past experience indicates that very few people quit their jobs voluntarily in order to receive social-security benefits. In 1955 a survey showed that the greatest number of people receiving retirement benefits did so because they were dismissed for some reason which was beyond their control. The most common reason was their age. The next greatest number, moreover, were retired because poor health made work impossible. It is only reasonable that people wish to work as long as possible when the cost of living continues to rise and social-security benefits remain at such a low level. Average monthly benefits for October 1956—$63.21 for a retired worker, $33.64 for a wife, and $49.24 for a widow—offer very little inducement for voluntary retirement.

The purpose of this reduction in the minimum retirement age is to extend social-security protection to the greatest number of persons within the context of a moderate tax increase. The amendment, which raises taxes 1¼ percent on both employee and employer alike and 1⅞ percent on the self-employed, seems reasonably calculated to preserve the integrity of the Old-Age and Survivors' Insurance Trust Fund.

Questionable Food Additives

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BURDICK. Mr. Speaker, in support of some of the statements made in my news release for March 7, 1957—today—concerning certain deleterious or poisonous chemicals which are being added to our food supply, I wish to insert a petition to Congress, which was sent to me by the Massachusetts Women's Political Club of Boston, Mass.

If the pure-food law is not being enforced, and the failure to enforce it has resulted in great danger to the health of our citizens in the consumption of foods and soft drinks by the addition of chemicals and other substances which do not conform to the requirements of that law, it presents a situation which Congress should lose no time in remedying by the passage of laws which would eliminate such dangers, and there should be an immediate investigation as to the use of all questionable additives.

PETITION TO CONGRESS BY THE MASSACHUSETTS WOMEN'S POLITICAL CLUB

The Massachusetts Women's Political Club hereby petitions the Congress of the United States to make a thorough investigation into a matter of far greater importance to this country than the threat of communism or atomic warfare, because:

1. It is more insidious, hidden, and unrecognized by either the public or the Congress.

2. It stems from presumably reputable and respected citizens within our midst.

3. It exerts more power than the Congress itself.

4. It propagandizes our people and the congressional Members into a false sense of security.

5. It stamps out freedom of speech and of the press.

6. It is slowly but surely destroying our people more effectively than will ever be done by a foreign power.

We refer to a most powerful combination of the American Medical Association, the chemical and drug interests, and the refiners and processors of our foods all using the Health, Welfare, and Education Department with its expediter, the Food and Drug Administration, to protect their huge financial investments and profits to the detriment of the health and future welfare of our people.

Abundant evidence is available to the Congress if they really instituted an unbiased investigation to prove—

That Government bureaus such as the Federal Trade Commission, the Post Office Department, but more particularly the Food and Drug Administration, are being used by the above interests to bring pressure on drugless doctors, small-business men, and private individuals who interfere in any way with the profits of the above or who criticize the Federal bureaus who are protecting them.

That the Food and Drug Administration in particular have for 40 years been the tool of the above interests in the prosecution of anyone, whether layman, scientist, professional or businessman who by written or oral statements or deeds attempts to educate the public as to the truth about their health, their food, their soil, or the chemicals or drugs used therein or thereon.

That the press, radio, and television are definitely subservient to these interests and refuse to print but one side of any controversial question, being profuse in extolling the virtues of the products of these interests but definitely critical of anything which interferes with their profits.

That this control of press, radio, and television is made possible (1) by the voluminous advertising made available (or withheld) by the above mentioned interests, (2) by a "working agreement" whereby nothing pertaining to health, medicines, drugs or disease is made public until it has first been cleared through a representative of the local health department whose policy is dictated by the American Medical Association headquarters on Dearborn St., Chicago.

That because of this illegal "working agreement" our people are deprived of freedom of speech and of the press more effectively than the slaves behind the Iron Curtain when it comes to the particular subjects which affect the profits of the aforementioned interests, namely health, drugs, chemically treated soils, poisonous insecticides and refined, processed or chemically treated foods.

That the Food and Drug Administration act as the police department for these interests and the Justice Department either willingly (or unwillingly) act as prosecutor to obtain fines and imprisonment for doctors and businessmen whose only crime is telling the truth and exposing the illegal activities of these Government agencies. As proof that the predominant activities of the Food and Drug Administration are illegal we call the attention of Congress to a book written by Dr. Harvey W. Wiley, the founder of our pure food law, whom the Congress in this past year, (1956) has honored with a special stamp. This book contains positive proof that the pure food law has never been enforced by the Food and Drug Administration whenever such enforcement conflicted with the vested interests aforementioned, which includes practically all of the main purposes for which the law was passed. As proof positive for these statements we respectively suggest that each and every Congressman purchase and read the book entitled "The History of a Crime Against the Food Law," written by Dr. Harvey W. Wiley and printed in 1929. It was bought up immediately and confiscated as fast as it appeared on the bookshelves. For 30 years it has been effectively suppressed. It is now being reprinted in defiance of the copyright laws, by the Lee Foundation for Nutritional Research, West Wisconsin Avenue, Milwaukee, Wis. Price $3. But it and read it.

In it Dr. Wiley explains how his law has been cleverly sidestepped by over 24 illegal directives so that instead of our people being protected from all poisons as they think they are, they in reality are consuming some 500 chemicals of which 150 have not been tested and many have been definitely proven poisonous. Dr. Wiley claims that since 1917 the pure food law has ceased to perform its original purpose namely to prevent the addition of poisonous or deleterious substances to our foods, and instead has become nothing but a misbranding and mislabeling directive.

Dr. Wiley explains how the two most important Supreme Court decisions were rendered null and void by illegal directives. One was a decision of Charles Evans Hughes against Coca-Cola which decision was rendered null and void because no further prosecutions were made. Another was a Supreme Court decision against the nitrate bleaches used in flour. Likewise this decision was rendered null and void by an ille-

gal directive completely reversing the Supreme Court decision and permitting the continued use of poisonous bleaches provided the label clearly indicated it had been bleached. To these two decisions which would have protected our people had they been enforced we can add a third and more up-to-date one.

In 1945 the Massachusetts Brewing Co. and its owner were fined $5,000 each for adding a poisonous fluoride compound to the beer. Thus Dr. Wiley's pure food law was again upheld by the courts.

But in this case as in the others an illegal directive issued by the FDA a few years later rendered it also null and void. Why? Because the parent Department, the Health, Education, and Welfare Department was taken over completely by the chemical interests for the express purpose of promoting the introduction of this same deadly fluoride poison into the drinking water of every city and town in the country.

Therefore, to save face the FDA had to issue a directive that no prosecutions of brewers would be made for similar use of this deadly poison. Evidently people are expendable but business must be protected. Thus Congress is permitting the continued deception of 160 million people who blindly believe they are being protected by a pure food law.

In other words, in order to avoid prosecuting the vested interests before mentioned, the Food and Drug Administration has deliberately sidestepped the law and its purpose as passed by Congress, and instead permits the addition of any substance, without investigation, provided the substance added is named on the label. This is contrary to the law which has never been repealed or changed.

Yet this same Food and Drug Administration will hail into court anyone who sells a product, however beneficial to the public, if it fails to contain a drug or synthetic vitamin that will enhance the coffers of those interests whom they are protecting. As an example, just recently a Mr. V. E. Irons, who had for 23 years carried on a respected business in Boston, was prosecuted by the Food and Drug Administration because (1) he was selling a wholly natural dietary supplement and refused to add to it synthetic drugstore vitamins and (2) because he lectured on the evils of present-day refined, chemically treated foods. In his literature he clearly exposed the failure of the Food and Drug Administration to protect the people by their refusal to enforce the law. Naturally the FDA must dispose of such opposition. Mr. Irons was tried before a biased Boston judge and jury. Before them the Food and Drug paraded an array of doctors connected with the Nutrition Department of the Harvard School of Public Health. Of course, Harvard is much respected by Boston jurors but what they didn't know, and were not told, was the fact that Dr. Stare, the chief witness against Mr. Irons and head of said Nutrition Department received in the past 6 years over $360,000 from the food professors, the refined sugar interests, the soft-drink people, and the chemical and drug interests. Half of this was marked for Dr. Stare's personal direction. Naturally Dr. Stare and his coworkers made ideal witnesses for the FDA for they definitely could not and did not testify in any way but what was favorable to their donors, the very chemical and drug interests and food refiners whose activities in destroying our foods and our health were being exposed by Mr. Iron's literature and lectures. The suit against Mr. Irons was a criminal one against him personally because of his literature and not against his product.

Mr. Irons was found guilty and given a $6,000 fine and a year in jail on each of 6 counts, 4 of which were duplicate seizures. The judge specified the 6 separate years could be served concurrently. The case is being appealed.

Thus in this land of the free, and in this country that is the shining beacon for all those freedom lovers escaping the Iron Curtain, there exists a system whereby Government agencies illegally protect the vested moneyed interests who are destroying the health of our Nation for a profit. They prosecute and imprison courageous men who attempt to tell our people the truth. But you might ask, "How can they do it when the one has been harmed or poisoned by the products of the accused and when thousands are ready to testify as to the beneficial results." The answer is the FDA has unlimited power and the taxpayers' money with which to work. They sue on trumped up technicalities; they make on charge of willful violation nor any charge against the product itself. Thus the defendant cannot defend himself nor disprove their trumped up charges. But the unjust feature is that the FDA uses evidence furnished by a so-called scientific department of a great university, a department largely supported by huge donations from the very concerns who are flouting the law and who want the defendant put out of business.

How can justice be obtained under a system whereby there exists a vicious circle of illegal directives by Government bureaucrats, who protect the illegal activities of vested interests while both in turn are protected by an illegal unwritten agreement with the press, radio, and television to circumvent our constitutional freedoms. Then, they use witnesses from a pseudo scientific department of a great University paid for by the very interests who circumvented the law in the first place. Nor can the courts or juries be blamed, for neither they nor the public are aware that our pure food law is being nullified by these illegal directives because of the suppression of Dr. Wiley's book and the stranglehold on our freedoms of speech and press. So this insidious cancer continues to eat away the vitals of the greatest nation on earth.

Fifty years ago Dr. Wiley warned that unless the aduleration of our foods with poisonous or deleterious chemicals was stopped we could become a nation of morons, neurotics, and imbeciles. He devoted his life to prevent it but failed because his law was never enforced. Over 25 illegal directives have completely nullified his law and the court decisions that uphold it. Not a single citizen can go 1 day without being adversely affected by one or more of those directives (pp. 398–399 of Wiley's book). The crowning deed of this destruction was the addition of sodium fluoride, the greatest of all poisons, to our drinking water on the pretext of protecting the childrens' teeth. Every true nutritionist knows that it's refined sweets, soft drinks, and refined flour that is the basis of defective teeth. Is it any wonder the processors of these foods are so active in helping the chemical interests cover up for them? Is it any wonder the Health, Education, and Welfare Department and its expediter the Food and Drug Administration, who are equally responsible for the destruction of our teeth and health, are their continued willing tools?

Unless Congress acts soon Russia can walk in and take over this Nation of poisoned, toothless invalids without firing a shot.

MASSACHUSETTS WOMEN'S POLITICAL CLUB,
FLORENCE BIRMINGHAM, *President.*

Curtailing Power of Judges

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. CHENOWETH. Mr. Speaker, I am sure the Members of the House will be interested in an editorial that appeared in the Gazette-Telegraph in Colorado Springs, Colo. This editorial refers to a bill introduced by our colleague from Georgia [Mr. FLYNT, Jr.] relating to the power of judges to punish for contempt.

CURTAILING POWER OF JUDGES

We have previously mentioned the incredible power of the court respecting matters of contempt. The American system of jurisprudence, based as it is on both English law and English precedent, has it that the power of the court is traced directly from the Crown. There is a certain royal prerogative which still clothes our judges which prerogative is considered to flow directly from the monarch.

While we do not question this, insofar as British law is concerned, it seems to us a travesty on American independence that American law still contains a holdover from the alleged divine right of kings.

It is particularly noticeable in matters of contempt, since a judge is deemed a law unto himself and can, if he so chooses, cite an individual for contempt of court even when that individual is not in court and not a party to the matter at trial.

The recourse to be had by the cited individual is meager. He cannot be heard before a jury. He is given a chance to present his defense under oath, but the decision of the judge is final and the power of the judge is so great that the luckless citee can find himself fined or imprisoned simply because he exercised what he presumed to be his constitutional right of free speech.

Now it does happen that on at least one occasion the Supreme Court of the United States decided that cases of contempt against citizens not in the court nor privy of the court's findings, could not be valid. This matter was reported in some detail in U. S. News & World Report for February 15 under the heading of "How Much Power Does a Judge Really Have" It makes interesting reading.

None the less, while the Supreme Court did reserve itself in this one instance, there is no reason to believe that it would do so again, and some steps ought to be taken to curtail this unbridled display of power.

Fortunately, others than our selves have noted this latent potential for tyranny. The Honorable JOHN J. FLYNT, JR., a Representative to the Nation's Congress from Georgia, has recently introduced a measure in the House which, if approved, would serve to curtail the unbridled use of force which presently pertains.

In presenting his measure, Congressman FLYNT stated: "Nothing in the bill is designed or intended to prevent any court from summarily punishing for contempt any person guilty of a contemptuous act or otherwise creating any disorder in the courtroom or in the presence of the court * * *.

"It does not take away from any court or any judge the right to maintain order and decorum within the courtroom nor does it deny to such court or such judge the right to

punish willful violations of the terms of any order, mandate, writ, process, rule, decree, or command of the court.

"It does, however, provide that no American citizen shall be fined or imprisoned or both for an act of contempt of court committed outside the presence of the court and involving a proceeding to which he was not a party until a legally qualified and impartial jury passes upon the question of his guilt or his innocence."

Congressman FLYNT is to be congratulated for making the proposal he has. While we owe much to British law for our understanding and functional employment of due process in an effort to attain justice, we owe nothing to the British Crown, nor should any of our laws or regulations be based upon a presumed inherent right of the Crown to decide arbitrarily against a citizen who may differ from the opinion of the judge in a given case.

We were particularly pleased with this statement, also from Congressman FLYNT:

"The test of all legislation is not what a good and wise man might do with it; the necessary test to be applied is what a bad man can do with it. Absolute power, whether vested in an executive officer or in a judicial officer, is a dangerous thing and would most certainly destroy our framework of government and the basic guaranties of individual liberties which are spelled out in the Constitution of the United States and I believe in the constitutions of all 48 States."

We have great hopes that the Congress will pass this needed revision to the powers wielded by courts. It is completely contrary to the spirit of our laws that any man, regardless of his office, shall have arbitrary power over another man simply because the one may choose to criticize the other. We hold the right to criticize an inviolable portion of freedom of both speech and press.

Suez Quicksands

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial entitled "Suez Quicksands" from the Camden (S. C.) Chronicle:

SUEZ QUICKSANDS

Acceptance by Israel of the demands of the U. N., the United States and the Arab summit conference at Cairo, for immediate troop withdraway from Aqaba and the Gaza strip (as confidently predicted at this writing) seems unlikely to pour the anticipated oil on Suez waters.

Presumably the Israeli acquiescence was purchased by United States promise to defend freedom of navigation in the Gulf of Aqaba and to protect Israel against Egyptian raids from the Gaza strip. At the same time, the four Arab leaders, King Saud of Saudi Arabia, King Hussein of Jordan, President Kuwatly of Syria, and President Nasser of of Egypt, concluded their conference by signing a joint statement of neutrality which demanded the immediate and unconditional withdrawal of Israel from Gaza and the Aqaba straits and pledged mutual support of the sovereignty of Arabs over their lands and territorial waters. The joint communique emphasized the sovereignty of Egypt over the canal, while Egypt maintains that the Gulf of Aqaba, lying between Egypt and Saudi Arabia, belongs to the two Arab nations.

These devolpments would appear to leave the Middle East just as tense as it has been since the Franco-British-Israeli invasion—and place the United States in a position of deeper involvement and greater confusion, officially and unofficially.

Americans are asking (as Human Events says President Eisenhower asked when he was called back from his Georgia vacation for secret conference with congressional leaders): "How on earth did we get into this mess?"

More difficult and considerably more important, however, is the question: "How on earth do we get out of it?" The diplomacy of expediency which we have been pursuing since the first London conference on Suez seems only to have drawn us deeper into the Mideast quicksands.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MATTHEWS. Mr. Speaker, we shall soon be called upon to vote on the so-called civil rights legislation. I intend to vote against this legislation and would like to submit my testimony before the Subcommittee on the Judiciary which I gave this year:

TESTIMONY OF HON. D. R. (BILLY) MATTHEWS, EIGHTH DISTRICT OF FLORIDA, CONCERNING CIVIL RIGHTS LEGISLATION, FEBRUARY 14, 1957

Mr. Chairman and members of the committee, I appreciate this opportunity to testify concerning the so-called civil rights legislation. I want to say at the outset that I am very much opposed to this legislation the committee is now considering because I believe it is an unwarranted usurpation on the part of the Federal Government of the functions of our respective State governments.

Mr. Chairman, since maturity I have become increasingly concerned about the attempt, either conscious or unconscious, on the part of many people in this country to bypass the 10th amendment to the Constitution which provides that powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people. The 10th amendment is, in my opinion, one of the basic tenets of the Jeffersonian philosophy of government to which I adhere. Commonsense, experience in government, and the maintenance of justice for our people require, in my opinion, a strict observance of the 10th amendment. Government which is far removed from the people tends to become government by absentee ownership. Unless our Government remains close to our people, I believe in the not too distant future it will be supplanted by vicious despotism in one form or another.

Mr. Chairman, I cannot help but believe that this legislation is punitive legislation aimed particularly at the people of the South, which is the great section of the country that I represent. Let there be no mistake, however, in assuming that this problem of States' rights is peculiar to the South alone. I read in the CONGRESSIONAL RECORD an extension of remarks made by the Honorable J. ARTHUR YOUNGER, of California, in which he included an address by California Assemblyman Casper W. Weinberger on the subject of States' rights. Mr. Weinberger, in this very discerning article, mentioned several fields which illustrate very vividly how the Federal Government, usually through the Supreme Court, but occasionally through congressional action, has already assumed dominion over many fields that people have always assumed belonged, at least, partially, to the State. Mr. Weinberger went on to mention some of these fields, such as water and its control, the matter of the general security of our State government, and the field of civil rights. I think it might be well to emphasize the usurpation of general responsibility for the general security of our State government by the Supreme Court decision in *Pennsylvania* v. *Nelson*. As you will recall, in the Nelson case—and I am now quoting Mr. Weinberger—"the Supreme Court agreed to reverse a conviction of an acknowledged member of the Communist Party under the Pennsylvania State Sedition Act. The Supreme Court held that the various Federal acts, the Smith Act, the Internal Security Act, and the Communist Control Act, required the inescapable conclusion that the Federal Government intended to occupy and legislate in this field exclusively and, consequently, there was no room left for the State governments to act. This conclusion may have been inescapable, but it certainly was unexpressed by the Congress in any of those Federal acts."

I cannot help but express grave concern over the tremendous efforts that seemingly have been made, and are still being made, to safeguard the so-called civil rights of avowed Communists by agencies of Government and by many individuals who do not seem to concern themselves about the rights of many millions of people who live in the South to live and to pursue their vocations in accordance with the 10th amendment to the Constitution. In this connection, I was very shocked to read of the recent meeting of the Communist Party of America in New York City where one of the bold declarations promulgated by that small body of traitors was "to democratize the South." This heinous and vile implication merely emphasizes the point that we in the South have been making for years, and that is that the Communist Party has always determined to stir up strife and dissension between our races, not only of course, in the South but throughout all parts of the country. I never have, and I never will, follow the leadership of the Communist Party, in this area or in any other area of activity. I know this to be the true feeling of the members of this committee. Yet, I am constrained to observe that if this so-called civil-rights legislation were passed, that the rights of Communists would be greater than the rights of American citizens who would find themselves in litigation being required to pay costs and counsel fees whereas the accuser would have his costs paid by the Federal Government.

This so-called civil-rights legislation in my opinion is another Sherman's march to the sea. Rather than granting civil rights to a majority of our people, in my opinion it would deny basic civil rights to a majority of our people.

I should like to analyze H. R. 627, 84th Congress, 1st session, as reported, which is identical to H. R. 1151, 85th Congress, 1st session, and to point out the reasons why I oppose this legislation. I realize, of course, that this committee has not agreed upon any final bill to report, but I am assuming that the principles of these two bills will be embodied in any final bill considered by the committee.

Returning to the analysis of these two bills, and in particular H. R. 1151, part I establishes a Commission on Civil Rights. This Commission is to be composed of six men and will operate in the executive branch

of the Government. The Commission will be appointed by the President with the consent of the Senate, and it is specified that not more than three at any one time may be members of the same party. Four members will constitute a quorum. Members of the Commission not in Government service will receive $50 per day actual travel expenses and $12 per diem in lieu of actual subsistence, while members in Government service will receive actual travel expenses and $12 per diem in lieu of actual subsistence.

The duties of the Commission will be (1) to investigate allegations that citizens are being deprived of the right to vote or are being subjected to economic pressure because of color, race, religion, or national origin; (2) to study and collect information on economic, social, and legal denial of equal protection; (3) to appraise Federal laws and policies respecting equal protection of the laws; and to submit interim reports to the President and a final report of activities, findings, and recommendations not later than 2 years from date of enactment. The Commission shall cease to exist 60 days after the submission of the final report. The Commission may appoint a full-time staff director and other personnel subject to civil service and classification laws, and procure services of individuals not in excess of $50 per diem under title 5, United States Code, section 55a. They may accept services of volntary, uncompensated personnel and pay actual travel and subsistence expenses (or per diem of $12 in lieu of subsistence). They may constitute advisory committees and consult with State, local, and private organizational representatives. Federal agencies are to cooperate fully with the Commission. The Commission or subcommittees of not less than 2 members, 1 of each party, may hold hearings, issue subpenas over signature of Commission or subcommittee chairman for attendance and testimony of witnesses and production of records. Upon application of the Attorney General, Federal district or territorial courts shall have jurisdiction to issue order requiring a person guilty of contumacy or refusal to obey a subpena to appear before the Commission or subcommittee, and failure to obey such order is punishable by contempt proceedings. The necessary funds to carry out this act are authorized to be appropriated out of any nonappropriated money in the Treasury.

My opposition to this part 1 of the proposed legislation is based in the first place on the fact that this Commission would be authorized to investigate election matters over which I believe the Federal Government was no constitutional authority. The authority of the Federal Government concerning right to vote is distinctly limited. It is generally considered unconstitutional except as defined by the 14th and 15th amendments. (See *Minor* v. *Happerset* ((1874) 88 U. S. 162)), *Ex Parte Yarbrough* ((1884) 110 U. S. 651) to effect that right to vote federally created, is dicta. There is no authority to investigate unwarranted economic pressures on right to vote. This issue was decided in *Hodges* v. *United States* ((1906) 203 U. S. 1).

I should like to point out that this work of the Commission seems to me to be contradictory to the rest of the bill. Congress should wait for reports of the Commission before proceeding with passage of legislation.

I am further opposed to this part 1 of the proposed legislation, because I do not believe the Commission should have the power to subpena any person to appear and testify at that person's expense. Even the Committee on the Judiciary of the House, Mr. Chairman, which has jurisdiction over this bill, has no subpena power in civil rights matters. It is my earnest conviction that if this proposed legislation were passed giving the Commission subpena power that citizens of America would have less rights than Communists, who cannot be cited for contempt unless the appropriate body of Congress gives specific approval.

The second part of the legislation provides for an Attorney General who will be a new Assistant Attorney General appointed by the President with the consent of the Senate. Compensation of this new Attorney General will be the same as present Assistant Attorneys General. This new appointment is, of course, based upon the assumption that a new Civil Rights Division will be created under the direction of this additional Assistant Attorney General.

I am against this part of the bill because in my opinion this is an attempt to invade the States and subdivisions in matters relating to integration, education, and primary elections. I am furthermore constrained to note that there is less need for a Civil Rights Division, based on workload, than for any other division in the Department of Justice. For example, I believe that the deportation of aliens who have been illegally admitted to this country is a far greater problem than a Civil Rights Division. I repeat again what I said before: I think this piece of legislation is one which will be used as a punitive measure against the South and one out of which many members of both our great political parties are hoping they can gain voting members.

Part 3 of the proposed legislation would strengthen the civil-rights statutes and do many other things. Section 121 amends section 1980, Revised Statutes (42 U. S. C. 1985). The present statute prohibiting conspiracy to interfere with civil rights has added the following new section: "The Attorney General may institute for the United States, or in the name of the United States for the benefit of real party in interest, a civil action or other proceeding for redress, permanent or temporary injunction, restraining order, against any person who have 'engaged or are about to engage in any acts or practices' giving rise to a cause of action under presently existing sections which—

"(1) establish civil liability against 'two or more' persons who conspire to interfere with a United States officer in the discharge of his duties and as a result injures another or deprives another of his rights or privileges as a United States citizen;

"(2) establish civil liability against 'two or more' persons who conspire to intimidate or injure parties, witnesses, or jurors in Federal court actions or conspire to obstruct justice in State court actions with the intent to deny any citizen equal protection of the law, if it results in injury or deprivation of a person's rights or privileges as a United States citizen;

"(3) establish civil liability against 'two or more' persons who conspire or go in disguise on the highway or premises of another to deprive another of equal protection of the law, equal privileges or immunity under the law, or the right to vote for Federal offices, if such action results in injury or deprivation of another's rights or privileges as a United States citizen."

New section 5 states that district courts given jurisdiction without regard to whether aggrieved party has exhausted administrative or legal remedies.

Section 122 amends title 28, United States Code, section 1343, as follows: Catch line to read: "Civil Rights and Elective Franchise."

Adds new section (4) giving Federal district courts original jurisdiction of civil action to recover damages, equitable, or other relief for abuse of civil rights, including right to vote.

Mr. Chairman, I am very much opposed to this part 3 of the proposed legislation. It is inconceivable to me that the Federal Government should be permitted to go in the business of paying costs and counsel fees for the benefit of a real party in interest and yet insist that the defendant in the case whether finally adjudicated guilty or innocent should have to pay all of his costs and counsel fees. I cannot see for the life of me how such a procedure could be deemed constitutional. Is this not giving certain groups of citizens free legal representation and denying other groups of citizens that same privilege? It is not inconceivable that will-o'-the-wisp rumors will descend upon the household of some innocent citizen and he to clear his name and protect his honor will have to deprive himself of all of his material possessions and yet the accuser enjoys the vast resources of the United States for his prosecution. This is tyranny at its worst. This is the despotism of fascism and communism. This is not the expression of our form of government which regards that all men are equal before the law. In fact, Mr. Chairman, I emphasize that if this proposed legislation were passed, all men in America would not be equal before the law. Prosecutors would have the great advantage. The defendant would be denied his constitutional rights of equal protection under the law.

I am opposed to this section of the proposed legislation because the Attorney General should not be permitted to institute litigation without the knowledge or consent of the real party in interest, regardless of the insistence of various pressure groups. This proposed legislation does not grant the accused the rights that are constitutionally his.

One of the most outrageous suggestions of part 3 is the fact that district courts be given jurisdiction without regard to whether the aggrieved party has exhausted administrative or legal remedies. Existing law (*Peay* v. *Cox* (1951) 190 F. 2d 123) requires the exhaustion of State administrative remedies before resort is had to Federal courts. The last vestige of States rights would be taken away if this legislation were passed. In my opinion tyranny would inevitably result.

Part 4 of the proposed legislation amends section 2004, Revised Statutes (42 U. S. C. 1971) which guarantees the right to vote without regard to race, color or previous condition of servitude, as follows: It adds a new subsection (b) prohibiting any person acting under color of law or otherwise to intimidate, threaten, coerce, or attempt to do so, any person, to interfere with his right to vote as he may choose for President, Vice President, electors, Senators, Representatives, Delegates, or Commissioners from the Territories or possessions, at any general, special, or primary election.

A new subsection (c) is added which states that the Attorney General may institute for the United States, or in its name for benefit of real party in interest, a civil action or other proceeding for redress, permanent or temporary injunction, or restraining order against any person who has "engaged or is about to engage in" any act or practice depriving a person of the rights secured by subsections (a) and (b), and that the United States will be liable for the costs.

A new subsection (d) is added which gives the district courts jurisdiction without regard to whether aggrieved party has exhausted administrative or legal remedies.

Many of the arguments against this section apply to previous sections of the proposed legislation. The regulation of voting is traditionally a function of the State. Federal intrusion, except as defined in the 14th and 15th amendments is unconstitutional. Please note case *Minor* v. *Happerset* ((1874) 88 U. S. 162, 177); *U. S.* v. *Reece* ((1875) 92 U. S. 214, 217–218). In the case *Peay* v. *Cox* ((1951) 190 F. 2d 123) it was clearly stated that there should be an exhaustion of administrative remedies because of commonsense. Unless the State can control its voting regulations there is no balance of power

between Federal and State sovereignty. Subordinate State officials should be corrected by State officials if they err.

I believe if this bill were passed it may be held that Congress has preempted the field of suffrage. We therefore would have said to us that as States we cannot legislate in the field now not only of sedition, water control, and in other important matters, but we cannot legislate in the field of voting. If this legislation were passed, in my opinion, State election officials will be harassed by endless suits, by the Government, by pressure organizations and individuals.

Mr. Chairman, I am not a lawyer, but I have sought capable advice on the legal aspects of this great issue. I have tried to study thoroughly the various provisions of these so-called civil-rights bills. I am more convinced than ever as a result of this study that no greater disservice could be made to America than to pass this so-called civil-rights legislation. I urgently implore the members of this great committee to kill this proposed legislation in committee, which I sincerely believe for the sake of America ought to be done. It is my firm opinion that we have sufficient laws on the statute books at the present time to enforce properly the civil rights of our people. I think that this superduper piece of legislation is not necessary, is an unwarranted invasion of States rights, will be used as a political instrument to get votes, and will do more to tear our people apart than any piece of legislation which has been considered in Congress since I have been a Member. Thank you again for permitting me this opportunity to testify before you.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BURNS of Hawaii. Mr. Speaker, one of the most able and distinguished Members of this House is the lovely and gracious gentlewoman from Oregon, the Honorable EDITH GREEN. She has represented her constituents with outstanding industry and sound judgment. Her support of programs that are right and just indicate a remarkable prescience of future effects and needs.

One of the causes to which she has given her talents unselfishly and wholeheartedly is statehood for Hawaii and for Alaska. I believe the Members of Congress would be interested in the letter she wrote to the Christian Science Monitor on this subject a few days ago:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 1, 1957.

To the CHRISTIAN SCIENCE MONITOR:

I read with interest the letter appearing in your edition of February 25 from the editor and publisher of the Alaska Sportsman. In it he purports to set forth the arguments against statehood now for Alaska. The gist of those arguments seems to be that statehood for Alaska would be costly and that he doubts that Alaska could really afford statehood.

That is really putting a price tag on representative government.

It would not surprise me in the least if, around the year 1775, some juggler of figures had not also written a letter to the editor of some British paper proving conclusively, to his own satisfaction, that the American colonies really could not afford freedom and that it was cheaper for them to remain under British rule. If such a letter were written, I am glad the American colonists did not heed that fallacious advice.

Democracy is not something that is sold in the market place to the highest bidder. It is to be striven for even at a sacrifice and once won is to be preserved and nurtured.

EDITH GREEN,
Member of Congress,
Third District of Oregon.

Statement About the Hoxsey Cancer Treatment

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. DINGELL. Mr. Speaker, much has been said about one Mr. Hoxsey who claims to have evolved a cure for cancer. The matter of the cure has been studied thoroughly by the medical profession and by scientists, technicians, and physicians at the Food and Drug Administration.

Mr. Hoxsey's claims of cancer cures have been found to be without merit, and the medicine and treatment he prescribes have been found to be equally worthless.

Under permission heretofore granted, I include at this point a statement given to the House Interstate and Foreign Commerce Committee on March 6, by Mr. John L. Harvey, Deputy Commissioner of the Food and Drug Administration:

STATEMENT ABOUT THE HOXSEY CANCER TREATMENT

Many Members of Congress have received, within the past few days, letters and petitions protesting the action of the Food and Drug Administration against the Hoxsey cancer treatment. These letters and petitions, all using substantially the same words, request a congressional investigation.

The letters and petitions are not spontaneous expressions, but have been solicited and inspired by Gerald B. Winrod, of Wichita, Kans., as a paid propagandist for Harry M. Hoxsey, the promoter of the so-called Hoxsey cancer treatment.

Gerald B. Winrod was one of the defendants in the mass sedition case here in Washington in 1944, having been indicted on January 3, 1944, along with some 29 other persons on charges of conspiracy with each other and with officials of the German Reich and leaders and members of the Nazi Party to cause insubordination, disloyalty, mutiny, and refusal of duty by members of the military and naval forces of the United States. This case ended in a mistrial when presiding Judge Eicher died during the trial and most of the defendants refused to continue with another judge. Subsequently, the indictment was dismissed because of failure of the Government to give the defendants an early trial to which they were entitled.

Mr. Winrod publishes a nationally distributed religious magazine known as the Defender. But since he began receiving money from Mr. Hoxsey, the religious magazine has been increasingly devoted to articles claiming that the Hoxsey cancer treatment is a cure for all types of cancer, without the use of X-ray, radium, and surgery. Mr. Winrod also publishes a great number of booklets, circulars, and leaflets promoting the Hoxsey cancer treatment.

Harry M. Hoxsey and the Hoxsey Cancer Clinic paid Gerald B. Winrod and the Defender magazine $82,750 for advertising and public relations in the years 1954–55. This was admitted by the Hoxsey Cancer Clinic, of Portage, Pa., in response to requests for admissions filed by the Government just before trial of a seizure of Hoxsey pills at the Portage, Pa., clinic.

Two Federal courts have now found the Hoxsey treatment worthless for internal cancer. The Hoxsey Cancer Clinic, Harry M. Hoxsey, and his staff are under Federal injunction prohibiting them from sending their medications in interstate commerce with labeling claims for cancer. The latest finding that the Hoxsey treatment is worthless came after a trial by jury in Pittsburgh, Pa., which ended on November 16, 1956. Since then, Gerald B. Winrod has been stepping up his campaign to nullify the effect of the jury verdict and to misrepresent the facts about the Hoxsey treatment. To this day, he is mailing out thousands of circulars claiming that a little girl named Kathy Allison was cured of cancer by the Hoxsey treatment, even though it was proved in the Pittsburgh trial that she died of cancer soon after taking the treatment. These same circulars claim other cures of cancer, naming people who never had cancer at all or who are alive today thanks to proper medical care.

Mr. Winrod is sparking the drive for an investigation. He is soliciting funds, as well as urging petitions and letters to Congress. I have a photostatic copy of a letter he sent out on February 16, 1957, with which he enclosed his petition forms. This is what he says in part:

"Please come to our support immediately. There are four ways in which you can help at this time.

"1. By sending a contribution of $5 or $10 or more. Don't let us want for money at this stage. We never waste a cent.

"2. Start to work at once, on the petition crusade. Find herewith 10 petition blanks, to be signed and mailed without delay, to the Senators and Representatives from your State, each in a separate envelope. Find enclosed a slip of paper containing their names and explaining how to address the envelopes. Get friends and neighbors to mail petitions.

"3. Send us the names of at least five persons * * *.

"4. Enclose an extra $1 for a bundle of 10 February Defender magazines, which contains an article explaining why the Food and Drug Administration should now be investigated by Congress."

Mr. Hoxsey, by his own admission, has had no formal education beyond the eighth grade. He has been convicted of practicing medicine without a license a number of times. He claims to have inherited the treatment from his father, who in turn received it from his grandfather and great-grandfather. The treatment originated, claims Mr. Hoxsey, back in 1848 when his great-grandfather's old white horse was cured of cancer.

There is nothing new or mysterious in the Hoxsey cancer treatment. It is made up of well-understood drugs and herbs—such things as potassium iodide, cascara sagrada, buckthorn bark, prickly ash bark, etc.—which have been known for many, many years. It is the opinion of all qualified cancer experts that none of these drugs, either singly or in combination, are of any value for cancer.

This petition campaign should be examined in the light of the fact—twice proved in lengthy court trials—that the Hoxsey drugs are worthless for internal cancer. And it is sparked by a paid propagandist.

Every one of Hoxsey's handpicked cases claimed as cures has been thoroughly in-

vestigated by the Food and Drug Administration. It has found no basis whatever for a belief that the Hoxsey drugs have, or even might possibly have, an effect on cancer.

Congress has appropriated millions for research to solve the enigma of cancer. A great scientific effort has been launched to find the causes and cure for all types of cancer. In the meantime many types of cancer are being successfully treated with radiation and surgery. This is particularly true when prompt treatment is instituted. Promoters of nostrums like Hoxsey and Winrod continue to exploit the public with their promises of easy-to-take cures. These promoters malign the medical profession and the scientific agencies of Government to bring about distrust, which is an essential part of the big lie technique of selling worthless drugs for serious diseases. They cause irreparable damage through delay in proper treatment.

Statement of Hon. W. M. Abbitt, of Virginia, Before the House Committee on Education and Labor in Opposition to Pending Legislation Providing Federal Aid for School Construction to the Localities

---

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. ABBITT. Mr. Speaker, on Tuesday, March 5, 1957, I appeared before the Bailey subcommittee of the House Committee on Education and Labor in opposition to the so-called Federal-aid-to-school-construction bills.

Under leave to extend my remarks, I herewith include the statement I made to the committee:

STATEMENT OF HON. W. M. ABBITT, OF VIRGINIA, BEFORE THE HOUSE COMMITTEE ON EDUCATION AND LABOR IN OPPOSITION TO PENDING LEGISLATION PROVIDING FEDERAL AID FOR SCHOOL CONSTRUCTION TO LOCALITIES

Mr. Chairman, I appreciate the opportunity of appearing before your committee in opposition to the so-called Federal-aid-to-education school-construction bills.

This is a most important question. As a matter of fact, it is one of the most important problems facing the people of our country today. It seems to me that a decision must be made by our people. Sooner or later we must decide whether the public schools are to be operated, maintained, and controlled by localities and the States or whether our schools will be turned over to the Federal Government.

The schools of this great country of ours have been a great bulwark for our way of life. They have been the foundation stone of our democracy. We can but know that, if the Federal Government gradually takes over the financial burden of our public schools, so will they gradually take over the control. It is not possible to distribute Federal funds for education without the imposition of an increasing measure of Federal control in matters of educational policy. Local control of education is fundamental to the American type of democracy. It is necessary that education be adapted to local needs. It is necessary that we have a sense of local responsibility for its successful execution. To remove the responsibility of educating our children from the local level will necessarily and unavoidably greatly weaken democracy at the grass roots. The separation of education and the Federal Government, so far as primary and secondary schools are concerned, is as important as the principle of separation of church and state. For many years there has been a general trend toward centralization of power in Washington. There is now an all-out effort to federalize the schools and nationalize the lives of all American citizens.

The present proposal to have the Congress appropriate Federal funds for the construction of local schools is but a step toward the realization of turning over the public-school system to the Federal Government. Many people supporting this legislation will not admit this is true, but the vast majority of its supporters are those who desire the concentration of power in Washington and the centralization of all government at the National Capital. All of us believe that adequate education of American youth is essential to the preservation of the Republic and to the welfare of the Nation. I am convinced that this opportunity can be provided by local communities and States more satisfactorily and more equitably to both than by the Federal Government.

It is most important that local control of our schools remain as it is at present. This will be impossible if we allow the Federal Government to stick its long nose into the financial responsibility of educating our children. If we are to remain a free people, if we are to retain our way of life as we know it, it is necessary that control of our public schools remain at the local level. There is no such thing as Federal aid without Federal control.

Mr. Chairman, I oppose this bill for a number of reasons. First, as I have tried to point out, it is absolutely necessary that the control of our public schools remain at the local level. Not only that, but the citizens in a democracy have certain duties and obligations that they must perform. In my opinion, it is the duty and obligation of the localities and the local citizens to maintain public education. Education of our youth is a function of the localities and not of the Federal Government. I am convinced if we permit the Federal Government to subsidize our public schools generally then we will lose control of the schools so far as the localities and communities are concerned.

Next, I would like to say that the localities and the States are adequately financially able to provide the necessary educational opportunities for the youth of this great country of ours. The States are far better off financially than is the monstrous Federal Government today. There are those who would have us believe that the States are not able financially to carry on the proper educational program to meet the needs of our youth. They contend that the Federal Government has the financial ability to undertake this great task. Unfortunately, nothing is further from the truth. Sadly enough, the national debt now amounts to more than eight times State and local indebtedness. The Federal Government has a national debt of approximately $275 billion. Apparently, there is no hope in the foreseeable future that this debt will be reduced in any appreciable amount. It is saddening to see on all sides grasping bureaucrats and people who believe in centralized power trying to reach out on behalf of the Federal Government to continue to take over functions and obligations of the States and local communities. We are now at the crossroads. We are about to see this country embark on a gigantic long-time journey into the field of local public education. It is disheartening to me to see this administration sponsor such a program.

Truthfully, the 1958 budget of the Federal Government is such a bizzare combination of fantasy, mystery, and irresponsibility that it alone should convince any individual person of the necessity and urgency of stopping the growth of the Federal octopus. This program will simply add another tentacle to the octopus Federal monstrosity. To those people who say and apparently earnestly contend that the States are unable financially to carry on the proper and necessary educational program for the future welfare of our youth, I desire to call to their attention a most enlightening report by an outstanding committee.

By authority of an act of Congress, there was appointed in 1954 a Commission on Intergovernmental Relations. Fifteen members of the Commission were appointed by the Chief Executice, 5 by the Speaker of the House and 5 by the Vice President. It was the duty among other things of this Commission to make a painstaking study and report on the functions of the Federal Government in various fields of activities. This Commission appointed various study committees to look into and to study particular phases of activity. One such committee was appointed to make a thorough study and report on Federal responsibility in the field of education. This committee was composed of many able American citizens. They made an actual painstaking study of the problem of education, the responsibility of various segments of our society in this field as well as the ability of the several political divisions to carry out the necessary and proper educational program. A very fine report was made by this committee on October 19, 1954. I am very much surprised indeed that the present administration should apparently discard such a splendid report from such an outstanding group of men from almost every walk of life in this great Nation of ours.

The Study Committee on Federal Responsibility in the Field of Education as selected by the Inter-Governmental Relations Commission was composed of 15 members; Adam S. Bennion, of Utah, as chairman. Mr. Bennion is a leader in the Mormon Church and a close friend, as I understand it, of Secretary Benson. Other members of the study committee included Thomas C. Boushall, of Richmond; Samuel Miller Brownell, brother of the Attorney General, and since Commissioner of Education; A. Boyd Campbell, a Mississippi businessman; Alfred E. Driscoll, former Governor of New Jersey; Oscar A. Ehrhardt, chairman of the St. Louis School Board; Mr. T. Norman Hurd, director of the budget of the State of New York; Edward H. Litchfield, dean of the School of Business Administration at Cornell University; Carl J. Hegel, president of the American Federation of Teachers; Mrs. H. M. Mulberry, a member of the Chicago Board of Education; Very Rev. Msgr. Thomas J. Quigley, of Pittsburgh; Hubert H. Race, of the General Electric Co.; Roy E. Simpson, superintendent of public instruction of the State of California; Paul D. West, superintendent of Fulton public schools in Atlanta, Ga.; Henry H. Wriston, president of Brown University. The director of research and adviser for the committee was Roger A. Freeman, who has since written a book on the subject.

This study committee, after a most careful study of the financial problems facing this country and a painstaking analysis of the responsibilities of education of our youth, has pointed out in no uncertain terms that the duty and obligation to educate the youth is a direct responsibility of the localities and the States. They have also in no uncertain terms found as a matter of fact that "the general conclusion is that Federal aid is not necessary either for current operating expenses for public schools or for capital expenditures for new school facilities. Local communities and States are able to supply both in accordance with the will of their citizens."

I heartily concur in the conclusion of the study committee and commend them for a most enlightening report, as well as for the outstanding job that they did. This study should be read carefully by every Member of Congress who is really interested in the welfare of this country of ours.

I would like for this administration to inform the people why it has cast into the wastebasket such a valuable report from a group of outstanding citizens.

I hope, Mr. Chairman, that the legislation now before this committee which provides for Federal aid to the localities for the construction of schools will not be recommended for passage by your committee so that the localities may retain control of the schools and continue with their duties and responsibilities for the education of our youth, as they are amply financially able to do.

British Policy in Cyprus

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. CRAMER. Mr. Speaker, as a Representative of the First District of Florida I am proud to speak for a great group of Americans who have come to our country from Greece. In their interest and that of many of their relatives abroad I would like to call to the attention of the House the following editorial appearing in the Spectator, a newspaper published in England, on date of Friday, February 22, 1957. The article deals with the Cyprus situation and I believe it is important that the Members hear this expression of one segment of British opinion on this problem so important to the world today:

THE ANATOMY OF TERRORISM

The Government's two apologies on Cyprus, in the United Nations and in the Commons, have done nothing either to justify its past policy or to suggest that there will be any improvement in it. No new proposals for a settlement have been put forward; Government spokesmen have contented themselves with reiterating the bedraggled argument that nothing can be done until terrorism on the island is stamped out. If this is to remain Government policy, it is time the Government and the public realized its implications.

Nearly 2 years ago, the British authorities committed themselves, as a first objective, to the crushing of EOKA. To this end, the forces that had originally been intended as a strategic reserve in Cyprus were employed as stalkers and beaters, to flush EOKA members out of their lairs; and the laws of the island were modified to suit what was, in effect, garrison rule. Within 6 months, Sir John Harding felt confident enough to announce that EOKA's days were numbered; a year ago he said the movement was beginning to crack; and since that date every reporter visiting the island has been assured, as the Observer naively asserted last Sunday, that the final destruction of terrorism "is only a matter of time," and that the British forces "have the initiative firmly in their hands."

There is a time when these claims cease to be embarrassing, and become dangerous. This moment is reached when the authorities, finding that straightforward repressive measures show no sign of working, begin to condone brutality and torture and to suppress criticism in the newspapers. In the Manchester Guardian last week Mr. Peter Benenson, who has been in Cyprus recently as counsel for the editor of the Times of Cyprus, described the growing tension between the Cyprus Bar and the Administration, owing to the increasing tendency of the authorities to prevent lawyers from seeing clients. Such a policy inevitably spawns allegations of cruelty to prisoners.

A recent example Mr. Benenson mentioned is the case of a Cypriot youth who alleged that he had been stripped, punched, and beaten; when eventually he was released medical evidence revealed that he had in fact rib fractures, bruises, and hemorrhage. But his charges against the two men he alleged were responsible were dismissed for lack of evidence; and shortly afterwards an emergency regulation was promulgated under which no prosecution of this kind may be brought against members of the security forces without permission from the Attorney General.

On the same day, a report appeared in a number of newspapers here of another case. A Cypriot charged with murder alleged that he had been tortured to extract a confession; the prosecution offered no evidence to rebut the accusation; and the judge ruled that as there was doubt whether the confession was voluntarily made the prisoner must be acquitted. Such cases have been multiplying recently; and it is useless to try to argue that they have not been proved. How can they be proved? There is, however, a very easy way of disproving them: by ensuring that prisoners have access to legal advisers. This will not prevent men being killed "while attempting to escape," but it will help to prevent casual, indiscriminate brutality. But it will not, of course, solve the main problem of violence. Nor can that be solved while the Government persists in its unrealistic attitude to EOKA.

Broadly speaking, there are two main types of terrorist-activity in the world. One arises when there is a minority holding fanatically different views from the community, and determined to impose them. From such roots stem Communist terrorism in Malaya and Mau Mau atrocities in Kenya. The other type is totally dissimilar. It arises when a nationalist movement which wins general support from the community is ignored by an occupying power. Sooner or later extreme nationalists, who may be noble patriots or thugs or a mixture of both, conclude that force is the only argument that the occupying power will listen to. In Bohemia and Italy, in America and Ireland, and now in Cyprus, such men have fought, and eventually won, becoming national heroes in the process. To employ against them the same tactics and weapons as are used against the Mau Mau is a tragic mistake.

Apart from the mistaken principle, there are practical reasons why the Government's repressive policy must fail in Cyprus. Where force is used against Communist rebels, the community is waiting to cooperate with the authorities as soon as the rebels have been crushed. But there is no evidence that Cypriots would cooperate with the Britsh if EOKA were crushed. The gradual destruction or capture of what has been described as the "hard core" of EOKA has made no difference to the community's view; in fact, recent outrages have been committed not by that hard core, not even by EOKA members, but by ordinary Cypriots—youths, and even schoolboys. The Greek Cypriot population as a whole, however little it may trust Grivas, or like violence, is firmly committed to the policies for which EOKA has been fighting, and even if EOKA were to disappear, other terrorist bodies would promptly arise—helped by recruits; perhaps, from Greece—to take its place.

In the circumstances there is no practicable alternative but to negotiate with Archbishop Makarios. Whether or not he has been connected with terrorism is irrelevant; it is regrettable that the Labor Party, whose arguments in the Commons were otherwise restrained and sensible, should show signs of wavering on this issue. The point is not whether Makarios worked with Grivas, nor whether his episcopal hands are stained with blood, but whether Makarios can now restore order, and thereby prove his capacity to represent the Greek Cypriots in the negotiations for a settlement. It is useless to disguise the fact that these negotiations will be difficult; but they cannot even begin until the right of the Cypriots is recognized to choose their own spokesman.

Until Makarios is brought back, Cyprus will continue to be a drain on British reserves not only of money and power, but of reputation. Even to have deported Makarios without trial was a shameful breach of British constitutional procedure; the rule that a man is innocent until he is proved guilty should apply. A newspaper which boasts about the guilt of a man who has yet to be tried would very quickly be brought up for contempt of court; and rightly so. By assuming Makario's guilt without offering him a chance to give his case, the British Government has put itself in contempt. It will remain in contempt, at the bar of world opinion, until it abandons a policy which brings Britain humiliation.

The Attack on the Cooperative Movement

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I desire to bring to the attention of the House an exchange of letters between the Cooperative League, signed by former Congressman Jerry Voorhis, and the National Pickle Packers Association, signed by W. R. Moore, secretary.

This correspondence deals with the attacks on the cooperative movement being spearheaded by the National Tax Equality Association.

An objective perusal of these letters should serve to bring out the inadequacy of the arguments of business corporations fighting the cooperatives, who are reputed to have propaganda funds close to one-half million dollars, an argument which the National Pickle Packers Association does not refute.

The two letters follow:

THE COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA,
Chicago, Ill., February 11, 1957.

Mr. W. R. MOORE,
Secretary, National Pickle Packers Association, Oak Park, Ill.

DEAR MR. MOORE: One of the Members of Congress to whom you recently wrote a letter on the subject of taxation of cooperatives has been kind enough to let us see a copy of what you had to say.

We fully realize that this subject has been surrounded with a very great deal of misunderstanding and that Members of Congress are honestly seeking information from all sides of the question in order that they may be truly informed about it. I feel sure

you will not mind my giving you in this letter a different point of view from that which we know the National Tax Equality Association has been attempting to get the trade associations of the country to adopt.

For many years, NTEA has been spreading the propaganda slogan that "Co-ops and mutuals don't pay taxes." They have attempted to represent a whole segment of our American economy as being unpatriotic, if not un-American, and they have been careless, indeed, with the truth.

All through American history, we have had a free economy. In it there have been two kinds of free enterprises—one kind has been the corporation, partnership, or individually owned enterprise which is organized for the purpose of making a profit for shareholders through the sale of its goods and services to other people. On the other hand, there have been businesses organized by the same people who needed their services and owned by those same people and conducted, not for the primary purpose of making a profit, but rather for the purpose of providing goods or services to their owners.

This second kind of free enterprise business are the cooperatives and mutuals; the savings and loan associations; credit unions, and other similar enterprises. Sometimes it is true they do show earnings on their books. When this is the case they should pay, and they are now required to pay, Federal income taxes as well as all other taxes on the same basis as their competitors. Cooperatives and mutuals, however, since they are established for the primary purpose of conducting a nonprofit operation, return the bulk of their net margins to their patrons in the form of patronage refunds. This money is not taxed against the cooperative or mutual any more than money used to redeem trading stamps, or merchandise certificates, or to make rebates or to give discounts is taxed against any other business. The basic law is no different in the case of cooperatives and mutuals than in the case of any other business. (Any business can return its profit to its customers in proportion to their patronage and it will not pay income tax on the amount of money so returned.) In the broad sense, there is no inequality in the law now.

Farmers of the United States, small businessmen in the United States, and, to a lesser extent, consumers have all used the cooperative device as a means of enabling them to continue to take an effective part in our free enterprise economy. Farmers and small businessmen, like independent grocers and independent druggists are operating in an economy which is largely dominated by very large business aggregations. They have, accordingly, formed cooperatives in many cases in order to somewhat integrate their operations and to enable themselves to better compete in our modern economy. What the NTEA is actually asking for is discriminatory taxation. It is saying that, while large integrated corporations, such as chain stores, automobile companies, or steel companies should be allowed to pay one tax on their total operations, this opportunity should be denied to farmers or small businessmen or any other group that join together to own together a cooperative enterprise. NTEA says that where small people attempt integration they should have to pay a tax at every stage of the marketing or distribution process even though no profit has resulted and no change in ownership has taken place. This is manifest injustice.

Patrons of cooperatives, whether they are farmers, hardware merchants, grocers, druggists, or whoever they may be, must pay full income tax on any patronage refunds they derive from their cooperatives to the extent that such patronage funds affect their business income and operations. The NTEA program would not only be unjust but it would deprive small business and agriculture of their best chance to avoid appeals to government and by voluntary free enterprise to continue to keep our economy a reasonably competitive one.

We should welcome the fact that some 13 million different American families own and participate in our free enterprise system through cooperative and mutual enterprise, especially when a mere handful of people control corporations which are able to completely dominate whole industries and shut the doors of those industries against all competitors.

Cooperatives are small businesses. All the petroleum cooperatives put together, for xample, would make up one company about as large as America's tenth largest oil firm. All the credit unions put together have assets less than one-half of those of one large New York bank.

Cooperatives are also locally owned businesses that depend for their capital upon the investments of their members. Frequently, those investments are made by reinvesting patronage refunds. NTEA would like to tax cooperatives on these re-investments as if they were net income. If this were done, in all logic, it would be necessary to tax all corporations on any investments made in their shares as if those investments were net income to the corporations.

NTEA has recently associated itself with the most extreme political elements in the country, including that headed by T. Coleman Andrews which advocated returning to pre-civil war days so far as "states rights" are concerned and a complete repeal of income taxation.

NTEA has raised money from unsuspecting people to a point where it is reported to have propaganda funds close to one-half million dollars a year.

Our organization and others associated with it desire no tax favoritism or advantages. We do not believe we have any. We have sincerely sought to close any actual loopholes that may exist and we will continue to do that, whether or not this requires additional tax payments by cooperative and mutual businesses or by their patrons and owners. But, we are bitterly opposed, and we believe you will be also, to a program like that of NTEA which seeks to destroy an essential difference between a nonprofit operation and a profit one and to impose inordinate penalties against the right of the American people to conduct free enterprise either on a profit or nonprofit basis, whichever may serve them best.

I would be glad to meet with you to discuss this matter further at any time you may desire to do so.

Sincerely yours,

JERRY VOORHIS,
Executive Director.

NATIONAL PICKLE PACKERS ASSOCIATION,
Oak Park, Ill., February 21, 1957.

Mr. JERRY VOORHIS,
Executive Director,
The Cooperative League,
Chicago, Ill.

DEAR MR. VOORHIS: Replying to your letter of February 11, I do not agree with your statement that there is a great deal of misunderstanding on this subject of co-op taxation. To the trade associations engaged in this fight the issue is crystal clear. It is well known that cooperative corporations enjoy tax favoritism. It is well known that cooperative corporations earn profits—that they are not partnerships; that they are not trustees; that they are not agents. The authority for this is contained in part 3, The Power of Congress To Tax Cooperatives on Net Margins prepared by the staffs of the Treasury and the Joint Committee on Internal Revenue Taxation. They say:

"However, general statements have been made to the effect that the cooperatives are only agents, partnerships, or trusts, with the implication that they are not entities in their own right capable of having income subject to tax. For this reason it is necessary to establish beyond question the fact that the cooperatives are separate corporate entities which are taxable as such."

In this same document they also say:

"The cooperatives' net margins are income to them regardless of patronage dividend contracts."

You compare co-op distributions to trading stamps and rebates. This is ridiculous. Cooperatives are not conducting a business that makes distributions regardless of whether they earn a profit or not. It so happens that co-op patrons are also owners of the co-op. Profits distributed to owners are taxable; this has been recognized by the Tax Court for years.

With respect to your argument that "any business can return its profits to its customers in proportion to their patronage and it will not pay income tax on the amount of money so returned," all you are saying is that any business that becomes a cooperative will enjoy cooperative tax privileges.

Our association is affiliated with a group of trade associations who have made our own studies and investigations on this subject and arrived at our own conclusions. We are unanimous in our position that any business that earns a profit for its owners should pay Federal income taxes thereon.

In your letter to me you refer to two kinds of free enterprise. Again we must agree with the Joint Staffs in that we see no distinction taxwise between your cooperative corporations and any other business operation. In each case they are owned by shareholders so therefore when you distribute your profits to your so-called patrons you are also distributing your profits to your owners. As a result, the differences to which you refer are without foundation.

You make a point of the cooperative being small business. This is not so. Many co-op corporations are big business—so big, in fact, that they have on occasion been indicted for monopoly. Co-ops have grown tremendously in many of the basic industries of the country and are now doing a large percentage of the business done in such fields as fertilizer, grain, dairy, citrus fruits, etc.

It is incorrect to state that NTEA and trade associations are seeking discriminatory taxation. We fail to see any reason why the cooperative corporation and its owners should not be obliged to pay the same income taxes as a fully taxed business corporation and its owners. This is simple tax justice and this is what the fight is all about.

You mention that cooperative and mutual enterprises comprise some 13 million American families and go on to say that a mere handful of people control the corporations of this country and are able to completely dominate whole industries and shut the door of those industries against all competitors. This is manifestly untrue. There are over 7 million stockholders in American corporations.

Referring to your paragraph on reinvestment of patronage dividends. We are well aware that cooperatives are able to finance their expansion by keeping their profits on a tax-free basis. Other corporations are not granted this privilege. Under our present tax laws, corporations are fully taxed and the recipients of dividends are also fully taxed. We believe this same rule should apply to cooperative corporations and their owners.

You refer to NTEA as associating itself with extreme political elements including Mr. T. Coleman Andrews. Mr. Andrews addressed a meeting of the trade associations in Chicago. He was, until recently, a member of the Eisenhower official family as Collector of Internal Revenue. So far as I know, Mr. Andrews has no connection with NTEA or any of our trade association groups. How-

ever, he would be most welcome, as we consider him a very able gentleman.

I can assure you that the members of the trade association with whom I am associated are not unsuspecting people and it is these businessmen who are supporting the work of NTEA and the various trade associations in this struggle for tax equality. The truly unsuspecting people are the rank and file taxpayers, who are, in fact, the victims of tax injustice because they have to pay their taxes and in addition assume a larger burden because the co-ops don't pay their share.

Sincerely yours,

W. R. MOORE,
Secretary.

P. S.—I am sending a copy of your letter along with a copy of this letter to my associates in the trade association field.

Critical Shortage of Teachers—Tempering Mercy With Justice for Servicemen

---

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. ASHLEY. Mr. Speaker, I am today introducing two bills, one designed to meet a critical situation facing our entire Nation and the other to temper mercy with justice for thousands of American servicemen, past and future.

The national problem to which I allude, Mr. Speaker, is the critical shortage of teachers, both in our secondary schools and our colleges and universities.

A recent survey reveals that we will need 1,906,889 new teachers by 1965 to replace those who die or leave the profession, and to meet increased enrollments. If this need is to be met, one-half of all college graduates expected during the next decade will have to enter the teaching field.

I recognize, of course, that there are many reasons and factors behind our present shortage of teachers. Not the least of these is the low-salary structure which prevails in all but a few States of the Union. But another factor contributing to this shortage is the inability of thousands of qualified high-school graduates to pursue a higher education and to enter the teaching profession.

The Commission on Human Resources in Advanced Training has estimated that of all high-school students with an I. Q. of more than 130, only 56 percent go to college, and only 47 percent graduate.

If we drop slightly down the scale to those with IQ's of 120 or more, only 47 percent go to college and only 37 percent graduate. Yet the Armed Forces regard all with an IQ of 110 or higher as fit material for officers candidate school.

If we apply these percentages to our college-age population, which is defined by the Bureau of Census as 18–24 years of age, we find that there are approximately 2,300,000 young people in this age group. Under present circumstances, only 1,100,000 will enter colleges and only slightly more than 410,000 will earn degrees. This represents a loss of nearly 2 million young people with IQ's higher than 120 who will not complete college.

There can be no question whatever that many of these scholastically able young people fail to enter or remain in college simply because they are financially unable to do so.

I think that it has also become abundantly clear that the amount of private assistance now available to prevent this colossal waste is far from adequate and that the need can only be met by governmental action.

For this reason, I have introduced a measure today, establishing a national scholarship program.

One of the provisions of my bill would create 50,000 scholarships a year for the next 10 years for students entering the field of education. Before the bogey of Federal control of education is raised, let me point out that this is often only a smokescreen raised by those who are reluctant to act. We have seen during the administration of the GI bill of rights that Federal financing of a student's college education has not resulted in Government control over the policies or curriculum of our colleges and universities. To administer the program of scholarships, there would be created in the Department of Health, Education, and Welfare the position of Director of Scholarships and a Board of 16 drawn from the professional field who would set standards for the recipients of scholarships, making tuition payments direct to the various institutions, and make subsistence payments direct to the qualifying students. Scholarships would be divided on a statewide basis in proportion to the number of high school graduates in each State.

Directly related to the teacher shortage is the equally critical shortage in trained personnel in the scientific fields. The reason for this is not difficult to find. Twenty-three percent of our Nation's public high schools offer no courses in physics and chemistry. During 1954–1955, a total of 7,900 science teachers were needed, but only 3,600 were trained, and of these only 1,700 actually entered the teaching field. According to the National Education Association, the output of science teachers has declined 57 percent from 1950 to 1955. This at a time when science and technology are the very cornerstones of our security and our hope for peacetime prosperity. Yet, how can we expect our young people to become interested in the further study of science when they have been given no chance of becoming acquainted with it.

The second provision of my scholarship bill provides for 20,000 undergraduate scholarships a year for 10 years for qualified students in the field of science.

The president of Massachusetts Institute of Technology, J. R. Killian, Jr., stated in a recent article for Life magazine that our shortage of scientists has become the "best advertised shortage of our time" because of the well-known fact that Russia has been producing more trained scientists than has the United States. Mr. Killian went on to propose a series of national scholarships to meet our emergency needs. He did prefer to have these scholarships financed by private sources, but he also felt that until private funds were available the Federal Government should do something to fill the partial vacuum. I certainly agree with Mr. Killian.

Because quality is as important as quantity, my bill also sets up 5,000 postgraduate scholarships a year in the field of science. This should enable some of our gifted students to continue their education rather than face the necessity of having to accept positions after receiving their B. S. degree. Mr. Speaker, we have every reason to be proud of the men and women whom we entrust today with the education of our children. They are doing an extraordinary job under difficult circumstances. But they need help—and the help of tomorrow must be trained today.

Similarly, Mr. Speaker, we must face squarely the fact that the scientific demands of our Nation in this highly technological era are falling upon too few shoulders. It may be no exaggeration to say that the outcome of the cold war and America's continued leadership may well depend upon how squarely we face the challenging task before us. For this reason, I sincerely hope that the House Committee on Education and Labor will consider my proposals as soon as possible. In the life of both people and nations, there comes a time for decision and action. With respect to our future teachers and scientists, that time is now.

Mr. Speaker, I am also pleased to join in the sponsorship of a measure which will direct the Department of Defense to take a second look at the "less than honorable" or "other than honorable" discharges which have been and are proving an albatross around the necks of tens of thousands of former American servicemen.

This bill proposes to amend existing statutes which do not authorize any of the military review or correction boards to take into consideration as a ground for correcting military discharges that a former serviceman has rehabilitated himself in civilian life. The bill authorizes an application before the appropriate military board for an individual not less than 3 years after he has been dismissed or discharged from the military under other than honorable or under less than honorable conditions endeavoring to establish to the satisfaction of the military board by oral or written evidence or both that such individual has rehabilitated himself in civilian life and that his character and conduct and activities and habits have been good for a reasonable time; in no event not less than 3 years after his original discharge.

The military board is directed to take into consideration each case on its own merits and shall consider the factors involved in the original discharge and dismissals, including the reasons for the nature of the original discharge or dismissal.

Applications and reapplications may be filed at any time beginning after 3 years from the date of original discharge.

The bill provides that no Government benefits shall be afforded any individual

who may be issued a new discharge or release by the military board upon review of his application.

If the military board corrects and changes the type of original discharge it shall be dated back to the date of the original discharge and the corrected discharge shall be under honorable conditions.

I want to point out, Mr. Speaker, that my bill does not apply where there has been sentence by general court-martial, but only to offenses which would be considered minor or misdemeanors in civilian life.

The clear purpose of this legislation is to give to the thousands of our American servicemen who received any type of discharge from the military, less than honorable, a reasonable opportunity to (a) erase the stigma which automatically attaches to him for a lifetime as a result of receiving such less than honorable discharge; (b) in applying for work and employment to present a type of discharge which will not cause the employer to immediately say "no" because of the type of discharge presented.

It is believed that many thousands of discharges "less than honorable" are given to lads still in their teen-age years and a large number of them administratively and a great number of resignations by teen-agers when under great stress or strain and without due consideration of results.

There can be no question of the fairness of this legislation, Mr. Speaker. In the fiscal year 1955, a total of 655,955 men and women were discharged from military service. Of these were 69,323 who received undesirable, bad conduct, or general discharges—those subject to review under the provisions of the bill which I have introduced.

Further evidence in support of this legislation is found in the fact that in the 5-year period between July 1, 1950, and June 30, 1955, only 561 discharges were corrected or changed by the Boards for the Correction of Military and Naval Records.

Thomas G. Masaryk: Champion of Human Freedom

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. REUSS. Mr. Speaker, a little over 100 years ago, on March 7, 1850, there was born in Moravia a man who today is revered as one of the great champions of human freedom: Thomas G. Masaryk.

Americans are particularly responsive to the greatness of Masaryk because of his own close personal association with our country, his marriage to an American, and his friendship with Woodrow Wilson. We know, too, how much he drew his inspiration from our American ideals and institutions.

But the spirit of liberty and justice knows no natural boundaries. Masaryk today has become a world figure and we Americans in turn are in his debt for the contribution he made to freedom's cause.

I think we can repay that debt in some small measure by giving new life to our determination that Czechoslovakia shall once again be free. We know that in that land—as in other lands behind the Iron Curtain—the dedication to true democracy remains undimmed by the oppressor's iron fist. We cannot today merely mouth sterils slogans, nor must we be terrified by the Soviet Union's campaign of violence. A positive program aimed at a peaceful settlement is urgently needed.

In this endeavor, Americans of all national origins will join with heartfelt thanks that the greatness of Thomas Masaryk lives on to give us confidence that out of darkness shall come a rebirth of the freedom for which he gave his life.

The Latin American Ambassadors and the States of the Union

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. SIKES. Mr. Speaker, I noted with a great deal of interest the excellent editorial appearing in the Tuesday, March 5, 1957, issue of the Americas Daily entitled "The Latin American Ambassadors and the States of the Union." I know of the profound interest of a great many of my colleagues in the warm relations between the United States and our neighbors to the south and I request that this editorial be reprinted in the CONGRESSIONAL RECORD. The editorial follows:

[From the Americas Daily of Miami Springs, Fla., of March 5, 1957]

THE LATIN AMERICAN AMBASSADORS AND THE STATES OF THE UNION

During the last few months, the diplomatic representatives of the Latin American Republics have been especially invited to visit some of the States of the Union which are interested in inter-American relations.

These invitations have had excellent results, since during those visits stress has been given, in the respective States, to the great importance of the Latin American countries. In the development of the respective programs there has been abundance of opportunities, which the ambassadors have been able to use to stress the convenience for the United States and Latin America in strengthening the bonds, of all kinds, of friendly hemispheric relations.

There have been no protocol speeches during those visits. The speakers, both the diplomats and the hosts, have said many truthful things, of great transcendence for the inter-American friendship and solidarity. There has been an interesting campaign of reapproachment of positive mutual benefit.

During this tour, through two Tennessean cities, Memphis and Knoxville, each Ambassador was the guest at a United States home. In this manner, there was a more propitious occasion for a better personal contact between the Latin American representatives and the leading citizens of the above-mentioned cities.

Taking into consideration the form in which the administrative life of the United States functions, this type of relations is of the utmost importance, as with them a larger endorsement to the plans of inter-American policies of the Washington Government is given by the people. And that popular backing is necessary in a democracy as that of the United States, in which public opinion exercises, on its own right, a marked influence in the official decisions of the Government.

It is certain that visits of this nature will be repeated in the future and they will cover, little by little, all the States of the Union, or at least those with closer ties, in international commerce, politics, and culture.

In the mind of the Latin American Ambassadors, all the efforts to entertain them and make their stay pleasant in those States, leave, no doubt very pleasant impressions which, in one form or another, they know how to make known to their governments and peoples.

Youth's Stake in Soil Conservation

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. THORNBERRY. Mr. Speaker, on February 15, 1957, there appeared in the daily newspaper of San Marcos, Tex., the San Marcos Record, four of the winners in a statewide essay contest, the subject of which was Youth's Stake in Soil Conservation. The context, sponsored by the Fort Worth Press, was promoted locally by the Soil Conservation Service and other civic clubs.

First place in the senior division was won by Miss Karen O'Banion; while second place was awarded to Miss Janice Little, both of San Marcos, Tex. In the junior division, the winners were Miss Leanice Harp and Wesley Odell, of Wimberly, Tex.

Because of the timely nature of the subject matter discussed in the essays, I know that Members of Congress will be interested to note the perception of the youngest of the students, Wesley Odell, whose essay follows:

YOUTH'S STAKE IN SOIL CONSERVATION

(By Wesley Odell)

Soil conservation is very important to Texas. When the first settlers came to Texas they began to clear the land of trees because they thought there were too many of them. When they cleared land they often started soil erosion because much of the land was uneven, and there was nothing left to keep the water from washing away the topsoil.

In 1882, Howard Duke began to terrace his fields, but soil-conservation service was not started officially until 1910. The Soil Conservation Districts Act was passed by the Texas Legislature in 1939, and by January 1, 1955, there were 171 soil-conservation districts all working to save our Texas topsoils.

Some of the soils of Texas wash away more than others. Sandy soil washes away when there is a heavy rain or blows when a strong wind comes. Black clay soil doesn't wash or

blow away as much as sand does. Soils wash or blow because they don't have the roots of plants, grass, or trees to hold the soil in place.

There are many things we can do to help save the soils of Texas. We can terrace our fields so water will not wash the topsoil away. Ranchers can save much topsoil by having just enough stock to graze the grass and yet leave plenty of roots to hold the soil. If people who clear pastureland of trees would leave more trees to hold the soil together, we wouldn't lose so much topsoil and save many acres of topsoil that now go down the rivers. In some places we could build dams to prevent washing.

These practices in saving the soil of Texas will help to keep our State a good place to live in for us who are young.

Farmers Stress Need for Soil Bank Change

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1957

Mrs. KNUTSON. Mr. Speaker, because of the tremendous importance of the soil bank as it affects the small farmer, I think it appropriate at this time to point to the reactions of my constituents. Mr. Albany J. Capistran, of Crookston, Minn., was in my office recently, and I took down verbatim what he had to say.

These problems one cannot often see from a legislative or administrative level. They are practical down-to-earth suggestions. We should consider these with an eye to further improvements in the soil bank. Under leave to extend my remarks, I request permission to insert his offhand remarks and also the letter he wrote to the editor of the Crookston Times, Crookston, Minn., which appeared in the column Valley Farmers' Opinions:

REPORT OF CONVERSATION
THE SOIL BANK

If the soil bank were to have the land entered in the soil bank on the 5-year period with the provision that they could use it anytime it was best for the farmer. The good land near Crookston is not in the soil bank. The law should be changed so that the land put into the soil bank could be planted with clover, alfalfa, or summerfallow. Acres put in soil bank should be shifted so that crops could be planted anytime between 1 and 5 years. They could still leave the 5-year term but should be able to shift the acres on the farm. Under the presently set up 5-year way, land gains little fertility and good land will not be put in the soil bank. This keeps 90 percent of the farmers from joining in the program. I have attended a number of farm meetings and out of the farmers with whom I talked, I have only known three farmers who would join the soil bank or had any intention of putting land into the bank in our area. Under the present setup, all these farmers thought that they should be allowed to plant clover, alfalfa, etc., and then they could have a good weed-control program as well as a soil-bank program, and the way it is now, farmers are not going to take land out of production, and only the poorest type of land will go into the bank—the good land will continue to produce and grow crops.

On the farm survey that was made which covered approximately 82 farmers, they were asked what would do the most good to the farmer in the territory without a lot of Government expense and one of the major things that came up was for the Federal Government to appropriate for loans to farmers to build machine sheds on a 10-year loan basis at low interest rates. In Minnesota, due to the weather conditions, machine-shedded machines last longer, about 20 percent longer. These figures are taken from the University of Minnesota, extension service division. Under the plan, farmers will be able to build and use as they pay. It is felt that out of 82 farmers, 68 farmers agreed that under these terms they would be able to build and it would do the most good in extending the life of the machinery. Most of the farmers felt that the 10-year period with low interest would help solve their problem. Most farmers cannot go into the 5-year plan on account of finances—they would like quonset huts and grain storage built under the same deal. The period should be 10 years instead of 5 because (1) they would be able to collect on the interest rate; (2) would make more orderly marketing, and another thing, it is good from a major food grains distributing standpoint, and in case of emergencies all food grains would not be stored in big terminals alone, but also on farms.

Much of the machinery is built with lighter, nonrustproof metals, and naturally do not last as long as machinery built before 1952—as for example on combines, difference in price between 1952 and 1956 is $1,500.50—the material used is two gage lighter. If the farmer was allowed to borrow money on a 10-year plan, with low interest rates, to build sheds to preserve his machinery he would gain 20 percent value in time. Four out of every five farmers agreed that they approved of the shedding plan.

Would like to see: (1) Amend the soil bank as recommended above; (2) plan to provide for shedding farm equipment on a low interest, 10-year payment plan.

[From the Crookston (Minn.) Times]

VALLEY FARMERS' OPINIONS: LETTERS TO THE TIMES EDITOR AND CONGRESS

To the EDITOR:

I have been following with much interest all the letters submitted on the farm problems in our Red River Valley. I would like to give you my thanks for getting area farmers to submit their views.

I would like to touch upon some of the different things as I see them in our great American problems. Everybody in Washington talks about farm issues and nobody agrees on what the farm issue is or what should be done about it right away.

As a farmer I feel very disturbed when our farm problems are going to be political dynamite. There are many farm issues and farm problems that will vary from region to region and commodity to commodity. There is no one group of farm organizations, or political party alone that can solve these great problems. If the American farmer is going to get what he rightly deserves, a program that will be good with long-range ideas can be made up using a lot of the good plans from all the farm groups.

The first thing, when we talk about farms we can put them in three classes: Small, usually 80 acres or under; family size farms, 160 to 640 acres; and large farms, 640 acres into the thousands.

Just what is happening to our farms? The farm census shows that United States farms are becoming fewer and larger. The number of farms have declined 11 percent and are over 9 percent larger in size. Farm population has been decreasing and we now have only about 13 percent of the United States population on farms.

Now it appears that many of the real small farms may be taken up by larger farms because the cost of equipment and operating expenses makes too high an investment for the net return.

The family farm which can be in size from 160 to 320 acres, and some up to 640, is usually a somewhat diversified farm and is the backbone of our Nation. It is on this type of farm that families group up and work together, and grow and produce almost any crop or livestock that our country needs to balance supply and demand.

Now the big farms are usually owned and operated under one man and are certainly not good for our country. There are some very efficient operators who do deserve praise, but for the most of them this is not true. Many large farmers are just suitcase farmers who move in to seed and harvest and then go. Most of these big farms are the ones that create our surpluses because usually they don't feed any of what they raise.

The big operator can produce cheaper because of large-scale production and can stand that price squeeze longer than the family farmer. We are fortunate in not having many of these large farms in our area. The family size farm is the biggest asset that we have in the community and the Nation as a whole.

If you had 10 families living off the same amount of land as 1 big operator controls just look what business and industry would be selling. There would be 10 sets of machinery, household goods and appliances as against a few big machines for the big operator. If one wants to see business and towns shrinking just go where there are a lot of big farmers like in northwestern Minnesota, parts of Canada and Washington. Farms should not be judged by acres alone in all places, but it can be a guide to go by.

Now let's take a look at the harsh facts of our agricultural economy and also some of the things that were responsible for building a surplus. In August 1952, parity was at 100 percent. Since 1952, income is down 25 percent; this is 7 percent under a year ago and the lowest since October 1940, and according to forecasts of the Department of Agriculture, farm parity will drop still further.

Retail food prices in November 1955 were less than 2 percent below that of November 1954, while farmers had taken a 10-percent reduction in their selling prices and production and marketing costs were up 5 percent.

Farmers are now getting only 39 cents out of every dollar spent in retail stores, the lowest since 1940. Middlemen and processor of farm produce are making the highest profits in their history even though their costs are more due in part to making convenient food packages and extra services that the American housewife has come to expect. An example of this is 36 cents a dozen for No. 1 eggs on a farm at Crookston for the same week that eggs sold for 78 cents in New York retail stores (January 1956).

Now let's set the record straight on our buildup of farm surpluses and take the farmer from behind the eight ball. In the spring of 1952, Secretary of Agriculture Brannan was called before the Senate Agriculture Committee to be questioned as to whether national security goals could be met. Our Nation was involved in a deadly serious attempt to halt Communist aggression in Korea and prevent a world war III from breaking out. Food and fiber as well as feed grains and other commodities were urgently needed to win a war. Mass meetings were held all over the country and farmers were urged to produce more with less manpower and machinery. The record of achievement in agri-

cultre's response is a glorious one in our Nation's history.

The 1952 goals were met by agriculture and the Nation was prepared for whatever might come, continued war or peace.

No one then, whether Republican or Democrat, challenged the Nation's need of the wanted production; but both hoped that 90 percent of parity-price support was high enough to get the needed production. Then in 1953, our Nation had no alarming surplus, but just a safety reserve that was needed in time of emergency.

The farmers of the Red River Valley did not create a wheat surplus. The good quality hard spring wheat that is desirable for milling is not the kind that is causing our surplus. We should not take any more cut in our wheat acreage in the valley as we have taken too big a cut already. The winter wheatgrower is the farmer who caused the surplus and should be the one to take the acreage cut.

Surpluses are not as bad as we are led to believe, and I thank God that I live in a country that can have surpluses instead of shortages. Our carryover in 1953 was 562 million bushels of wheat and 27 million tons of feed grains. Now if surpluses are unmanageable and are to be blamed for the depressing prices of agriculture, they are surpluses created by price-decreasing, income-reducing policies and not the result of 90 percent of parity. If no satisfactory program can be devised to protect farmers during this price-squeeze period of adjusting production to world conditions, then it is up to Washington to give subsidies to farmers right away.

Secretary Benson is attempting to control production by lowering farm prices. Yet production has gone up consistently, most of all the feed grains that were cut the most. Our wheat surpluses have almost doubled and our feed grains and other concentrates which were lowered most has a carryover of from 27 million tons to 197 million tons for the 1955–56 seasons.

This is 14 percent higher than average. Therefore, we need 100 percent of parity with acreage control to solve the farmers' problems and get rid of surpluses. Parity should be set on the 1952 figures. Farm prices and markets are made in Washington and not on the farm. Farmers must get price protection from government in return for industry's privileges to have balance of trade which means importing farm produce in exchange for manufactured goods.

I'm not saying legislation alone can solve the farmer's problems or that a farmer should depend solely on legislation. What I am saying is that government has the responsibility to promote the welfare of farmers as it does the welfare of other segments of our economy. Agricultural income and purchasing power must be brought back into balance, or else the farmers cannot share in the living standards with everyone else in our country.

I will list some other things that I think will help the farm economy:

1. Give us back a good AAA program with some real sensible and practical farm practices and have enough money appropriated to make it work. The 1956 farm program is about worthless.

2. Loan farmers money on 10-year loans with 3 percent interest to build more grain storage on farms, giving actual farmers more of a chance to make the money on grain storage instead of big terminals. This would also control more orderly marketing.

3. Loan farmers money on 10-year loans at 3 percent interest to build machine sheds and quonsets. This would be a big item as farmers could have machine storage under a program of pay-as-you-use. Machinery and rubber-tired equipment has a 20 percent longer life if kept in dry sheds.

4. Sell surplus feed in the community where it is, if possible, at 50 percent of its loan value. This would be a great boost to farmers right now and save a lot of transportation charges. Grain could be mixed with coal-tar dies and salt to color it so it could not get back into market channels.

5. Immediately rewrite the present unfair parity formula to provide a reasonable yardstick for measuring the purchasing power of farmers relative to other groups in the national economy.

My farm plan is to take 33 percent of cultivated farm acres out of production. A sound farm practice normally would be to keep 25 percent out of production in soil-building practices and weed control. Now if every farmer would take 8 percent more out of crops, but still keep our acreage control on wheat or on crops that might be necessary for controls as might be prescribed by the Secretary of Agriculture. The farmer would get 100 percent of parity for all crops raised. It would really mean that 8 percent extra land out of production will bring more cash return per farm and the surplus will be taken care of at the same time bringing more money to the farmer and costing the Government less. To run such a plan would be very simple and some conditions could be written into it to help the small and medium-sized farmer.

As an example: The farmer with 160 acres or less could use his 33 percent of cultivated acres for pasture, hay land, corn for feed or silage, etc., and still be in the program for 100 percent of parity. Then farms over 160 acres can rotate these 33 percent cultivated acres in legumes, green-manured crops approved in the territory, or permanent grass or summer fallow protected against weeds or erosion. A payment should be given on this grass or legume acreage of about $6 an acre and $3 an acre on protected summer fallow with a provision that some of these acres could be used for pasture or hay in case of drought, hail or other disasters of nature. A county committee would make the inspections and give the O. K. if necessary. This plan would be very simple to run as it just means checking out production acres and wheat or other crops allotted acres.

This plan may be a long way from being perfect, but farmers if you will figure it out for your own farm you will see that most every farm will be getting more money for less bushels, creating no surpluses, getting rid of surpluses fast that we now have on hand, and you will have a good soil-building program as well as weed control.

In closing we must be realistic and remember that acres must be taken out of production and it all depends on which plan is best for the farmer. Just remember that it is flexibility of methods that we need in a farm program, and not flexibility of income and prices.

ALBANY J. CAPISTRAN.

CROOKSTON, MINN.

Give Investors a Break

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Rock Hill (S. C.) Evening Herald:

GIVE INVESTORS A BREAK

With prices higher each year, the Federal Government might think about issuing "purchasing power" bonds to give investors a break.

Purchasing power bonds would be tied to the cost of living. If the cost of living moved up, the value of the bonds would move up at the same rate.

This would protect savers against inflation.

As things stand now, people who buy United States Government savings bonds actually lose money in the long run. If you pay $18.75 for a $25 series E savings bond, you draw 30 cents interest the first year. That is a shade under 1½ percent. If you cashed the bond in at the end of 3 years, you would draw $1.05 in interest, 2¼ percent.

But in the 3 years it took your money to earn that 2¼ percent interest the cost of living might go up 9 percent. This is based on the estimate of economists that living costs go up about 3 percent per year.

The Treasury Department has asked Congress to let it raise the present 3 percent interest rate on series E and series H bonds to 3¼ percent. The Department also wants to revise the interest schedule, so that bonds cashed in at the end of 3 years would pay 3 percent interest, instead of the present 2¼ percent interest.

Even with these changes it is hard to see how investors would benefit by putting their money into savings bonds. The Government has an obligation to do one of two things: (1) Halt the rising cost of living or (2) offer investors bonds that will keep pace with rising living costs.

Because the Government can control inflation, it would seem the Government has a moral obligation to repay its debts with money just as valuable as the money it borrowed.

Postal Rate Legislation

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. FULTON. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD the following editorial written by Mr. Charles E. Puskar, executive secretary-treasurer of the National Association of Postmasters, who is also postmaster at Imperial, Pa., which is located in my district. This editorial appeared in the January 1957 issue of the Postmasters Gazette, the official publication of the National Association of Postmasters:

THE NATIONAL SECRETARY'S PAGE

(By Charles E. Puskar)

Early action can be expected on postage rate legislation by the 85th Congress. Last year, when time ran out on the 84th Congress before action could be taken by the Senate on the rate bill, Senator OLIN D. JOHNSTON, chairman of the Senate Post Office and Civil Service Committee stated that early consideration of that important legislation could be expected.

You will recall that the House of Representatives passed a postage rate bill that would increase first-class mail to 4 cents, and would increase the rates on second- and third-class mail. It was estimated that the total increase in revenue would be almost $500 million a year. The fact that the House

approved the measure by a 217 to 165 vote indicates that the 84th Congress was aware of the need for increasing postage rates.

The aggregate deficit since 1946 is over $5 billion in the Post Office Department. In other words, the national debt has been increased by postal deficits during the past 10 years in the amount of $5 billion and must eventually be paid by the taxpayers of the Nation, probably by a future generation. In effect, the users of the mail during the past 10 years have saddled future taxpayers with their postage bill.

Postmasters are especially aware of the fact that during the past 10 years, as the deficit mounted, the physical plants and the facilities were allowed to deteriorate. In spite of increasing demands for postal service by reason of an ever increasing population and business economy, facilities were not expanded and practically no new post offices were built. It is to the everlasting credit of postmasters and all post office employees, that the service was maintained at a high standard of efficiency during the past 10 years during which time the postal service practically doubled.

In the meantime the costs of mail service increased. Congress rightfully raised salaries of postal personnel and transportation costs increased proportionately. It is estimated that the deficit in 1957 under the present postage rate structure will be well over $500,000. The measure that passed the House of Representatives last year would provide an estimated additional revenue of not quite $500 million, as mentioned above. Therefore, it has been suggested that the rates should be increased above those proposed last year.

This writer does not agree with some people who believe it would be a calamity and a gross injustice upon the users of the mail, if the Post Office Department were to show a slight profit above operating costs. It is argued by some that, since all other departments of the executive branch of the Government charge the cost of operations to the Government, the Post Office Department should also operate in the red. The fallacy of that thinking was evident in the report of the House Post Office Committee last year which said in effect that the users of the mail should pay the cost of mail service.

A nickel? A new theory has been advanced in the past 2 years that first-class mail should be increased to 5 cents per ounce and that the designation "first-class" mail should mean it would be handled in the most expeditious manner in order to insure the fastest possible delivery. Under that theory, first-class mail would be transported via the fastest carrier to the city designated on the address whether by air, or surface. There would cease to be an air mail rate as such, but all first-class mail would be transported by air if earlier delivery could be made than by surface transportation. It would make it possible to guarantee 24-hour delivery of first-class mail to any point in the Nation.

It is doubtful if the commercial air lines are equipped to handle all the long haul mail at this time. However, it is an interesting theory and may eventually be considered by Congress.

It is a fact that our neighbor, Canada, charges 5 cents per ounce for first-class mail and shows a 168 percent return on that class mail, and almost without exception, the countries of the world require their postal service to operate on a pay-as-you-go basis. If Congress raised first-class mail to 4 cents per ounce, the return on that class of mail would still be less than 130 percent. It is generally agreed that it would not be feasible or practical to increase rates on second- and third-class mail to the point where that class of mail would pay its own way. Just last month, the Crowell-Collier Publishing Co. decided to discontinue publication of Collier's and Woman's Home Companion because both of those magazines with a combined circulation of 8½ million had been losing money. If rates on second- and third-class mail were increased 100 percent, the postage would not be adequate to pay the cost of delivering that class of mail, and many publishing firms would be forced out of business, according to testimony of their representatives. Therefore it is apparent that any substantial increase in postal revenue must come from first-class mail.

In recent years parcel-post rates have been increased by more than 110 percent, and postal cards and drop letters have been increased by 100 percent without great protest by the general public. With the assurance of even better mail service, new post offices where needed, and modern facilities and procedures in the postal service, it is doubtful if the postal patrons would offer general objection to paying a nickel to mail a letter. When Congress considers postage rate legislation this year, it may be well for them to take a long look at the suggestion that first-class mail be raised to 5 cents. In view of the fact that letter mail postage has not been increased during the past 25 years, that proposal does not seem too far out of line with present-day prices.

Our interest as postmasters in the postage rates is manifold. As the field managers in our great postal system, we have a deep sense of pride in our accomplishments and in the service. We are getting tired of hearing the word "deficit" in relation to the fiscal condition of our Department and we know it is high time that our great Nation provide post offices and facilities for all communities as befits the greatest government in the world. We feel that the faithful one-half million postal employees are entitled to modern working conditions and decent salaries. We want to give our patrons the best postal service in the world by being able to expand our service as demanded by increasing populations and economies, but we need additional financial allowances in order to accomplish our objective.

We hope Congress will take action within the next few months on postage rate legislation. Postmasters can help by telling their Congressmen and Senators about the disgraceful fiscal situation in the Post Office Department and asking for support of an adequate increase in postage rates.

The 168th Anniversary of the House of Representatives

SPEECH

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. SHELLEY Mr Speaker, I am happy to join with my colleagues in the House in paying tribute to Alexander Hamilton and commemorating the 200th anniversary of his birth. The occasion is of signal interest to me, as national commander of the Coast Guard League and an officer in the temporary Coast Guard Reserve, because Alexander Hamilton was the real founder of our Coast Guard.

On August 4 of this Hamilton bicentennial year, the anniversary date of the establishment by Congress of the Revenue Cutter Service, the forerunner of our present Coast Guard, the Coast Guard League with the cooperation of the United States Coast Guard, will sponsor a nationwide observance of this auspicious event. In connection with that occasion I will take the opportunity now to relate a brief history of the establishment of the Coast Guard, the first of our military type services to have been formally organized by act of Congress.

The distinguished Members of the House who spoke earlier have told of Alexander Hamilton's personal and political history, and of his appointment as our first Secretary of the Treasury. Within 3 years after taking office, Hamilton brought order and efficiency into the chaotic national finances and established a pattern of fiscal solvency that helped to carry the Nation through the critical years of its development. Through this entire period, as indeed through all of his public career, he was motivated by one major purpose—the strengthening of the Union.

Collection of revenues was one of the most difficult problems facing the first Secretary of the Treasury. During the period of British control smuggling had become a popular activity as part of the struggle to eliminate "taxation without representation." By the time the Revolution was over, smuggling had become a habit, and unless it were stopped, there was an excellent chance that the young Nation would go bankrupt.

Hamilton, therefore, sought and, on August 4, 1790, obtained from Congress authority to launch a seagoing military force to collect revenues. The Revenue Cutter Service, as the fleet was first known, consisted of "10 boats, 2 for the coasts of Massachusetts and New Hampshire; 1 for Long Island Sound; 1 for New York; 1 for the bay of Delaware; 2 for the Chesapeake—these, of course, to ply along the neighboring coasts—1 for the coasts, bays, and harbors of South Carolina; and 1 for the coasts, bays, and harbors of Georgia."

The 10 boats were cutter types—that is, heavy-keeled schooners that could carry plenty of sail for speed.

Boats of from 36- to 40-feet keel will answer the purpose, each * * * armed with swivels—

Hamilton told Congress. They cost $1,000 apiece. Thus was born the Revenue Cutter Service, and the forerunner of today's Coast Guard.

The organic act placed the new Service under the direct control of the President. It also authorized the appointment of 40 officers of military rank. This professional corps of commissioned officers were strongly urged by Hamilton in anticipation of the expansion of this small fleet both in size and function.

From the very beginning, the Coast Guard was faced with a difficult task which required great tact and judgment in dealing with the public. Hamilton's instructions of June 4, 1791, were that officers of the new Revenue Marine display activity, vigilance, and firmness, marked with moderation and good temper.

Upon these last qualities not less than the former—

He warned—

must depend the success of the establishment.

Officers must always keep in mind that their countrymen are freemen, and as such are impatient of everything that bears the least mark of a domineering spirit. They must refrain with the most guarded circumspection from whatever has the semblance of haughtiness, rudeness, or insult. They must overcome difficulties by cool and temperate perseverance in their duty and moderation rather than by vehemence or violence. This is still very good advice for law-enforcement officers.

To protect seaborne commerce from the hazards of rocks and shoals, Hamilton also proposed the establishment of a Lighthouse Service. This amounted to a proposal that the Federal Government accept responsibility for safety at sea—a doctrine which has become a fundamental peacetime mission of the Coast Guard. On August 7, 1789, President Washington approved the act of Congress which incorporated lighthouses and other aids to navigation into a Federal system, launching the National Government upon its course of guarding the coast in the interest of safety and security afloat.

In 1804 Hamilton's career was cut short when he was fatally wounded in a duel with a political adversary, Aaron Burr. But he had already left a profound and permanent impression on his country's history.

The Coast Guard is, in a very real sense, one of Hamilton's legacies to our Nation. This service has come a long way since the days of the original revenue cutters. Compared with those 10 small vessels, the Coast Guard today operates 178 cutters and buoy tenders of the larger types in addition to many smaller craft. Its fixed and rotary-wing aircraft number 126, and a total of 38,389 aids to navigation are maintained in the United States, its Territories, possessions, and overseas military bases. It is a fitting testimonial to a man who, perhaps more than any other of his time, understood the true importance of a maritime protective force to our country's economic future.

Mr. Speaker, I would now like to invite every Member of the House to take part with the Coast Guard League, the Coast Guard, and their home communities in the patriotic exercises to be held on August 4 of this year in celebration of the 167th birthday of the United States Coast Guard. As national commander of the Coast Guard League I can assure you of a cordial welcome.

New Jersey Republican Labor Story

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1957

Mr. WOLVERTON. Mr. Speaker, the Republican Party in New Jersey in the years that have passed has made a record of forward-looking and progressive legislation that would be helpful to labor in the State of New Jersey. It may not have always done all that in the opinion of some should have been done, yet, it has been of a character that establishes it as worthwhile.

In this connection, I now wish to set forth a résumé of the accomplishments of the Republican legislature of New Jersey in the field of labor during the past 3 years. I realize that this will only give a part of the splendid record that has been made by the Republican Party in the State of New Jersey, in the years that have passed, but, it is sufficient to show that the Republican Party in New Jersey continues to be helpful and desirous of serving the best interests of the working men and working women of the State of New Jersey.

In presenting the New Jersey Republican labor story, it is a pleasure to record that through Republican efforts in the legislature and by a number of its Republican governors, New Jersey ranks among the foremost States in the Nation in modern, progressive labor legislation. The most recent improvement in the beneficial, forward-looking New Jersey labor laws was enacted in 1956 by the Republican legislature. In direct cooperation with leaders of labor and business a committee of Republicans completely revised the Workmen's Compensation Act. A new wage and compensation schedule was adopted. Maximums for temporary total disability were increased to $40 per week.

Under this new law the maximum for permanent total disability was raised from $30 to $40 per week while the maximum for permanent partial disability was raised to $35.

The maximum compensation awarded to widows with or without children on the death of a husband was raised to $40 per week. In Pennsylvania, the maximum for a widow with 3 children is $37.50 and for the widow alone is $33.75. In New York for a widow alone, a maximum of $24 per week is allowed. If she has 3 children it rises to the New Jersey maximum of $40 per week.

The Republican legislators also provided for increases in the duration of benefits for the loss of vision. Funeral allowances were increased to $400. A lump-sum payment of up to $1,000 was made available to a widow who remarries before her benefit period is up. Another new feature of the act is the provision that an innocent employee injured through the horseplay of another is entitled to compensation. Further, employees must now repair or replace prosthetic devices broken or destroyed as a result of a compensable accident.

The entire liberalization of the workmen's compensation law took a constructive group of Republican legislators 4 months of steady work. It was originated, studied, and adopted as a Republican measure.

During the previous year, in 1955, the Republican legislature in New Jersey adopted one of the country's most liberal formulas for unemployment and temporary disability benefits by raising maximum benefits to $35 per week.

In order to qualify for the present maximum, a New Jersey worker need have earned an average pay of $55.01 per week. In Pennsylvania, a worker can qualify for $35 unemployment compensation only if he has earned $66.38, and in New York $67. Put another way, for a weekly gross wage of $55.01 in New Jersey, a worker may receive up to $35 per week as compensation but could only receive $29 in Pennsylvania and $30 in New York. Under Michigan's benefit formula, a worker would have to earn $75.51 a week in order to qualify for that State's maximum which is $30 per week.

Another advantage to the workingman in this Republican-sponsored program is the financing of the fund out of which payments are made. This fund is raised by a dual tax on employer and employee alike. However, the employee's tax remains stable, at ¼ of 1 percent of his first $3,000 of salary. Should an employer experience extensive personnel unemployment at his plant or should the general level of the State fund go down, the employers' rate of contribution automatically goes up to a maximum of 3.6 percent of payroll. Thus, it is the employer, not the employee, who bears the brunt of fluctuating unemployment in the State. The covered employment payroll in New ersey for 1956 amounted to $6,700,000,000.

Again, the Republican legislature did this splendid and worthwhile job of liberalizing unemployment and temporary disability benefits.

Perhaps the most significant achievement for the workers of New Jersey within the past 2 years, in the unemployment compensation field, was the passage of a Republican bill decentralizing payment of unemployment checks. Prior to the enactment of this law, a claimant reported to his local employment office, certified to his eligibility for unemployment benefits and left the office empty-handed. Their certification was then mailed to the Trenton office, and after a prolonged wait of several weeks, a check signed by the State treasurer was forwarded to them. Under the new law, when a claimant reports to his or her local unemployment office, they reecive a check that day, before they leave, for their past week of unemployment.

This law, enabling unemployed persons to receive their checks after a short waiting period—when the unemployed worker most needs the money—was passed by a straight Republican vote—two-thirds of the assembly and the Senate—over a Democratic governor's veto and strong objections.

Over the years, Republican legislators have provided for most eventualities. They created a cushion on which the unemployed worker could rest when his or her job was not there. This cushion is unemployment compensation, and a worker need only apply and fulfill certain minimal requirements to obtain it. At the same time, while they are receiving their unemployment compensation checks, their State employment service will help them find a new job.

New Jersey's working men and women have other cushions. If a worker is injured during the course of his or her work, he or she is entitled to workmen's

compensation. Their medical expenses will be paid; they will be compensated for their loss of wages; and, after being back on the job, they will continue to receive payments for their injury and disability.

Another remarkable achievement for the workingman and workingwoman in New Jersey is the existence of the temporary disability benefits law. Only four States in the United States have such a law. Initiated by Republican Governor Driscoll and introduced by a Republican State senator in 1948, this law set up a system of weekly benefits payable to workers suffering off-the-job illness or accident and hence not covered by the Workmen's Compensation Act. Total benefits paid under this program in 1955 amounted to $35,500,000.

New Jersey's accident or disability coverage goes even further. If a worker is going home at night and is injured, for example, while getting off the bus and cannot report for work, he or she may qualify for the temporary disability benefits—and this quite apart from their private, civil right to sue the bus company.

When a New Jersey worker is ready and able to go to work, he or she knows they have protection on the job. Their State government has passed compulsory laws requiring businesses to operate under conditions of health, safety, and sanitation. They know that, under the law, they have a right to time off to eat a meal. The worker knows there are special laws protecting his womenfolk and his children while on the job. He can rest assured they will not work under substandard conditions at the whim of an unscrupulous employer. He knows, too, if his wife or anyone else in the family, including himself, does any work at home for an employer that this homework comes under strict regulation. And he knows, above all, that this State backs up these laws with inspection and penalties for violation.

In addition, New Jersey's workingman and workingwoman has the protection of their State in the regulation of wages. When they are paid by check, the State requires some guarantee. It also aids in their collection and makes provision for such things as frequency of payment when a worker is deceased.

Republican legislators take particular credit for guaranteeing to a worker the right to join a union. This is a constitutional right, not just a privilege which may be modified with a shift in the legislature, but a fundamental right which stands or falls with the supreme power of the State of New Jersey. This right, the worker knows, is further buttressed by an anti-injunction act preventing abuse in the issuing of court injunctions in a labor dispute. And finally, the worker knows that where their union and their company cannot reach agreement, the State lends a helping hand through its mediation board.

During the years since the enactment of the labor legislation, Republicans have consistently supported and fought for liberalization of benefits, to their present maximums of $40 and $35 per week, and a lowering of qualifying conditions for such benefits.

From morning to night, New Jersey's workingman and workingwoman has protection on the job, in their work conditions or when there is unavoidable accident; off the job when he or she suffers accident or illness; and when he or she lose their job. The worker in New Jersey is guaranteed the constitutional right to fight for better conditions for their job, and the agency he or she has chosen to achieve this—their union—is protected against paralyzing court injunctions. New Jersey goes even further and demonstrates its interest, as an impartial mediator, in the promotion of labor-management harmony, by affording the services of a State board of mediation.

These are all beneficial gains for the workingman and workingwoman and they have all come about through the leadership and high-caliber performance of the Republican Party. Thus, it will be seen that New Jersey's 2½ million working men and women have good reason to look favorably upon the Republican Party because of its numerous achievements in promoting the welfare of labor.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

"Not by Bread or Bombs Alone"

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5, 1957

Mr. NEUBERGER. Mr. President, one of the great editors of our time is Palmer Hoyt, of the Denver Post. Because of his personal independence, his freedom from any rabid partisanship, and because of the vigor of his views, he is recognized throughout the land as a voice of liberalism and courage. Mr. Hoyt is anchored to no narrow provincialism and to no deep-rooted prejudices. He sees the world realistically and in terms of urgent human needs. He is objective and fair.

For these reasons I know Members of the Senate will be interested in a scholarly and able address which Palmer Hoyt delivered in Washington on March 4, 1957, at a conference called by the American Association for the United Nations.

Title of Mr. Hoyt's address is "Not by Bread and Bombs Alone."

In this thoughtful speech, Palmer Hoyt answers the recent sweeping criticisms of the United Nations voiced by the senior Senator from California [Mr. KNOWLAND]. Mr. Hoyt acknowledges the validity of some of Senator KNOWLAND's criticisms. He does not attempt to conceal or hide them. But he pleads for a change of emphasis. He points out that such criticisms are carping, indeed, when contrasted with some of the magnificent achievements of the United Nations as the only world forum where men may talk rather than waging war.

Palmer Hoyt also emphasizes that skeptics once predicted the downfall of the United States, especially after its dreadful Civil War. But the United States has survived and moved hopefully forward to greatness among nations. So, too, will the United Nations endure and help to achieve peace among men.

I ask unanimous consent, Mr. President, that excerpts from the speech made here in Washington by this illustrious editor from the Rocky Mountains be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address was ordered to be printed in the RECORD, as follows:

"NOT BY BREAD OR BOMBS ALONE"

(Address by Palmer Hoyt, publisher, the Denver Post, March 4, 1957)

* * * * *

Because of man's dream of peace and because of the vital necessity of the dream's fulfillment, the United Nations remains the most cussed and discussed organization in the world.

The United Nations is in a most unusual position. Its enemies charge it with qualities and potentials it can never possess. Its friends claim for it virtues and functions it can never own.

For example, the United Nations is not a world government nor will it ever become one.

The United Nations is not a final instrument for preserving the peace, nor will it ever be.

But the United Nations is an operating union of 80 countries wherein daily the principal problem of our time—peace—is talked over again and again with the ears of the world at attention.

And it is a fact that the United Nations has successfully halted wars, delayed wars, and helped to terminate them as in Palestine, Kashmir, and the Middle East, and it continues to attempt to settle disputes between sovereign countries.

I do not conceive it to be my mission here to document all the hits, runs or errors of the United Nations.

It is my purpose, instead, to warn this association that the United Nations is now confronted with a new danger—call it the "Peril of Paradox."

I thus direct myself specifically to a recent speech of the Honorable WILLIAM F. KNOWLAND, the senior Senator from California and a member of the United States delegation to the General Assembly of the United Nations. For in that speech, buried in a substantial overburden of high-sounding talk, is to be found a vein of pure political ore known as an "issue."

What did Mr. KNOWLAND say? He said: "There are five major defects in the functioning of the United Nations. If not corrected now, any one of them could result in the United Nations going the way of the League of Nations." Mr. KNOWLAND listed the defects as follows:

"1. The abuse of the veto power by the Soviet Union.

"2. A growing 'double standard' of international morality.

"3. The increasing trend to bloc voting.

"4. An expanding tendency to interfere in the internal affairs of member nations.

"5. Unwillingness of many of the 80 members to equitably share the monetary costs and other obligations of the United Nations and its related activities while insisting on a full and equal voice in the making of decisions, the burdens of which must be assumed by others."

* * * * *

First, the veto:

There has never been any doubt about the Soviet Union's abuse of the veto power in the Security Council.

A good example of such abuse took place on February 21. Then the Soviet Union vetoed a resolution on Kashmir. That resolution would have dispatched the Security Council's president, Gunnar V. Jarring, of Sweden, to Kashmir to offer his services in mediating that dangerous dispute.

The Soviet Union cast its 80th veto against such a resolution. Her reasons were so fantastic as to be obviously absurd. No more tortured thinking to disguise the malicious mischief of the Soviet Union could be conceived than the thinking of the Russians in the case of Kashmir.

* * * * *

The abused veto device in the Security Council is a handicap to the equitable dispatch of collective security. But to suggest that its existence foretells the end of the United Nations, without public mention of achievements despite the veto, is an exercise in half-truth, deliberate or otherwise.

Now what of this double standard of morality that Mr. KNOWLAND is worried about? Such double standards, though deplorable, show up soon enough in the glaring publicity that centers on the delegates of 80 nations in New York. And when they are practiced, they become part of the record upon which delegates and their countries must stand. That was dramatically evident in the voting against Russia on Hungary. No delegates were comfortable even in abstaining on that vote.

No one embraces a double standard in international morality. But the United Nations' condemnation of Russia's murderous conduct in Hungary, short of sanctions, was not without impact—particularly in satellite and so-called neutral states. To suggest that the U. N. failed in its responsibility or compromised its morality by not imposing sanctions on the Soviet Union, misreads the realities of both world politics and world economics.

It is true that bloc voting, under the system that gives the vote of all 80 states equal weight, raises problems. But the record shows that the United States has continued to command support on all important votes; that United States influence today is as strong as, if not stronger than it was a year ago—before 20 new nations were admitted.

* * * * *

But there is little that is any more pernicious or extraordinary about the Bandung or the Asian-African bloc in the General Assembly of the United Nations than there is in the southern bloc, or in the semiarid western bloc, or the New England bloc in the United States Senate. If it is deplorable that nations of the world assembled vote their regional, racial, and narrow economic interests, may it not be said that similar parochialism plagues the parliamentary effectiveness of our National Legislature?

The important thing is not that there are blocs, but what they stand for when their votes are counted. If and when blocs of nations within the United Nations coalesce around principles or objectives alien to the ideology and purposes of the charter, the United Nations will decline in vitality and die. That has not happened, and is not likely to happen—unless the American people are diverted from a firm faith and understanding of it by fake fears or distorted demands for reform.

Mr. KNOWLAND professes alarm about the United Nations expanding tendency to interfere in the internal affairs of the member nations. He cites the case of South Africa. The official position of the United States Government at the United Nations was that South Africa's treatment of its colored population—deporable and wicked though such treatment has been and continues to be—is still only a domestic concern. But the continuing challenge to the U. N. insofar as interference with the internal affairs of member states, is concerned, remains this: when does a matter cease to be one essentially of domestic concern and, instead, threatens the peace of the world? That, too, is a problem for inquiry and debate within the United Nations, and hardly one to be disposed of by Mr. KNOWLAND's preference for neatly blocked out preconceptions.

It has occurred to some that the General Assembly debate on the Algerian problem

was perhaps the most timely and wholesome development possible from the viewpoint of both France and Algeria. For this time, rather than pleading charter immunity and walking out, the French marched into the Assembly Hall with a substantial outline and promise for reform not only in Algeria, but in all of her African possessions.

True, the French considered Algeria wholly an internal problem. True, the Algerians and Arabs are something less than joyful in their failure to win a crushing Assembly resolution in their behalf.

But there again, was not the collective wisdom of the leaders of 80 nations being brought to bear with sensitivity and intelligence on a boiling issue that had produced unspeakable crimes and horrible agony in the sands of the Sahara thousands of miles away? Would the Senator from California ignore the quieting effect of this action and condemn it only as an expanding tendency of assumed U. N. jurisdiction in areas of action beyond its authority?

Finally, we come to the point that some of the member states, in Mr. KNOWLAND's view, are unwilling to share equitably the "monetary costs and other obligations * * * while insisting on a full and equal voice in the making of decisions." In some ways the statistics are even more annoying, at first glance, than the generalizations. The United States puts up a third of the budget, which was $48.3 million in 1956, but has only one vote. The 5 great powers contribute 70 percent of the budget, but have fewer votes than the 6 Arab States. Our share of the net budget in 1956 was $16.1 million. The total bill to us (including the specialized agencies) is equal to what 10 hours of World War II cost us.

The fact is that were the United States to contribute dues according to comparative wealth among all member nations, as United Nations standards require, our bill would be 40 rather than 33 percent. But as to the equal voting rights of great and small states, let it be recalled that the sovereignty of participating states is no less fiercely asserted in the U. N. than it was when the American Founding Fathers conceived the United States Senate in the same pattern of compromise to assuage the fears of the sovereign American States.

I do not take up for critical comment each point in Mr. KNOWLAND's February 11 speech at Georgetown University simply to take issue with him as a person. The issue here is much greater than the views or fortunes of Mr. KNOWLAND. It is this:

Is the moral unity which, as Mr. Eichelberger has written, "has since survived the most revolutionary changes of any decade in history," strong enough to stand against an all-out attack within the United States? I do not know that such an attack is inevitable. But I believe it is entirely possible.

President Eisenhower has, in recent months, performed with maximum attention to the obligations and opportunities of this country's United Nations membership. He has done that at times under very heavy adverse pressure. But the result has been remarkable unanimity within the U. N. General Assembly behind American leadership, notwithstanding that the United States position has been in the very eye of the hurricane blowing across the Mediterranean.

In the midst of this grave test of the President's resoluteness in behalf of the United Nations, we find the President's own Republican appointee from the United States Senate peddling what to me is dangerously oversimplified and distorted critical comment on the U. N.

I had been under the impression that Mr. KNOWLAND, although often critical of our foreign policy, had endorsed the United Nations at least in principle. Certainly, that much was implied when he accepted appointment as delegate by President Eisenhower, whose devotion to the U. N. is indisputable. But my first impression was soon shown to have been false.

* * * * *

In fact, the Denver Post said on December 2, 1956, that it was time then "to remove Senator KNOWLAND * * * from the United States delegation to the United Nations." I believe that even more strongly now. We said then: "It is the duty of a United States representative to explain, expound, and promote the official American viewpoint on world issues." And we pointed out that "a representative does not live up to that duty when he spends his spare time using his prestige to advocate schemes of his own which are contrary to the policy to which he is supposed to be devoted."

The issue then and now is simple: The Eisenhower administration sees the U. N. has a highly useful device to enable countries to talk about their differences instead of fighting over them. Senator KNOWLAND seems to have the idea that the U. N. should be shrunk to an organization of like-minded countries which could work together as allies to oppose countries of unlike minds.

Thus, may I suggest a fundamental syllogism: United States support of the United Nations is essential to its success; American public opinion in support of the United Nations is essential to favorable participation by our country; anything that alloys the base of understanding and approval by our people undermines the chances of the United Nations success.

President Eisenhower championed the cause of collective security and the United Nations long before he became President. His Presidency coincides and is in tune with popular opinion on this subject. But it may not be ever thus. For that reason alone, a divisive and destructive movement against the U. N. within our own Nation is a sword at the throat of this world organization—indeed, at the throat of mankind.

In his speech at Georgetown, the Senator asked this revealing question: "Does the record of the United Nations warrant a continuation of our policy and our support?

Then Mr. KNOWLAND, having felt impelled to raise the question, made what I would describe as an anti-United Nations speech, clothed thinly in the garments of constructive criticism.

I believe our influence within the U. N. would be immeasurably stronger, and our position in the world would be infinitely better understood, if our delegates to that body spoke in greater harmony both inside the United Nations and outside it. For effective American leadership in the U. N. demands a real communion of principles and objectives on the part of those representing us.

Consider, if you will, what patience and forbearance have achieved recently within the U. N., where impulse and oversimplified nostrums have failed.

Slowly the world is coming to understand, for example, that perhaps a single United Nations ship, patrolling the Gulf of Aqaba, is a more effective symbol of restraint against aggression and belligerency than a mighty armada not thus sponsored, that a lightly armed composite of troops from small nations, symbolic of order and peace, is a more formidable force against violent settlement of international disputes, than mankind dared imagine only a few years ago.

Recall, if you will, the swiftness with which some 6,000 men were assigned by 11 member states and flown into the trouble zones of Egypt. Manpower for that mission was offered by 21 countries. More is available, on similar terms, if more is needed. Charter provisions which were intended to put armed contingents at the disposal of the Security Council have long been voided by disagreement between East and West. But that unhappy fact had no effect on the ease or speed with which the emergency force began to occupy the soil of Egypt just 10 days after the General Assembly passed an enabling resolution in New York.

Thus, in one period of less than 2 weeks, more was achieved in behalf of international policing short of war than in all the previous period of recorded history. On January 22, 1917, President Wilson called for a force greater than "* * * the force of any nation now engaged or any alliance hitherto formed or projected, that no nation, no probable combination of nations could face or withstand it."

Mr. Wilson could not foresee the age of fission or imagine the day when security would become the child of terror. The system he envisaged four decades ago was not workable then, nor is it now. But in its place, we have substituted the concept of a virtually unarmed force, smybolizing the majesty and authority of formalized world opinion, intervening at sources of recent or potential violence and standing by while men pursue settlement of their differences by peaceful means. This may indeed prove to be the next monumental step in the evolution of a United Nations with peace.

The veto stood for years as an artificial barrier against the universality of United Nations membership. But here again the cumulative pressure of world opinion, stirred by that awful foreboding which leavens all knowledge of modern science and technology, pushed over and around that barrier. Last year 16 nations were added to the United Nations. This year 4.

As for expense to the taxpayers of America: For any man to object to the cost of the whole United Nations to the United States, in the face of what the U. N. Refugee and Work Agency alone has done to ease the tensions among the 900,000 Palestinian refugees in the Middle East, is to me incredible shortsightedness.

Now, we all know of the United Nations' major and minor defects. And we are not unaware of its failures—failures which, by the way, reflect as much the weaknesses of the member states as any structural faults in the United Nations itself. I have heard it put this way: Some charges leveled at the U. N. cannot be denied, but they spring from the world in which we live of states unequal in power, wealth and culture, but all claiming equal sovereignty, each pursuing an independent policy and each judging its own national interest, and each entertaining its own opinion about the characteristics of a more perfect world.

But those defects and imperfections will not soon, or perhaps ever, be corrected by illuminating them with unfair emphasis and casual distortion for whatever purpose—not excluding that of political ambition.

The United Nations is nothing, nor will it ever be anything except a gymnasium for multilingual exercises in diplomatic patois, without universal and profound belief in its philosophical importance to world peace. Every new nation, each successive social order not excepting our own, must overcome "double standards" of morality as indeed we did in the blood and tears of 1864. The relationships of our own Central Government to the sovereign States and to the sovereign people has evolved over a period of more than 168 years of constitutional trial and error, during which the interests and rights of the few and of the parts were constantly adjudicated with interests and rights of many and of the whole. At any time the prophets of doom could have foreseen (and did) the collapse of the Republic unless evils were remedied, not tomorrow or the day beyond, but now. And now was a long time ago.

The peoples of ancient Europe only now, after thousands of years, are able to make tentative explorations into a system that challenges the historic bloc thinking of na-

tional groups. Self-interest, greed, inherited and imbedded suspicions, national characteristics and centuries of habit and tradition make bloc voting within the United Nations inevitable. The astonishing thing is not that bloc voting exists, but that it has already been dissolved so often and so completely in the crucible of applied reason and by the test of revealed truth.

I say the United Nations has enjoyed magnificent success notwithstanding organizational flaws and fundamental weaknesses. I say that triumphs of peace over violence that can be ascribed to its good offices deserve at least as much illumination as defects which, when tested in actual performance, become more theoretical than real.

I believe the people of the United States, and certainly those subscribing to the mission of this association must be alert for critics of the United Nations who would kill it while curing it. Such critics are entitled to a presumption of pure or sincere motive. But they can expect a fight from those who believe with all their hearts and with all their minds, as I do, that the United Nations we have is still the best and perhaps the last good hope for human survival.

Address Delivered by Hon. Edward J. Thye, of Minnesota, Before Annual Meeting of Rural Electric Cooperative Association

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address I delivered at the 15th annual meeting of the Rural Electric Cooperative Association in Chicago on March 7, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. EDWARD J. THYE, UNITED STATES SENATOR FROM MINNESOTA, AT THE 15TH ANNUAL MEETING OF THE RURAL ELECTRIC COOPERATIVE ASSOCIATION, CHICAGO, ILL., MARCH 7, 1957

It is a pleasure and an honor for me to join with you on this occasion of the 15th annual meeting of the Rural Electric Cooperative Association.

It was suggested that I use as a topic the title "A Senator Looks at the Rural Electrification Program." It is one thing for a United States Senator to look at such a program but it is more significant to determine what a Senator sees in such a program. In order to see anything clearly one needs light. This applies literally to objects and figuratively when applied to a theory, a policy, or a program.

As one who has lived through the transition from the kerosene lamp to light by electricity, I am firm in my conviction that the electrification of rural America stands as one of the most dramatic episodes in the history of our Nation's social and economic progress.

Many of you in this assembly here today were pioneers in this vast program. I have worked with many of you in the development of rural electrification. On this occasion it is tempting to devote the time alloted to me by recalling my associations with you during past years. However, I shall consider three main avenues of discussion:

First, a brief look into the past so that we may determine how far we have come along the road of progress.

Second, consideration of the present status of the rural electrification program.

Third, and most important, a look into the future to see what new horizons have opened up as a result of our past effort and the advent of atomic power.

I can recall the days when rural America lived in the glimmer of the kerosene lantern. The electric light was looked upon as the property of the city residents in my boyhood. It was in 1882 that Thomas A. Edison built his famous Pearl Street plant in New York. Twenty-five years later electrical current could not be distributed more than 10 miles from the generating station. In 1935 after 53 years of electricity's development only 10.9 percent of all farms in the United States had electric service. Today over 95 percent of our farms are enjoying the benefits of electricity. This record of development is a tribute to your efforts and planning and to the entire REA program. No other nation in the world has accomplished as much in a comparable period of time. This development has been a major factor in giving us the highest standard of living in the world.

As we look over this past period of time we have come to realize that the United States has been blessed with a rich assortment of natural resources. Our resources have been developed by a freedom loving and industrious people. Although our population is small in comparision with the teeming millions throughout the world, we have established world leadership in the efficient production of food and factory products. We have been able to make this progress through the use of machinery which has multiplied the productive manpower by many many times our actual population. According to one estimate, machinery supplies every worker in the United States with the equivalent of 279 mechanical helpers.

To keep these machines working for us, power in vast quantities is needed. Every month brings new records in demand for electric energy. Last year the electric industry, of which the rural electric cooperatives are a part, sold an estimated 529 billion kilowatt-hours more of energy than was sold in the preceding year. In the 10 years from 1946–56, sales of electric energy increased 177 percent. These figures refer to the growing power needs of America as a whole. The same sharp upward trend in power requirements appears in rural areas. A recent report of the Rural Electrification Administration shows that borrowing systems sold nearly 15 percent more power in 1956 than they sold in 1955. Farmers are continually using more power as an agricultural production tool. Ever since the REA electric loan program was established rural power consumption has grown at a rate that has astounded even its most optimistic supporters. Today REA financed systems alone serve nearly 4½ million rural consumers.

This growth of electric power has completely changed rural living in the United States. It has produced both social and economic changes. To list these changes would consume more time than I could possibly take. In general terms, it has increased production and at the same time, eased the burden of farm work. It has brought modern appliances into the farm homes, making the farm more attractive to youth.

We must keep this in mind as we consider our present plant capacity and operations. For 1957 alone, the electric industry as a whole has budgeted $4.8 billion of capital expenditures. This is nearly 28 percent more than was spent by electric utilities last year. Approximately 46 percent of this year's budget is earmarked for generation, as compared to 39 percent in 1956. During fiscal 1956, REA loans to electric borrowers totaled about $190 million. For other recent fiscal years, REA electric loan totals were relatively stable: $167½ million in 1955; $167 million in 1954; and $165 million in 1953. When we are considering these figures we must also point out the success of the electric industry to date in holding down costs as compared to many other sectors of our economy. REA co-ops have made a significant contribution in holding the line on power costs. This is especially important in farm areas where rates were once prohibitive. You who have worked with the rural electrification program have reason to be proud of the pioneer work REA-financed systems did in cutting construction costs. Many of the innovations which you developed have since been adopted by the electric industry.

Many technological advances in the electric power industry have increased efficiency and helped keep down costs. To cite only one: coal consumption per kilowatt-hour of steam generated power dropped to a new low of 0.93 pound during 1956. This compares to 1.29 in 1946 and represents a substantial improvement over the 10-year period. If only new and modern plants were included in the figure even greater improvement would be apparent.

Today we need a renewed effort on the part of all groups to hold the line against power costs in the face of inflationary pressures. All electric utilities, whether big or little, public or private, commercial or nonprofit, must look for ways to save. One way to do this is through improved management and long-range planning to avoid waste and to get maximum benefits from new construction. Best use must be made of available power supplies and the greatest good for the largest number must be our yardstick in using our natural resources to develop power. Our future power needs and the problems involved in meeting them are too great to permit complacency on the part of the power industry. The job is too big for any one group, whether government, cooperatives, or power companies to do alone. What is needed is the best effort of all groups working together toward the common objective of meeting consumers' needs adequately.

Dissension and suspicion have divided various groups of the electric industry at different times and places. But the time has passed when the industry can afford the luxury of permitting prejudice and suspicion between public and private power and between companies and cooperatives to interfere with the efficient overall development of our national power resources. Unwarranted sniping at justified public-power projects or blind support of unjustified Government power developments are equally wasteful of money and energies better spent in productive effort. The wise and prudent use of our power resources is of far greater importance than the aims or desires of any one individual or group of individuals.

The situation today demands that industry should make concentrated efforts to develop and pool our resources wisely and to integrate facilities where this will cut costs and assure firm power supplies. There is evidence that this approach has worked well in a number of instances.

It is my understanding that the REA-financed generation and transmission borrowers which operated their systems on a completely self-contained basis have experienced power costs considerably higher than those which had worked out integration arrangements. Some systems which started out on a self-contained basis have found it advantageous to integrate and interchange with neighboring utilities. As I see it, any

system faced with the necessity of increasing its power supplies would be well advised to look carefully into the advantages which would result from a pooling arrangement with a neighboring system. Whether such pooling arrangements go by the name of interconnection or integration is not too important. The important thing is to see that the rights and interests of both cooperatives and companies are properly safeguarded and that consumers benefit from good service and reduced costs. I believe that a climate is developing in the industry favorable to such an efficient utilization of our power resources.

In my own State of Minnesota, for example, a group of REA cooperatives and three power companies got together and worked out a joint plan for distributing Missouri River power in order to obtain the most economic arrangement. There are other instances of this type of cooperative enterprise which have produced good results.

We have now reviewed past accomplishment and have considered the present status of the rural electrification program. Now we must ask ourselves—What does the future hold in store? Today our Nation faces a challenge as great as ever in the history of the Nation. In a world divided between the free and the slave, the United States must maintain its position of world leadership for the cause of freedom. Our job is to keep the light of freedom burning for all to see. That light must penetrate into the darkest corners of the world in the constant struggle against world domination by Communist powers. Much of our success will depend upon what use we make of our power resources in the years ahead. Our entire agriculture production and our industrial output is geared to power.

The key to success in future years will be wise planning and management which has as its foundation the economic welfare of the ultimate user of electric power.

Cooperatives as well as local, State, and Federal agencies and private companies must become increasingly alert in planning to meet the long term needs for power.

This type of approach is reflected in REA's third annual survey of construction plans and financial needs. This recently completed study shows that borrowing systems plan to spend $967 million during the 5-year period beginning July 1, 1957, for electric facilities to serve rural areas. Results of this survey reflect a considerable upward revision in the plans of rural electric systems as reported in an earlier survey completed last year. Present plans call for investing about 28 percent of this amount in generation and transmission facilities. To help finance the new construction, the rural electric systems plan to apply for about $676 million in REA loans in the next 5 years. This includes $143 million in loan applications planned by power-type borrowers.

I have examined those survey figures very carefully in my office. I am convinced that they point to a need for providing REA with additional electrification loan funds for this year and for the next year too. As nearly as I can determine the need will amount to somewhere between $150 and $225 million more during the next 18 months, than the rural electric systems themselves anticipated in the earlier surveys. When these latest construction survey figures have been refined and translated into terms of additional loan fund dollars, and officially presented to the Congress for action, I feel confident that the Congress will act speedily and favorably to meet the need. As a member of the Senate Appropriations Committee I can pledge my support for the additional amount which I believe will be needed.

From REA Administrator David A. Hamil on up to President Eisenhower himself, the present national administration has demonstrated on many occasions, its confidence in and support for the rural electrification program. Both the administration and the Congress have given their full support to the program and I have utmost confidence that this support will be forthcoming to the maximum degree necessary to meet the need created by the current upswing in rural use of electric power.

The planned construction of additional generating and transmission capacity by Federal and other public agencies is essential, if we are to maintain adequate supplies of electric energy for our farms and factories.

In planning for the future we must also recognize and develop the full use of atomic power for commercial use. The development of atomic energy opens up another exciting chapter in the history of power development. It will prove to be just as revolutionary as Thomas Edison's first plant in 1882.

It represents to us a new challenge. Congress appropriated to the Atomic Energy Commission the sum of $25 million to be spent in research and development of this new type of power. I believe that it bodes well for the future of nuclear power in the United States that in promoting its production, our Government is following a pattern of cooperation between private enterprise and Government assistance. With big and small power organizations, including a number of REA borrowers, actively working on development projects with the Atomic Energy Commission, I have no doubt that the dream of putting nuclear energy to work on the farms of America will become a practical fact. Substantial progress has been made toward developing small nuclear reactors suitable for supplying rural power systems. We all must realize that it is going to take time before atomically produced electricity can hope to effect savings in areas where conventional fuels are abundant and relatively cheap. Our tendency as humans is to become impatient with progress or what seems to be the lack of progress.

The danger in viewing something as revolutionary as nuclear power is to assume that everything can be accomplished overnight. Success or failure of any program cannot be measured in terms of days, months, or even years in some cases. In looking back over the past as we have done—who can categorically state that the development of electric power came too fast or too slow? The important thing is that it has come during your lifetime and mine and it has produced comforts, safety and a way of life undreamed of in 1882. Wise action on the part of the Congress, the administration, electric cooperatives, and private utilities can bring forth a program which will be most beneficial to the entire Nation.

Our future success as a nation will become dependent upon the orderly and patient research, development, and construction of nuclear-energy plants.

Also looking to the future I know that you are wondering if there will be an increase in the interest rate on REA loans. I can say that as one Member of the Senate, I would not favor an increase in the interest rates. I don't even know whether this question will even come before the Congress. I would believe that a proposal to increase interest rates would not be approved.

It is true that currently the cost of money to the Government is substantially above 2 percent. It is equally true that for a number of years since the 2 percent rate was established by the Congress the cost of money to the Government was below 2 percent.

Some few may label the present spread between the cost of money to the Government and the 2 percent interest rate on REA loans as a subsidy. If it is a subsidy, it is one of the most worthwhile subsidies that our Government has become involved in. We know what the rural electrification has meant to the progress of our Nation. Government loan dollars alone, could not have accomplished this. Into the vast change that rural electrification is bringing in our way of rural life has been poured something of far greater value than all of the loan dollars put together. I speak of the tireless energy, the boundless faith, the unswerving determination and the wholehearted loyalty of millions of farm families that have brought this dream of rural electrification to reality. In return the United States has received not only dollars in return but it has also received a vastly expanded and improved agricultural economy.

I know this is so, because I am a Minnesota farmer—one who has kept pace step by step with the advance of rural electrification since its inception a generation ago.

All of us here have had the privilege and honor of participating actively in a program which has lifted our rural America from an age of darkness into an age of light. Our present program is strong and vital. The future presents new horizons of unpredictable progress and growth.

Toward a New Immigration Policy

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article prepared by me which appeared in the Reporter magazine of March 7, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOWARD A NEW IMMIGRATION POLICY
(By Senator CLIFFORD P. CASE)

The flood of refugees from Hungary following the uprising in that country last fall has forced us to focus our attention on our overall immigration policies. There is a fairly general feeling of dissatisfaction about our immigration laws and practices. But there is less agreement on what ought to be done and still less about how to go about accomplishing it.

No one suggests that we could, or should, admit to the United States everyone who would like to come here. The problem, then, is one of limitation and, unavoidably, selection. I suppose no one would quarrel with the general proposition that the best interests of the United States, both domestically and in our relations with other countries, and basic fairness to individual human beings should be our guides in determining the numbers to be admitted and the criteria for their admission. But beyond that point there are no easy answers. Attorney General Brownell spoke accurately when he said:

"I am frank to state that it is extremely difficult to devise any system which is in the best interests of the country, is considered fair by other countries, has readily definable standards, is manageable, and does not leave too much to any one person or group's discretion."

Ever since the early 1920's the national-origins quota system has governed the selection of immigrants to this country. I believe this system has never been, and is not now, in the best interests of the United States or fair to the individuals affected. Secretary Dulles had this to say about the matter: "* * * honorable persons willing and eager

to make their homes in the United States, know that they cannot do so except after a wait of many years, while other persons similarly situated but living in more favored countries, can do so without delay. The impact of this situation is felt in our relationship with friendly nations every day."

I am confident that eventually the defects in the national-origins quota system, and its unfairness, will be generally recognized and that we will abandon it. But I do not believe that either Congress or the country is yet ready to take this step, in considerable part because of the difficulty in agreeing on an alternative.

Therefore, I fully support the two major amendments which President Eisenhower has suggested to Congress to the McCarran-Walter Act—our basic immigration statute.

These changes would:

Base quotas on the 1950 instead of the 1920 census figures. This would raise the number of quota immigrants admissible each year by 65,000.

Permit the redistribution of quotas presently unused by such countries as Great Britain, Ireland, and Germany among nationals of other European countries on a first-come basis, giving effect to provisions of existing law for preference to persons with skills needed in this country and those having close relatives already here. This amendment would increase the number of persons admitted to this country by an additional 60,000 annually.

In practical effect these two changes would permit the admission each year of up to 125,000 additional immigrants from the European area, without regard to their national origin. This is highly significant in view of the fact that the total number now admitted from that area under national-origins quotas is less than 100,000 annually. Therefore, if these amendments were adopted, the national-origins system would apply to less than half the quota immigrants from this area.

These changes clearly would represent a long step in the right direction in the light both of our self-interest and greater fairness to individuals.

Many of the skills that are becoming scarce in this country could be supplied by immigrants whose admission is indefinitely delayed by the national-origins quota system. And I believe, with the President, that our economy has expanded to a point where such liberalization of our immigration laws would not impair our ability to maintain domestic labor standards.

On this point our experience with the admission of Hungarian refugees is relevant. Tracy Voorhees, Chairman of the President's Commission for Hungarian Relief, recently wrote to me:

"The job offers already received considerably outnumber the employable refugees. An examination of these job-offer listings will, I know, disclose the existence of many lines of occupational activity which are in short supply and many communities in which certain manpower shortages exist. * * * Thus far we have been able to move refugees into employment in a steady flow with no known instances of displacement of qualified Americans."

DUE PROCESS FOR ALL

Another major need is to give our immigration laws sufficient flexibility to enable us to meet special problems and emergencies.

Since the October uprising 170,000 Hungarian refugees have fled across the border into Austria. The Austrian economy could not possibly have supported this additional burden. If other countries, including our own, had not stepped in, Austria would have had to turn these people back to persecution, and in many instances to exile or death. It was fortunate, indeed, that the President was able to use the expiring Refugee Relief Act and the parole provisions of existing law as a means to enable us to take a share of this load.

Accordingly, in addition to seeking legislation for the permanent admission of Hungarian refugees already in this country under parole, the President has urged Congress to establish a continuing program under which approximately 70,000 refugees from Communist tyranny might be admitted annually. I have suggested that this program be broadened to include such other refugees from oppression as the Jews driven from Egypt.

The President has also proposed technical amendments to the McCarran-Walter Act to eliminate discrimination against certain Asians, fingerprinting requirements for visitors, and various unfair features of the law. Certain other due-process amendments are, in my judgment, desirable.

THE ART OF THE POSSIBLE

The President's proposals have been criticized from both sides. Many persons who are opposed to the national-origins quota system complain because the President has not asked for the immediate total abolition of that system. On the other hand, Representative WALTER has complained that the Eisenhower program would actually admit more immigrants each year than would any of the other bills which have been introduced. And, indeed, this is true.

All things considered, I am convinced that the President's approach is not only very much in the right direction but, in its major provisions, is also the one that would carry us further along the way toward improvement of our immigration policies and practices than any other now pending or proposed. Among other things, it would give us an opportunity for experience with the admission, in effect without regard to national origin, of up to 125,000 European immigrants annually. If this works well, as I am confident it will, we shall have laid the groundwork for the elimination of the national origins-quota system far more quickly than by seeking its direct repeal.

But though the President's program does reach for the possible instead of the unattainable, its enactment will by no means be easy to accomplish.

The general attitude throughout the country, as well as in Congress, has been and still is one of caution on this issue. That attitude cuts across party lines. As I pointed out earlier, the national origins-quota system has been in effect since 1921. In 1952 the McCarran-Walter Act, reaffirming that system, was adopted over President Truman's veto by more than a majority of the members of both parties in both the Senate and the House.

Despite its caution, Congress has on occasion acted with boldness and generosity on problems in this field. The passage of the Displaced Persons Act in 1948 and the Refugee Relief Act in 1953 is evidence of that fact. Both these acts were adopted with a supporting majority of the members of both parties, and as a Republican I take satisfaction in the fact that both were adopted during Republican control of Congress.

The response of our people during the recent Hungarian emergency gives further ground for belief that Americans are not blindly set against all change. A few weeks ago private citizens of Milwaukee airlifted directly to freedom a planeload of Hungarian escapees in 4 days' time. This was perhaps the most spectacular incident in our refugee effort, but all over the country private citizens and church and civic groups responded generously and effectively to the challenge.

It is my deep belief that the one insurmountable barrier so significant improvement in our existing immigration laws would be disunity among those who seek such improvement. If all those who sincerely wish to improve our immigration laws and practices will make common cause in the fight for those improvements which are within the realm of the possible, even though less far-reaching than many of us would like, I think we can succeed.

The Political Situation in Western Germany

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 8, 1957

Mr. SMITH of New Jersey. Mr. President, on Wednesday, March 6, the Honorable Heinrich von Brentano, Foreign Minister of the Federal Republic of Germany, delivered a very significant address before the National Press Club in Washington, D. C. This address eloquently described many of the pressing problems of the present West German Government.

In light of the interest all of us have in the problems of West Germany and the participation of West Germany now in NATO, and its close association with the Western free nations, I ask unanimous consent that the address be printed in full in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HEINRICH VON BRENTANO, FOREIGN MINISTER OF THE FEDERAL REPUBLIC OF GERMANY, BEFORE THE NATIONAL PRESS CLUB IN WASHINGTON, D. C., MARCH 6, 1957

Mr. President, it is a great pleasure to be able to speak to you again today and I thank you for giving me this opportunity. Even when I spoke to you the first time—it was in October 1955—I fully realized that I faced an audience of men who expect a great deal of their speakers. That is still my impression. It is no inappropriate flattery if I tell you that as a politician one has rarely a chance to address an assembly such as the National Press Club, the members of which, because of their distinction as journalists, contribute so decisively to the formation of opinion both here in the United States and throughout the world.

I propose to deal with the political situation today. But before doing so I would like to state a fact that indicates, as nothing else does, the unrest which dominates the whole world: Today, 12 years after the Second World War, we still live in a divided world, and the extreme tensions—both cause and manifestation of this division—are not fruitful but dangerous. They are a direct threat to the peace of the world.

The preservation of peace has always been the foremost object of a purposeful policy based on law and morality. This postulate applies all the more today, when men in various parts of the world have at their command technical means—I hesitate to describe these means as weapons—which could extinguish human life on our planet. You will believe me if I tell you that we in Germany, in particular, are aware of this critical situation. It is in Germany, after all, that the partition of the world is demonstrated most clearly. The dividing line which cuts the European continent into two halves—one free, one slave—runs right across our country and strangles the living organism of our people. Thus, the partition of the world, to which I have referred, is not only a political fact as far as we are con-

cerned, but in our country it is evident as a genuine human tragedy.

Since the end of the war German foreign policy has been dominated by three requirements: To do everything within its power to end the partition of the country; to do everything within its power to safeguard freedom in that part of Germany in which freedom has been restored as the guiding principle of the political and social order, and finally to contribute everything within its power to the preservation of world peace.

Since 1945 the organic connection between these three objectives has not permitted us to pursue a policy directed solely and exclusively at the realization of our national aspirations.

Realism and honesty demand of us that this political and moral qualification also be acknowledged in respect to that objective of our policy which—as all of you will understand—stirs our feelings most deeply: The reunification of Germany.

We know that political decisions can be taken only if one has the courage to accept certain risks. But a policy of reunification which did not at the same time aim at the protection of the freedom of the German people and the preservation of world peace would overstep the limits of a legitimate risk. Such a policy would be bad, because it would be frivolous. The Federal Government and the German people clearly recognize this responsibility.

Fifty million Germans live in freedom and they are determined to preserve it in order to pass it on to those Germans who today are still oppressed in the Soviet occupied zone. This objective guides our foreign policy in the Federal Republic. And this hope nourishes the will to live and the capacity for resistance of the German people in the Soviet Zone.

For this reason there is, to my mind, only one clear and unambiguous answer to the question about the correct course for German foreign policy: Today's Federal Republic and tomorrow's reunited Germany must, will, and shall exist in unbreakable alliance with the free world. This conviction also has found expression in the decisions so far taken by the Federal Republic.

Germany has learned from the experiences of the past. We realize that the calamitous dismemberment of Europe was one of the causes of the tragic conflicts of recent centuries. Our conception of the world has undergone a complete change as the result of a shift among the political forces. This change compels us to revise our concept of history, if we want to look into the future and not live in the past. Through their development the European national states have rendered an inestimable contribution, the fruits of which have been reaped by the entire world. But the European states have realized too late that their existence is assured only if they live with and for one another. The policy of conflict has led to a tragic distintegration of forces and to a deplorable state of impotence on the part of a continent which not so long ago appeared to be destined to guide the progress of the world.

In Europe we have done everything to draw the proper conclusions from this realization. In international and supranational organizations we have joined the European nations together and I think I may say that the Federal Republic has made a valuable contribution to that which has been done so far. In the first instance there was the Council of Europe which served the cause of political cooperation. In order to secure and to improve our economic and our social order we have joined forces in the OEEC and in the Coal and Steel Community. We have established the Western European Union so as to meet in common a danger threatening all of us. All I think that without this European approach we could never have dealt with the difficult legacy left by the war for the whole of Europe.

This policy has borne its fruit. It has often been said that European cooperation in the first place presupposed the overcoming of the German-French conflict. I think I can say today that relations between these two nations in the heart of the European Continent have not for centuries been so good, so friendly, and so receptive toward one another as they are today. This new friendship found its outward expression in the treaty providing for the return of the Saar to Germany. Today and on this occasion I should like to note, with satisfaction and gratitude, that this result could be achieved only because the German and the French people have abandoned the nationalist ideas of bygone days and because they—believing in a common future—have taken a courageous decision and one which I would like to call exemplary.

The negotiations for the establishment of a common European market are about to be completed. We hope that after a transitional period—agreed on by treaty—160 million people will live in an economic area comparable to that of the United States. The customs barriers between our countries are being dismantled. Economic, communications, and agricultural policies of the participating states are to be gradually but consistently harmonized with one another. And we are happy that other European states—such as Britain—cooperating with us in the OEEC, have demonstrated their resolve to join this common market by means of a free-trade zone.

In this readiness on the part of Britain, in particular, I see a hopeful beginning for future developments. Continental Europe has already joined forces with Britain in the Western European Union. The agreements on commercial policy in respect to the common market and the free-trade zone will give further visible expression to the efforts to safeguard freedom and peace and to meet a common danger—efforts which in themselves are a pledge of solidarity. Simultaneously with the common market we are also going to set up the European atomic organization; and it is my hope and conviction that this organization, too, will not be limited to the six member nations but will extend to other European states either by means of their accession or by means of special treaties of association.

I think that the economic development thereby set in motion is of immense importance for the whole world. This applies also to economic relations between, say, this newly emerging Europe and the United States. The vast economic area now about to come into being will also offer new opportunities for mutual trade. The expansion of the economic area will not only help to increase productivity and improve well-being, but equally it will offer new, hitherto hardly imaginable markets.

The United States has decisively contributed to this development. We, all of us in Europe, and particularly in Germany, have reason and occasion ever to remember with gratitude the generous aid which the United States gave us. Without this aid our endeavors would never have had the success to which we can point today with satisfaction.

But the policy of the United States has achieved still more. I should like to say that the United States has awakened the spirit of mutual interdependence which has been decisive for this development. It was always the United States which worked for European cooperation, putting into its efforts all the political and moral weight of a great, free and independent people. Here there was no longer any trace of the narrow-mindedness of a past epoch; no trace of the fear felt by those who always live in the past, who fear such cooperation because it might lead to a shift in the political and economic balance. Instead, this attitude of the United States demonstrated courage and faith in the future. At times it seemed that you here in the United States understood even better than the Europeans themselves that European economic and political cooperation would decide whether the European peoples are to live or die.

And it was out of this spirit of cooperation, out of this conviction that the free world must unite of its own free will, that the Atlantic community was born. This community, it must be understood, is more than the expression of a common resolve to meet a common danger, it is more than the will to meet injustice and chaos through strength and order.

The German people have pursued the road toward the European and the Atlantic community in full awareness of its meaning. I speak advisedly of "the German people," for I know that I can speak for 70 million Germans. The Germans know that they are an integral component of the free world and they will neither withdraw from this alliance of their own volition nor will they let themselves be severed from it by force. The place which the Federal Republic today occupies in this cooperation will tomorrow be occupied just as unwaveringly and as resolutely by a reunited Germany.

I resist with all the determination and gravity at my command any attempt to describe the German policy implied in this attitude as wrong or dangerous.

It cannot be dangerous in any way. For what could give the world in the West and East greater security against a possible abuse of power on the part of Germany than the fact that this Germany joins—of its own free will—the community of free peoples in order to safeguard peace in concert with them? And I am convinced—to say this right away—that the Soviet Union, too, in the long run cannot remain blind to this realization. How much more dangerous would be a Germany which tomorrow would have to be expelled and isolated from this community, and left to its own devices? This argument should also be considered by those who want us Germans to proceed along the path to neutralization. I know very well that there are two forms of neutrality, but I believe they would be equally calamitous.

A Germany defenseless and powerless because of an enforced neutrality, released from self-imposed and freely undertaken commitments, would become a pawn in world politics. Seventy million people would become politically homeless, in the true sense of the word. In order to be able to exist and to work, such a Germany would have to seek friends, since it must perish in isolation. Any link with a neighbor would be regarded with distrust by the other neighbors. In the west and east, attempts would be made to utilize for one side or the other the resources of this politically homeless people. In this conflict of interests Germany could exist only if it were to adopt expediency as a political principle. And in any case a vacuum of this kind would sooner or later be filled by some power intent on destroying a balanced order.

No less great would be the danger presented by a neutral Germany which, left to itself, would have to be prepared to meet any possible threat. Her political and, even more, her geographic situation would compel Germany to build up armaments far in excess of her capacity. These efforts would necessarily be at the expense of economic and social well-being. Within a short time they would lead such a neutral Germany to the verge of collapse and compel her either to capitulate to one side or the other, or to make use of her power.

Anyone who genuinely desires a world order of enduring peace should not express such ideas nor give such advice. These ideas re-

veal—permit me to say this—a shocking lack of political common sense and they show that their exponents still cherish concepts belonging to the past century and that they think in categories which no longer apply to the present time.

Nor can this realization be evaded by plans and designs which appeal to the emotions and ignore realities. Certainly, we also want a European security system as part of a worldwide security system which would free the world from fear and would secure peace. But it is dangerous to substitute high-sounding theories for nonexistent realities.

I do not deny by any means the value of multilateral arbitration agreements. I do not deny at all the value of nonaggression treaties. I do not deny by any means the tremendous importance of a disarmament agreement based on effective controls. I do not deny, by all means, the importance of pledges and mutual assistance in case of aggression. But the most recent tragic, historic developments have shown us that declarations of this kind do not have any value in themselves and that their validity depends on the extent to which they can be implemented.

We know the charter of the United Nations. The German people and the German Government support the moral principles laid down in that document without any qualification. We follow with admiration and sympathy the effort to give effect to these principles within the limits set to the United Nations through the organization's statute. I have in mind here the ceaseless endeavors to remove the tensions in the Near East. President Eisenhower has made a decisive contribution to these endeavors by his bold initiative, an initiative conscious of responsibility.

But it is not a signed and pledged Magna Carta of peace which brings peace to the world. It is, rather, the actions of those who endorse these objectives. And here we note a discrepancy between word and deed which could be denied only by a dreamer or a utopian.

I believe that we Germans, above all, can say this: The policy of the Soviet Union toward the German people constitutes a constant and flagrant violation of these principles. The maintenance of a hated system alien to the German people in the Soviet occupied zone; the refusal to restore to 17 million Germans their freedom of choice; and absurd thesis of the reality of two German states which the German people would repudiate almost unanimously on the day of free elections; all these facts, of which I have spoken, are indeed tantamount to a constant and incessant aggression by the Soviet Union against the German people, a permanent, unjustified intervention in the rights of a free people. And if I recall the fate meted out to nations who have to live within the Soviet orbit, when they demand only a little more freedom, a little more of their human rights and dignity—I am thinking here particularly of the unspeakable tragedy, which occurred in Hungary during the last few months—then this discrepancy becomes crystal clear.

The German people want to live in peace with all the nations of the world. All of us in Germany have experienced the horrors of war and we still bear a heavy burden as the result of a criminal policy for which a German Government was responsible. We realize what a military conflict would mean, particularly for people like the Germans whose geographic position places them in the middle of the area of tension. Therefore, we are ready to do everything to remove this tension. But we are not prepared to commit suicide.

We have very concrete ideas about an effective security system which should not divide but unite the world. A free and reunited Germany would willingly take its place within such a system, and also make some sacrifice for it. But it is not prepared to sever and to isolate itself from the free world. A free and reunited Germany is prepared to accept any risk which others are ready to share. But it is not prepared to undertake solely and by itself a risk which would cost it its freedom and its very existence.

Germany is prepared to maintain good neighborly relations also with the countries of the eastern bloc and with the Soviet Union; but it is not prepared to sacrifice to this end the alliance with the free world and the friendship with peoples to whom the German people feel themselves bound by historical, cultural and spiritual ties. A free and reunited Germany is prepared to provide every security which is granted to itself. But it is not prepared to accept less security than others. It is prepared to accept without discussion ideological differences exemplified by the political order of other countries, and to acknowledge that every people has the right to establish its own political order. But a free and reunited Germany is not prepared to renounce this right for itself and to submit to a political order which does not correspond to its ideas.

History has placed a tremendous burden upon the American people during the last few years. Sometimes, surely, the American statesman and the American citizen must have felt the temptation to evade this responsibility. And there have been many disappointments which could have served as outward occasion for such a decision. If I appeal as a German and as a European to this responsibility, I do so because I can state, at the same time, that we are conscious of the duties arising therefrom for ourselves. The systems of alliance which we have joined are not expedients designed to achieve a certain aim of any member. We have to fulfill a common task: We should be aware of our mutual obligations, that is to say, we should always be ready to subordiate our special interest of the moment to the common task and to common objectives.

I have no doubt that this united community of the free peoples of the world will succeed in solving, jointly, the tasks which history and politics have set us. This applies also to the special problem which touches us Germans so profoundly: The secure freedom of the united Germany. I have no doubt that all the peoples of the world pledged to freedom will support us in the solution of this problem. And I do not doubt that with constancy and resolution we shall also persuade the Soviet Union that the interests of the Soviet people themselves is compatible with the achievement of this aim—perhaps they can be satisfied only through the achievement of this aim.

The last few months have shown us that the will to live in freedom is deeply rooted in human nature. Years of oppression and of indoctrination were unable to change human nature. This will to freedom is like a divine spark—it can be smothered but not extinguished.

It is our common task to help the cause of freedom and of law to prevail wherever it is still suppressed. But we do not want to do this by using force. Might must serve right to become effective as a principle of order. But right must also avail itself of might when it is threatened with violation.

Years ago I read here in Washington an inscription with which I would like to conclude: "Eternal vigilance is the price of liberty."

Man of the South

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the news release announcing the forthcoming poll conducted by Dixie Business magazine of Decatur, Ga., to select the Man of the South of 1957. The release, prepared and distributed by editor Hubert F. Lee, lists the outstanding southerners who have been nominated for this honor. Recipient of the award for 1956 was Georgia's distinguished and beloved Senator Walter F. George.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

SOUTH'S HALL OF FAME FOR THE LIVING

(By Hubert F. Lee, Decatur, Ga.)

HELP ELECT THE MAN OF THE SOUTH

Readers of this newspaper are invited to vote for the Man of the South from a group of leading southerners who have been named to the South's Hall of Fame for the Living by the editors of Dixie Business.

Those who have been elected Man of the South include Thomas W. Martin, Birmingham; Donald Comer, Birmingham; C. Hamilton Moses, Little Rock; Ernest L. Kurth, Lufkin, Tex.; Reuben B. Robertson, Canton, N. C.; David Ovens, Charlotte; James C. Self, Sr. (deceased), Greenwood, S. C.; Robert T. (Bobby) Jones, Atlanta; Bishop Arthur W Moore, Atlanta; Wilton E. Hall, Anderson, S. C.

Ambassador Walter F. George.

Vote for seven of the following on a post card or letter. Send to Hubert F. Lee, editor of Dixie Business, Decatur, Ga.:

Ivan Allen, Remmie L. Arnold, Robert O. Arnold, Harry M. Ayers, C. W. Bailey, Hines H. Baker, William N. Banks, Col. T. H. Barton, Bruce Barton, Bernard M. Baruch, George C. Biggers, L. L. Baxter, Morgan Beatty, Adm. Richard E. Byrd, Bishop John Branscomb, Barry Bingham, Dr. Alfred Blalock, Gen. A. R. Bolling, Carl D. Brorein, Rex I. Brown, Wright Bryan, A. M. Burton, C. F. Byrns, Erskine Caldwell, Cason Callaway, James L. Camp, Jr., John W. Carpenter, Bishop C. C. J. Carpenter, Hodding Carter, Dr. O. C. Carmichael, O. E. Cheatham, James Saxon Childers, Will Clayton, Erle Cocke, Sr., Erle Cocke, Jr., Charles A. Collier, Hugh Comer, Senator Tom Connally, Richard W. Courts, Jr., Roy Cullen, Dr. John R. Cunningham, Virginius Dabney, Jonathan Daniels, Colgate Darden, Jr., T. M. (Ted) Dealey, James K. Dobbs, Dean John E. Drewry, Hal S. Dumas, B. M. Edwards, Dr. Daniel C. Elkin, J. Oliver Emmerich, K. A. Engel, William Faulkner, Milton Fies, Fred F. Florence, B. T. Fooks, John Nance Garner, E. K. Gaylord, Dr. Francis P. Gaines, Lt. Gen. Alvan C. Gillem, Jr., Frank Gould, Walter L. Graefe, John Temple Graves, Gordon Gray, Robert Gregg, F. E. Grier, Robert W. Groves, Robert M. Hanes, Clarence B. Hanson, Jr., Dr. Rufus C. Harris, Harry G. Hastings, D. J. Haughton, J. N. Heiskell, Arthur M. Hill, Gov. W. P. Hobby, Oveta Culp Hobby, Hamilton T. Holt, Gen. George A. Horkan, Maj. Clark Howell, Frank G. Huntress, Jr., R. F. Hudson, Walton Maxey Jarman, J. B. Ivey, Robert Jemison, Jr., Hershel V. Jenkins,

Dewey H. Johnson, Walter C. Johnson, Thomas M. Johnson, Helen Keller, Kenneth S. Keyes, Dr. James R. Killian, Robert J. Kleberg, Jr., Edwin D. Lambright, Sam L. Latimer, Jr., Thomas C. Law, Spencer Love, Joseph T. Lykes, Robert F. Maddox, Gen. George C. Marshall, C. N. Martin, Rabbi David Marx, Ben Massell, Haynes McFadden, Senator Kenneth McKellar, J. Finley McRae, C. B. McManus, J. Roy McGinty, Dr. James Ross McCain, S. C. McMeekin, Ralph McGill, Henry T. McIntosh, Quimby Melton, Sr., Gen. Troy H. Middleton, Thomas A. Morgan, William Murphey, Frank H. Neely, Abit Nix, E. L. Norton, Ernest E. Norris, Dr. Alton Ochsner, Gen. E. W. Opie, Col. C. E. Palmer, T. W. Pangborn, Roger Peace, Commodore E. H. Perry, Gen. John C. Persons, Louis Pizitz, Dr. William P. Pollard, Legh R. Powell, Jr., Lawrence W. (Chip) Robert, E. A. Roberts, Caffey Robertson, Frank P. Samford, James C. Self, Jr., John A. Sibley, A. D. Simpson, James H. Skewes, Tom Slick, Dr. Frank G. Slaughter, McGregor Smith, Richard P. Smith, William A. Smith, Frank E. Spain, Talbot T. Spear, Dr. Tom D. Spies, Eugene W. Stetson, Louis V. Sutton, James G. (Jimmy) Stahlman, L. P. Sweatt, Dr. Charles Allen Thomas, Fred J. Turner, W. R. Turner, W. G. Violette, Louis Ware, P. F. Watzek, Dr. Goodrich C. White, A. L. M. Wiggins, Jack Williams, Cecil Woods, Robert W. Woodruff, Emily Woodward, C. E. Woolman.

The Failure of Voluntary Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "The Failure of Voluntary Health Insurance," issued March 1, 1957, by the Public Affairs Institute.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FAILURE OF VOLUNTARY HEALTH INSURANCE

Voluntary health insurance is not meeting the health-protection needs of most Americans.

The voluntary-insurance principle has grown tremendously in recent years—Blue Shield, Blue Cross, and others. In 1940 only 9 percent of the population carried voluntary health insurance. By the end of 1954 some 60 percent of the population was subscribing.

Today, however, organized labor and many other groups in the community are facing the brutal fact that voluntary health insurance is not meeting the heavy financial burdens of modern medical care.

In State after State, now, organized labor is seeking some new means of providing adequate medical protection for its members. The number of union-sponsored health plans, providing for full hospitalization and medical-care benefits under union auspices, has expanded rapidly in recent years.

Many other citizens are still forced to rely on the voluntary health-insurance programs that are available. And these programs are now facing serious problems in the future.

For one thing, the public is finding out that the fine print in the contracts seriously limits the coverage of illnesses, duration of sickness and hospitalization, and family benefits are often not provided except for extra large costs.

A recently-published study, Family Medical Costs and Voluntary Health Insurance: A Nationwide Survey, throws some new light on this problem. The study was prepared by Dr. Odin W. Anderson, of the Health Information Foundation, and Jacob J. Feldman, of National Opinion Research Center.

At one point they explain: "Serious actuarial problems have been raised by the shift in emphasis from infectious diseases to chronic disorders and mental illness. The role of Government, which in recent years has been sharply expanded in other areas under a more liberal interpretation of the general welfare clause of the Constitution has caused bitter disagreement when evaluated in relationship to health services."

What the authors are saying is that in most other areas of social welfare some progress has been made. But in the field of health, Federal, State, and local governments shy away from the issue or, as the Eisenhower administration did last year, offer a plan which turns over the entire matter to life insurance companies.

Think back to the year 1949. Organized labor and others strongly backed a Truman program for national health insurance. Out of the West came the public relations team of Whitaker and Baxter, employed by the American Medical Association. The national health insurance proposal was not only defeated but the fantastic success of Whitaker and Baxter made a deep imprint on the national thinking.

Almost every concrete proposal for expanding medical protection is still greeted by the cry of socialized medicine, as a result of their campaign. Many medical societies are even refusing to cooperate with the mass campaigns for Salk vaccine immunization against polio. Still, the issue of national health insurance will not die, for the problem of providing for the people's health has not been met by the voluntary insurance plans.

The burden that medical protection imposes on so many American families can be seen in a simple statistical picture.

Anderson and Feldman estimate that the total nationwide charges for private personal health services is $10.2 billion annually. This, in turn, averages out to $207 a year per family, or 4 to 5 percent of the family income.

Averages never give the true picture, though. For example, in 1 year 8 percent of the families incurred no charges at all for personal health services. On the other hand, 2 percent, or approximately 1 million families, incurred charges in excess of $1,000. Again, 11 percent of the families received charges in excess of $500, accounting for 43 percent of the total charges.

How adequately does voluntary health insurance cover medical expenses?

The authors point out that families with insurance incur median charges of $145 a year and those without insurance $63. Then they note: "It is obvious that, on the basis of the median, families with insurance incur charges exceeding twice that of uninsured families. If the amount paid by insurance is deleted, leaving out-of-pocket expenses of $117, this is still twice the charges incurred by uninsured families."

There may be many explanations for this. One is that more families in the higher income brackets are covered by insurance and consequently have more expensive care. On the other hand, it seems to be a standard practice in the medical profession to inflate the bill to those insured.

But, in the net, when the insured have to pay almost twice as much out-of-pocket as do the uninsured, something is badly out of kilter with the entire insurance principle and a national health insurance plan seems more necessary than ever.

Paging Poor Richard

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine column written by Mr. Paul Wooton, which appeared in Dun's Review and Modern Industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAGING POOR RICHARD

It's fashionable to be thrifty again. And it's also necessary. Cheap money taught businessmen some bad habits over the past two decades and now that interest rates have risen, many proprietors and managers of enterprises are rediscovering the fact that somebody has to save a dollar before someone else can invest it.

Despite the theories of Keynes on the merits of spending one's way to prosperity, and the economic fallacies that crept out of the doldrums of the depressed 1930's, there is no substitute for earning and saving, and the principle applies to the corporation and State as well as to the individual. We have acquired some bad management habits that are partly hidden under the lush velvet of an inflationary period. The income-tax vagaries have encouraged questionable tactics in the spending of money for tax benefits, a maneuver in which opportunism occasionally overrides sound financial judgment. Any sustained drop in sales revenues uncovers the secret sins of management, and the recent credit freeze is a word to the wise to review fiscal policies.

Good management looks at a program of expansion with an eye toward the long-term risk and reward. Whether the investment be a new store front for a retail shop, a new converter for a steel mill, or a new warehouse for a distributor, the money should be provided out of earnings, or new money invested. Not too much of it can come out of the working capital without hampering the productivity of the store, mill, or service. In a day when income tax sluices off much of the earnings that might be used for the replacement of equipment or improvement of facilities, and the banks are reluctant to supply our demands for risk capital, there is the temptation to dip into working capital reserves to meet the emergency.

Working capital moves through a cycle of inventory in raw materials, then processed goods, distribution, and sales. If the cycle follows the established pattern, the capital returns with an earned profit. Any attempt to drain off working capital for the long-term assignment may interrupt the cycle, disturb the credit relations of suppliers and customers, and even endanger business survival.

There is a definite, and at times vague, relationship between the thrift dollar and the credit dollar. In an inflationary period, the two may appear to be tugging in opposite directions, and confusing the spectator whose economic virtues are anchored in Ben Franklin's truism of "A penny saved is a penny earned." Poor Richard's Almanac is not yet out of date.

Ignoring all the technical aspects of banking functions and the financial jargon about currency in circulation, demand deposits, Treasury certificates, and all the cash and paper equivalents of money, we know we are not accumulating current thrift dollars at the accelerated pace needed to give substance

and stability to credit and investment dollars. The action of the Federal Reserve Board in raising the rediscount rate on loans is evidence of the current pressure of demand over supply. The increase in savings bank interest rates dramatizes the need for diverting more earnings into thrift accounts and reserves. The pause may be awkward for the corporate management or for the individuals who are leaning too far into the future, and find themselves off balance.

Thrift is not only fashionable—it is a highly necessary virtue in a period of inflation when the pumps have run out of air. There's no need for penury, and no excuse for profligacy. But there is a need for the practice of an oldtime discipline in saving for the rainy day—because we may occasionally need a quick dollar even when the sun is shining.

A Miracle of Social Adjustment

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on a pamphlet entitled "A Miracle of Social Adjustment." The pamphlet, which was written by Dr. Carl F. Hansen, Assistant Superintendent of Schools in Washington, D. C., comments on integration in the public schools in the city of Washington.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Supreme Court decision outlawing public school segregation confronted great sections of our land with profoundly difficult problems of adjustment. Men of good will were sincerely troubled whether the law of the land could be translated into sound and effective educational terms. Recently, for example, we witnessed widely conflicting claims about the effects of integration in the Washington school system.

Those who are concerned with an objective, factual account of the Washington problems and how they were met will find it in the authoritative study by Dr. Carl F. Hansen, Washington Assistant Superintendent of Schools, just published by the Anti-Defamation League of the B'nai B'rith. Dr. Hansen calls his study A Miracle of Social Adjustment, and his documented story justifies the title.

Successful school integration in Washington was the product of the efforts of thousands—pupils, parents, teachers, and administrators—who scrapped ancient habits and prejudices in an orderly and rational adjustment to the best ideals of our democratic heritage. To achieve this result it was necessary to cope with drastic shortages of money and with inequities arising from what the Washington Post called the "old separate-but-hardly-equal system." Moreover, it was necessary to overcome the obstacles deliberately created by meddlers who sought to prove that integration couldn't work by forcing its failure.

I hope the Miracle of Social Adjustment will be read widely here and abroad. It can show educators and public officials of good will how integration can be achieved by offering the example of a school system in which the majority of children are colored. Abroad, it can demonstrate to that two-thirds of the world's people who are colored that equality of opportunity is not only an American ideal but an accelerating and successful fact.

The heart of Hansen's story is to be found in one very moving passage which cannot be quoted too often:

"Anyone who views the Washington story in its entirety, including the problems, disappointments, and errors in judgment, will be impressed with the evidence of the integrity of most of the people in it, and will feel a glow of pride that in the Nation's Capital, the ideal of individual dignity and worth, no longer simply an idle phrase in a textbook on American democracy, is now to a much larger extent a living reality in the lives of its citizens."

Proudly We Hail

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article writen by Dr. George S. Reuter, Jr., entitled "Proudly We Hail." Dr. Reuter is on the staff of the A. and M. Hospital at A. and M. College in Monticello, Ark., and is the State coordinator for Arkansas for the Phi Delta Kappa Fraternity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROUDLY WE HAIL

(By Dr. George S. Reuter, Jr.)

Beta Pi field chapter of Phi Delta Kappa was organized on May 15, 1954, at the Marion Hotel, Little Rock, Ark. The officers have been as follows: Presidents, James H. Hutchinson, Jess W. Matthews, and W. K. Summitt; vice presidents, Jess W. Matthews, W. K. Summitt, and LeRoy Scott; secretaries, A. G. Thompson, Ralph Wilson, and F. L. Robinson; and treasurers, M. H. Russell, and the writer.

As State coordinator for Arkansas of Phi Delta Kappa, the writer has cited the following brothers who have rendered distinguished service to Arkansas education and Phi Delta Kappa and who are 65 or older:

1. Charles Forrest Allen, Beta 638, executive director-emeritus, Arkansas teacher retirement system, Little Rock, Ark.

2. James Herbert Hutchinson, Psi 173, dean, Arkansas A. & M. College, College Heights, Ark.

3. Morgan Richard Owens, Psi 114, emeritus from the State department of education, Little Rock, Ark.

4. John Leon Stone, Psi 785, chairman, division of social sciences, Arkansas A. & M. College, College Heights, Ark.

Dr. Clifford S. Blackburn was also cited for distinguished service, even though he is under the age of 65, as the first State coordinator of Phi Delta Kappa for Arkansas. He was superintendent of schools of North Little Rock, Ark., and is now professor of educational administration at North Texas State College, Denton, Tex.

Senior Citizens of America was organized by Dr. Willard E. Givens and Dr. Joy Elmer Morgan. The former is the emeritus executive secretary of the National Education Association, and the latter is the emeritus editor of the Journal of the N. E. A. Here is the philosophy of the organization (Arkansas Gazette, Tuesday, January 1, 1957, p. 4A, A New Year's Thought for Older People, and Arkansas Democrat, Wednesday, January 2, 1957, p. 8 Senior Citizens of America):

"1. That the second half of life should be richer and happier for most people than it now is.

"2. That preparation and planning for the later years should begin not later than age 40.

"3. That there should be a popular clearinghouse for the growing body of knowledge and experience in gerontology and geriatrics.

"4. That many older people now put up with infirmities and handicaps which can be corrected.

"5. That better provision should be made for the care of senior citizens who are not able to take care of themselves.

"6. That man's greatest need is to learn; that this need increases as one grows older; that older people can learn what they want and need to know.

"7. That everyone should be encourged to make the most of himself as long as life lasts.

"8. That the senior citizen should keep reasonably active physically, mentally, and spiritually.

"9. That there is a vast reservoir of unused talent among men and women in all walks of life who have been retired that should be used for the public good.

"10. That among some 60 million citizens over 40, including 14 million who are over 65, there are many who will gladly support a non-profit enterprise in this field with their money, talent, and service."

Dr. Thomas J. Welsh, Dr. Van C. Binns, Rev. H. C. Seefeldt, and Jeff Davis Moore are on the advisory board for Arkansas. As State director of Arkansas of Senior Citizens of America, the writer has announced the following distinguished senior citizens for Arkansas:

1. C. C. Smith, executive assistant to the president, Arkansas A. and M. College, College Heights, Ark.

2. James H. Hutchinson, dean, Arkansas A. and M. College, College Heights, Ark.

Arkansas can proudly hail the awards granted to these educational statesmen by Phi Delta Kappa and Senior Citizens of America. We may fail to win all battles for progress in education at one time (Arkansas Gazette, Sunday, December 16, 1956, p. 4F, A Formula for Easing Burden of the Schools, and Arkansas Democrat, Monday, December 17, 1956, p. 8, Federal Participation), but the courage and determination are there.

Discrimination Against South

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter and accompanying memorandum which I have receiveed from Hon. H. L. Wingate, president of the Georgia Farm Bureau Federation, showing the discriminatory manner in which the Benson farm program operates against the South.

There being no objection, the letter and memorandum were ordered to be printed in the RECORD, as follows:

GEORGIA FARM BUREAU FEDERATION,
Macon, Ga., March 1, 1957.

Hon. HERMAN TALMADGE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TALMADGE: I am taking this opportunity to present some factual information that will prove beyond a doubt that Mr. Benson is knowingly and intentionally taking from the cotton producers this year a minimum of $120 million to $150 million. He has set cotton price support for this year at 77 percent of parity when by all reasonable figures it should be from 83 to 85 percent. Mr. Benson has proved through his soil bank operations his insincerity by discriminations between regions and also his lack of sympathy for the farmers by using unreasonably low estimates to bring the price support as low as possible.

Enclosed are some figures concerning the cotton supply and estimates by Mr. Benson and estimates by many others in and out of the cotton industry that should be of much interest to you.

As you can see from enclosed information it is obvious that Mr. Benson is not working in behalf of the farmers in the Cotton Belt. This great injustice to our cotton producers should be corrected immediately if possible.

Sincerely yours,

H. L. WINGATE,
President.

Below are figures concerning the cotton supply and estimates by Mr. Benson and estimates by many others in and out of the cotton industry:

	Bales
Carryover on Aug. 1, 1956	14,000,000
Production in 1956	13,100,000
Total 1956–57 supply	27,100,000

	Benson's estimates	Reasonable estimates
	Bales	*Bales*
Estimated consumption for 1956–57	8,850,000	9,000,000
Estimated exports for 1956–57	6,500,000	6,700,000+
	15,350,000	15,700,000+
Estimated carryover, Aug. 1, 1957	11,750,000	11,400,000
Estimated 1957 production	11,200,000	10,700,000
Total	22,950,000	22,100,000
Less set-aside of 800,000 bales by previous legislation	800,000	800,000
Estimated total supply for 1957–58	22,150,000	21,300,000
Estimated total disappearance of cotton for 1957–58:		
Domestic consumption	8,500,000	9,000,000
Exports	4,500,000	5,000,000
Total	13,000,000	14,000,000
Plus normal carryover	4,000,000	4,200,000
Estimated total disappearance	17,000,000	18,200,000
Percent supply for 1957–58 is of normal supply	*Percent* 130	*Percent* 117

To figure level of supports to farmers, you begin at 108 percent of a normal supply and for each 2 percent above 108 percent, level of support drops 1 percent until total supply reaches 124 percent of a normal supply. For each percent point increase after 125 the level of support drops 1 percent point for each 1 percent supply increase. By Benson's estimates he has set the level of support at 77 percent of parity and by other reasonable estimates it should be at least 84 percent of parity.

This is what Mr. Benson announced actions will cost the cotton farmers of the United States based on parity for cotton at 36.81 cents per pound, based on Middling ⅞-inch staple and his estimated 1957 production of 11,200,000 bales, and figuring a difference of 2.58 cents per pound in supports—11,200,000 bales multiplied by 500 pounds each equals 5,600,000,000 pounds times 2.58 cents per pound equals $144,480,000.

Collision in Delaware River

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CLARK. Mr. President, early yesterday morning, at Graveyard Bend, in the Delaware River off the town of New Castle, Del., a freighter and a tanker collided in the shockingly narrow channel of the river at that point. Ten men are feared dead. The tanker exploded and burned after having a 100-foot hole opened in its side. The explosion could have been heard 30 miles away. At that point the river is 2 miles wide, but the channel is only 100 yards wide.

The Philadelphia Inquirer, one of the leading Philadelphia dailies, a steadfast and strong supporter of the Eisenhower administration, in its leading editorial this morning entitled "Will It Wake Up Washington?" comments on this shocking tragedy. It points out that back in 1938 a congressional commitment was made to maintain that channel at a depth of 40 feet and a width of 400 feet; that that commitment has never been kept; that many river widening and deepening projects in other parts of the country have gone forward; that from 1951 to 1954 river collisions in the Delaware and resulting fires took a toll of 27 lives and resulted in property damage of about $12 million.

The Philadelphia Inquirer submits the fault is with the Bureau of the Budget for being unwilling to recommend adequate appropriations to meet the congressional intent set forth in the act of 1938.

I ask unanimous consent that the editorial from the Philadelphia Inquirer be printed in the Appendix of the RECORD. I suggest that the fault lies not with the Bureau of the Budget but with the Eisenhower administration for a shocking neglect of the needs of our Delaware River ports.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL IT WAKE UP WASHINGTON?

When that Navy supertanker blew up after colliding with a freighter in the Delaware River early yesterday, the explosion which jolted us all was heard as far south as Baltimore.

It is our hope that the terrific earth tremors set up by that blast were felt also in Washington, D. C. Specifically, in the United States Budget Bureau.

A contributing factor in the flaming crash, which cost 10 lives, is official penny-pinching behind neglect of the Delaware River channel over the past decade. One reason those boats collided is that while the river is 2 miles wide at that point, the channel is comparatively narrow. In 1953 two tankers collided, and exploded, at almost the very same spot.

Back in 1938 a congressional commitment was made to maintain that channel at a depth of 40 feet and a width of 800 feet. Three years ago this newspaper warned that "shoaling of the river has reduced the channel to less than 30 feet in depth and around 400 feet in width." We appealed then to Federal authorities for action to honor their pledge.

Since then vast sums have been found for the St. Lawrence seaway and many other projects; but Delaware Valley, U. S. A., has been consistently neglected. This crash is one fruit of that neglect. There have been others.

As Delaware River traffic increased with passing years, and as ships grew larger, our neglected channel became the scene of more and more accidents, a number of them fatal. From 1951 to 1954 river collisions and resulting fires took a toll of 27 lives with property losses of about $12 million. This does not include minor crashes, groundings and other accidents due in part at least to the inadequate channel. Four years ago the Joint Executive Committee for Improvement and Development of the Philadelphia Port Area pointed out:

That at many points the channel could be completely closed if a ship 600 to 700 feet in length were to sink crosswise (the whole river was blocked for 8 hours yesterday).

That in the 88 miles of river from Philadelphia to the sea there are 50 miles without any anchorages where ships can put up in bad weather.

That even the 800-foot-wide channel promised in 1938 is not adequate to meet the needs of safe navigation for modern vessels in the Delaware River today.

All that tells why we hope the blast from this latest tragic crash was felt—and will continue to be felt—in the Budget Bureau.

Development of our great Delaware Valley industrial complex is closely linked with its most vital artery of commerce—the channel. From Trenton to the sea there are now more than 8,000 different manufacturing plants, most of them located along the river. And that is responsible for the further fact that the Delaware River area is estimated to have produced revenue for the Federal Government, from shipping alone, equal to half the total cost of all waterway improvement work ever undertaken by the Federal Government throughout the United States.

If the Budget Bureau is too obstinate to recognize that every dollar spent on the Delaware Channel is a revenue-producing investment, let us hope this terrible tragedy will prod it into undertaking, for humanitarian reasons—and especially for national defense—the deepening which it has refused to support for economic reasons.

That blast in the river should, indeed, awaken us all. It should awaken our Senators and Congressmen to the need for aggressive action.

Our people have a right to demand an explanation why our Government today can find vast sums to spend in all far corners of the earth, but has only pennies for the neglected Delaware Channel.

More than charity begins at home.

VA Interest Rates

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MULTER. Mr. Speaker, I have received a copy of a telegram dated

March 4, 1957, which was sent to VA Administrator Higley by Leon J. Elterman, county commander of the Brooklyn Council, Veterans of Foreign Wars. I commend it to the attention of our colleagues at this time when the subject of raising the mortgage interest rates is about to come before us. Mr. Elterman's telegram follows:

No doubt you are aware of the financial situation in Greater New York area due to the refusal of savings banks to make Veterans' Administration loans at 4½ percent unless rates are raised to 5 percent. Wish to point out that millions of dollars are idle in national service life insurance funds. Request that you consider making direct VA loans at 4½ percent out of the surplus NSLI funds to help out the thousands of veterans waiting to purchase their own homes. Such advances would increase building in Brooklyn and Long Island areas and create many new jobs.

The following letter from a Long Island builder is most revealing. It came to me unsolicited under date of March 7, 1957:

DEAR SIR: In connection with your banking study and deliberations with reference to increasing the interest rates, particularly on GI mortgages from 4½ to 5 percent, the writer would like to submit the following observations:

1. The present drop in construction and lack of sales in the one-family industry is not as directly related to the interest rate as the banks would like us to believe. That there is a present lack of sales is due mostly to the fact that employment in other industries and wages paid therein have not kept pace with the increase in the costs of construction of the one-family houses.

Furthermore, there seems to be a general feeling of unemployment in the area, and, therefore, people are reluctant to obligate themselves to purchase new homes until their employment seems to be more secure. This is generally the reason why the sales have fallen off.

2. An increase of one-half of 1 percent in the interest rate of a GI mortgage under the regular 30-year term on an average mortgage of $15,000 confronts the GI with an ultimate increase in cost of his home of approximately $1,600. No one receives any benefit other than the bank itself.

3. An increase in the GI mortgage will not stimulate sales of one-family houses. As a matter of fact, an increase will further create loss of sales due to the fact that increasing the interest rates causes an increase in the monthly carrying charges of the house. Further, the number of GI's who would be eligible to pass for the mortgage would, per se, be drastically reduced. The limitation of the market for purchasers decreases the units to be built.

4. It appears from the study of the newspaper items reporting on this subject that no one is taking into account the fact that the financial institutions that have been making these types of loans recovered back from investment by way of amortizations at the rate of 1 percent a month or 12 percent per annum. These funds, together with the substantial deposits received by these banks, due to the fact that they increased their interest rates to attract money will leave the banks with substantial idle funds on hand, and, therefore, if there is a lack of construction, they will be compelled to compete for whatever mortgages are available.

The writer respectfully submits that if there is a sincere desire to stimulate construction and purchase of one-family houses, etc., that the following should be considered:

(a) Increasing the mortgage term from 30 years to 40 years. (The average house being built today under the GI program could stand a 50-year mortgage by way of specifications demanded.)

(b) That the financial institutions should in some way be made to honor the low-downpayment regulations permitted under the GI bill. (Even though low downpayments are permitted, banks will insist on substantial payments from GIs.)

Builders are presently paying substantial discounts or premiums to financial institutions for processing GI loans. Therefore, if discounts are to be paid in these connections why should they not be paid directly to Fanny May.

Moreover, the writer feels that the GI should have more to look forward to than a restriction of his ability to purchase a home and an increase in interest rate.

The writer is a builder of thousands of units in the Long Island and Westchester area, but due to the fact that there is a fair chance of retaliation from the financial institutions, he is unable to disclose his identity.

Award of Aldo Leopold Medal to C. R. Gutermuth

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. NEUBERGER. Mr. President, at the 22d North American Wildlife Conference, held in Washington, D. C., this past week, Mr. C. R. Gutermuth, vice president of the Wildlife Management Institute, was honored by being awarded the Aldo Leopold medal for distinguished service to wildlife conservation.

The presentation was made by Dr. Durward L. Allen, of Purdue University, at a banquet presided over by Dr. Ira N. Gabrielson, who is one of the most illustrious wildlife biologists in modern history.

Because of the great faith which so many of us in conservation work have for C. R. "Pink" Gutermuth, I should like to call to the attention of the Senate the public statement of March 5 which describes this award to Mr. Gutermuth and his splendid qualifications for this merited recognition. I ask unanimous consent that the statement appear in full in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Wildlife Society, international organization of wildlife and fishery professionals, today presented its highest award, the Leopold Medal, to C. R. "Pink" Gutermuth, vice president of the Wildlife Management Institute. The award, in recognition of distinguished service to wildlife conservation, commemorates the late Aldo Leopold, considered by many the father of wildlife management in North America.

Mr. Gutermuth, recipient of the Leopold award for 1957, has had a long and distinguished career in conservation. He was cited for outstanding contributions to improved wildlife legislation and administration, effective public-relations work, and leadership as an officer of national-resource organizations. His support has been expressed in the productivity of the Nation's 16 cooperative wildlife-research units and two waterfowl-research stations sponsored by the institute. He has been active in promoting the publication of useful books and bulletins on wildlife, and he has arranged each of the North American wildlife conferences since 1946. "This man's record," said the citation, "is one which few people could find the will, the courage, and the strength to emulate."

The award was made by Dr. Durward L. Allen, of Purdue University, president of the Wildlife Society, at the banquet of the North American Wildlife Conference at the Statler Hotel, attended by nearly a thousand persons from all parts of the United States, Canada, and Mexico.

Opportunities of College Education for Children

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Will My Child Get In?" written by George H. Holstein, Jr., which appeared in the Rutgers Alumni Monthly of February 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL MY CHILD GET IN?

(By George H. Holstein, Jr.)

Will my son, or daughter, get into college in 1960, 1965, 1970, or 1975?

For the Rutgers alumnus, parent, or prospective parent, there is no more important question affecting his family's welfare today. It is a question, too, which may affect the whole course of America's future, her economy, and her security.

If the answer were to be given as this is written, on the basis of real rather than merely talked-of provisions for the future, a frank and honest reply would be that, unless your child is a near genius, his or her chances of getting into college in the years ahead—it's even pretty tight right now—are very slim.

If you are a resident of New Jersey, your child's chances are even dimmer, for in this State there has always been a sharp deficit at the level of public higher education, and very little or nothing in bricks and concrete is being done to correct it.

As individuals, most of us fail to see the woods for the trees around us. We see that big housing development on the outskirts of town; we notice the new schools as they hit our tax bill, and we are aware of new gadgets that fill our homes, from the electric drill in our cellar workshop to the new ventilating fan in the attic.

But we fail to think what these things mean in terms of population increases, of vast industrial expansion, and new fields of endeavor and opportunity. And then we fail to realize what this all means in terms of the college population of the future.

A recent issue of Time magazine in an article on the Nation's economy pointed up the problem indirectly. It noted that the American population is growing at the rate of 11,000 new citizens every 24 hours, that there are 1 million new families formed—with their consequent demand for housing, clothing, cars, and education—every year.

Right along with this tremendous population boom—the estimate is that there will be 190 million Americans by 1965—the Nation is experiencing an unprecedented industrial and economic expansion. During 1956 American business set a new record, spending $36 billion on new plants and facilities, plus another $9 billion for office buildings, furnishings, and the like. There is every reason to believe that this expansion will continue for some time to come.

Then too, look at the new fields opening up. Nuclear science holds a whole world of new opportunity. And there are new developments in electronics, ceramics, automation, just to mention a few that will be demanding their share of college-trained brains.

If we have thought about this at all, it has probably been only a passing awareness. We haven't thought too much about what its impact will be on us and on our children, the latter more particularly.

But some of our leaders in education and planning have been thinking about it very seriously and it seemed to us that as a publication for college men with college aspirations for their children—and this is another phase of the problem because it is a well-recognized fact that a larger percentage of the children of college-trained parents go on to college—some of this thinking should be brought to you in as neat a package as possible.

The President's Committee on Education Beyond the High School, with Devereux C. Josephs, chairman of the board of the New York Life Insurance Co., as its chairman, has recently made a preliminary report to President Eisenhower.

It strode right in to the problem in its opening paragraph:

"The inescapable fact about the future of education beyond the high school is that in 1956 almost twice as many children will be born in the United States as were born in 1936. Already more people than ever before are attending the Nation's colleges, universities, and other post-high-school educational institutions, yet the impact of the greatly increased birthrates of the past 15 years will shortly strike, and will be felt with mounting intensity each year as far into the future as we can foresee."

The PCEBHS goes on to state that by 1970 "larger proportions of the much larger numbers of young people will demand post-high-school education and training to earn a living, to discharge the responsibilities of citizenship, and to enjoy the leisure which their increased productivity will earn.

"Indeed, the number in college and universities alone will be at least double, and may well be triple the more than 3 million now being served * * *."

In what is called "taking stock of the situation," the Committee said that it had been guided by "criteria which it considers essential to the well-being of America and American education."

It agreed that:

"1. The conservation and development of human talent is the proper concern of every citizen, and of the Nation.

"2. Every individual, regardless of race, creed, color, or national origin, shall have the opportunity to develop his or her best self, to continue appropriate education up to his or her personal point of optimum development.

"3. The assurance of genuine equality of educational opportunity requires that, collectively, the institutions and agencies responsible for providing this education be characterized by four attributes."

The first attribute listed by the Committee is quantity—"there must be a sufficient number of institutions and qualified faculty persons to provide for all qualified students"—but it quickly adds that "the quality of opportunity offered must be good. * * * we must find ways of meeting the pressure of numbers without jeopardizing the quality of present educational opportunities." The other attributes listed are variety of opportunity and accessibility.

In its preliminary study, the Committee stated these six basic conclusions for the guidance of the President and of Congress:

"1. Our ideals and the increasing complexity of our civilization require that each individual develop his or her talents to the fullest.

"2. The needs of the individual and of society, plus an unprecedented growth in the population of post-high-school age, will far outrun the present or planned capacity of existing colleges and universities and other post-high-school institutions.

"3. The needs of the oncoming millions of individuals with varying capacities and interests will call for a broader range of educational opportunities and less rigid time requirements.

"4. Many more able and qualified teachers will be needed than present efforts can provide.

"5. There must be promptly formulated an explicit, considered policy as to the role of the Federal Government in education beyond the high school.

"6. Even with the best possible utilization of existing resources, additional financial support must be provided if the additional millions of the population are to be enabled to develop their talents to the fullest."

And commenting further on the cost, the report states that "it is already crystal clear that post-high-school education will cost much more in total as each year advances. Even though it will probably cost more per capita, it will also continue to pay increasing dividends to our Nation and our people."

NEW JERSEY

What about the problem in New Jersey? The State board of education has recently published the results of a special survey directed by Dr. Marshall P. Smith, an associate professor at Trenton State Teachers College, in which he says flatly:

"For many New Jersey young people the chances of getting into college will not be good unless something is done and done quickly * * *," and also, "One out of two children now 2 years old who will be capable of college work in 1972 will find no place to go."

New Jersey, Dr. Smith makes clear, is in a particularly bad spot in the national picture:

"Consider a senior high-school student in 1963. He has been active in sports and in the community. He was on his homeroom council and on various student committees. He has taken a college preparatory course and wants to be a lawyer. As a B student with average scores in college entrance examinations, his chances of getting into any college are only about 3 out of 5. In many other States, his chances would be 5 out of 5.

"Here in New Jersey the competition will be fierce. Some students, no matter how able or conscientious, will be disappointed; others will be forced to attend overcrowded colleges which do not meet their needs or challenge their abilities.

"We are proud of New Jersey. Will our children aspiring to college also be proud, or will they regret living where they are denied opportunities equal to those of their contemporaries in other States?

"The answer is up to all of us.

"The door to college opportunity is closing on New Jersey's children. That it is closing fast is evident from the simple statistics given below. That the problem is complex and challenging is the story told in the following pages."

In those pages it points out that the college age population of New Jersey (18 to 21 years) will grow from 239,000 in 1954 to at least 436,000, and probably as much as 517,000 by 1973.

But in the 10 years since 1946, the percentage of college-age youngsters in New Jersey going on to college from high school has increased from 21 to 30 percent. With the increasing complexity of our society, the Smith report points out, the proportion of those headed for college will soar much higher.

There are approximately 48,000 New Jersey boys and girls in college during the current academic year. Of this number, a little more than half are in colleges outside of the State; only about 22,000 are enrolled in New Jersey institutions. This is a highly important fact because it means that New Jersey has been an exporter in the college field. But in the period ahead when other States close down their public institutions to nonresidents, New Jersey will suffer.

By 1973 Dr. Smith predicts the total college enrollment among New Jersey young people—youngsters already born and headed for college, not mere statistics—will be 155,000, more than 3 times as many as at present and probably a conservative estimate. At the present time expansion of New Jersey facilities is planned to increase capacity to about 72,000.

For the other 83,000 there will be no place to go. In other words, 1 out of every 2 New Jersey young people wanting to go to college in 1973 will find no place available for them, unless drastic and heroic measures are taken at once.

The Smith report says that these measures should be "comprehensive, long-range, flexible, and high quality." The program for expanding higher educational facilities in the State, it suggests, might include a strengthened State university with provision for 25,000 students as against 6,000 plus at the present time. It would include engineering colleges with enrollment for 10,000 students, new 4-year colleges with facilities for 35,000 students, and a number of 2-year community colleges capable of handling another 30,000 students.

The cost of this it estimates at $155 million annually, either through tuition or taxes, and a capital outlay of $332 million.

In an appearance on the weekly Rutgers forum, a radio interview, Dr. Smith suggested that these funds could be raised from income taxes, sales taxes and ad valorem taxes. He also emphasized that speed in getting a program under way in New Jersey is very important. Unless ground is broken for some of the buildings within the next year, he said, classes will have to be held out-of-doors.

Dean Elmer C. Easton of the college of engineering looked at the problem from the standpoint of national productivity and high employment in testimony given in Washington before the Subcommittee on Economic Stabilization of the Joint Economic Committee. He said that both of these will be curtailed unless the United States can double its output of trained engineers by 1970.

He explained that automation, nuclear energy, and all the other complicated machines and processes which give promise of much higher standards of living cannot be operated by men and women who do not understand the basic principles by which they work.

In one area alone, that of future fuel sources, he pointed out that the "very existence of civilization as we know it depends on the development of new fuels and means of using them," and then noted that "the idea of obtaining energy from the fission or fusion of atomic nuclei was not obvious and was not conceived by man until he had learned to use the most advanced concepts of physics, mathematics, and chemistry. The concept was predicted

theoretically before it was observed in the laboratory. The development of devices using atomic or solary energy will depend entirely on the quality and quantity of our engineers and scientists."

Dean Easton spoke only about the need for more engineers. We are going to need them in increasing numbers but we are also going to need all the other kinds of scientists and many more men and women with broad educational backgrounds in the liberal arts and humanities. Even if we could assume that our population would stand still without major industrial expansion for a few years we would still need a higher percentage of college-trained people. In dynamic, burgeoning America we must have them or surrender to some other people who believe more firmly in the best use of their human potential than we do.

Proposed Abolition of the Postal Savings System

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CARLSON. Mr. President, on February 26 I introduced S. 1394, providing for the dissolution of the Postal Savings System. It is my contention that this service is outmoded and outdated. It has in recent years outlived its usefulness.

Our citizens can have no problem in placing their deposits in insured financial institutions, and if this postal savings service were eliminated it would save the taxpayers more than $1 million a year.

Recently, Clyde Reed, editor of the Parsons Sun, Parsons, Kans., wrote a splendid editorial on this subject. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEYOND USEFULNESS

A bill has been introduced in Congress for dissolution of the Postal Savings System and constitutes an opportunity to abolish an unneeded function of Government that is an unnecessary burden upon the taxpayers.

There was a time when the postal system filled a need in this country. It offered Government protection of savings for one thing and that was unavailable when the post office hung out its savings sign. It paid a return on savings that also was not widely available to small investors.

Times have changed, however. Private institutions which solicit savings accounts are covered by Government insurance on their deposits. The 2-percent rate of interest paid by the Postal System long since has been outdistanced by reliable private sources.

The public has recognized the change. It it patronizing the Postal Savings System less and less as time goes on. While there were more than 4 million depositors in 1947, the number has dropped to less than 2½ million at the present time.

The Postal System plainly serves no vital public purpose and ought to be dissolved at the earliest possible date. That will be easier said than done, however, for public agencies have a way of hanging on beyond the point of all usefulness. The Postal Savings System probably will not be any exception to that rule.

Duluth's Ship Is Coming In

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. HUMPHREY. Mr. President, the great port of Duluth, Minn., at the far western terminus of the Great Lakes, is preparing for a tremendous influx of new shipping and trade as a result of completion of the St. Lawrence seaway project in 1959 and the deepening of the connecting channels of the Great Lakes.

Duluth is planning wisely and strongly for the new era of shipping when Minnesota will become a coastal State.

In the February 1957 issue of the official publication of the Minneapolis Chamber of Commerce, Greater Minneapolis, appears a splendid article entitled "Duluth's Ship Is Coming In." I may say that the February issue of this Minneapolis publication is devoted almost exclusively to the sister city of Duluth and to the great industrial and trade developments in the northern Minnesota iron range area.

Mr. President, I ask unanimous consent the article entitled "Duluth's Ship Is Coming In" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DULUTH'S SHIP IS COMING IN

Bustling, brawny Duluth, with a full century of rich and colorful history behind it, has good reason to look forward. Poised at the westernmost finger of the Great Lakes, it is today eagerly scanning the eastern horizon of Lake Superior—for Duluth's ship is coming in.

Duluth's ship is no figment; already the world's second busiest port, it stands to see a great spurt in foreign shipping once the St. Lawrence seaway project is completed in 1959. And while Duluth busily prepares to provide the facilities for handling giant ocean-going freighters, the rest of the one-time landlocked upper Midwest is enjoying the foretaste of becoming a primary area of deep water commerce.

In truth, the good that will accrue to the upper Midwest's some 8 million residents from the 7 seas is something that has stirred businessmen, industrialists, and shippers throughout the area. Robert T. Smith, executive director of the Duluth Port Authority, foresees a tremendous expansion in exporting and importing—if expanded port facilities can be provided.

The port authority is now conducting a comprehensive survey of all business establishments in its sphere of influence—roughly the upper Midwest—to determine the potential of commerce funneling through the twin ports of Duluth-Superior.

Smith says the potential export volume of manufactured and processed goods that exists today in the upper Midwest is around 350,000 tons annually. Significantly much of the industrial development that can generate this volume lies in the Minneapolis-St. Paul area. These exports, of course, do not include such shipments as grain and other bulk commodities such as soy bean oil or linseed oil, which are exported in great quantities.

Similarly, the import potential of the twin ports is equally bright. Here again, the outlook depends on the harbor and ship-handling facilities that can be provided. But Smith points out that Duluth could become a great importing center for such items as fertilizer, sugar, coffee, and manufactured equipment. Coffee, incidentally, would be a natural import commodity for Duluth, Smith says, because the city's air conditioned climate would permit prolonged storage.

Smith believes that the 600,000 square mile area of the port authority's theater of operations—which includes Minnesota, North and South Dakota, and parts of Montana, Wyoming, Colorado, Nebraska, Iowa, Kansas, Wisconsin, and upper Michigan—offers tremendous possibilities for world commerce. The area lends itself to industrial development because of great reserves of natural resources, such as iron and taconite, forest products, oil, lignite. Most valuable, too, are the area's tremendous reservoirs of fresh water, which is vital to industry.

The shipping potential for Duluth is unlimited, says Smith, but some years will elapse until the full impact of the seaway will be realized. But he points out that by sea, Duluth is only 783 miles further from Liverpool than is New York—and the cost per ton-mile for shipping by lake is about 15/100 of a cent, the lowest cost system of bulk transportation in the world. So sooner or later, Duluth and the upper Midwest will take advantage of this deep-water commerce.

The seaway's coming means that Duluth-Superior Harbor itself must be refurbished to accommodate deep-draft ocean vessels. The harbor already has 17 miles of dredged channels, 25 feet deep at the ore docks and 21 feet at the grain elevators. Army engineers are contemplating increasing these depths commensurate with the 27-foot channel of the seaway itself.

As for port facilities, the port authority has plans for a mammoth public terminal wharf which will be the most modern on the lakes. Governor Orville Freeman, incidentally, has asked the Minnesota Legislature for $500,000 per year for the next 2 years to study and plan the development of the port of Duluth.

The new public terminal would be built in three stages, says Smith. The first stage will cost some $10 million and will accommodate three great ocean vessels or half a dozen lake boats. This facility, which may cost $40 million by the time it's completed, will be financed with revenue bonds. When finished, it will handle 11 of the largest type vessels engaged in foreign commerce.

Meanwhile, Duluth is not forgetting the iron legs on which it stands. Down through the years the Duluth-Superior twin ports have grown through the great shipments of iron ore. An annual average of some 51 million short tons of this red gold passes through Duluth on its way to steel mills to the east.

Although the supply of rich ore of the giant Mesabi and two smaller ranges, Vermilion and Cuyuna, is waning, the burgeoning processing and shipment of taconite has opened a new Minnesota frontier. Second to iron ore on the twin ports' manifest is coal, followed by grain. While the twin ports are now the third largest grain center in the Nation, it is expected that the seaway's coming will force enlargement of the present grain-storage capacity of 56 million bushels to about 100 million bushels.

Actually, the Duluth-Superior Harbor is one of the finest natural harbors in the world. With nearly 50 miles of shoreline within the harbor lines and 75 miles altogether, including outer bays, it has plenty of room. It has plenty of bulk-freight docks, 7 iron-ore docks, 21 coal docks, 23 grain elevators on the waterfront, 4 automobile docks, and ample facilities for handling salt, stone, cement, scrap iron, and a host of other commodities.

With the improvements now in the planning stage, the harbor should readily adapt itself to the stepped-up tempo of shipments that will come with the St. Lawrence seaway. Here's what John S. Coleman, president of

the Chamber of Commerce of the United States, predicts for Duluth alone:

"I honestly expect the population of Duluth will double in a relatively short time after the completion of the seaway."

Likewise optimistic is geography Prof. Harold M. Mayer of the University of Chicago:

"With greatly augmented opportunities for industrial development opened up by the seaway in the major port cities as well as others in the Midwest—not only on the lakes but also in the interior—there will be a greatly enlarged demand for labor.

"Not only will thousands of people be engaged in direct operation of the port and shipping services, but additional thousands will be required in associated services. These include banking, ship chandlering, shipbuilding and repair, marine insurance and many other activities.

"Many more thousands will be needed by industries attracted by the advantages of lower-cost transportation and expanding markets, local and in distant areas, directly and indirectly attributable to the seaway."

So, as Duluth prepares for yet another domestic shipping season, it also is laying the plans which, come 1959, will mark its entry in major league foreign commerce. Port Director Smith entertains no doubts about the twin ports' future.

"If we provide good facilities," he says confidently, "commerce will flow."

Mrs. Elsie Reynolds, Oregon Mother of 1957

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 8, 1957

Mr. NEUBERGER. Mr. President, representatives of 17 Oregon women's organizations have chosen Mrs. Elsie Argeletia Scott Reynolds, of Portland, as the State's candidate for the title of American Mother. As Oregon's Mother of the Year, Mrs. Reynolds will meet with candidates from other States, Territories, and the District of Columbia in New York City before Mother's Day, for selection of American Mother of the Year.

The first qualification of a candidate for the honor given Mrs. Reynolds is that she be a successful mother, as evidenced by the character and achievements of her individual children. As the mother of 3 sons and 1 daughter who have achieved recognition for their school, civic, and community accomplishments, Mrs. Reynolds is superbly qualified in this category. It is apparent that the persons who selected Mrs. Reynolds as 1957 Oregon-Mother also recognized her traits of courage, cheerfulness, patience, affection, kindness, understanding, and homemaking ability.

Mrs. Reynolds' name as a candidate for Oregon mother was presented by the Oregon Association of Colored Women. Mrs. Reynolds, whose husband is a retired railroad employee and president of the Portland chapter of the National Association for Advancement of Colored People, was recognized also for her sense of responsibility in civic affairs and in service for public benefit.

Mr. President, the accomplishments of Oregon's Mother of 1957 are described in greater detail in two newspaper accounts about her selection. I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the Oregonian of March 5, 1957, and an article from the Oregon Journal of March 4, 1957.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Oregonian (Portland, Oreg.) of March 5, 1957]

OREGON MOTHER OF 1957 EDGES GOLF, BOWLING INTO JAMPACKED SCHEDULE OF CIVIC ACTIVITY

While her Eastern Star charm bracelet jangled on her left wrist, Mrs. Phil Reynolds, newly named Oregon Mother of 1957, merrily waggled the middle finger of her right hand in front of a reporter's eyes Monday night.

The nail had a black bruise on it—from a bowling ball.

That's only one of dozens of activities and civil projects at which Oregon's newest Mother of the Year busies herself.

She and her daughter Phyllis (Mrs. Edward Smith) frequently go bowling, and mama does better than daughter.

SHE COLLECTS CUTGLASS

Mrs. Reynolds plays the piano and owns a pretty spinet and a good record player. There are oil and water-color paintings on her apartment walls which she did herself. She has a kiln in her basement and has fired many pieces of ceramics there.

She has numerous pieces of finished needlepoint and a beginning on needlepoint chair seats for her dining-room chairs. She likes to make over dolls and maintains a regular little doll hospital.

She collects beautiful silver, which she brightens by getting replated when necessary.

She plays golf and is an ex-member of the Leisure Hour Club.

In the early years of her life when the family was all home, her family was of topmost importance, her second son, Dr. Walter Reynolds, Portland physician, explained.

"She's a person with a lot of patience and perseverance and a great deal of faith."

Laughingly, he described how she was "quite firm in this business of discipline, but it was a very helpful thing."

Education was of utmost importance to this woman who had gone only through grade school herself. An only child, she was born July 28, 1894, in Kansas City, Mo., but spent most of her life in Spokane, where she was working in a store when she met her husband.

They were married June 22, 1915, and moved to Portland, spending most of their married life until recent years in a three-bedroom home at 427 N. E. Roselawn Street, where the children grew up, attending Highland Grade and Jefferson High Schools.

SONS OUTSTANDING ATHLETES

Sons Walter and Robert were both voted outstanding athletes by their fellow teammates while attending Jefferson. Their names are engraved on the Hopkin Jenkins memorial athletic cup.

When the kids were home, there were great Saturday and Sunday morning breakfast get togethers, and there was a music room to help encourage the many musical talents and appreciations. Her oldest son attended Washington University and the other three children the University of Oregon.

Now she and her husband and two parakeets share a smallish apartment.

Daughter Phyllis, a merry-hearted mother of three children herself, says that her mother has a wonderful wit with "always a good story to tell. She always has a smile."

Of the 11 grandchildren, "everyone of them is her heart. She gives so freely of her time and effort."

When Mrs. Reynolds' children were all grown, this during World War II, she decided to go to work, spending first 4 years as a maid at Meier & Frank store and then 10 years ago taking the job of matron at the Union Station.

Her good-natured helpfulness there is remembered by many a weary traveler.

Her husband says that the most important thing about her is the way she has gone about raising a family and keeping a home, "with the equilibrium necessary for a successful family life."

"We feel, between the two of us," he said, "and especially Mrs. Reynolds, we have always been concerned about youth and proper guidance. We conceived the idea very early in our married life that there should be a substantial connection between the schools and the home and the recreational centers and the home.

"Among those three elements of life, a child gets a break of guidance that will carry him through life very well. She's a wonderful mother and wife."

SHE'S ACTIVE IN CHARITY

Mrs. Reynolds is a past president of the Oregon Association of Colored Women's Clubs and current president of the organization's past presidents' council; an active member of St. Philip's Episcopal Church; a member of Portland branch, National Association for the Advancement of Colored People, of which her husband is the new president; and of the Urban League.

She is grand matron of Washington and Jurisdiction, Prince Hall affiliated, Order of the Eastern Star, and a member of the Oregon Federation of Women's Clubs and the Oregon Prison Association. She is also active in several local charity organizations.

Recently she organized a study group of Negro women meeting weekly at the Williams Avenue YWCA. She has just completed instructing them in parliamentary law.

As Oregon's 1957 Mother, Mrs. Reynolds will be entered with nominees from all the other States and Territories in competition for the title of American Mother. With other candidates she will be honored at a dinner sponsored by the American Mothers' Committee, Inc., of New York, in New York City the week before Mother's Day. Selection of the American Mother will be announced at that time.

Monday's choice was made by the Oregon Mothers' Citation Committee, made up of representatives of 17 Oregon women's organizations.

Mrs. Reynolds smiled and turned very serious when she was asked to what she attributed the great success of her family and her children. She looked across at the radio, on which were neatly arranged the pictures of all 11 of her grandchildren:

"The main thing is that my body is God's temple, and I'm a servant of His. All of my success and the success of my children come from Him."

[From the Oregon Journal (Portland, Oreg.) of March 4, 1957]

MOTHER OF YEAR HONOR WON BY MRS. REYNOLDS

Oregon Mother for 1957 is Mrs. Elsie Argeletia Scott Reynolds, of Portland, selected today when the Oregon mothers citation committee met at the Aero Club.

She is the wife of Phil Reynolds, recently retired railroad employee, and has four children. She was born in Kansas City, Kans., is a member of the NAACP, Urban League, Eastern Star, Oregon Prison Association, and the Oregon Federation of Women's Clubs. Her name as a candidate for Oregon mother was presented by the Oregon Association of

Colored Women's Club. She is a member of the Episcopal Church.

Children are Jack, 39, mathematician and physicist at the Naval Reserve Laboratory at Pasadena, Calif.; Walter Cornelius, 36, local physician and surgeon; Robert Eugene, 33, teacher and football coach at Compton High School, Los Angeles, and Mrs. Phyliss S. Smith, 30, physician's secretary in Portland. The children attended Highland Elementary School here. The family home is at 1326 North Benton Avenue.

Walter and Bob were outstanding athletes, and their names were inscribed on the Hopkin Jenkins athletic cup.

National Water Shortage

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, March 8, 1957

Mr. WILEY. Mr. President, I call special attention to an illuminating feature article in yesterday's New York Times pointing up the real facts of our growing national water shortage. This national survey of rural and urban water problems is sure evidence of the immediate need to meet this situation head on through combined local, State, and Federal efforts.

I have long been concerned about Wisconsin's particular water needs. The drain on our underground water supply is becoming increasingly serious. Our water levels are dropping deeper and deeper with the stepped-up demands of communities, our utilities, industries, and farmers.

I have been in touch with various State agencies and officials on this matter, signifying the wide repercussions of our water deficit. Our national resources committee of State agencies has been making intensive surveys of the situation. I have heard from A. Rynders, superintendent of Milwaukee Water Works, on our city needs. Conservation and health officers are equally concerned about the "running out" of our most basic resource.

What does the future hold? How can we make sure that sufficient water will be available for the expected 200 million population in 1975? It is time we realized that water cannot be taken for granted any longer.

Moreover, the demands of our industries for water have aggravated the pollution problem. Statistics show that 31 States in the Midwest, South, and East, which average from 33 to 60 inches of precipitation annually, use 89 percent for industry, 10 percent for public supply for some 128 million people, and only 1 percent for irrigation. The growing industrial consumption is obvious, and with it comes the need to combat water pollution—not a cheap process by any means. Many of the local commuities in Wisconsin have had a tough time financing sewage disposal and treatment plants, proved by the demand for participation in the 1956 Water Pollution Control Act.

Thus action to develop a wise water policy is imperative from several major standpoints.

I ask unanimous consent that Mr. Bill Becker's article on the Times survey be printed in the RECORD, together with an earlier article written by Mr. Lewis C. French published in the June 24, 1956, issue of the Milwaukee Journal on this same problem.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of March 7, 1957]

WATER SHORTAGE—SEVEN STATES ENDURE SEVERE SCARCITY—GREAT PLAINS AND SOUTHWEST AREAS ARE HIT HARDEST BY PROLONGED DROUGHT—DISTRIBUTION IS LAGGING—DIRTY STREAMS ALSO POSING A SERIOUS PROBLEM FOR THE MORE FAVORED SECTIONS

(By Bill Becker)

The American dream of unlimited expansion soon may face a test by water.

For three D's—drought, distribution, and dirty streams—spell a possible dead end for continued growth of industries and cities, as well as potential disaster for farmlands, according to a survey by the New York Times.

Basically, the survey shows the water shortage is severe only in seven drought-ridden States in the Great Plains and Southwest. But it also reveals that inadequate distribution facilities and pollution are nagging at laggard communities in more favored areas.

The central fact produced by the survey is this:

No longer can 170 million Americans—destined to become 200 million by 1975—take for granted that ample water supplies will be available wherever and whenever desired.

Already many experts doubt that industry can continue to follow the flow of population to some areas of the West. An increasing number of engineers, geologists, conservationists, industrial leaders, and even more realistic city officials, have sounded a go slow for certain industries seeking new plant sites.

THREAT TO GROWING CITIES

The prolonged drought, assuredly a blight for the farmer, poses a threat perhaps equally serious to such cities as Denver, Dallas, Fort Worth, and Phoenix—unless heavy rains replenish stores.

Dwindling, souring water supplies mock the industrial-expansion hopes of these growing cities. For some communities of the arid Midwest and Southwest the query may be broadened: Can they get enough water to hold the people they already have?

The geologists agree with the poet: Water is everywhere. But in the dry Southwest it lies several hundred feet under ground in places. Amarillo, Tex., one expert says, "doesn't have a water supply—it has a water mine."

If the drought extends 5 years more one-fourth of the Nation will face chronic shortages or poor-quality water, geologists predict. While studies show that the Nation uses only about 15 percent of the water available, withdrawal has exceeded average net supply in recent years not only in drought areas but also in such moist sections as northern New Jersey and northeastern Ohio.

INDUSTRY MAY HOLD KEY

Industry, it is felt by some, may hold the key to solving the dual problem of western shortages and eastern pollution. There are planners who believe that, wet years or dry, certain industries could make better use of western water than has large-scale crop irrigation.

And long-range viewers insist that eastern industrial plants, for their own welfare as well as public health, must develop additional means for reusing water and purifying it on return to public sources.

Plans for the long haul are beginning to come off the drawing boards. Spectacular projects in California, the Columbia River Basin, metropolitan New York and Boston point the way for American cities to meet their water needs in 1975 and beyond.

Fred A. Seaton, Secretary of the Interior, and his aides have on several occasions pictured a national network of water pipelines by 1975. The Federal Government has yet to construct a foot of such a network. However, the thought is indicative of what is going on in the minds of many planners.

Drought sufferers in the Southwest are beginning to speculate about long-distance water-piping. One proponent, a Texan, suggested pipelines from the Great Lakes.

Plans also have been advanced for pipelines from Lake Erie to serve most of northern Ohio. The first step is a preliminary survey—sponsored by the Lake Erie Watershed Conservation Foundation—of eight counties, highly industrialized and containing a third of the State's population.

TWO HUNDRED AND FIFTY BILLION GALLONS A DAY

By 1975, the Nation—already using 250 billion gallons of water at a cost $8 million a day—will be using 450 billion gallons daily. That will be 10 times as much as our grandfathers used in 1900. Industrial use is expected to provide most of the rise, but much will come from the gadget-loving public's increasing reliance on automatic clothes- and dish-washers, garbage disposals, and air conditioning.

Impounding and squeezing the maximum potential out of precipitation is basic to any long-range plan. The country as a whole—although most of the West will not believe this—is getting enough rain, an average of 30 inches a year. But 70 percent—all but 8 inches—literally goes down the drain, either down streams into oceans, or back into the air through evaporation.

A smattering of figures shows the disparity in precipitation and water use between the arid and humid areas of the Nation:

Seventeen Western and Great Plains States, most of which get only from 12 to 25 inches annually, use roughly 85 percent of their water for irrigating crops. Industry takes about 12 percent; public supply for the region's 42 million residents, about 3 percent.

Thirty-one States in the Midwest, South, and East, which average from 33 to 60 inches, use 89 percent for industry, 10 percent for public supply for 128 million people, and only 1 percent for irrigation.

Overall nationally, industry uses 47 percent, irrigation 45 percent and public supply 8 percent. The trend toward industry will continue, according to the President's Materials Policy Commission and the American Water Works Association. By 1975 industry may use two-thirds of all our water.

NEW SOURCES SOUGHT

That is why, to get their share of projected industrial growth, city fathers in the West are scurrying for new sources of water supply. With wells sinking and reservoir stocks at record lows—and runoff hopes rising only in Denver—the economic outlook for cities in the arid zone is somewhat beclouded.

The drought—"1 of the 3 worst in 600 years," according to A. Nelson Sayre of the United States Geological Survey—is putting the Dust Bowl of the 1930's in the shade. Rainfall has been deficient throughout the Southwest generally since 1948, in some places since 1942.

Mr. Sayre and several consulting engineers say many industries are taking a long, hard second look at the western water situation. One New York engineer who helped a plastics manufacturer pick out a site for a pilot plant in northwestern Colorado is not sure whether it ever will be more than that.

Among other industries that may have to reassess their expansion plans, engineers indicate, are chemical, steel, paper and oil.

Cost will be another factor. In general, Western water rates are higher. Basic rates for 1,000 cubic feet run $2 to $3 in Dallas, Denver, Phoenix and Oklahoma City, as compared with 97 cents in Philadelphia, $1.23 in New Orleans and $1.50 in New York.

Secretary Seaton, however, foresees "reasonable industrial expansion in the next 20 years" in the Southwest if 4 steps are followed:

1. Construction of more facilities to regulate water now going to waste.

2. Revision of industrial processes to reduce water use. Mr. Seaton cites the example of Kaiser Steel Corp. plant at Fontana, Calif., which uses far less water than steel plants in the East.

3. Reduction of pollution to enable more reuse of water.

4. Industries buying up irrigation water rights, which in the West are usually tied in with property by law.

SERIOUS IN SEVEN STATES

In at least 7 of the 17 Western and Great Plains States, the community water problem can be described as serious to acute. The States are Texas, New Mexico, Arizona, Colorado, Utah, Oklahoma and Kansas.

It is rated fair to moderately serious in Nevada, Montana, Wyoming, North and South Dakota and Nebraska.

The situation is generally good in California, Oregon, Washington and Idaho.

Nowhere has the water pinch been more deep seated than Texas. The Dallas-Fort Worth picture is typical.

Last year, driest in Dallas' history, saw the city's water consumption jump to more than 34 billion gallons. Unless recent rains continue, it is estimated that the city's reservoirs by June may hold only 7 billion gallons; drinking water will be saltier than ever and lawn sprinkling will be out of the question.

[From the Milwaukee Journal of June 24, 1956]

MIDWEST STATES SEEK MODERN WATER LAWS—SURVEYS INDICATE THAT PRESENT REGULATIONS OFTEN WERE DRAFTED IN LOGGING DAYS

(By Lewis C. French)

GREEN BAY, WIS.—Because of the shortage of usable water, five Midwestern States—Wisconsin, Illinois, Indiana, Minnesota, and Michigan—are making intensive surveys of water supply and demand preparatory to rewriting their water laws.

Even growing communities like Green Bay and Milwaukee, blessed with an abundance of nearby fresh water, run into water shortages. Here in Green Bay, as engineers hurry along a costly aqueduct, the city has banned sprinkling and use of water to wash cars.

Even Great Lakes port cities are becoming aware of the sad plight that "you never miss the water 'til the well runs dry."

Actually, the well has not run dry, according to engineers and public health authorities. Instead, municipalities have failed to keep pace with the constantly increased demand for clean water.

SHORTAGE CALLED STUPIDITY

"It is stupid that any city having such a precious asset as Lake Michigan or Lake Superior should run short of water," said one Indiana public official at the annual meeting here of the Central States Sewage and Industrial Wastes Association. "If we are going to meet future increased water needs, two things must happen: We must stop pollution and do a better job of treating water supplies so they can be reused, then make certain by legislation that everyone has a fair share of the supplies."

Legislative committees of the various States are taking a close look at both the surface and underground water supplies, measuring the needs for increased household use, for industry, and for farm irrigation. They also have an eye on the recreation value of the surface waters.

STATE PROBLEMS STUDIED

Here in Wisconsin, the natural resources committee, with Governor Kohler as chairman, is compiling a list of water problems for the legislative council for presentation to the next legislature.

"We are going to have to change provisions in the present water laws, and clarify controversial issues," says O. J. Muegge, State sanitary engineer.

Wisconsin's present water laws trace back mainly to logging and sawmill days, when any stream floating a log was deemed navigable water and a public highway for transporting logs to mills.

This natural resource committee has been besieged from all sides for special consideration. Utilities want water for power. Communities want it for household use and perhaps a swimming pool. Industries are making a pitch for more and more. And the farmers, especially the commercial potato growers, want more for irrigation.

Under present Wisconsin water regulations on the precious underground water percolating through lime rock in most of the State, the State board of health requires a permit for pumping more than 100,000 gallons a day.

This provision was predicated on the need to protect municipal supplies. But the drain on subterranean waters has been so great that many cities are running short of artesian-well supplies. With water levels dropping deeper and deeper, the State board of health is urging revision of the regulations.

WANTS TERM CLEAR

Now it proposes that permits be required by large-volume pumping not only to protect the vital municipal supplies but also to protect the rights of other well owners. When one large Milwaukee brewer began pumping at high volume from a new big well, water levels of another manufacturing plant 7 miles away dropped 75 feet within a few hours. The State proposes strict laws to prevent anyone from hogging the supply.

And the State wants to clarify just what a well is. In the central Wisconsin area, where water is close to the surface, it has been common practice to dig a pit and pump without restriction. The State board of health would like to have any way of getting underground water to the surface for private or public use legally defined as a well and subject to State control.

Wisconsin has run into another pollution snarl. Having achieved the best record of any State in abating pollution, the Wisconsin committee in charge of enforcement would welcome a little help from Uncle Sam along the Mississippi River.

There has been trouble on Lake Pepin, part of the river with towboats pumping their oily and messy bilge and ballast water into the lake. This is termed a definite hazard.

GET ONLY BRUSHOFF

"Federal authorities could help with proper control of the interstate transportation mediums, such as the barge lines and lake boats," says Theodore Wisniewski, director of the Wisconsin committee on water pollution. "But when we write a complaint to Army engineers in charge of the Mississippi locks and traffic, we just get the brushoff."

Other States are just as actively proposing modernized water laws. Illinois has named a legislative commission to make a study of the water problems to report to the January session of the legislature, says A. P. Troemper, sanitary engineer of the Illinois Department of Health.

"Illinois has two big problems," according to Troemper, a vice president of the association of engineers and technicians who run municipal water works and treatment plants. "First there is metropolitan Chicago and its fringe areas. Lake Michigan furnishes a sure supply of water so long as it is protected from pollution. But downstate we have drought and lowering underground water levels."

RESERVOIRS IN INDIANA

Downstate Indiana, not having many rivers or lakes, is building a series of reservoirs to retain the winter snows and rains and curb floods. These reservoirs are used for filtration plant water supplies and their seepage recharges well supplies.

"If southern Indiana only had that Lake Michigan we woud think for sure we were in the Garden of Eden," said one engineer.

Indiana also is making a survey of the amount of water used for farm irrigation.

Minnesota, under legislation passed in 1955, has a commission surveying water supplies, said Harvey G. Rogers, of the Minnesota Board of Health.

"As in Wisconsin, my State has plenty of water, providing we protect it," said Rogers, naming cold Lake Superior and the Mississippi River, plus smaller lakes and rivers.

Presidential Service

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. MULTER. Mr. Speaker, the following article, written by George Sokolsky, which appeared in the Washington Post and Times Herald of February 28, 1957, makes most interesting reading:

PRESIDENTIAL SERVICE

(By George Sokolsky)

The first task of a President is to be sure that he is well serviced. Obviously it would have been impossible for President Eisenhower to have delivered his speech on the problems of Israel had he been adequately serviced, for the essential proposition of that speech was an untenable one, namely, that although Soviet Russia committed international crimes, nothing can be done about Soviet Russia because of the enormous size and power of that country and because Russia possesses the veto in the Security Council. Nevertheless it is possible to punish a country which is smaller and less powerful than Soviet Russia and which does not possess the power of veto in the Security Council. These are the President's exact words:

"No one deplores more than I the fact that the Soviet Union ignores the resolutions of the United Nations. Also, no nation is more vigorous than is the United States in seeking to exert moral pressure against the Soviet Union, which by reason of its size and power, and by reason of its veto in the Security Council, is relatively impervious to other types of sanction.

"The United States and other free nations are making clear by every means at their command the evil of Soviet conduct in Hungary. It would be, indeed, a sad day if the United States ever felt that it had to subject Israel to the same type of moral pressure as is being applied to the Soviet Union."

On February 21, Secretary of State John Foster Dulles and Maxwell Rabb, Secretary to

the Cabinet met with eight citizens who are influential Jews, at the request of the White House. A press story was given out suggesting that a distinction was being made between Zionists and non-Zionists and giving the impression that the eight were non-Zionists, which happened not to be true. All of them are distinguished for their services to Israel, particularly in the matter of fund raising and the sale of Israel bonds in this country. Again, there was evidence of poor service and inaccurate information to the President.

It was suggested in the news stories that were given out that these gentlemen would be primed to bring pressure on Israel, which they could not do. The word "pressure" was toned down in subsequent releases to the press. The gentlemen were embarrassed by the entire proceedings and gave out their own interviews which clearly indicated that they would continue to raise funds for Israel, John Foster Dulles and Maxwell Rabb notwithstanding.

Another instance of bad servicing is undoubtedly the witnessing of Henry Byroade before the Senate committees studying the middle-eastern proposals of the President. Byroade is a State Department perennial who went with Gen. George Marshall to China as an expert and so expertized that General Marshall has since been in a dilemma to explain how it happened that a long truce he advocated benefited the Chinese Reds. Then Byroade was taken off the Far East and eventually landed in Egypt where he should have known that Nasser had made a separate deal with the Russians to exchange arms for cotton and where he should have known that Nasser planned to seize the Suez Canal.

When he appeared before the Senate committees as an expert witness, Byroade seemed, to some Senators, to hold the view that the United States should finance Egypt so that that country can buy more arms from Soviet Russia. It sounds queer as one says it, but some of the Senators gathered that impression.

The President of the United States has an exceedingly difficult position and when he is inadequately serviced, errors are made which often are of such a magnitude that they never can be corrected. The President should have carefully gathered and evaluated data from which the fat of emotionalism and prejudice has been cut away. No other man presently possesses such powers as the President of the United States and therefore no other man can make such monumental mistakes.

The $72 billion budget, which if everything were included would come closer to $100 billion is an error of judgment which even Mr. Eisenhower's Secretary of the Treasury and friend, George Humphrey, had to denounce. That budget can probably be cut by $7 billion but the way it stands, it makes peace more devastating than war.

The Late Alvin F. Weichel

SPEECH
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1957

Mr. BROWN of Ohio. Mr. Speaker, I wish to join with my colleagues from Ohio and the other Members of the House in paying tribute to my good friend and former associate in the Congress, Alvin F. Weichel, whose recent death has been a great personal loss to all of us as well as to the State of Ohio and the Nation generally.

Al Weichel, as we called him, was a hard-working, sincere, and able representative of the people in the Congress of the United States. Before coming to Washington, he had established himself as one of the outstanding attorneys at law of our State. He was honest and conscientious; and, as chairman of the House Committee on Merchant Marine and Fisheries, he helped guide through the Congress many important pieces of legislation. He was especially interested in the welfare of shipping and commerce on the Great Lakes, and the people of that section of the United States and Canada owe him a debt of gratitude which can never be repaid.

We shall miss Al Weichel, and we who served with him are better for having known him. He has left behind him the priceless heritage of a good name and to those of us who called him friend and colleague many precious memories.

Federal Aid to Areas of Heavy Unemployment

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. CLARK. Mr. President, the National Planning Association has recently published a report based on a study by William H. Mierhyk, director of business and economic research, Northeastern University, Boston. The report urges passage of an effective Federal program of aid to areas of heavy unemployment. Such a program has been presented to the Senate in S. 964. I ask unanimous consent to have printed in the Appendix of the RECORD the conclusions reached by Mr. Miernyk which are printed in chapter 8 of the report.

There being no objection, the conclusions were ordered to be printed in the RECORD, as follows:

The persistence of localized unemployment in a rapidly expanding economy is a fairly recent phenomenon. Initially, it was hoped that this problem would solve itself through action initiated at the local level. More recently, however, there has been increasing recognition that localized unemployment is more than a local problem. The author of a comprehensive study of economic growth has pointed out that barriers to growth in some areas will affect the economy's overall rate of growth as well as its equilibrating tendencies. Some of our policymakers have now recognized that local areas will require financial and technical assistance if they are to participate fully in the benefits of our expanding economy.

The form which proposed aid to depressed areas would take is fully consistent with our present economic institutions and practices. Government loans to private business have the sanction of past precedent. For some time the Government has made loans to private shipping companies on favorable terms. For more than 20 years the Government, through the Reconstruction Finance Corporation, made loans to businesses to avert financial disaster. And when this Corporation expired in 1954, a Small Business Administration, with limited lending powers, was established in its place.

Federal aid in the construction of public works has long been accepted as a proper function of Government. Billions of dollars are spent annually in the construction of roads and other public facilities. The construction of public works in depressed areas, through loans and grants, would be in full accord with this program. Vocational training and rehabilitation would be an extension of public education, and should be conducted through existing educational institutions.

State and Federal agencies have been providing technical assistance to individuals and business establishments for decades. The Department of Agriculture, the United States Fish and Wildlife Service of the Department of the Interior, the Department of Commerce, and numerous other agencies stand ready to serve the needs of farmers and businessmen with advice and technical assistance. None of the functions to be performed by Government in the proposals to aid depressed areas would be new. The only difference is that this assistance would be limited to specific areas. For this reason, some might raise the cry of special privilege or preferential treatment.

Because of the general interdependence of all sectors of our economy, however, the effects of localized depression ramify far beyond the boundaries of the communities directly affected. When thousands of workers are idle and unproductive for extended periods of time, there is a cumulative effect upon our total output of goods and services. The loss of production at any moment may appear small when measured against our total realized output. Over a sufficiently long period of time, however, this loss could become considerable. Even more important, and more difficult to measure, are the losses in human values. We learned during the great depression that prolonged unemployment has a serious psychological impact upon the individual who comes to feel that his productive services are not needed. This may be even more severe for the individual in a depressed area, since he constantly reads and hears about the economic expansion going on around him and his community.

We have had a decade of experience with local efforts to eliminate persistent localized unemployment. There has been progress, particularly in some areas, but the problem has remained with us throughout several years of high-level employment in the Nation as a whole. The local leaders who have taken the initiative in the redevelopment of their communities deserve much praise. Aggressive, intelligent leadership will always be required if this problem is to be solved. But community leaders should not stand alone. Their efforts are most likely to be rewarded if instead of viewing depressed areas as a series of separate local problems we see them for what they are—parts of a national problem which will require a carefully planned and well-coordinated program if it is to be solved.

Our Ostrich China Policy

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. UDALL. Mr. Speaker, the events of each week make it more plain that the time has come for our country to

adopt a realistic policy toward China. It seems to me that on this issue Secretary Dulles and the President are lagging behind the people.

For obvious reasons most editors and politicians have been reluctant to tackle this problem. However, this week, in a bold editorial, the Washington Post took a hard look at our old policy and found it wanting. Reprinted below is this provocative editorial:

OUR OSTRICH CHINA POLICY

It is too bad when Secretary Dulles and the administration have so many other foreign issues to worry about, that China policy also must plague them. But that is the inevitable result of the administration's adamant, and in this newspaper's view indefensible, stand against permitting American news correspondents to report from Communist China.

The episode invites new scrutiny of the whole range of policy toward China. Our diplomacy toward Peking is dominated by men who have a religious fervor about evil and who think in terms of absolutes. Not surprisingly, this has led to a sort of Walter Mitty approach based, not upon affairs as they are, but upon affairs as we might like to have them.

Secretary Dulles views as "premature" the intimation by Chairman GREEN, of the Senate Foreign Relations Committee that the United States must sooner or later consider recognition of Communist China. Perhaps it is. There is no question that the Chinese government is part of world communism, that China joined in the still unliquidated aggression in Korea which cost the lives of thousands of American young men, that she supplied the uprising in Indochina, that she has engaged in barbaric treatment of prisoners (although barbarism is nothing new in China), and that she continues to hold 10 Americans as captives.

Yet it is worth looking at what the United States has or has not done to arrive at some peaceful accommodation with China. The negotiations at Geneva have been tedious, and the Chinese appear to have reneged on a promise to release the prisoners promptly. But we set our face against the dispacth of correspondents whose reporting might hasten release of the prisoners. We use all our influence to keep China out of the United Nations, against the advice and conviction of our friends, and we attempt to persuade our allies not to trade with her.

We cling to the championship of a government on Formosa that daily proclaims its intention to return to the mainland and overthrow the Communist regime. We have spent a sizable proportion of our military and economic aid in helping Chiang Kai-shek. There is little debate about the importance of defending Formosa itself; whomever it rightfully belongs to, it does not belong to the Communists. But scarcely anyone outside Formosa believes that Chiang has a chance to return to the mainland, or even that it necessarily would be a good thing if he could. To a large extent the Nationalist regime is built on a myth. There is a danger that as the years go by this government will atrophy and Formosa will merely be absorbed by the mainland (the Communists already have offered Chiang a vice preidency). In that event we would again have acted as a supply sergeant for the Communists.

Our Formosa doctrine, which was designed to deter Communist conquest, has left hazy the status of the Quemoy and Matsu Islands on the doorstep to the mainland. Yet almost every day Chinese Nationalist pilots fly across the mainland in this area and engage in small hot war. Their planes are supplied by the United States and the pilots themselves are trained by American officers. It is inconceivable that their missions are undertaken without the acquiescence of American officials.

Thus the provocations are by no means all on one side. American policy is following a course very similar to that which prevailed toward Russia after World War I. The patterns set now may influence Chinese hostility for many years into the future. Unhappily, to much of the world the United States appears to be attempting to freeze relationships in an unreal status, to be standing rigidly and blindly against change. No such policy has long succeeded, as we found out in the case of Russia. We shall have to live on the same planet with China whether we like it or not.

Perhaps the worst aspect of the policy of untouchability is that it frustrates knowledge of what is happening, of the failures as well as the claimed successes, in the most populous nation on earth. Inevitably China acts as a sort of magnet in Asia. The magnetism is increased by the evidence that the Peiping government is charting its own course and does not regard itself as subservient to Moscow. China's influence also is strengthened by the reports that the Government has given the 600 million people a new sense of importance and has made considerable economic advance.

The trouble is that without broad reporting of conditions in China there is no way adequately to present the other side of the picture—the shortfallings and regimentation in agriculture, the indignities of the police state, the appalling human cost of the Chinese experiment. Ignorance feeds the magnetism. Among other things, it disadvantages India, which is engaged in a titanic effort to raise living standards by free and democratic means, in the rivalry for the allegiance of Asia.

This sort of head-in-the-sand policy is bound to lose, and the longer we stick to it the more we endanger our prestige and our stake in the Far East. Friendly relations and an overall settlement with Communist China may not be possible at this stage. But it is altogether possible to start bringing American policy back to reality. The first step is to end the artificial restrictions against coverage by American correspondents so that we and the free world may learn more of the actual situation in China. The second is to practice our own preachments about universality in the United Nations and end the crusade to exclude Communist China—seeking at the same time to expand the number of permanent seats on the Security Council and to obtain a separate seat in the Assembly for Formosa.

Two quotations from a most interesting book published in 1950 are apposite:

"Peace is not a static and stagnant condition of the world, but it can be, and should be, a condition of selective change. In the past, war was partly a consequence of the fact that change was inevitable, and that, internationally, there were no means of change except war.

"If the Communist government of China in fact proves its ability to govern China without serious domestic resistance, then it, too, should be admitted to the United Nations * * * if we want to have a world organization, then, it should be representative of the world as it is."

The author was John Foster Dulles.

Professional Baseball Is a Business

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. HILLINGS. Mr. Speaker, I wish to call the attention of my colleagues an editorial from the Philadelphia Inquirer of March 3, 1957, pointing up the obvious fact that professional baseball is a business and should be placed in the same category of all other businesses within the purvue of our antitrust laws. I have introduced legislation to this effect. It is my opinion that the passage of my legislation would help to bring major league baseball to the west coast and other sections of the country and would break up the unfair and monopolistic practices which have kept the game from truly becoming America's national pastime.

The editorial follows:

SPORTS—BUT BUSINESSES, TOO

Out of the confusion arising from the Supreme Court's recent decision that professional football is a business, and hence subject to the antitrust laws—while baseball is not—have come some proposals which would hardly inject consistency into a situation where consistency is needed.

That the High Court's two contrasting decisions regarding professional football and baseball create an anomaly can't be denied.

In the case of baseball, the Court looked right past the gate receipts, the costly television and radio rights, the tight contracts binding players and fixed its gaze on a 35-year-old decision written by Justice Oliver Wendell Holmes holding that Congress didn't intend to place baseball under the antitrust laws. Hence big-league baseball was—and is—legally, a sport.

In the case of professional football, the Court last week looked stonily at the receipts, the players' contracts, and so on; and said it was a business.

Now Congresman OREN HARRIS, of Arkansas, a State which enjoys big-league football and baseball only by way of radio and TV, has come up with an idea scarcely conducive toward straightening things out. He would exempt professional football, basketball, and hockey, as well as baseball, from the antitrust laws. In other words, those four would be pure sports.

Other bills, it is reassuring to note, are being proposed to put professional baseball under the antitrust laws.

Just why these professional sports should be called games, and by implication nonprofit activities which should not be subject to regulation, is hard to understand when we think of other activities depending on spectators such as the movies and the theater.

Since the so-called sports compete with the movies, for instance, why shouldn't the movies be freed from regulation?

There is something to be said for the objection of the pro football club owners that they are treated differently from the baseball owners before the Court. A distinction exists in the original signing of players but it scarcely justifies calling one a sport and the other a business.

But the complaint of George P. Marshall, owner of the Washington Redskins football

team, that the Court decision may result in millionaires taking over professional football will fail to impress the average ticket-buyer.

It has not been disclosed that any paupers are struggling along under the burdens of owning pro football clubs. Rather, with their ability to draft players without their consent, and to ship them from club to club like serfs, the owners sometimes resemble feudal barons.

The answer to the anomaly resulting from the Supreme Court decision isn't for Congress to pass legislation holding that football, baseball, and the others are just games played for fun, while other activities depending on spectators for profits are businesses. It isn't for the legislators to close their eyes to the inescapable fact that professional baseball and football players can't work where they want to, but are moved about like human chattels, even if well-paid ones.

If Congress wants to end the confusion, and strike a healthy note of realism, it should start by recognizing the profitmaking motive in professional sports, and treating them as it does other enterprises that bid for public attendance. The effective way for Congress to do is to bring all of these professional sports under the regulatory provisions of the antitrust laws.

Middle East Economic and Military Cooperation

SPEECH
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. COLMER. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio [Mr. HAYS].

Mr. HAYS of Ohio. Mr. Speaker, it was interesting to note after the bipartisan approach by the Democratic leader that the gentleman from Ohio [Mr. VORYS] tried to take credit for the administration for what has happened in the Near East. If you can believe what you read in the papers, the reason we have the situation we have in the Near East is because the Democratic leaders who were down at the White House, when Mr. VORYS suggested sending a resolution up here, saying that the Congress would approve sanctions on Israel, told the President, "Do not send that up to this House." What happened? The Arab nations finally decided they were going to have to do business on a decent basis.

Mr. MARTIN. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Ohio. No; I will not yield.

They finally decided they would have to do business on a decent basis. But the thing that perplexes me and perplexes a lot of people in this country is, Why has this administration hounded—and I use the word advisedly—hounded Israel, a little nation of 2 million people, to get out of Egypt, yet has turned her back on the atrocities committed by the Russians in Hungary and tried to salve our conscience by sending a little bit of bread and some bandages to the Hungarians. If that is not a double moral standard, then I do not know one. About the only other thing I can suggest to amend this resolution, if we could amend it, would be to put some funds in to give Mr. Dulles an umbrella to carry a la Chamberlain at Munich when he goes out to spend the $200 million to bribe the Arab dictators.

The SPEAKER. The time of the gentleman from Ohio has expired.

Department of Agriculture Subsidies Are Scuttling Waterfowl

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. METCALF. Mr. Speaker, among the outstanding papers presented at the North American Wildlife Conference, just concluded here, was one by Dr. J. H. Shaeffer, of Parker, S. Dak., chairman of the North and South Dakota Emergency Committee.

The title tells the story: "Department of Agriculture Drainage Subsidies Are Scuttling Waterfowl."

Dr. Shaeffer says waterfowl are making their last stand in the United States; that unwise drainage programs, if continued, will surely spell the end of wildfowling as we know it today.

He calls attention to a contradictory situation in Agriculture Department policy—a situation which, if corrected, would be beneficial to our farmers, our duck hunters, and to those who will come after us.

Because this situation apparently can only be corrected in Congress, I call the attention of my colleagues to the following paper by Dr. Shaeffer:

DEPARTMENT OF AGRICULTURE DRAINAGE SUBSIDIES ARE SCUTTLING WATERFOWL

(By Dr. J. H. Shaeffer, Parker, S. Dak., chairman, North and South Dakota Emergency Conservation Committee, at the 22d North American Wildlife Conference, March 4, 5, 6, 1957, Washington, D. C.

Production of waterfowl in the United States has received many setbacks. As the industrial revolution progressed, highway and municipal development and drainage programs destroyed much of waterfowl's ancestral breeding grounds. By the turn of the century this country's principal duck-production habitat has been confined to the Midwestern States of Iowa, North and South Dakota, Minnesota, Nebraska, and Montana. The first blow to waterfowl in recent times occurred in Iowa's once-famed pothole country. Habitat estimated to have produced between 4 million and 5 million ducks annually was nearly obliterated by privately financed drainage programs. Federal subsidies for drainage finished the job, and Iowa's contribution to annual production declined to a negligible 3,000 to 5,000 ducks.

Since wet-land habitat in both Nebraska and Montana was limited, the salvation of this country's waterfowl became largely dependent upon breeding areas in the prairie pothole region of North and South Dakota and Minnesota, an area, which, today, accounts for approximately 75 percent of the total United States duck production. Make no mistake about it, the ability of waterfowl to perpetuate shootable populations had been placed under severe handicap by nearly a century of wetland despoilation. It soon became evident that the combination of drainage, together with greatly increased hunting pressure, called for drastic action if we were to continue to hunt ducks. Bag limits and length of seasons were slashed—with no small amount of protest from the hunting public. Some complained that these stringent measures were unnecessary, that Canada, the horn of plenty, could produce all the ducks we needed. What these people failed to realize was that the same forces which had destroyed much of our waterfowl potential here were likewise cause for alarm in Canada. Most people, however, went along with the added restrictions and we have been able to salvage a portion of our once countless numbers of waterfowl.

In light of these events, we are acutely aware that unwise drainage programs, if continued, will surely spell the end to wildfowling as we know it today. Waterfowl are making their last stand in the United States. Their ability to perpetuate a shootable surplus throughout this country will be invalidated by any further reduction of breeding habitat in North and South Dakota and Minnesota. Yet, with full knowledge of the consequences to our waterfowl resources, the United States Department of Agriculture continues to encourage a subsidized drainage program in this vital area, under the guise of soil and water conservation. Furthermore, agencies of this Department have not only accelerated subsidized drainage in recent years, but to save this phase of their program, have sabotaged wetland restoration provisions of the Soil Bank Act, in direct contradiction to the expressed wish of Congress.

I am fully aware that this is a strong indictment. Yet, these conclusions are supported by extensive investigation conducted by the North and South Dakota emergency conservation committee. For those of you who may be unfamiliar with the activities of this committee, a brief explanation is in order. The committee was activated about a year ago at the request of the North and South Dakota wildlife federations. Members of both State organizations had become alarmed about the effect of drainage which was causing drastic reduction of water supplies in the two Dakotas and western Minnesota. Frankly, we were primarily concerned with the threat of promiscuous drainage to our agricultural economy. Yet, we recognized that drainage was not merely a local problem. Soil, water, and wildlife resources of national importance were being destroyed, and as such, concerned the entire country.

Since the Agriculture Department had shown callous disregard for the facts as presented time and again by national conservation organizations, we decided to place these facts before a public board of review, comprised of those who stood the most to lose—the people of this country. Our objective was to foster public support for a national water development and protection program wherein the needs of various resources dependent upon water could best be served. This was not an idea which originated with this committee. Congress, some time ago, recognized the need for such a policy, when it put into operation its "multiple use" program for river basin development. This program called for treatment of water-dependent resources in accordance with the greatest public need. The committee believed that the single-purpose drainage policy of the Agriculture Department showed disregard not only for Congress, but the public need as well. Periodic newsletters containing the results of our investigations were

transmitted to State conservation department, State presidents affiliated with the National Wildlife Federation and Izaak Walton League of America, national farm organizations, and over 200 major newspapers from one end of the country to the other. The committee was well pleased with results and felt that their effort had played at least a small part in focusing attention on a matter which was most deserving of public scrutiny.

For reasons of brevity, I shall refer mainly to committee investigations in South Dakota. Please bear in mind, however, that our findings in South Dakota are not unique. Administration of drainage programs in North Dakota and Minnesota are strikingly similar.

Subsidized drainage was introduced into this 3-State area in 1943, for the purpose of stimulating agricultural production to aid in the war effort. From 1944 to 1949, the agricultural conservation program service in South Dakota expended approximately $300,000 for drainage payments, exclusive of the cost of free engineering assistance rendered by the Soil Conservation Service. By 1946, supply of basic agricultural crops was outstripping demand, and by 1949, both farmers and the Government were in serious trouble, as a result of this overproduction.

An imperiled farm economy obviously called for immediate curtailment of production, together with elimination of drainage subsidies. Yet, drainage subsidies were not only retained, their use was accelerated. From 1949 to 1954, nearly $1,200,000 was expended for drainage by the South Dakota ACPS. The inevitable results are now apparent. ACPS and SCS encouragement for the use of financial and free engineering assistance has aggravated the serious problem of unwanted agricultural surpluses, caused tremendous loss of water which is vitally important to the future agricultural economy of this semiarid region, and has destroyed a substantial portion of the last remaining waterfowl-breeding habitat of consequence in the United States.

To recapitulate, here are the committee's findings:

1. Because of improper timing, drainage subsidies appeared to have had little, if any, value in helping to sustain the war effort.

2. Drainage subsidies continue to contribute to present-day surplus problems.

3. Drainage subsidies have resulted in the effective obliteration of over 1 million acres of nationally important waterfowl-breeding habitat in North and South Dakota and Minnesota, and, if continued according to Department of Agriculture plans, will soon destroy the remaining wetlands.

4. The committee was unable to ascertain any logical reason for continuance of drainage subsidies in the prairie pothole region.

These facts are a matter of public record and are well known to the Agriculture Department. A committee, composed of the game directors of North Dakota, South Dakota, and Minnesota, officers of the National Wildlife Federation and the Wildlife Management Institute, the director of the Welder Wildlife Foundation, with the chairman of the North and South Dakota Emergency Conservation Committee, after many weeks of negotiations, secured an audience with the Secretary of Agriculture in September 1956. It had been apparent that previous resolutions and statements concerning subsidized drainage had never been called to the personal attention of the Secretary. Case histories and photographic evidence were presented to the Secretary, showing many instances of drainage projects contrary to the regulations as provided by Congress. Although this committee received a fair and courteous hearing, no definite statement indicating a change in policy has been forthcoming from the Secretary of Agriculture.

Why then does the ACPS insist upon continuing its subsidized drainage program? The Emergency Conservation Committee believes that the South Dakota ACPS annual report for 1954 reveals the main reason for continuing drainage subsidies is this agency's desire to spend all its appropriations. This report states: "Although it is true that over $1 million of South Dakota's budget was turned back to the Federal treasury unused * * * it is the feeling of the State committee that the 1954 program was a successful one as far as accomplishment of true conservation is concerned. Some county committees were too conservative in making commitments for practice approvals and this may have discouraged farmers from carrying out proposed projects in some cases. This is a difficulty which can easily be overcome in the future." Analysis shows that the 1954 ACPS appropriation for South Dakota was approximately $3,600,000, of which over $1 million was returned to the treasury in unexpended funds. No such difficulty (as predicted by the ACPS) was experienced in 1955. Of appropriations totaling approximately $4,700,000 during this latter year, only about $400,000 had to be returned to the public coffers. The Emergency Conservation Committee's opinion as to the reason for continued drainage subsidies or, for that matter, any other unwarranted subsidy, can be summed up by a statement included in a news release published in June of 1956: "The Agricultural Department formerly advocated the control of water at its source. These earlier guiding principles were 'Hold water on the land where it falls' and 'Make water walk—not run—downhill.' Obviously drainage policies no longer follow these basic soil and water conservation principles which apparently have been sacrificed in order to further the expansion of the Agricultural Conservation Program Service and the Soil Conservation Service."

There now appears to be tremendous public interest in programs designed to regain our once important waterfowl heritage. Conservationists, and this term includes not merely a select few, but everyone who believes in the wise use of our natural resources for the greatest public good, looked to the soil bank to help solve many problems which have resulted from subsidizing drainage programs. While the Soil Bank Act of 1956 is primarily directed towards ultimate reduction of surplus agricultural crops, this legislation also carries a clear mandate for the protection and conservation of wildlife values. Conservation organizations whose efforts gave great impetus to the passage of this bill were encouraged by the initial action of the Agricultural Department which administers the program. While this agency failed to publicize the wildlife benefits made possible by the enabling legislation, it, nevertheless, developed regulations which, if properly administered, would go a long way towards restoring vital waterfowl breeding habitat. Practice G–2 for example, which authorized the restoration of previously drained land to its original condition, would not only be of inestimable value to breeding waterfowl but also would tend to "bank" important soil and water resources until needed.

An examination of last year's record will illustrate what may be expected from the soil-bank program in the way of consideration for wildlife. Seemingly taking a cue from national policies of the Department of Agriculture to disregard initiation of wildlife benefits, some State ACPS committees made the arbitrary determination that all money expended for drainage would have to be repaid before farmers could participate in benefits from practice G–2. This attempt to scuttle the restoration of wetlands was viewed with alarm by the International Association of Game, Fish, and Conservation Commissioners at their recent meeting in Toronto. Subsequent inquiry by this organization revealed that this action to restrict the restoration of wetlands was contrary to the national policy of he Department of Agriculture. This revelation of national policy presented a problem. It is clear that the ACPS administrators, who had gone to great lengths to popularize subsidized drainage, hoped that their move to block any extensive use of practice G–2 would go unchallenged. They recognized that the ACPS and SCS could not long endure the public protest which was certain to occur with the continuation of two subsidized programs which were diametrically opposed.

These agencies have known for several years that their drainage operations have been highly detrimental to the Nation's waterfowl resources. Moreover, in many cases, they have not served the best interests of agriculture. To turn about and encourage the restoration of some of these same wetlands, drained under past programs, would be an indirect admission that their previous attempts at drainage were wrong. Undaunted by initial failure to play down the wildlife provisions of the soil-bank program, and in particular, G–2, another, more subtle, approach was employed. For years, the Agricultural Department with its unlimited facilities, had fostered the idea that the Soil Conservation Service was the primary wildlife conservation agency in the land, that this agency sponsored more genuine conservation than the combined efforts of all State conservation departments, and the Fish and Wildlife Service. The facts, of course, prove otherwise. Basically, the SCS is a farm planning organization interested mainly in agricultural capabilities. As such, it should be recognized that any wildlife benefits are purely incidental and secondary to its farm planning activities. For example, small dams constructed for livestock watering in the west river country of North and South Dakota have created waterfowl nesting habitat, but these areas cannot make up the production loss from natural breeding areas destroyed by drainage in the eastern part of these States.

Supported by the belief that the SCS would be acceptable in view of the favorable publicity received, the ACPS appointed this agency to administer the wildlife practices of the soil bank program. Perhaps this action would have passed unnoticed had the SCS sufficient qualified personnel to carry out the program. The fact remains, however, that the SCS has only one biologist in each of the States of North and South Dakota and Minnesota. Presumably the solitary biologist in each of these States will eventually work out a program to be administered by work unit conservationists—the same people who have been instrumental in encouraging the drainage program. If this happens, it is clear that the ACPS and SCS will have successfully blocked any extensive use of practice G–2 for the restoration of areas previously obliterated under the drainage program. The Agriculture Department pleads that this program cannot effectively be administered by any organization outside their jurisdiction. However, this attitude is not consistent. The United States Forest Service realistically faced their personnel shortage in South Dakota and delegated authority for administering the forestry practices of the soil bank to the forestry division of the department of game, fish and parks. The SCS has the same option as the Forest Service—but to make the department resopnsible for the wildlife practices would have serious consequences to subsidized drainage.

This, ACPS and SCS attempts to retain subsidized drainage portends the failure of wildlife practices of the soil bank program. It becomes clearly evident, therefore, that the ACPS, and SCS, who have merely given lip service to the cause of wildlife conservation, are directly responsible for the decline of this Nation's waterfowl resources. Yet,

in the final analysis, the individual and collective membership of national conservation organizations bear a share of this blame for permitting subsidized drainage to continue as a part of the Department of Agriculture's program. Recognizing this fact, we must redouble our efforts to eliminate this practice. It is now apparent that the ACPS does not intend to recognize the status of waterfowl, but plans to continue its program of promiscuous drainage in the three waterfowl-producing States, where areas, in many instances, are suffering from the worst drought in 25 years. In the stricken areas of the Dakotas and Minnesota, the Agriculture Department must answer to future generations, not only for the loss of our waterfowl breeding grounds, but explain the destruction of water tables in an area that only receives enough rainfall in normal years to produce a crop.

It is not unusual in the history of these United States to discover that top officials in Government have made serious errors in judgment. To maintain a policy that is not in the best interest of all the people is foreign to our way of life. Many local ACPS committees and SCS personnel would welcome the elimination of subsidized drainage because they realize their administrative responsibility in connection with this practice has often been contrary to proper water utilization.

If necessary, a congressional investigation should be initiated which will pave the way for the passage of adequate legislation to preserve important wet lands. Such legislation is vitally important and basic to any forward-looking program for the preservation of our waterfowl heritage. With subsidized drainage eliminated, appropriate State and Federal conservation agencies should investigate the possibilities of public stewardship of important waterfowl breeding habitat.

It would then be possible, for complete cooperation among the Agriculture Department, State and Federal wildlife agencies, and conservation organizations, to effect a constructive program of water development and protection for the benefit of all our people. Only through such cooperation can we hope to stabilize our agricultural economy and preserve our great national waterfowl heritage.

It appears at this time that our hope for relief is the Congress of the United States. We can prevent this national catastrophe, if we care enough.

Some More on What the State Department Does Not Know

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MULTER. Mr. Speaker, I am sure the following excerpt from Drew Pearson's syndicated column of March 7, 1957, will be as surprising as it is enlightening:

THE WASHINGTON MERRY-GO-ROUND—TUNISIA PREMIER STRANGER HERE

(By Drew Pearson)

The State deftly censored it from the record released to the press, but Ambassador Henry Byroade admitted to Senators to recently that he never heard of one of America's best friends in the Middle East, Prime Minister Bourguiba of Tunisia.

Byroade was formerly Assistant Secretary of State in charge of Middle Eastern affairs, then Ambassador to Egypt. He is supposed to know everything about the Middle East, and for that reason, was flown from his new post in South Africa to testify before the Senate Foreign Relations-Armed Services Committee on President Eisenhower's Middle East doctrine.

Senator HUBERT HUMPHREY, Minnesota Democrat, asked the question about Prime Minister Bourguiba. But Byroade didn't know who he was.

"You were Assistant Secretary of State for Near Eastern, South Asian, and African Affairs, were you not?" asked HUMPHREY incredulously.

"Yes sir," said Byroade.

"You mean to tell this committee you don't know of Prime Minister Bourguiba?" snapped the Senator.

Byroade acknowledged that he had not heard of Bourguiba.

"I can't understand it," HUMPHREY shook his head. "He is one of the most prominent leaders and one of this country's best friends in the area that was under your jurisdiction."

Byroade's amazing confession was made behind closed doors. Before the transcript was made public, the State Department carefully censored this telltale admission out of the record.

Hungarian Freedom Revolution

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. FEIGHAN. Mr. Speaker, a few weeks ago the American Lithuanian Society of Washington, D. C., commemorated the 39th anniversary of Lithuanian National Independence. On that occasion a significant and timely address was delivered before the members of that society gathered at the Dupont Plaza Hotel. The speaker was Edward M. O'Connor, longtime friend of the people of the Baltic States and a keen student of events which have taken place behind the Russian Iron Curtain since the Bolshevik revolution of 1917.

The title of that address was "Total Revolution," which the speaker described as the new dimension of international politics created by the Hungarian freedom revolution. The speaker also pointed out that the Warsaw pact is the hangman's noose for the conspirators of the Kremlin because none of the armed forces of the so-called satellite states are or ever will be loyal to the Russians and only await the day when they can rise up against the Russian occupation forces.

I believe this address presents an expert analysis of events which have taken place behind the Iron Curtain in the last 6 months and what these events mean to the future of millions and millions of people enslaved behind that Iron Curtain.

Under leave granted, I include the address entitled "Total Revolution," as follows:

Mr. Chairman, distinguished diplomatic representations of Lithuania and Latvia, representatives of the United States Government, reverend members of the clergy, honored guests, and my dear friends, it's a pleasure for me to be here today with you to commemorate the 39th anniversary of the national independence of your beloved homeland, Lithuania. All the previous speakers have said that this year there is something in the air. I put it this way. There is reason to believe, this year, more than ever before, that the days of enslavement of Lithuania are numbered, and that they are very few.

We began today's commemorative ceremony in a most appropriate way—with High Mass at St. Matthew's Cathedral, and a magnificent sermon pointed to the high purposes for which we meet. And then, a gathering here to discuss further the opportunities that are ours—that belong to us as free men and free women. I think the past year, 1956, carried with it events of great importance. One distinguished Member of Congress has said that the Hungarian Revolution was the most significant political action since the great American Revolution for freedom and national independence. I believe that that is true.

We have learned a lot of things from the Hungarian Revolution, and there are lessons from that revolution which hold high hope for the future of Lithuania and the future of all the nations enslaved behind the Iron Curtain. I would like this morning to discuss just a few of them with you.

The first is that the youth of Hungary who had been subjected to the most concentrated indoctrination of communism were the ones who sparked the revolution. The way to revolution had been prepared, yes, well prepared. Communism, as a system, prepares the way for revolution. It creates discontent among all the people. Any scholar of revolutionary events knows that actual conditions of life best prepare the way for any revolution. But I repeat, the youth, the ones that many had given up as lost to freedom's cause, were the ones who sparked it. That's a lesson we must never forget. It may very well be that the youth will save the world of tomorrow, because we, in this generation of leadership, may fail to understand our opportunities or may lack the courage to take advantage of them.

The second thing is: that the workers and peasants in every country occupied by communism only wait the opportunity to spring upon their tormentors. This was well demonstrated in the Hungarian revolution. All of the people rose up in revolt. The workers quickly joined with the students who had begun a peaceful demonstration in sympathy for the Polish patriots of Poznan. And almost, it seems, by the hand of God, the revolution was set off. The workers were quick to prove they were not on the side of communism. They are the dedicated enemies of communism. That, all of us must never forget.

The third thing is: that the invincibility—the myth of invincibility—that has been built up around the Red army has been torn down. It took teen-age Hungarian youth, with nothing more than paving stones that they took up out of the street, and at the risk of their lives, stuck them into the treds of Russian tanks, to prove to us that the Red army is not what we have far too long believed it to be. It is not made up of heroic or dedicated people, nor is it made up of unbeatable giants. It is most vulnerable because the human element in it is undependable. A classic example of my point was made during the first days of the Hungarian revolution. Elements of the Red army quickly deserted. These elements not only deserted, but they struck against the very army in which they wore the uniform.

I speak of the Ukranians and some Turks and the non-Russian elements in the Red army. They have demonstrated they are completely undependable from the point of view of the Kremlin masters. Even some of the Russians turned upon the Red army that they are supposed to be dedicated to.

There is the story of a whole garrison of the Red army in the outlands of Hungary who were starving. Their wives and children needing milk and other foods. The Russians said, "We are not your enemies. We are on your side. We may not kill you." The Hungarian revolutionaries took care of them, fed their children. This underscores the weakness of the supply lines of the Russians, another fact of importance that all of us should remember.

The next is that the Warsaw Pact, concerning which the masters of the Kremlin have talked long and loud, has been demonstrated as the hangman's noose around the conspiracy of communism. The Hungarian Army proved that to be a fact. As a man they rose up in defense of their homeland. They used the Russian tanks, the Russians guns, and the other Russian equipment to strike against the common tormentor. The Russians should think long about this as they face the future with increasing fear of the people they enslave, exploit, and degrade. The Warsaw pact is the hangman's noose around the neck of the Russian Empire.

Another myth, the myth of the invincibility of the police state has been exploded. We have been led to believe that so strong was the control, the tyrannical control of the regime over the people, that any thought of revolution, of widespread dissent, was impossible. We have been relieved of that misconception, I hope. But out of this exploded myth has grown something more important. And that is, that there is a new dimension to revolution. Those who think of revolution against tyranny as being made up of a handful of underground workers and their helpers throughout the occupied country, are wrong. That is archaic. It is a theory of the past. Communism has given us something new, a new dimension of revolution; a revolution of a whole people, a whole nation, rising up as one, needing no secret underground, needing no encouragement from the outside, but striking because there is no other course open to them. This I call total revolution. There is a point to which mankind can be pressed from which there is no turning back and there must be action against the tormentor. This is the new dimension that the policy planners and those who hope to see freedom reign throughout the world must henceforth consider as an established fact in their planning. The next point is that the people behind the Iron Curtain are not prepared to fight and to die for limited goals. Their goal is a simple one. It is full human freedom. It is unequivocal national independence. Any scholar of events attending the Hungarian revolution will bear testimony to that statement. It would be folly for any western leaders henceforth to preach limited goals to the people behind the Iron Curtain. To make such a proposal or to support such a proposal is to do violence to the will of the enslaved people. Our position has got to be attachment to, and unequivocal support for, full freedom, full national independence.

And then, I believe that the people behind the Iron Curtain, all of them, our dear Lithuanian friends in Lithuania and in every one of the countries behind the Iron Curtain, have also learned some lessons. I think the first they have learned is that the free world was completely unprepared for total revolution which took place in Hungary only a few months ago. "Unprepared" is the word.

In my view, we had somewhat gone to sleep. We had almost been willing to believe that an impasse had been reached. That there was nothing we could do to aid the enslaved nations without causing war. Some people began to say that it was in our own interests, sad to say, to accept a situation of status quo with the Russian tyrants. Thus, we were ill prepared for the great events of last October–November. I speak of all the free world. The people behind the Iron Curtain know that. We have got to face up to it. We have got to be prepared for the next one, which, surely as day follows night, shall occur behind the Iron Curtain.

The second lesson, I believe, that the people behind the Iron Curtain have learned is, that the United Nations has a very long way to go before it measures up to the hopes of the enslaved people and nations. I say this from a very careful examination of the political events attending the Hungarian revolution and those which attended the introduction to total revolution in Poland. Two signs were posted from one end of Budapest to the other, with whitewash on the walls and windows and buildings. First was "Ruskies go home," which is the common slogan of 80 percent of the people within the Russian Empire. The second one was, "Free elections under United Nations supervision." I've talked with many who have escaped from Hungary after it was necessary for them to get out, particularly those who took part in this great try for freedom. They told me that the revolutionaries, those who suddenly seized control, came to the fore and helped lead the masses of people against their tormentors, all felt that the United Nations would save them. Let us never forget the Hungarians won their freedom and national independence. They drove the Russians out of Budapest. Make no mistake about that. There were 4 days of Hungarian freedom. Then they appealed to the United Nations to save their freedom. They wanted the condemnation of world opinion upon the Russians if they dared to come back in there. Let us all hope that the United Nations, in the future—because surely the opportunity will come again—will be prepared to do whatever is necessary to guarantee such hard-won freedom and national independence.

And the third thing as I see it is: that the will of the whole people cannot be defeated by communism or any other tyrannical doctrine or system. It is impossible to defeat a whole nation when its people are determined to be free. The forces of tyranny can only temporarily deter them from winning their goal; they cannot keep them from it.

I am convinced that the Hungarian people are prepared to die rather than give up their victory for freedom. Right at this moment they are continuing to fight for that victory. And they will continue to fight by every conceivable means. They will continue on and on and on until their destiny with freedom is fulfilled.

It is against this background that I look to the future with you, thinking of Lithuania and her sister Republics of Latvia and Estonia, and all the other nations enslaved behind the Iron Curtain. I am certain that full freedom, that the drive for national independence which sweeps from one end of the Communist empire to the other will be attained. And I like to look beyond that happy day. I believe if we have only the goals of bringing freedom and national independence to these enslaved nations we may fall victim to the very thing that happened in the critical periods of 1917 to 1920 and 1939 through 1945. We've got to look beyond national independence as a goal for all these nations. We ought to begin thinking about the need for free regional federations, to be composed of free and independent nations brought together on the principle of equal among equals, the dedicated to preserving all those interests which are common to the regional bloc. I believe if we do not do this we will not have prepared the way for order, for justice, and for freedom in that part of the world now occupied by the Communists. Worse still, by such negligence, we will permit the reestablishment of the despotic Russian Empire, even though its outward form may differ from the present one.

I believe, too, as a starting point, we can take the Association of American States as an example of free, regional federation. It is a good example of the principle of equal among equals, where you have the principle of national independence protected, and where you have the goal of mutual progress and betterment without taking away any of the basic characteristics of any of the member states. Those are the goals that the people behind the Iron Curtain seek.

In closing, I join with you in a fervent hope and prayer that we will not pass one more commemoration of Lithuania's national independence before Lithuania is free, independent, and joining with us in this memorable occasion.

Ancient Schools Make Poor Environment for Children

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the basic issues which this Congress must decide is the matter of Federal aid for school construction. The time and the study which the 84th and 85th Congresses gave and will give to this matter is indicative of the strength and basic superiority of the democratic system of government to that of all others which nations have developed through the centuries.

All sides of the issue are being studied, and all opponents and proponents are being heard.

Can we afford it? This is a question that is being asked in the richest Nation in the history of the world, a Nation with the highest standard of living anywhere, any time—a Nation that has given aid to nations abroad in recent years to the extent of more than $50 billion.

Can we not afford decent schools for our children? This question also is being asked. Actually, a great many taxpayers want the Federal Government to help build decent schools for their children. Working together, the cities, the States, and the Federal Government, the schools will be built. Working separately or at cross-purposes the schools will not be built.

Some of the facts regarding our schools were presented in graphic and compelling terms by a friend of mine, Ray Hasson, in an article on the editorial page of one of the great newspapers in my New Jersey district—the Trentonian.

There are 8 schools in the city of Trenton alone that are more than 50 years old. These schools do not measure up to good educational standards. Trenton is a city of approximately 150,000 people, it is a fine city, a forward-looking city, a city of fine homes, and a

great body of intelligent and hard-working citizens.

Yet here are 8 schools, each of which is more than 50 years old. It cannot be denied that ancient schools sometimes make poor environments for growing children.

Mr. Hasson says the rooms in these eight schools are dank and dark, floors are bare wood and sag and creak, and grooves worn in the floors through the years are etched in ineradicable grime.

The practical fact is, according to Dr. Richard B. Robinson, superintendent of schools, it is costing the taxpayers extra money in maintenance costs for these old buildings. The maintenance costs are almost enough to pay for a bond issue to finance new schools.

Multiply this situation by many times in other cities across the country where, business and civic leaders report, similar conditions exist and the answer is clear: We cannot afford not to have good schools.

The Federal budget contains Defense Department appropriations running upward of $43 billion, while foreign aid over the past 10 years has been at the rate of $5 billion a year.

Meanwhile we neglect the priceless asset which makes this country great and free—our children and their education.

I include here Ray Hasson's fine article from the Trentonian of March 7, 1957:

ANCIENT SCHOOLS MAKE POOR ENVIRONMENT

(By Ray Haeson)

Around Trenton: I hate to be a spoilsport and hand the city commissioners another fiscal headache now that they have concluded their agonizing and marathon wrestle with the 1957 budget. But people in my business are supposed to point out the "awful" truth.

And in this case it is that there are 8 schools in the city that are more than 50 years old and hardly measure up to modern educational standards.

The schools are Cadwalader, Columbus, Cook, Harrison, Jefferson, McClellan, Mott, and Gregory.

They may look good and solid—from the outside—because they're built of brick. But because of their drab interior construction and the virtual inability to modernize rooms, they do not make a good environment for the kids who have to stay in them for 6 hours a day, 5 days a week.

Take two of them, for example.

Columbus, on Brunswick Avenue, near the circle, has concrete hall floors. The rooms are old, dank, and dark. The ceilings are of that configurated metal that was the cat's meow 50 years ago. There are as many coats of varnish on the hall paneling as the school is old.

At McClellan, the basement rooms are like catacombs—and they have classes in these rooms. Drapes in the auditorium are 30 years old. The stage is only 10 feet deep. The auditorium seats are of such ancient vintage that I don't remember ever seeing any like them.

The real danger here is from exposed first floor beams. They are dry as tinder. Floors in these old buildings are bare wood, with no covering. They sag and creak. Grooves worn in floors by generations of kids are etched in unerasable grime.

In contrast, Stokes school is bright and sharp. The walls in the halls are of tile, which means maintenance costs are cut and fire danger is at a minimum.

Rooms and furniture are clean, modern, bright. There's a spring to the rubber tile floors. And the kids seem to have more bounce than their fellows in the ancient schools.

The only brightness in the older schools comes from the drawings and crazy-quilt pasteups the kids and teachers hang up on the walls.

According to Dr. Richard R. Robinson, schools superintendent, educational surveys have shown that environment—meaning the school building—has a marked effect on a child's ability to learn—pleasant surroundings make it easier.

But added to this is the practical fact that it's costing the taxpayers extra money in maintenance costs for these older buildings, according to Dr. Robinson. In fact the maintenance costs almost are enough to pay for a bond issue that would finance new schools, he adds.

Furthermore, there is the question Dr. Robinson keeps asking, but to which he gets no answer:

"How much can you pay for the safety of children?"

Reviewing Our Needs for Scenic Resources

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. METCALF. Mr. Speaker, I am among the Members of this body who have introduced a bill to provide for a comprehensive review of America's outdoor recreation resources.

We want to know what this Nation has now; what is our potential; what we will require in the future, and what we should be doing to assure that we can meet the future requirement.

In this connection, my attention has been called to the following excerpt from an article entitled "Reviewing Our Needs for Scenic Resources" in the Sierra Club bulletin by David R. Brower, executive director:

REVIEWING OUR NEEDS FOR SCENIC RESOURCES

(By David R. Brower)

In the course of the year it has been my privilege to represent the Sierra Club at various meetings about the country and to stress the importance of the concept of the scenic resources review. As far as I could tell, the reaction has been reassuringly favorable every time. The concept adapts itself well to just about every kind of conservation contest we have entered. Perhaps a condensation of part of the testimony I gave will serve two purposes: show in some detail what has been said about several subjects which concern the club—water development, forests, parks, wildlife, wilderness, roads—and clarify their relation to the scenic resources review.

ON THE COLUMBIA BASIN

A typical presentation is the statement made at hearings held by the Army Corps of Engineers in Missoula and Spokane on July 9 and 10 concerning ways to revise earlier plans for control of the Columbia River and its tributaries—an international problem, and very complex. I said in part:

"In behalf of the Sierra Club, I am appearing to request that the agencies charged with Columbia Basin water development, as well as other interested groups here, give most careful consideration to planning for the preservation of the Columbia Basin's scenic resources in the course of working out a program of water development. We hope that all groups may work together to assure that the needs of progress are met without sacrifice of unique qualities which are of great importance to the region and to the Nation—qualities which cannot be put together again once they have been taken apart.

"The Sierra Club is 64 years old. It consists of more than 10,500 members from all walks of life and all parts of the country, but most of them from California. The club has members who are prominent and many more who are not. They share one purpose: to explore, enjoy, and protect the natural scenic resources, including the wildlife resources, which make this land America the beautiful. We are conservationists, all interested in wise use, but especially interested in preserving from development those scarce and special places in our vanishing wilderness which dollars can never replace in kind and for which there will always be human need.

"We are a small part of what you might call a national force that has been building to protect the special resource of parks, wilderness, and wildlife. That force is represented, in a way, by the Natural Resources Council of America, of which I am the present chairman. This is a forum of 37 national and regional conservation organizations having a total membership of 2 million. That force is further represented by the voice of the people themselves, who are realizing in increasing numbers that the few samples we have left of original America must not be sacrificed needlessly.

"Witness that public force on the national scene as it was measured in this Congress In the controversy over Dinosaur National Monument and the proposed Echo Park Dam, the Colorado River storage project bill was doomed to a 70–90 vote defeat in the House of Representatives so long as Dinosaur was threatened. The threat was removed, whereupon the bill coasted through with a 120-vote majority.

"The same force brought a 3 to 1 defeat at the polls last November in New York State to a proposal to invade part of the Adirondacks which New York citizens wanted to keep forever wild—strong wilderness support in spite of eminent opposition.

"The same force showed itself recently at the city level in Eugene, Oreg., where the people chose at the polls not to sacrifice for a power project a beautiful stretch of wild stream, the McKenzie River headwaters. Similar forces are developing rapidly to protect the intangible values of the Rogue River.

"All I am trying to say is that we are witnessing a change in the American temper—witnessing a mature realization, in the nick of time, that we must vigorously and dynamically support the preservation of our scenic resources and especially our living wilderness. This doesn't mean that we're building a breed of people who don't like man's handiwork; it's just that people are discovering that even the most civilized man needs places where he can appreciate what God's handiwork is like, unaided by man. People are recognizing that we cannot forever continue to multiply and subdue the earth without losing our standard of life and the natural beauty that must be part of it.

"POLICIES APPLICABLE TO THE BASIN

"The Sierra Club believes that the flood-control and power-development needs in the Columbia Basin can be met without jeopardy to important scenic and wildlife resources. There should be optimum use of damsites which do not imperil these resources, no matter whether public or private agencies or a combination of both build on the acceptable sites. These sites should be developed fully enough to meet the overall flood-control requirements with a minimum number of structures. There should be proof that there is no alternative course of action before irrevocable damage is inflicted upon

the important scenic and wildlife resources.

"The club—and this is the general feeling in most other conservation organizations I know of—is in favor of sound water development. However, we consider it not in the public interest in the long run, and therefore oppose, any dam or reservoir proposal which would adversely affect a national park or monument or duly designated wilderness area.

"Conservationists, in general, are feeling a growing concern about indirect peril to major scenic resources. For example, the Citizens' Committee on Natural Resources, Washington, D. C., have already voiced conservation opposition to what they are convinced is inadequate development in Hells Canyon. They are not concerned with the public versus private power controversy. But they are concerned with the threat to major scenic and wildlife values arising from partial development in Hells Canyon. Nearly 3 million acre-feet of storage is seemingly about to be blocked there. This has already led the Corps of Engineers to seek replacement storage on the Clearwater River, where conservationists are opposing the proposed Bruce's Eddy and Penny Cliffs Dams. Likewise, apparently, the Bureau of Reclamation is seeking further control of the upper Snake River in the tremendously important scenic country above the Narrows, in Wyoming, and in Grand Teton National Park and the Teton wilderness area, an effort which conservationists must oppose.

"CONSERVATIONISTS THINKING ON THE COLUMBIA

"Let me summarize conservationist reasoning here, so that you may understand it even if agreement with it may not be unanimous:

"1. It is clear, in the Columbia Basin, that there is not enough flood control now.

"2. Remedial action can take four forms:

"(a) Flood insurance. This still requires more legislative pioneering; it will not save lives.

"(b) Evacuation of flood plain by zoning to prevent new construction or replacement of present structures. This is uphill work, literally and figuratively.

"(c) Upstream-watershed management. Practiced with care, this is good conservation; but, it is not effective in controlling the big floods.

"(d) Flood-retarding structures — mid-basin dams and lower basin channel improvement. This action has strong engineering and political backing. We are spending billions on it.

"3. To protect scenic resources from flood-control action we must concern ourselves with the effects of dams.

"4. The corps and the Bureau agree that to skim the flood crest from the Columbia River, we need a main-control plan, and eventual flood-control storage of 20 to 30 million acre-feet can be presumed.

"5. Scenic resource needs should be integrated with this flood-control need.

"6. Whenever storage is provided, someone's special interest will be damaged.

"7. The first projects authorized should be those causing tangible damage which can be reimbursed with money, for example, at a cost in dollars, railroads, and highways can be rerouted, power generation can be substituted for, and farmland can be replaced in kind.

"8. The very last to be authorized should be those projects causing damage which no amount of money can replace. This would include damage to national parks and wilderness which man cannot duplicate.

"As things stand, in the Columbia River Basin, we seem still to need to provide about 15 million more acre-feet of usable storage in the main control plan. Conservation opposition has delayed about 2 million at Glacier View and will probably continue to delay it indefinitely. Partial development plans seem to have blocked 3 million at the John Day and Priest Rapids sites; partial plans are in the process of blocking nearly 3 million at Hells Canyon and may well be about to block 3.5 million at Buffalo Rapids No. 4 if a run-of-the-river plant is built instead of a major storage structure at Paradise; moreover, the smaller development will add greatly to the pressure for major upstream storage in Glacier National Park, either at Glacier View or at Smoky Range. Conservationists will be forced to oppose both of them.

"Thus, to many conservationists, the solution would seem to be to assure full development at Paradise, Hells Canyon, Libby, and in the outlet-works improvement at Grand Coulee, saving the upper reaches of the Flathead in Glacier National Park, the Snake in and near Teton National Park, the Salmon, and the Clearwater for scenic and wildlife resources, which in all probability will be in very short supply by the year 2000.

"CONCLUSION

"The Columbia Basin is an especially good area in which to initiate a scenic resources review—a comprehensive plan for adequately protecting now, with an eye to the long-range future, an optimum reservation of the basin's scenic resources of parks, wilderness, and wildlife and their tangible and intangible values for public use, enjoyment, and education.

"The plan would consist of a cooperative inquiry by many agencies to develop answers to five basic questions. * * * We believe that the best possible answers to these questions should be sought out before irrevocable decisions are made. Adequate answers are not now available. The Nation has immediate need for a broad perspective such as detailed answers to these questions could provide. We believe such a long-range interagency study can be conducted within the framework of present law. Or it may need new legislation. We invite your comment and help."

Mr. Speaker, it is his suggestion that there be a scenic resources survey and a reappraisal and a reevaluation of the water resource development program in the Columbia Basin from this standpoint.

This proposal of a comprehensive plan for adequately protecting now, with an eye to the future, an optimum reservation of the basin's scenic resources could well be considered as part of the Corps of Engineers review of the 308 report, overall plan for main-stem flood control on the Columbia.

This article demonstrates that Mr. Brower and other conservationists are taking an affirmative position on water resource development. They are intent on finding sites for multipurpose dams which will store the most flood water, provide for the fullest possible use of our water resources, while at the same time protecting irreplaceable recreation resources in the public interest.

Your Income Tax

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. HOFFMAN. Mr. Speaker, constituents, no longer requesting, are now demanding—as is their right—that we quit taking from their pockets dollars to waste, spend on unnecessary activities, or give or loan to other nations which are well able to supply their own needs.

They may ultimately take from Congress the power to levy excessive taxes upon their earnings.

The national debt is piling up, the interest charge alone is around seven billion dollars a year.

It is evident that just as long as it can tax and spend and a majority be reelected, the Congress will continue to do so.

On the theory that if it does not have the money, the Congress, because it cannot, will not be able to add an ever-increasing burden upon the taxpayer, a proposal to repeal the 16th amendment, which implemented the levying of the income tax, has been introduced by me. That resolution—House Joint Resolution 232—read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

ARTICLE —

SECTION 1. After 5 years from the ratification of this article, the 16th article of amendment to the Constitution of the United States is repealed, and thereafter the Congress shall not have power to lay and collect taxes on incomes derived from any source.

SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission.

It has been asked—if the amendment is adopted, where will we get the dollars to replace those lost by the adoption of this amendment?

Under the power to levy taxes, Congress can always find ways of providing adequate funds for all necessary governmental activities. The gentleman from Illinois, Congressman MASON, of the Ways and Means Committee, has suggested several.

Power to levy a tax to meet wasteful or unnecessary spending should no longer be in the hands of the Congress.

The power to levy income taxes should be restored to the States, where those who pay the tax can make their desires known to their State representatives, who can be forced to do the peoples will.

Pressure groups, lobbying for additional spending—wasteful or otherwise—will then be forced to deal with members of the State legislature who are, comparatively speaking, next-door neighbors to the taxpayers who are opposed to either unnecessary or wasteful spending. Because of proximity, direct contact, the taxpayers should be able to more effectively attain their objective.

People who want relief from the present outrageous income tax burden should write the Honorable EMANUEL CELLER and the Honorable KENNETH KEATING, Washington, D. C., respectively the chairman and ranking minority member of the House Committee on the Judiciary, requesting a hearing on this resolution.

Appendix

Weapons Development

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given by the Honorable Richard E. Horner, Assistant Secretary of the Air Force for Research and Development, on the subject Weapons Development, which Secretary Horner presented at a meeting of the Palm Beach Resources Development Board:

Mr. Chairman, distinguished guests. I am honored to be your guest and pleased to have the opportunity to discuss with such a distinguished audience some of the important considerations that affect our progress in the development of new weapons for the defense of our country. In addition it is always a personal pleasure of mine to visit your State and I am deeply grateful for the warm hospitality you have so kindly offered.

It seems to me that this audience has a special interest in the subject of weapons development. Over and above the concern for our military preparedness which I am sure you share with all Americans, a particular awareness undoubtedly results from the location of some of our most important facilities for testing new planes and missiles within the boundaries and over the surrounding waters of this State. At Eglin Air Force Base the pilots and technicians of our Air Proving Ground Command and the Air Force Armament Center are operating new bombers, supersonic fighters and electronic components of their bombing, navigation, and fire control systems under test and simulated combat conditions.

It is also noteworthy that the Air Force's first experimental guided missile group was established at Eglin in 1946. That pioneer venture into the guided missile field was the forerunner of extensive missile testing programs which are now being directed from Patrick Air Force Base just north of here. At this installation we are gaining vital missile performance data from test equipment along the 5,000-mile range extending from Cape Canaveral into the South Atlantic. The missile operating procedures we are developing at Patrick will help speed the introduction of these new weapons into our operating combat elements.

You might be interested in one indication of the growing importance of the Patrick installation in our missile program—the trend of expenditures to support the base and its system of testing stations. In 1955 these expenditures amounted to $34,342,000. During 1956 they increased to $41,871,000 and we are estimating that our 1957 costs will approximate twice the 1956 account.

I am confident that all of you are justifiably proud of the direct contribution which the State of Florida is making to our deterrent striking power through its support of these key defense facilities. Considering these important local aspects of your association with the Air Force's research and development program, I feel especially privileged to be with you tonight.

Any discussion of weapons development might very well take into account a great number of topics beginning with that of identifying requirements for new weapons and proceeding through the myriad of administrative, technical, production, and testing facets of the research and development program. However, it seems to me that it might be most appropriate to consider tonight the problems we encounter from a technical management standpoint, and the methods we employ in dealing with them. One of the management problems that has been receiving a great deal of our attention recently is that of reducing the development time cycle. Our competition behind the Iron Curtain has brought forcefully to our attention the need to minimize the elapsed time required to bring a new weapon from concept to operational development. We have seen little evidence of marked technical or industrial superiority in the Soviet dominated sphere but with their governmental and economic system and from their vantage point of observing the directions taken by our defense effort, they have demonstrated a remarkable facility for making the necessary determinations and prosecuting them with vigor and dispatch. The resultant decrease in the qualitative gap in some of the important areas of military technology, provides us with an incentive to look more closely at our own procedures of management and herein also lies a danger—if we permit ourselves to become too fascinated with the simple objective of producing new weapons on a shorter time scale some of the technical and military facts of life may be obscured. A measure looking toward a reduction in development time which does not recognize the need for a superior end product may in the long run cost us time, money, and military advantage.

To illustrate my point, let's consider the seemingly simple process of initiating development for a new weapon. There are two major factors that influence the amount of time require: First, the degree of technical difficulty associated with the development; and, second, the administrative arrangements and management decisions which must precede actual development work. There is quite a definite interrelationship between these technical and administrative elements of the problem. As the technical aspects become more complicated they tend to create differences of opinion at the management level which must be resolved to permit enabling decisions. The development plans that propose highly involved technical programs are regarded as high-risk solutions to our military requirements; and support for such proposals is notably difficult to obtain. A principal reason for this may be the requirement for a heavy outlay of funds and other resources without complete assurance of success. This of course is the nemesis of all research and development effort. It can be readily seen that any program dedicated to the improvement of the quality of our weapons which attempted only the sure thing would be rather sterile. Our effort should be, instead, to assure the proper balance between risk accepted, military advantage to be gained, and resource investment that is required. However, we must recognize that as the size of this investment increases there is a more careful scrutiny of such factors as vulnerability, performance increment, and maintainability to the end that administrative lead times are sometimes intolerably increased. All of these factors lead us to the conclusion that we might accrue tremendous benefits through seeking simpler, more ingenious solutions as opposed to the highly sophisticated complex and expensive answers to our stated military requirements.

It is worth noting that we seem too frequently to indulge in the typical, head-on, impatient, American method of problem solving. By this I mean we are inclined to smother a project by brute force, by addressing to it so much wealth and effort and by adopting so many alternative approaches that one way or the other we are almost certain to achieve at least limited success. In this State we might be tempted to call this the Texas approach. In Texas, I am sure we would probably find some other name for it. It sometimes appears that this practice of substituting manpower and dollars for cleverness and ingenuity is a lazy way of acquiring a military capability. Another impractical consideration which must receive attention at the onset of development is flexibility of design. Regardless of how well the technical approach is chosen, under most circumstances the time required for the development of a weapon will be such that considerable advance in the state of the art in pertinent technical areas must be expected. This generally has the net result of giving the newly developed weapon the doubtful appearance of approaching obsolescence, about the time it is ready for deployment in the operational inventory. In other words, after we have completed the development cycle, we feel that we have gained enough additional knowledge to do a better job if we were to start over. Thus arises the common criticism applied to engineers and scientists, that is the one that alleges, "they never want to stop developing long enough to produce a new weapon for operational usage." Perhaps more thought should be given during the original design phases of a new weapon to methods of forestalling or at least alleviating this condition and the resultant criticism. For example, there are many instances in a new weapon design where provision can be readily made for anticipated improvements in technical areas as they become available. With ingenuity and forethought, accommodation for such improvements can frequently be provided at no expense in development time or dollars. In general, the growth potential of a new weapon development is probably a greatly underrated characteristic in the deliberations involving weapon selection.

So far I have touched on areas of judgment that inevitably confront us with time-consuming dilemmas. During the early stages of the development program we must recognize the necessity for allowing a reasonable interval for deliberation on questions of feasibility, cost, and performance if we are to obtain weapons which are at the same time within our resources and at the forefront of scientific progress. But we must also recognize the necessity for continually refining our planning and administrative actions to minimize the time required to get a new weapon ready for operational use. We are taking such steps as appear to be profitable. More and more we are finding it advisable to bring elements of industry into the picture with forecasts of our mili-

tary requirements so that we may have the advantage of all the best engineering brainpower in the Nation to answer the questions of technical feasibility, optimum technical approaches, and estimates of required resource investments. This helps us to decide on how and when to undertake a new development. It might be mentioned here that this procedure has introduced some problems of security, but we have made a very careful effort to work out these problems in a practical fashion. Today we have 148 study groups in 44 different companies which can give consideration to our future requirements and apply their own corporate research efforts along lines that correspond to our needs. We have found that the broader dissemination of our definitized requirements has been a noteworthy factor in encouraging American industry to undertake an increasing quantity of research and development effort on a competitive basis. We see advantage in relying on the ingenuity of the free American economy to produce a better mousetrap and ultimately recoup the investment in the research and development program through the medium of a production contract. You might say that this is a reversal of the trend of military planners to state their requirements in such detail as to dictate the solution. It may frequently happen that industry by using forecasted requirements, arrives at a novel solution which would otherwise never be exploited.

It is recognized, of course, that there are many development programs of such a scope and magnitude that no element of American industry could reasonably be expected to cope with them without Government support. These projects are probably in the majority in our overall weapons development program. However, there are many opportunities to accelerate progress on these projects by carefully adjusting our joint actions with industry. For example, we find that we are able to relax some of the performance specifications during the prosecution of the program as it becomes apparent that they are not realistic. We have also found it advisable to eliminate some of the requirements for military review of detailed drawings and specifications. I am sure that many of our contractors feel that we can do much more in this area and I would certainly agree that it warrants continuous review.

As a part of our policy of increasing our reliance on American industry, we have established a practice of requiring the contractor who designs and builds a new weapon to provide direct support of spare parts during the testing phase. This has the additional benefit of revealing to the contractor which parts might need new design effort to improve durability and maintainability. Finally, I wish to make a general statement concerning this problem of reducing the development time cycle. Perhaps we are not having as many calendar days in performing this function as we would like to; but I can say that we are producing within a given time period today a far more effective weapon than we could produce within a corresponding time span a few years ago. Thus, where we are not materially reducing the time that is required to develop a new airplane, for example, and in some cases it may appear that we are taking more years to accomplish our objectives, the complexity of our new weapons is such, that we are in effect saving time by not spending time.

It has always been true that an evaluation of a new weapon must include a consideration of the human skills and physical capacities required for its use. Certainly that need has been intensified by the onrushing technology of the jet age and missile age. Where manned aircraft are concerned we have had extensive experience in identifying the physical and mental qualifications of aircrew members and maintenance technicians and we are now proceeding in connection with the guided missile development program to evaluate some of the more important personnel implications of these weapons.

From the standpoint of technical complexity alone, the guided missile family has forced us to initiate new programs of training in many new areas, including propulsion and propellant systems, guidance and control mechanisms, and logistic operations. One of the most demanding features of guided missile operation is the exhaustive checkout procedure to assure component and system reliability. This function must be carried out by people with expert knowledge of the systems which are being tested. If we are to capitalize on the inherent capability of a missile system to respond quickly when needed, then we must rely heavily on automation, for to depend on human procedures would be so demanding of large numbers of highly skilled technicians as to severely limit the number of weapons that could be employed. Thus we have found it necessary in some cases to design test equipment that will first check its own reliability and then provide an indication of the condition of all the systems in the missiles themselves. One expert, monitoring this machine, can identify malfunctions that it reveals and pass on to individuals at a lower skill level the job of replacing faulty components.

One of the outstanding advantages of unmanned weapons systems is the inherent performance characteristics which permits their separation from elaborate airfield complexes. This dispersal capability factor, although extremely advantageous in reducing the vulnerability and in permitting system operational techniques that will provide superior reaction times in case of need, is somewhat of a mixed blessing, for it increases the need for operating personnel with a high degree of initiative and self-reliance. The supervision of missile teams cannot be as direct as for manned aircraft units which are of necessity grouped together around an extensive concrete runway system, and we must, therefore, have individuals who can act promptly and intelligently in varying situations. They must be instantly responsive to a system of control that extends through remote areas in a wide pattern of deployment.

It is also necessary to face up to the problem of keeping guided missile technicians geared to a constant pitch of keen attention to duty if the short reaction times possible are to be truly meaningful and it is readily apparent that several factors of motivation are absent in the operational missile organization. For example, with guided missiles it is impossible to create the same sense of group achievement that results from simulated combat missions with manned aircraft. Furthermore, since the role of the missile man is largely one of watchful waiting and constant alertness it is not likely that he will receive the same degree of public acclaim and recognition that exceptional performance by aircrew members has evoked. There are no doubt many lines of action we can take to replace the incentive and the job satisfaction that have thus been obscured by scientific progress. But we must recognize these problems and deal with them effectively if our combat units, armed with guided missiles are to be an effective addition to our position of military deterrence. There are also other contrasting factors which affect the human component in the system operation of manned aircraft and guided missiles. In a plane there is always the possibility following takeoff that human error may jeopardize the mission. But this possibility is compensated for at least, in part by the fact that human judgment may also be counted on to overcome difficulties which might arise from such errors or from mechanical malfunctions of the weapon. On the other hand, an error made before or during the launching operation of a guided missile rapidly becomes irrevocable as the unmanned system proceeds toward its objective. This fact simply serves to emphasize the requirement for infallibility on the part of missile technicians and a high degree of reliability in their equipment.

Any discussion such as the one we have engaged in tends to take on the flavor of direct comparison of manned and unmanned weapons systems; identifying the desirable and undesirable characteristics of each. It is not my purpose tonight to serve as the champion of either missile or airplane but perhaps I have not emphasized enough the military factors that have led us to choose our present balance of support in our military-weapons program. I am sure that everyone in this audience must appreciate the tremendous increase in our mission capabilities that guided missiles can potentially produce. The importance of achieving this capability soon enough to maintain a firm deterrent position can hardly be overstated. This accounts for the overriding priority we have given the intercontinental ballistic missile, and it accounts also for the great emphasis we are placing on the other promising weapons in the guided-missile family. But I think we should consider in more specific detail the kinds of tests and operations which we must carry out in order to integrate guided missiles into the Air Force as rapidly as possible and in the proper ratio to manned aircraft systems. To do this it is necessary to keep in mind the inherent characteristics of missiles that distinguishes them generally from manned systems. They have a longer standby time, a shorter reaction time, relatively invulnerable launching bases, inflexibility once launched, and a 24-hour all-weather capability. They probably will not provide as accurate a delivery system of our destructive warheads, at least in the initial years of their deployment and they frequently impose an exacting requirement for the precise knowledge of target location. Each of these characteristics has an important bearing on the variety of military jobs for which missiles can be most effectively used and collectively they form a basis for a complex and sometimes expensive integration process.

During the development period it is necessary to run literally thousands of tests on components and subsystems to establish reliability and identify opportunities for improvement through adjustment and modification. When the most elemental parts are proven through this method, the process of putting them together as building blocks to form subsystems and then prototype weapons is undertaken, with each step accompanied by further testing. This procedure is used to insure that each component works in the presence of others and the cause of any malfunction can be readily identified. It is frequently necessary to discard or to modify a component which works perfectly in a simulated environment but fails to integrate satisfactorily with the entire weapons' systems and its operational environment. When the testing of the prototype missile is begun, it is advantageous to again illustrate the gross dimensions of the job we are up against by making a comparison with manned aircraft. For our manned aircraft we can gather experience data rapidly and accurately through repeated flights in which the machine is recovered. Based on information from crew members, data recorders, and postflight analysis of the hardware, we can make rapid improvements in the equipment and in our systems of maintenance and operation. As an example, the B-47, our first-line medium bomber has undergone about 3,000 modifications during its 6-year period as a major weapon in our inventory. On the other hand, although some of our missiles are recoverable during the early development stages, we cannot get them back after

launchings under simulated combat conditions. It is, therefore, necessary to create a much more sophisticated data gathering process to insure the maximum return in knowledge from each missile flight. It is obvious that considerations of cost alone will seriously limit the number of actual launchings we can afford in our test program. If we wish, for example, to consider a fictitious case of an air-to-ground missile that may cost on the order of one-half million dollars it can be readily seen that even after the development is completed, if we permit each air crew in our bombing force to fire just one missile a year for familiarization, training, and demonstration purposes, the total cost would be quite staggering. This would indicate that in order to keep cost factors within tolerable limits we are going to have to rely on extensive use of simulators in the training programs and, as we become more familiar with these techniques, we will doubtless be able to obtain valuable development information from their use as well. However, it appears there will always be a time when the commander of a combat unit will justifiably demand an opportunity to observe just what results his weapon will produce and confidence he is justified in placing in his equipment. It is, therefore, clear that the degree of dependence we place on guided missiles as effective substitutes in some roles for manned aircraft must await the results of rather extensive usage under operational conditions.

Taking the guided missile picture in all of its aspects, I believe we have some right to be proud of the progress we have made, and further, I believe we may have a reasonable measure of confidence that we are generally out in front of the competition in this field.

Since I have been devoting a large portion of my comments to the subject of guided missiles, perhaps a word of caution is in order. I would like to make it clear that for the foreseeable future there are certain jobs in which manned aircraft appear to be more effective. Where the location of targets in relation to launching sites is not precise, an unmanned system may operate at a disadvantage. Under certain combat conditions, where a high degree of accuracy is needed, and where a requirement for flexibility of action following launchings exists, the manned aircraft as a weapon responsive to human intelligence and judgment throughout the mission, may still be the choice of military people. It would be quite difficult and in at least some cases impossible, to develop a guided missile that could be recalled after it was launched, or diverted to an alternate target. On the other hand, it seems clear that new military jobs will be found for guided missiles as the state of the art advances and as our testing programs yield more information. Certainly in the years ahead they will take on a progressively more important segment of our total combat mission. The very important characteristics of quick reaction time, flexibility of deployment, and virtual immunity to bad-weather effects, are of extreme importance to our deterrent and retaliatory position.

So we come to the conclusion that it will probably be necessary to maintain and operate a mixed force in the foreseeable future. It is certain that the ratio of this mixture will vary with time and generally the basis for replacement of manned aircraft with missiles will be the determination that they can do the same job at less cost or a better job at the same cost.

Gentlemen, the problems I have discussed with you this evening in connection with development of modern weapons, I think, to some extent, has revealed the necessity for the very considerable burden which has been placed on all segments of our society in terms of cost to our national resources. I am sure that we all agree that we must meet them squarely in order to insure the security of our Nation.

Thank you again for the opportunity to discuss them with you. Thank you.

Washington Report by Congressman Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. ALGER. Mr. Speaker, since coming to Congress to represent the Fifth Congressional District of Texas, more commonly known as Dallas County, it has been my pleasure to report weekly to my constituents. In this report, I endeavor to summarize so far as space limitation and my experience permit those items I feel to be of greatest interest to my constituents.

For those who read the CONGRESSIONAL RECORD, including my colleagues, therefore I submit my newsletter of March 10:

H. R. 4901, to establish a minimum acreage allotment for corn, to provide acreage reserve programs for diverted acres and for feed grains, and for other purposes, provoked the year's first big political fight in the House. This bid for the farmers' vote may well kill him with attention. Almost without regard for the recently inaugurated new programs of the last Congress, past experiences, or the farmers' expressed wishes in last December's corn referendum, the Democrat and Republican members of the Agriculture Committee went after each other hammer and tongs, promising more help for the farmer. For 2 days of bitter debate I listened and abstained from participating in the strict party line votes while groping for the facts. Now I realize we may never have the facts. "Utter confusion," Judge SMITH, Virginia Democrat and statesman, labeled it. It's apparent that few, if any, know what the program is.

How much will the program add to the present cost of subsidy? Don't know—estimate between $250 to $1,000 million. (Added to budget beyond present $5,000 million program—the letter is now half as much as the farmers' total net income of $10,000 million.) Will it help or hurt the farmer? Don't know, but it would double the soil bank program, quite possibly scuttling it, will all other subsized crops being affected and Government machinery vastly increased. (Agriculture personnel: 1955, 70,000 employees; 1956, 77,520; 1957, 81,000; 1958, 90,000 estimated, a 9,000 increase.)

Other conclusions demonstrably true: (1) Strictly political, with Democrat leadership trying to maneuver the administration into a bad light; (2) hastily conceived and complicated without regard to present program and long-range good; (3) more Federal control of farmer, not less, moving farther from supply and demand realities of the free market. Where now is the concern over cutting the budget, as the legislators ask for hundreds of millions more, beyond the already heavy budget? In sorrow over the farmer, who weeps for the taxpayer? Where is the sense of morality? It's a case of bad laws breeding more bad laws. Where will this end? The answer—socialism, complete subservience to government. So we go over to next week, a later recurrence of a bad dream.

Co-authoring six constitutional amendments comprised my own week's legislative efforts. They are: (1) A forced balanced budget (Byrd-Bridges); (2) reform of income tax (Reed-Dirksen); (3) electoral college reform (Mundt-Coudert); (4) States empowered to amend Constitution without Congress (Reed-Walter); (5) treaty law of no effect if contrary to Constitution (Bricker); (6) Government can't engage in business (Gwinn).

The sixth proposed amendment reads: "Proposing an amendment to the Constitution of the United States relative to prohibiting the United States Government from engaging in business in competition with its citizens." This commonsense amendment is needed to put and keep Government in its place. In direct violation of the Constitution, the Government is in several thousand business enterprises right now. This amendment is a natural companion to efforts along the Hoover Commission lines, reducing Government size, thus cutting cost, and making tax cuts possible. The House and Senate have proven their inability to exercise self-discipline; therefore, a constiutional amendment is the only way.

The Mideast resolution passed 350 to 60 (see February 1 newsletter). Again, I necessarily opposed it, since the constitutional violation remained, despite attempted Senate amendments. The bill states, "If the President determines the necessity thereof, the United States is prepared to use Armed Forces * * *." The Constitution says this is the prerogative of Congress, and the self-contradictory nature of the resolution is not worthy of this high legislative body. I approve the end in view—a firm stand against Russia. I still do not believe the end justifies the means when it violates the Constitution.

Other objections include (1) foreign aid should be in separate legislation; (2) while required to report to Congress intended expenditures, there is no limitation on the President, so the provision is meaningless; (3) section 4 binds the United States to participate in any war between Arab-Israeli, regardless of being requested as in the resolution; (4) "gag rule" prevented House Members, the people's representatives, from being heard once again, though the Senate freely discussed and amended it; (5) a concurrent resolution, rather than this joint resolution, would have clearly stated our intent—been unanimous, and Congress then would not have been circumvented.

Lease, Purchase, and Lose

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the St. Louis Post-Dispatch of February 28, 1957:

LEASE, PURCHASE, AND LOSE

Testimony from two branches of the Government about the administration's lease-purchase plan leads to an irresistible conclusion.

Under the lease-purchase plan, the Government, instead of appropriating funds for the construction of post offices, courthouses and similar buildings, signs a contract with private interests which then construct the buildings and rent them to the Government. After 20 years the buildings become Govern-

ment property; but in the meantime the Government has paid rentals large enough to cover not only construction costs, but the financing charges and profits of the private enterprisers it has dealt with.

A House Public Works Subcommittee asked Comptroller Joseph Campbell how much these extra costs would run to. His answer: on 146 Federal buildings planned, the Government would pay $634,500,000 more than it would pay if the same structures were built directly under direct appropriations. That is a lot of money.

The committee then heard Franklin G. Floete, head of the General Services Administration, explain why the lease-purchase program has bogged down. It can be made to work, he said, if the Treasury will allow higher interest payments than at present, and if construction cost estimates are increased 11 percent.

In other words, the Government is unable to get its building done by the lease-purchase method unless it is willing to pay a great deal more than the $634,500,000 in excess costs already in sight under the program as now set up.

Need there be any question about what irresistible conclusion it is which this testimony leads to? Surely the lease-purchase program should be abandoned and the old-fashioned way of direct appropriations restored.

Challenge to Conservatives

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. William Henry Chamberlin entitled "Challenge to Conservatives," which appeared in a recent issue of the Wall Street Journal. This is a most interesting article:

CHALLENGE TO CONSERVATIVES: THEY MUST FIND MEANS TO ESPOUSE TRADITIONAL CONCEPTS NOW THAT BOTH PARTIES SEEM HEADED IN SAME DIRECTION

(By William Henry Chamberlin)

The proposed free-spending Federal budget and other aspects of the developing domestic and foreign policy of the second Eisenhower administration should sound a reveille for Americans who think of themselves as conservatives.

The beliefs, instincts and feelings of such people are being challenged all along the line. It is significant that some of the more enthusiastic reactions to the new budget came from New Deal Democrats. And a well-known commentator referred to what used to be called the New Deal and is now called the New Republicanism.

Whatever may be said in praise or extenuation of the budget, it runs counter to the instincts and traditions of most regular Republicans. The Republican contention throughout two decades of the New Deal and the Fair Deal was that Federal activities be curbed and Federal spending reduced. And this was not, as collectivists tried to argue, a mere negative reaction. The United States was founded and flourished and grew prosperous and great on the principle that it was up to the individual to paddle his own canoe without having the Government do the paddling for him, or jog his elbow or slow down his pace.

Judging from his campaign speeches in 1952 and from the fiscal policies followed during the first 2 years of his administration, President Eisenhower believed in this principle. He lopped $10 billion off the last Truman budget. And, to the confounding of the school of modern economic thinkers who maintain that ever bigger spending is the only recipe for prosperity, the country seemed to thrive under doses of old-fashioned thrift. Unemployment, which had been as high as 3.4 million in 1949, sank to a 1.5 million in 1956. The number of available jobs zoomed from 65 million to 72 million. Wages, savings, gross national product all rose appreciably.

Now the fiscal engines have been reversed and the old pattern of having the Federal Government spend the people's money for them instead of letting them spend it for themselves has reappeared—and at an accelerated pace. It may be argued that a Democratic administration would have presented a still more extravagant budget. Mr. Stevenson's campaign speeches, with their advocacy of lavish expenditure in the social welfare field and their vagueness as to where the money to finance these expenditures would come from, offered little prospect of prudent and economical finance.

SPIRALING SPENDING

Yet it is disconcerting to realize that the proposed figure of domestic spending in the Eisenhower budget for fiscal 1958 is more than 50 percent higher than the biggest Truman budget figure in fiscal 1953. The precise figures are $30.9 billion and $19.7 billion. In both cases military expenditures and fixed charges, such as interest on the national debt, are left out of consideration.

It is all very well to talk of more money being needed because of the growing population. But the population is not growing at that rate. There have been substantial increases in labor and welfare appropriations, in agricultural subsidies of one kind and another, in veterans' benefits. The whole conception of Republican individualism versus Democratic collectivism has been blurred to the point of complete obscurity.

It is not only in this very important field of Federal spending that conservatives must feel grave misgivings about the "New Republicanism." Men who are believed to stand high in the councils of the administration are advocating greatly increased handouts to the uncommitted neutralist nations of Asia.

And what had once looked like a difference between the two parties in foreign policy seems to have disappeared. In the past the Democrats have tended to go far in deference to the United Nations, while the Republicans have placed more trust in alliances.

But when international storm clouds began to thicken last autumn the Eisenhower administration showed a tendency to seek shelter in the fragile and leaky edifice of the U. N. This was despite the fact that the Security Council is stymied by the Soviet veto, and that recent shifts in voting power in the General Assembly make it impossible to get a two-thirds majority in that body for any resolution, however just in itself or urgent in view of American interests, if the Soviet bloc and the Afro-Arab-Asian bloc are in opposition.

What are conservatives to do in a situation when there is little choice between the two big parties? Third party activity in the last election was amateurish and unsuccessful. It would seem that the most effective form of conservative activity would be along politically nonpartisan, educational lines.

ADVICE AND SUPPORT

There is a place and a need for an organization that would stress conservative principles in national and international affairs without party bias; that would offer support to Congressmen, regardless of party affiliation, who support such principles; that would furnish advice and cooperation to the conservative and individualist groups that have been springing up on college campuses; and that would perform a number of similar political odd jobs.

Conservatives are generally individualists. It would probably be impossible to get under one roof all who regard themselves as conservatives. But there would perhaps be a fair measure of agreement on the following as basic principles:

Doctrinaire theory, however attractive, can never be a satisfactory substitute for practical experience.

The United States cannot safely abdicate its freedom and responsibility in making big foreign policy decisions to such a divided vacuum as the U. N., in practice, has turned out to be.

While there may be a case for subsidizing nations which are filling gaps in America's outer defense lines, there is no case for indiscriminate handouts to neutral powers which can and should fill their needs by the normal processes of investment and trade on a commercial basis.

The tendency of Federal authority, in one form or another, to supplant and override the proper governing functions of the States has gone too far and should be reversed.

Inflation makes for the semblance of wealth and the reality of impoverishment.

The process of pillaging the thrifty for the benefit of the thriftless through direct taxation by Federal and many State authorities has reached a point where it is morally inequitable and economically disadvantageous.

THE BUREAUCRATIC INSTINCT

There are two unvarying principles which hold true for governing bureaucracies everywhere under the sun and which speak powerfully for curbing, not expanding the role of the Federal Government in regulating the lives of its citizens. First, it is the instinct of every Government agency to seek more power, to take on more employees and to spend more money. Second, people as a general rule are not as careful in spending Government money as they would be spending their own.

Many Americans in both parties and without party affiliation instinctively before these things. What they need is intellectual guidance and coordination. Here is a responsibility and an opportunity for conservatives, operating as individuals or as independent groups, at a time when it seems unrealistic to expect a conservative lead from either party in Washington.

Double Standard on Public Power

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. FRAZIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint of an article by Thomas L. Stokes, entitled "Double Standard on Public Power," appearing in the Chattanooga Times, Chattanooga, Tenn., of March 4, 1957:

DOUBLE STANDARD ON PUBLIC POWER

WASHINGTON.—We have been hearing a lot lately, especially in protesting voices from Congress, about a double standard in international affairs. This referred to proposals for United Nations sanctions against Israel

when the U. N. never had applied them to Soviet Russia and Egypt when they ignored U. N. resolutions.

In an entirely different area we are reminded again of a double standard that the Eisenhower administration has applied for 4 years.

We see this in another report by the International Bank for Reconstruction and Development, in which we hold a third of the shares and subscribed a third of $9 billion capital. That shows the continuing approval by our Government, now managed by the Eisenhower administration, of loans to finance public power projects all over the world.

Here at home, as you know, the administration is fighting public development of our own water resources to develop power. It insists, instead, upon something it calls the partnership policy.

As that works out, it means the granting to powerful utilities of title to resources that should belong to our people, and under terms that mean fancy profits for them and high rates to consumers. It means, too, that development in some cases is shortsighted and does not utilize the full potential.

The latest report of the World Bank, as that institution is popularly called, covers its loan operations from July 1 of last year to January 31 of this year. It is issued as a special supplement to its 11th annual report covering operations up to last July 1 for the use of the United Nations Social and Economic Council meetings in New York beginning April 16.

This report shows additional loans for power development in that 7-month period of $98.3 million to Austria, Italy, Chile, and Nicaragua.

That brings to nearly a billion dollars—or to be exact, $887.3 million—the total of loans for electric power development in the 11 years the bank has been in operation. These loans went to 22 different countries, they are Austria, Algeria, Italy, Chile, Nicaragua, Ecuador, Finland, Norway, Rhodesia and Nyasaland, Uruguay, South Africa, Yugoslavia, Brazil, Ceylon, Colombia, El Salvador, France, Iceland, India, Lebanon, Mexico, and Pakistan.

Our share of these loans was $295.7 million.

In many instances the loans were to public authorities modeled after our own TVA in the Southeast. That has its ironical connotations, since the Eisenhower administration thus gives its approval to that means of developing water resources in foreign lands but has been antagonistic to TVA here and has sought in numerous ways to cripple that magnificent project. The President calls it "creeping socialism."

It's only "creeping socialism" under our flag. Under other flags it's all right.

While we are helping to expand the development of power by public authorities and governments elsewhere, we have witnessed a retardation of power development, both public and private, in our country during the Eisenhower administration. In rate of increase in power production, we are lagging behind Russia, though we are still far ahead in total capacity. She is moving comparatively much faster than we are.

The lagging, almost stagnation, in the development of our water resources is due in part to the Eisenhower administration's desire to favor the utilities. They want only sites out of which they are guaranteed a handsome profit.

In their picking and choosing for such sites, they have disrupted basinwide development, which is the only way to develop our rivers properly so that our people and our land will be served. In this piecemeal development they have not in many cases utilized all the potentials of our rivers.

The proper way to develop our water resources is integrated development as envisioned half a century ago by a great Republican President, Theodore Roosevelt, and as put into execution more recently by two Democratic Presidents, Franklin D. Roosevelt and Harry S. Truman.

The latter, however, were kept from doing as much as they planned because of the unyielding opposition of the great aggregation of wealth and political power which the utilities were able to marshal.

Integrated multipurpose development means not only the development of hydroelectric power but also flood control, reclamation, and navigation. The TVA, which was a creation of the Roosevelt New Deal, only recently demonstrated how it can control devastating floods, in addition to all of its other blessings for the people in its area.

This was in the case of the terrific floods which wreaked such damage in Kentucky, West Virginia, and parts of Tennesese outside of the TVA region. Control of the river by the TVA flood-control system prevented damage in the Tennessee Valley, including Chattanooga, where, it was estimated, the flood crest would have reached 52 feet and caused $50 million damage had it not been for the TVA controls.

House Democrats Block GOP Move for Emergency Midwest Corn Relief

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an article from the Washington Post of Friday, March 8, 1957:

HOUSE DEMOCRATS BLOCK GOP MOVE FOR EMERGENCY MIDWEST CORN RELIEF

(By Kenneth Weiss)

House Democrats yesterday beat down a Republican move to push through emergency relief for Midwest corn farmers.

The 187-to-180 vote came on a motion to substitute the GOP bill sponsored by Representative AUGUST ANDRESEN, of Minnesota, for a Democratic measure that would have provided aid for corn and feed-grain producers in all parts of the country.

The Democratic bill is sponsored by Agriculture Committee Chairman HAROLD COOLEY, of North Carolina.

COOLEY expressed some doubt that this bill would pass, since northern Democrats may side with Republicans to kill his more costly measure.

Shortly after the vote on the Andresen amendment, the House ended debate on the farm bill until Tuesday by agreement between majority and minority leaders.

The next vote probably will come on a new substitute sponsored by Represent ROBERT D. HARRISON, Republican, of Nebraska, following the recommendations of the American Farm Bureau.

The substitute would allow farmers to either grow 37,300,000 acres of corn at a $1.36 per bushel price support or 51 million acres at $1.31 price support.

Participation in the soil bank would be voluntary under the first choice. But if the farmer grew under the 51-million-acre limit, he would have to put 15 percent of his cropland in the acreage reserve.

The Cooley bill would allow corn farmers to plant 43 million acres this year and still allow farmers to participate in the soil bank and receive price-support payments of $1.36 a bushel.

It would also extend similar soil-bank aid to feed-grain producers in the South and Southwest. The Republicans strongly-oppose this part of the bill.

The Andresen measure would have merely increased the amount of corn Midwest farmers may plant this year from 37,300,000 acres to 51 million.

Republican leaders predicted that President Eisenhower would veto the Cooley measure if it were passed. In any event, they said, hearings in the Senate on the complex Democratic bill would take so long that the legislation could not help corn farmers who must plant their crops in the next few weeks.

The legislation is described as emergency, since current law limits Midwest farmers to planting a total of 37,300,000 acres if they want price supports and soil-bank participation.

National 4–H Club Week

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. AVERY. Mr. Speaker, March 2 to March 9 are important dates for all 4–H Club members. During this time they observe National 4–H Club Week. The theme for the week is Improving Family and Community Living. This theme truly defines the outstanding work of all 4–H Club leaders and members. I am especially proud of the fine achievements of the 1,365 clubs in Kansas. The 32,000 club members in the Sunflower State are putting into positive action the ideals and principles embodied in the 4 H's—Head, Heart, Hands, and Health. We cannot overemphasize the contribution to community and country which 4–H leaders and members are making. 4–H projects give practical preparation for future years no matter what the member might do as a vocation.

The 4–H program is one of our bulwarks for good citizenship. You need never worry about a 4–H Club member becoming easy prey for those who try to peddle communism and atheism.

I salute the 4–H leaders and members during this national observance. 4–H boys and girls help us to gain the respect of other nations of the world.

The following news article, appearing in the Marysville (Kans.) Advocate newspaper, Thursday, February 28, 1957, tells of the 4–H work in Marshall County, Kans. There are approximately 400 members in this county. This article clearly shows the outstanding work of the 4–H Clubs. The same story and similar accomplishments can apply to other counties in Kansas.

The news article follows:

Community projects backed by county-wide campaign, a three-way change in 4–H Club agents and the climaxing of an outstanding championship livestock career for a 4–H girl spotlighted the 1956 activities of 4–H Club work in Marshall County.

Individual members won recognition with scholarships during the year and many garnered purple championship awards with red

and blue ribbons at county and State level fairs.

Safety was the number one community project for the county clubs as members stressed safety on the highway, safety at home and safety in the use of tractors and other farm machinery. Every club had at least one club program emphasizing safe driving.

Dean Henoch, State highway patrolman, was a popular speaker pointing out the rules and courtesies of safe driving to prevent accidents.

Pertinent statement of Janice Schneider at a meeting of the Balderson Boosters, summed up the safety campaign in a slogan:

"More skilled drivers is the best insurance against accidents. It is better to be skilled than killed."

In an effort to reduce the rat population at a community level, clubs in the county spearheaded by the Wide-Awake Club started a rat and mouse control campaign.

Clubs purchased hundreds of pounds of rat control, sacked it and resold the poison to farmers to curb the rodent menace.

Final community project was a county-wide campaign to raise funds for Rock Springs Foundation in which light bulbs were sold by clubbers. Funds were contributed to Williams Hall, in memory of Dean Williams, K-State extension officer.

A tractor maintenance school on the local level sponsored by the Sunflower Club, pointed out simple methods in farm safety in tractor maintenance in which boys viewed the actual rebuilding of a magneto.

A farm improvement as another community project was the painting of mailboxes by a new club, the Go-Getters of the Winifred area, in which names of farm residents were identified. The Lester Eastwood family at Summerfield for complete identification listed the names of all the children in the family.

Merry Makers Club of Bigelow spearheaded the drive for funds in Christian rural overseas program and also assisted with a similar drive for the Marysville Community Memorial Hospital.

Among the first fun night events was the selection of a 4-H king and queen at a carnival held at the National Guard Armory with Melvyn Miller, Waterville, Marshall County 4-H Council president, selected as king and Ellen Keating, Marysville, named queen. Runners-up were Marilyn Hermesch, Marysville and Lennis Holle, Bremen.

Program talent was on parade in the annual 4-H Days held at Marysville high school in recognition of National 4-H Week when the largest number of demonstrations ever held were judged. Also performing in competition were plays, chorus, folk dances and other talent. Window displays in stores throughout the county called attention to displays during National 4-H Week.

Regional and State 4-H Days followed the countrywide 4-H Day in which winners competed.

With the opening of spring, project tours were arranged and a popular Sunday pastime was a tour of club projects. Every club had a picnic and project tour in which members viewed the accomplishments.

Plans for attending round-up at Manhattan were made by 12 4-H members while a larger contingent of 39 clubbers spent several days at Rock Springs 4-H camp.

The resignation of Kenneth Visser, hard-working agent in April was climaxed May 31 with a farewell party at Cahan ballroom for the agent and Mrs. Visser, when they were presented a gift from the large crowd in attendance.

Project meetings in home economics and agriculture were held as girls made garments to compete in the style revue and boys tended crops and fitted their livestock animals for showing.

First step for livestock fitting and showing was a school conducted by Gene Grabs, new county agent, who succeeded Visser.

Outstanding charitable project was under the supervision of the Axtell Busy Bees who made dresses for the Navaho Indian Mission at Kingston, N. Mex., which were displayed at the Blaine Pletcher home as preliminary to a show on WIBW-TV.

Parents and members reversed positions as parents night was observed at all clubs during the summer when parents performed for the clubbers.

Prior to exhibitions at fairs, the annual style revue was held in August with Patty Pletcher, Axtell, and Marilyn Horigan, Frankfort, as winner in the girls' division and William Throm, Marysville; Leo Voet, Oketo and Kyle Williams, Vermillion, in the best dressed boys class.

Climax to project work was the showing and winning of awards at Marshall County Fair, Topeka Free Fair, and Kansas State Fair by club members on top quality displays.

Dorothy Hildebrandt, Marysville, and a member of the Sunflower Club, climaxed her 7-year club career in winning reserve champion at the State fair in Hutchinson after a 4-year stretch of county and State championships.

Recognizing her showmanship in feeding and fitting baby beeves, Archer-Daniels-Midland Co. presented Miss Hildebrandt with a trophy. Crescent, junior yearling, was also shown at the American Royal show, Kansas City.

Foods judging team of the Bremen Hustlers Club brought championship honors to their home club as Barbara Koch, Regina Preil, and Mary Ann Gleue won top championship.

Carolyn Kruse, Happy Horseshoe, won two championships and Carol Drever brought home a purple ribbon. Placing first in style revue at the Kansas State Fair was Patricia Pletcher and Billy Throm, Marysville, was second in best groomed boy class.

Many other blue and red ribobns garnered by clubbers at the two fairs at State level added to the final project summary when closing records.

Year's climax came at the recognition party December 13 when Bernard Wassenberg, Marysville, one of the oldest 4-H Club members active in club work as a leader, and Arlyn Peterson, Waterville, were selected for the outstanding alumni awards.

Four members recommended by county officials received the coveted gold award. They were Dorothy Hildebrandt, Marysville; Patricia Pletcher, Axtell; Ivan Eastwood, Summerfield; and Allen Tilley, Frankfort.

Individual awards and scholarships made during the year were to Charles Blaser, Waterville, winner of the Carl Gray Union Pacific scholarship; and Ivan Eastwood, Danforth scholarship in religious training.

In the final analysis total value of club work in Marshall County in dollars and cents was $68,367.17. More than one-third profit was realized by members in the sum total on projects. After costs were deducted total figures show a profit of $21,783.40.

Folly of Wilderness Decision

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent statement by Dean Karl Onthank, of the University of Oregon faculty, and president of the Western Outdoor Clubs, made over radio station KORE, Eugene, Oreg., February 10, 1957.

Dr. Onthank rightly believes that a wiser decision on the Three Sisters Wilderness area boundary would have resulted had the Secretary of Agriculture awaited the land-use and scientific studies now in progress on this area:

COMMENTS ON THREE SISTERS WILDERNESS AREA DECISION MADE ON RADIO STATION KORE, EUGENE, OREG., FEBRUARY 10, 1957

Speaking for the outdoor clubs and all the millions of other Americans who own a share in the national forests, we are shocked that an irrevocable decision is made without the information essential for such a decision. This information will soon be available. It includes the Forest Service's own land-use study previously announced, scientific studies for which Oregon State and university scientists recently received grants, and the State water-resources board study.

No real study of its value as wilderness has been made—only a paper reappraisal of its timber. And no adequate consideration of the great and growing need for such areas. This great impending necessity for more rather than less of such areas has become much more apparent since the hearing, now 2 years ago, and already has been recognized by Congress itself by greatly increased appropriations for national parks, and for recreational facilities in the national forests.

Just as the Forest Service begins to get funds with which the area could be made more accessible to the thousands of people who wish to enjoy it and particularly the innumerable young families with children needing and ready to appreciate wilderness experience. It doesn't make sense to destroy a large part of the only wilderness area in the Oregon Cascades, and the portion most accessibe for the longest season and possessing the qualities most valued by ordinary folks not mountain climbers, and especially by scientists to whom it is an irreplaceable outdoor laboratory,

FACTS CONTRADICTED

The assertion that establishing the Diamond Peak and Mount Washington wild areas is compensation for the 53,000 acres taken from the Three Sisters wilderness area is in contradiction to the facts and to statements made by forest officials up to now, namely that these areas were considered on their own merits and not at all in relationship with the Three Sisters area. Mount Washington has for many years been a limited area and already reserved, although wild-area status gives it more positive protection. And Diamond Peak is, according to official statements, a substitute for the Summit Lake limited area to the south of it which has been opened to logging. True wilderness requires depth and continuity if central wilderness is to retain its essential quality unaltered by outside influence. These small wild areas lack that depth and are in no sense substitutes for the western portion of the Three Sisters area, the removal of which cuts down drastically its depth and its distance from external influence, brings the sight of logging and the sound of the power saws virtually to the foot of the Sisters themselves.

Wilderness is not just high spectacular mountain country comparatively barren which no one else wants, yet. A large part of wilderness which the Forest Service has reserved, is desert, and properly so. Some of it is prairie, some marshland. Certainly a little of it should be a sample of the original magnificent forest, illimitable and in-

exhaustible as it used to be called, which met the eye of the pioneer.

This great and prosperous country can well afford to preserve this one wilderness area in all the Oregon Cascades, not in spite of the fact that it contains some merchantable timber, but because of that fact, so that we may preserve a little of the primeval Oregon forest for the wonder and enjoyment and scientific study of future generations.

CAN ANYONE JUSTIFY

Incidentally, how can anyone justify logging a dedicated wilderness when reports of the lumber industry show that the waste burners of Lane County consume annually 50 times as much wood as the 53,000 acres excluded produces in a year? The more efficient operators waste less, but obviously the industry is still far from the degree of utilization of wood now being cut to warrant sacrificing this area.

To suggest that the area removed can be managed as a tree farm and retain its value as wilderness is, of course, a complete contradiction in terms. The more good tree farms the better, on lands zoned for them as nearly all forest land is. On land zoned for and set aside as, wilderness, trees have an entirely different set of values not measured in board feet. There is no emergency need for this timber.

The area should have been retained as wilderness to be so used and enjoyed, and still to be available if some dire future emergency should require the use of its timber. We are trustees for the future, a principle which this decision ignores. Opening the area now is a tragic mistake which future generations will find hard to understand or to excuse.

Reasons Why the Appropriation Should Be Made To Provide for the Maintenance of the Domestic Production of Tungsten, Asbestos, Fluorspar, and Columbium-Tantalum Under Public Law 733 of the 84th Congress

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. ENGLE. Mr. Speaker, the following is a brief statement of the reasons we believe the Appropriations Committee should restore the funds for the domestic mining program under Public Law 733:

First. The 84th Congress, after full consideration by the proper committees of both Houses, and after lengthy debate, passed Public Law 733 and the President signed it in July 1956. It will be a breach of faith with the people who work for and have invested in the domestic critical minerals mining industry if the necessary appropriations obligated in the passage of Public Law 733 are not made available.

Second. The national security and economy both demand that these highly specialized industries in which about $100 million of private capital has been invested be kept going so as to preserve the trained manpower and technological skills that have been developed.

Third. This is not a direct subsidy, but a price-support program under which the Government buys commodities which can be stored indefinitely.

Fourth. At present no exact military requirements for these materials are known and the Defense Department has stated that new requirements data cannot be assembled until the fall of 1957. All of the concerned Government agencies recommend the continuation of the appropriations until a long-term program for the preservation of these industries can be submitted and enacted by the Congress. Dr. Flemming, of ODM, testified in support of these appropriations on February 26, 1957, to dispel any false impression that he was opposing the appropriations. A consumer of tungsten whose profit interest lies in low prices for tungsten has recommended the discontinuation of the appropriation, but all of the domestic producers of tungsten are supporting the appropriation.

Fifth. Deputy Secretary of Defense, Ruben B. Robertson, Jr., in discussing rapid technical advance in weapons on December 13, 1956, said:

It is anticipated that by the time new guidance can be developed by the Joint Chiefs of Staff and requirements data computed, submission will not be available until the fall of 1957.

Sixth. Dr. Flemming, Director of ODM, in testifying before the Senate Committee on the Interior on February 26, 1957, said:

Taking into consideration a number of factors we do believe that it is important for Congress to follow through on the policy that was reflected in Public Law 733, as passed by the Congress and signed by the President * * * it just does not make good sense from any point of view to permit these mines to close down.

Seventh. Mr. R. H. Thielemann, chairman of the department of metallurgy of Stanford Research Institute, testifying on February 17, 1957, before the House Committee on the Interior said:

The need for metals and alloys which will have useful engineering properties at temperatures of 2,000° F. and higher is urgent. The best and probably the only method we have of developing these materials is with the four higher melting point refractory metals, columbium, molybdenum, antimony, and tungsten.

On February 26, 1957, in an address at New Orleans, La., Mr. Thielemann said:

In developing alloys for service at temperatures above 1,800° F. tungsten, with its high melting point, high modulus of elasticity and high recrystallization temperature appears to be the most attractive for the extremely high temperature requirements—it is relatively inexpensive.

Eighth. On February 21, 1957, General Doolittle, Chairman of the National Advisory Committee for Aeronautics, said:

The revolution in military technology has been accelerated. By word and deed the Soviets are challenging us in aviation. They are building more aircraft than we. They are training more aeronautical engineers and scientists than we * * *. We must redouble our efforts to maintain our technological lead.

Ninth. Congressman CARL T. DURHAM, chairman of the Subcommittee on Stockpiling of the House Armed Services Committee, has told us on the floor of the House:

The stockpile goal for tungsten most likely has to be reset in the light of the increasing need for high-temperature materials in the high-temperature era that lies before us.

Tenth. "In this age of peril we are not dealing with an emergency that is here today and gone tomorrow, but with an emergency that will be with us as long as most of us shall live." This statement, made by Dr. Flemming, should be remembered, and it would be a very grave error for us in the Congress to fail to make these appropriations and cause the shutting down of these domestic mining industries which are not adequately protected by tariffs and cannot operate in competition with low wage production from abroad.

Eleventh. The Government still has many contracts for the purchase of tungsten abroad at prices around $55 a unit and all of them will not expire until the end of 1959. Surely, we will not treat the foreign producers better than we will our people at home.

Battle Over Corn

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the Washington Post of Saturday, March 9, 1957:

BATTLE OVER CORN

The agricultural steersmen of the House appear to be driving into precisely the same mudhole that gave them so much trouble a year ago. In that election year the President appealed for a relatively simple soil bank, and Congress added complex price-support provisions which resulted in a veto. Finally the soil-bank measure was enacted, but so late in the year that many farmers could not take advantage of it. This year the administration asked for a simple relief measure for corn because the program favored by a majority of corngrowers failed to get a two-thirds vote in the recent plebiscite. The House has rejected even a liberalized form of the bill.

The ostensible reason for this defeat is that the House Agriculture Committee submitted a much more comprehensive bill allowing farmers to collect soil-bank benefits on land diverted from barley, oats, rye, and other feed grains. Undoubtedly the growing of feed grains other than corn on land taken out of basic crops has caused serious overproduction, accentuated the output of livestock, and helped to depress livestock prices. This problem should be relieved in considerable measure this year by keeping surplus acres idle in the soil bank, but the House committee insisted on doing something more.

The first defect in the plan it has offered is that it might cost taxpayers an extra billion dollars in payments to growers of feed grains. The committee estimates that the cost would be only $250 million, but experts say that the larger figure might be required with maximum participation. At a time

when both Congress and the administration are trying to trim every unessential dollar from the budget this seems indefensible.

Defect No. 2 is that the bill would sweep many new crops under loose Federal control. Farmers would be given a feed-grain quota based on the highest acreage of feed grains grown in any one of the last 3 years. As the Government has no records of individual farm acreage devoted to these crops which have not been under control, quotas would reflect unreliable estimates. In pointing this out to the House, Representative ANDRESEN insisted that soil-bank payments would be made for phantom acres and that very little reduction of surpluses would result.

These defects in the committee bill are so serious that an economy-minded House is likely to kill it, too. No action at all by Congress would mean a whopping corn crop, and lower corn and livestock prices could be expected. Under the present law the acreage allotments have become so small (37.3 million acres for the entire commercial corn area) that farmers are ignoring their quotas and thus forfeiting their right to participation in the soil bank. Mr. ANDRESEN described this as a terrifying outlook for corn growers.

Obviously the best course at this stage would be a compromise between the Democratic and Republican agricultural leaders that would avert the threatened crisis and leave the controversial aspects of the committee bill for later consideration. With corn-planting time only 2 months away, speed in enacting a simple bill is a major consideration. Surely there ought to be vision enough in the House to avoid repetition of last year's mistake.

The Present Situation in the Douglas-Fir Industry

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report contained in the newsletter Random Lengths published by the Lumbermen's Buying Service, of Eugene, Oreg., of which Mr. H. J. Cox is editor:

THROUGH A KNOTHOLE

The February 15 issue of U. S. News & World Report carries a detailed and comprehensive survey of business conditions throughout the Nation. Some of New England is perking up. South and West show gains. Booms seem weakest in the Midwest.

By singling out home-mortgage financing as the guinea pig for tight-money experimenting, the Government and the Wall Street moneychangers have run the Northwest forest products industry into trouble, with considerable effect on Oregon where lumber and plywood fill the State's breadbasket and are an accurate index to its economic welfare.

After totaling all the gains and setbacks, it adds up that business in cities and communities across the country is extremely good but the boom is leveling off. While the forest products industry is temporarily permeated with Government-caused sourness, nevertheless, all signs point to a good year with the start of a lumber upturn within 30 days or thereabouts.

The following information covers the Douglas-fir industry (large and small mills) as reported to the West Coast Lumbermen's Association:

(In millions of board-feet)

	Month of January—			Percent January 1957—	
	1957	1956	1955	to 1956	to 1955
Production	689	777	810	−11	−15
Orders received	651	776	765	−16	−14
Orders to production (percent)	94.5	100	94.5		
Shipments	674	742	737	−9	−8.5
End of month:					
Unfilled orders	585	705	798	−17	−27
Inventory (stocks on hand)	1,075	1,060	980	+1.5	+9
Percentage of unfilled orders to stocks on hand	54	67	80		

GREEN FIR MILLS

With the first few days of springlike weather, everybody realizes that March is just around the corner and that if there is to be improvement in the green-mill market, it must come soon to be of any material benefit. Some mills and buyers are cheerful over what they believe will happen marketwise during the next 2 to 3 weeks, but the majority are still in a frame of mind that, so far, there is little to instill confidence in any quick alleviation of present depressing market conditions. Nobody really knows, all we can do is hope and pray.

Many mills are still closed; others curtailing production, and market demand is not, as yet, keeping pace with extremely low production and this condition can be further aggravated by mills now resuming operation. Apparently, there is some gambling on what the market will bring within another 2 to 3 weeks as there has been spot buying of specific items and schedules this week at mill prices $1 to $2 higher than during the preceding 10 days. But this is no market criterion as the volume of inquiry and buying is still too low to have any hypodermic effect on the green-mill market.

The political prophets in Washington, D. C., incessantly clamor over there being a chicken in every pot and that we never had it so good. But they have never been farther west than Pennsylvania Avenue or Wall Street; otherwise, they would realize that they are either befuddled, prejudiced, or just plain liars. While there is still hope that spring will bring a change for betterment, the moneychangers on Wall Street and the palace guards in our National Capital will have to quickly loosen their tight-money strings or spring will come and go before many of the multitude now engaged in the production and distribution of lumber will know "wot 'appened."

California Goes It Alone—Feather River Project: A "Do It Yourself" Example of Water Development

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. ENGLE. Mr. Speaker, California has long been a major beneficiary of Federal water control and development programs, both through the Bureau of Reclamation and the Army engineers. It will be of interest to those who have supported these Federal expenditures for California and elsewhere through the Nation that California is making a major effort to help itself in meeting its water requirement by planning, financing, and holding a billion and one-half dollar major water project of its own. The excellent article on that subject by Harlan Trott from the Christian Science Monitor of March 7, 1957, is placed in the RECORD for the information of our colleagues:

SACRAMENTO, CALIF.—Events have taken a dynamic new course in California's historic quest for water.

For the first time since it began converting its vast semiarid interior valleys into what now make it the Nation's leading farm State, California is committed to State construction of giant regional water projects.

At a time when President Eisenhower is pleading for less State dependence on Washington for public-works handouts, and Secretary of the Treasury George M. Humphrey is asking citizens to show him how the $72 billion Federal budget can be pruned, the California Legislature has presented the rest of the States with a "do it yourself" example.

By voting State funds for the first phase of its mammoth $13 billion State-water plan, California is starting to reverse the trend of Federal aid to the States that began in the make-work days of the early New Deal.

Many Californians steeped in the story of the State's stupendous self-development, think it is only fitting that California has shown the way back to the traditional American road of local responsibility for State and local affairs.

Hitherto the marvelous man-wrought transformation of California from deserts to gardens has been done piecemeal by local irrigation districts operating much as public-school districts.

FEDERAL CONTROL SHUNNED

Almost the only exception was when California relaxed in the mood of the mid-thirties and let Uncle Sam build and own the Central Valley project. The reason widely advanced at that time was that the Central Valley region could not afford to pay for the benefits received.

But big and useful as that project is, it reclaims and serves only about one-fifth of the land area that Californians have brought into intensive and fruitful cultivation by their own town meeting independence.

Now California is on the road back, a road that some still say is too big and therefore too costly for the direct land beneficiaries to pay for, and yet a road that is not open to Federal financing and hence Federal control.

Some impartial authorities on large reclamation projects say that large Californian landholders are among those actively backing California's decision to "go it alone" in building its $1.5 billion Feather River project, the first link in the State's master-water plan.

This project would turn the Feather River's surplus flow south to benefit arid lands all the way to the Mexican line.

One California land company alone holds about 375,000 acres in the area the project would serve. But only about 138,000 acres of this vast holding are classified by the company as "land that can be farmed."

Under Federal reclamation law, water from a Federal project may not be made available for more than 160 acres of any individual's holdings. If the landholder is married, water is available for 320 acres.

THREAT FORESEEN

Dr. Paul S. Taylor, a leading California economist, said in 1947 that the water provided as a result of Federal construction of dams in the Central Valley project in California would give the holder of 320 acres an annual subsidy ranging in value from $3,200 to $8,000, depending on the amount of water such holders of the benefited land would require.

But in Tulare and Kern Counties, he said, some 20 landholders possess about 360,000 acres that can be farmed, and the value of Federal aid conferred upon them in the water-acreage limitation were repealed "might run as high as $8 million a year."

Furthermore, the selling value of their land would be multiplied, Dr. Taylor pointed out. He said it would be altogether improper to use a Federal project, "paid for out of tax revenues from the entire country, for the enrichment of a few fortunate individuals."

The same threat, he said, is implicit in the current desire of large landholders to secure State financing of the Feather River project. The same interests which in 1947 were attacking the 160-acre water limitation are now said to be among those backing the drive for State financing for the reason that the Federal acreage limitation on subsidized water would not apply if the State builds the Feather River project.

HELP WITHHELD?

Having failed to knock out the 160-acre water limitation in the United States Reclamation law, are they now turning their efforts to State financing in the hope the State of California will foot the bill for bringing water to their thirsty lands, thereby greatly enhancing the value of their landholdings without any cost to themselves? asks Dr. Taylor.

"The natural and foreseeable effects of the long and persistent campaign by opponents of the antimonopoly clauses of national reclamation law at last are becoming visible, so that he who runs may read.

"As a result of its current successes in the recent 4-to-3 decision of the California Supreme Court, and in the drive toward a State Feather River project (minus, of course, the excess land and public-power preference provisions) the present chances for Federal help for water and power developments are pretty slim.

"The taxpayers, water users, and ratepayers of California, at a time when they need help most, are finding it choked off. The National Congress is being told, in effect, by the most authoritative voices in this State that we refuse help on the only terms on which Congress will give it.

"The State constitution contains a 320-acre land limitation and the people of the State voted for public-power preference when they had a chance. So it seems curious that the State court invalidates this and public preference. Tendencies to monopoly will be favored, and the taxpayers of California may find themselves in a morass.

"Perhaps with our water program brought to a halt, the public will insist on finding out where we are, how we got there, and how to get going again. The Federal Government has been a great benefactor to California as builder of our greatest conservation works. We need its strength, with our vast and critical water problem. We need its protection against monopoly, too."

NEW ERA LAUNCHED

This view, notwithstanding, by voting $25 million to start preliminary work on the proposed Oroville Dam—keystone of the $1.5 billion Feather River project—the California Legislature has launched this State on a new era of what some regard as purposeful self-reliance.

As the green "aye" votes winked on the illuminated tally panel in the historic old assembly chamber here, the sighs of relief among the embattled lawmakers outdid the brisk Alaska norther that began dumping its first snow cover in some years over most of the thousand-mile-long State.

Enactment of the Oroville bill climaxed a stormy session. The last-hour measure had teetered for weeks as north and south factions fought over which should come first; State funds for preliminary work on the Oroville Dam or a constitutional amendment clarifying the hard question of prior claims to transported water.

Southern legislators insisted that until they were certain that the south would be assured an adequate share of the Feather River's year-round flow, they would not vote $25 million to relocate the Western Pacific tracks and the State highway around the area to be flooded by the giant works at Oroville.

PAPER HAILS MOVE

Dispelling of the session-long deadlock awoke jubilant echoes in the thriving foothill city of Oroville.

"Fifty years of dreams, sometimes rosy, sometimes gloomy, and at other times verging on nightmare as the unbridled waters of the Feather River spread death and destruction through the peaceful Sacramento Valley, culminated in one concerted whoop of joy last night."

Thus exulted the Oroville Mercury from its fornt-page perch the morning after the legislature recessed.

"The news came through by telephone at 11 p. m., and by 11:10 it was common knowledge. The grapevine that is peculiar to all small towns carried the word to every corner of the community. The long wait was over. * * * A new era that would make Oroville the hub of such activity as the State never before has seen stood on the threshold, and a thousand hands reached out to bid it welcome."

Mayor Connie Walker was called out of a basketball game by a long-distance phone call from Sacramento where a friend with a fistful of dimes was bursting to spill the good news.

By this act of the legislature, Oroville is said to have grown up overnight. Today the talk is of new schools, new homes, new stores, new churches, new playgrounds, new libraries, as the city braces itself for an estimated inrush of 1,575 new residents the first year, and 8,235 the following year. By 1960, Governor Knight estimates the population inrush will top 16,000.

FAIR ASSESSMENT SOUGHT

Next to the question of ascertaining that the southern part of California gets its fair share of the Feather River's new southward flow is that of assessing costs fairly upon the lands to be benefited by this much-wanted water.

One way would be to make the costs a charge on the benefited lands rather than on water users as users—or upon citizens of California living outside the area of direct benefits.

This means the bonds would be secured by taxing the benefited land rather than revenues from water and power tolls.

Assemblyman Vernon Kilpatrick, a southern spokesman, warned that if the cost is not made a charge on the benefited land, "thousands of idle acres served by the new project will rise in value to the point where landholders will realize the price of a Cadillac from each and every acre."

The unearned increment resulting from public improvements in an expanding economy such as California's would be enormous, it is said, and therefore the resulting rise in land values should be taxed to pay off the bonds, since such enhanced land values would be a publicly created thing.

Spokesmen for California's 100-odd irrigation districts adopted a resolution at their association's convention in San Jose recommending that a revolving fund be established, possibly out of State tideland oil royalties, to finance the State water plan.

These funds would be made repayable and might be interest free. To the extent the loans were interest free, they would be a subsidy, of course.

CURB ON SPECULATORS

Such a system of public-works financing would not feed the fires of inflation, it is said, and would tend to discourage land speculators because idle land would bear the same tax levy that an improved lot next to it would bear.

California's long experience with regional water and power development at the "local district" level has shown that when the cost of the project falls on the holders of benefited land, no one can afford to hold land idle waiting for skyrocketing prices. Very quickly the land is taxed into good use, according to Bert Smith, an official of the California Irrigation Districts Association.

If the project is not financed in this way, anyone wishing to buy an idle tract that is brought under irrigation will be all but "priced out of business" before he gets started, it is claimed.

Sound economic tendencies will only be accelerated, according to this opinion, if buildings and improvements are exempted from taxation as is the case in the most intensively productive irrigation districts in California.

Hopes are being voiced that the Feather River project and future phases of the State water plan may unfold in this manner. If so, then cities such as Los Angeles, Berkeley, San Francisco, and Oakland—which paid for their own water supply—will not be taxed to help pay for other communities' public works in the future.

Thus, too, the arbitrary 160-acre water limitation, designed to safeguard America's family-size farms, will be preserved, not by State or Federal fiat, it is said but by historically tested, natural economic laws.

As a Source of Electric Power Even the Coal Most Expensive To Mine May Prove To Be the Best Fuel Bargain Regardless of How Far We Advance in Our Ability To Harness Power From Fissionable Materials

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. VAN ZANDT. Mr. Speaker, because of the fascination which the atom's potential holds for all of us, there is sometimes a tendency to move a bit recklessly in the attempt to convert to reality those undeveloped creations that so far have been confined to man's dreams and drawing boards. Perhaps one of the reasons for the outstanding scientific evolutions that have come about in America is that there are no governors on our dreams—they can be raced at top speed, as they sometimes are, with scientific knowledge and skill in swift pursuit. The idea itself must always lead the way; then the design, the laboratory, and the testing block. This procedure—underwritten by private invest-

ment—has been largely responsible for America's industrial leadership despite the Nation's comparative youth.

Because much of the research on fissionable materials has necessarily been sponsored by the United States Government, putting the peacetime atom to work poses a number of questions which are unique in a free economy. An invention normally is nurtured from idea to application on the theory that its fruition will produce a profit for the individual or firm who undertakes to pay the cost of incubation and development.

In the case of the atom, particularly as it applies to the generation of electric power, the possibility of profit is too remote at this time for us to expect private capital to assume the complete load. The Government has already used great sums of Federal funds in its atomic energy laboratories and workshops. The chain of expenditures was begun by military establishments charged with the responsibility of drafting the atom as a weapon. Once this effort was successful, officials of the executive department, collaborating with the Congress, set out to adapt the atom to peacetime uses.

The subsequent studies, experimentations, and accomplishments have been and will continue to be extremely expensive. I think, however, that they have been necessary, if only from the standpoint of international prestige.

How far Government contribution must supplement or substitute for private investment is the question which has to be answered. It is a delicate question, for Congress must appropriate the funds necessary to encourage continued development of atomic energy, yet must not permit Government dollars to upset the scale of an economy based on freedom of business operation and opportunity. In order to remain on the side of a sober management policy without crossing over into sprees of inebrious spending, Congress must wherever possible be guided by fact rather than fancies, theorems rather than hypotheses, and horse sense rather than political intuition. It is therefore sometimes necessary for us to go back and do a little checking instead of moving too quickly on a beclouded work schedule.

I have recently looked over one of the written contributions of Dr. Arthur Compton, noted educator and physicist, whose participation in the field of atomic science is well known and who in fact directed the work resulting in the first atomic chain reaction. Because the normal impulse of all of us is to accept a statement of so highly respected a person of learning, we often overlook obvious errors that no doubt come about through careless research rather than intended distortion.

In Dr. Compton's treatise on the necessity for expediting development of atomic-generated electric power, this statement is included:

> The supplies of petroleum in the United States have dwindled sufficiently that we are now importing more than is being produced in our own territory. We have coal supplies adequate for many centuries, but the coal is becoming increasingly difficult to mine. In other countries, such as, for example, Britain, the once abundant supplies of coal have already become so difficult of access that the cost is rising rapidly. In the meantime, our society is becoming dependent upon a fast-growing supply of mechanical and electrical power. We also need the organic materials that come from coal and oil as the base from which to make a vast variety of chemical products. These products include plastics and textiles, as well as dyes and artificial rubber. We cannot long afford to use our precious supply of fossil organic material as fuel. To do so is like breaking up the furniture to stoke the furnace.
>
> It is thus that atomic energy is coming just in time to meet a fundamental human need. As our experience grows, the cost of power from uranium and thorium will inevitably decrease and that of power from coal and oil will become greater. It can hardly be before the end of the present century that uranium will to a very large extent supplant coal as the source of commercial heat and power.

Mr. Speaker, I need not dwell upon the fallacy contained in the very first sentence of this excerpt. I am sure that there are enough of my colleagues, especially from the Southwest, familiar with our oil imports program and with domestic oil-production schedules to recognize that there is no justification for that sentence. While I am firmly opposed to permitting international oil companies to continue their current heavy shipments into this country, I must readily admit that these imports do not approach the quantities produced in the United States. I merely remind Dr. Compton's researchers that the State of Texas alone produces more crude oil than all the crude and products imported into this country.

Now let us look into the Compton comment on coal supplies. The conclusions accepted by the author in this regard have already been disputed by Government studies, and by estimates of private fuel experts, as completely without fundation. In this discussion today I shall refer only to the McKinney panel report, whose estimates are based on United States Bureau of Mines figures and are universally acknowledged for their authenticity and accuracy. The report lists economically recoverable reserves of coal in the United States at 948 billion tons—enough to last for almost 2,000 years at present rates of production. Here is a breakdown of those figures:

About 237 billion tons of our reserve stockpile are minable at or near present prices.

An additional 285 billion tons are available at ¼ to 1½ times present prices.

An additional 426 billion tons are available at 1½ to 4 times present prices.

As a source of electric power, even the coal most expensive to mine may prove to be the best fuel bargain regardless of how far we advance in our ability to harness power from fissionable materials.

The present average delivered cost of coal in the United States accounts for only 3 mills per kilowatt-hour in the cost of electricity. The cost of this coal at the mine—leaving out the transportation charges—averages just 2 mills per kilowatt-hour. Thus even if the cost of mining increases by one-half, this rise would add only 1 mill per kilowatt-hour to the price of electricity. Now, if we add the 237 billion tons of coal available at or near present prices to the 285 billion tons that may cost as much as 50 percent more to get out, we find that there are 522 billion tons available before coal gets into a price range which might reduce the cost advantage of coal over nuclear power by as much as 1 mill. At today's rate of production, this advantage for coal would extend into the year 2900. Recognizing that coal requirements will increase as electric generating capacity soars upward, there is a good possibility that United States demand will reach a billion tons within the next 20 years. Even so, coal will be available for another 5 centuries before the cost element increases more than 1 mill per kilowatt-hour.

I might point out that the latter estimates disregard the fact that utilization efficiency in coal-burning steamplants is steadily tending upward. Here is an assessment from the McKinney report:

> Electrical generating plants at present consume about 1 pound of coal per kilowatt-hour. This is expected to be reduced by at least five one-hundredths pounds per kilowatt-hours for each 5-year period. The report further states: The corresponding overall plant thermal efficiencies are 40 percent in 1960 and 46 percent in 1980. It is believed that such improved performances can be obtained through gains in the straight-steam cycle through the use of higher pressures and temperatures. The forecast does not include the possibility of combination gas turbines and steam turbine cycles which might possibly result in even larger gains in efficiencies. However, such possible gains cannot be accurately forecast without a comparable forecast for the cost of the plants using such combination cycles. In event such combination cycles do come into widespread use, these would tend to diminish the rate of growth of nuclear fuel plants.

I have another comment to express on the business of finding coal—as Dr. Compton puts it—extremely difficult to mine. I want to point out that the coal industry has invested huge sums of money in technological improvement of mining machinery and methods. The United Mine Workers of America have welcomed this ambitious program for increased productivity. Twenty years ago the average output per-man-day at bituminous coal mines in this country was 4.62 tons. Today the per-man-day production figure is in the vicinity of 11 tons and tending upward.

Another consideration is the improvement in coal quality through technology. Throughout our coal-producing States, large preparation plants loom on the horizon and in some areas dominate the landscape. These great coal laundries stand as testimony to the industry's determination to utilize every possible contribution of science and engineering to give consumers a better product. A preparation plant makes it possible for the coal company to deliver more B. t. u.'s per carload than was the case only a few years ago. Through a series of treatments, impurities are removed and the coal is upgraded. By applying these and perhaps yet-to-be-developed processes to lower grade coals, including lignite, the

industry will be able to assure a good supply of most efficient fuels even further into the future.

I think perhaps Members of Congress should acquaint themselves with the recent statement by Commissioner Harold S. Vance, of the Atomic Energy Commission, at a hearing before the congressional Joint Committee on Atomic Energy on February 25, 1957. Mr. Vance reviewed the advantages of developing atom-generated electric power in a number of Western Europe countries where coal is not in such abundance as in the United States. Then, turning back to our own needs, Mr. Vance offered this observation:

Now our domestic situation is quite different. We are blessed with large supplies of coal, oil, and gas. They are relatively cheap and are fairly well distributed in relation to power demand. It follows that we are not under the same pressures as are our foreign friends, and we are free, at least so far as our economy is concerned, to follow a plan which, as in the fable of the tortoise and the hare, may appear to be slow at first but which will win out in the end of the race.

I associate myself with the position outlined in the Vance statement. Admittedly most areas of the world are far less fortunate than we with respect to reserves of coal. The Federal Government's present intensive program of research in atomic energy offers an opportunity for us to promote the welfare of all the people in the world; in all probability eve nthe United States, at some time in the far distant future, will need to supplement its traditional power sources as the demands for energy continue their rapid increase.

What is mandatory, however, is that efficiency must always be the watchword of our atomic-energy program. We must not become panicked into spending orgies prompted by erroneous estimates relating to energy sources and reserves. Dr. Compton's book is not the first study by atomic-power enthusiasts who unintentionally have permitted fallacy to displace fact as they carry their important messages to the general public. I salute Dr. Compton for his devotion to the job of helping to extract more and more marvels from the atom, and I am sure that he would be the first to object to any misinterpretation whether or not it would be regarded to be in support of his philosophy.

On the matter of atomic energy, as in every phase of life, our attitude must conform to the pattern expounded by Abraham Lincoln in his letter to Horace Greeley:

I shall try to correct errors where shown to be errors, and I shall adopt new views as fast as they shall appear to be true views.

WASHINGTON, March 7.—Coal is likely to be the lowest cost electric-power fuel for at least several more centuries, Representative JAMES E. VAN ZANDT said today in the speech prepared for delivery on the floor of the House. He pointed to the following factors in support of this estimate:

1. About 237 billion tons of coal reserves are available in the United States for mining at or near present costs, and an additional 285 billion tons are mineable at from 25 to 50 percent more than present costs. At the present rate of production, these reserves alone would last for more than a thousand years.

2. Utilization efficiency of coal-burning generating plants is tending steadily upward.

3. Upgrading of coal through technology will continue to increase the efficiency of this fuel.

The statement by Congressman VAN ZANDT, who is a member of the Joint Committee on Atomic Energy, was issued in reply to the published work of a prominent scientist who predicted that "it can hardly be before the end of the present century that uranium will, to a very large extent, supplant coal as the source of commercial heat and power."

Congressman VAN ZANDT said that the Federal Government's atomic energy research program "offers an opportunity to promote the welfare of all the people in the world," and that "in the far-distant future" fissionable materials may be needed to supplant traditional power energy sources. But, he cautioned his colleagues against becoming "panicked into spending orgies, prompted by erroneous estimates relating to fuel reserves," adding that "efficiency must always be the watchword" of the atomic-energy program.

"How far Government contribution must substitute for private investment in furthering atomic-energy research is the question which has to be answered," Congressman VAN ZANDT explained. "It is a delicate question, for Congress must appropriate the funds necessary to encourage continued development of atomic energy, yet must not permit Government dollars to upset the scale of an economy based on freedom of business operation and opportunity.

"In order to remain on the side of a sober management policy without crossing over into sprees of inebrious spending, Congress must be guided by facts rather than fancies, theorems rather than hypotheses, and horse-sense rather than political intuition."

In concluding his address, the Pennsylvania representative referred to a recent statement by Atomic Energy Commissioner Vance, who pointed out advantages of developing atom-generated electric power in some western European countries but emphasized that the same situation was not applicable in the case of the United States, which has vast stores of coal, oil, and natural gas.

Introduction of Bill To Improve Methods for Handling, Transporting, and Slaughtering of Livestock and Poultry

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. DORN of South Carolina. Mr. Speaker, today I am introducing a bill, the purpose of which is to promote the development and use of improved methods for the humane handling, transporting, and slaughtering of livestock and poultry in interstate and foreign commerce.

My bill would authorize the Secretary of Agriculture to conduct, assist, and foster research, investigation, and experimentation to develop and encourage the adoption of improved methods for humane handling, transporting, and slaughtering livestock and poultry. It would also authorize the Secretary of Agriculture to appoint an advisory committee composed of nine members who would consult and advise him in carrying out the proposed legislation. He would also be authorized to allow the advisory committee their necessary travel and subsistence expenses in connection with their attendance at meetings called by him or his designee. This bill of mine further provides for the Secretary of Agriculture to report to the Congress annually, commencing January 1, 1959, concerning actions taken pursuant to the legislation, and authorizes the appropriation of necessary funds to carry out the bill's provisions.

Mr. Speaker, the bill I am introducing today is a realistic and practical approach to this problem. Many idealistic proposals and opinions have been advanced dealing with the humane slaughter of animals. We are all in favor of the most humane and practical way to slaughter animals for market. The difference of opinion and controversy now existing is due only to the method of slaughter. The meatpacking plants of our country have been constantly striving for many years to develop their slaughtering processes along the lines of efficiency and the most humane methods possible under the circumstances. These techniques and methods are tied closely to employment, humaneness, and the quality of meat. For them to change their methods by mandatory legislation overnight would necessitate employment readjustment, new construction, and new machinery. Hasty, mandatory legislation might even result in more inhumane treatment of animals. I believe the proper approach is through this legislation that I am introducing today. We should, first, have competent experts in the Department of Agriculture, in the industry, and in the humane societies get together, study the situation, and make recommendations which will have the support of all concerned. I believe this can be done with the kind of study this bill provides for. I believe that out of this research and investigation, which this bill would sponsor, would come recommendations which would improve our transportation, handling, and slaughtering. This research and investigation, I am sure, would have the full cooperation of the Department of Agriculture, the meatpacking industry, and the humane associations.

Ernest W. Mueller, Knoxville Farmer, Defends GOP Farm Administration

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the Oskaloosa Daily Herald of February 20 which is a reply to an insertion placed in the CONGRESSIONAL RECORD on February 18 by the Honorable MERWIN COAD:

ERNEST W. MUELLER, KNOXVILLE FARMER, DEFENDS GOP FARM ADMINISTRATION

KNOXVILLE, IOWA.—A Republican farmer turned feed salesman defended the GOP farm administration Wednesday against charges it has placed farmers under a financial strain.

Ernest W. Mueller, who hosted a lunch for Agriculture Secretary Ezra T. Benson at his farm last summer, said he quit farming recently through no fault of the administration.

Mueller said he moved off the farm he rented and sold his livestock and machinery because he was out of feed and he didn't want to borrow money to keep his 90 dairy cows and 210 hogs going.

"If we had some moisture in the subsoil, it might have been O. K. to borrow the money, about $4,000 to $5,000. But we don't because we've had drought here for 3 years," Mueller said.

The drought ruined Mueller's crop last summer. He started the winter with 2,400 bales of hay, instead of the 8,000 bales he had a year earlier, he said.

"I don't blame him (Benson) or anyone else for a lack of moisture. And a lack of moisture is our problem," Mueller said.

Representative MERWIN COAD, Democrat, Iowa, reviewed Mueller's case in a statement he entered Tuesday in the CONGRESSIONAL RECORD in Washington, D. C.

COAD said Mueller's situation was "concrete evidence that all is not well on the farm when those who are loyal Republicans cannot stand the financial strain which has been thrust upon them through the policies of their own party."

Mueller didn't view it in that light.

"I'm not resentful. I'm not blaming anybody," he said.

Mueller said the Government did everything he could expect it to do for farmers who found themselves with a lot of livestock and little feed.

"I didn't expect free feed. I could have borrowed the money from the Government, but I decided not to. It was my decision," Mueller said.

Mueller said another factor that prompted him to give up farming was several wonderful job opportunities offered him. Mueller attended Iowa State College, Ames, for 3 years before he was drafted into military service during World War II.

Mueller, 39, said he has a good job with a wonderful company doing the kind of work he likes, and, besides, he is getting a little old to keep up the strenuous pace of running a 90-cow dairy farm.

"You have no idea how happy I am," Mueller said. "This work has so much more potential."

Answer to Secretary Seaton's Recommendation for Acceptance of Private Utility Proposal on Trinity Project

---

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. ENGLE. Mr. Speaker, the recommendation of Secretary Seaton that Congress approve the so-called partnership proposal of the Pacific Gas & Electric Co. on the Trinity River project, whereby the company would build the powerplants and purchose falling water from the project, boils down to one more attempt to repudiate and reverse a half century of Federal Government power policy and at the same time load hidden charges on the power bills of California power and energy users. This proposed revision of the concept of reclamation whereby the project is operated for profitmaking purposes would also result in the partitioning of one segment of the project for construction and operation entirely separate and different from the rest of the project, would emphasize operation of the project for power production to the detriment of water consumptive use purposes, would result in additional costs of power to Federal installations in California, and would not give the protection provided in the Trinity authorizing act for fish and wildlife values. Acceptance of the recommendation would mean the end of public power in California. Following is a brief summary of reasons why Secretary Seaton's recommendation should be rejected and the P. G. & E. proposal disapproved.

COMPANY'S PROPOSAL VIOLATES AND REPUDIATES LONG-ESTABLISHED FEDERAL POWER POLICY

First. Acceptance of Secretary Seaton's recommendation and approval of the company's proposal would be a reversal of half a century of power policy in the Federal Government. The policy which has been established by Congress relative to disposal of electric power and energy made available through development of the Nation's water resources is set out in numerous acts of Congress, including but not limited to, the Reclamation Project Act of April 16, 1906, the Raker Act of December 19, 1913, the Federal Water Power Act of 1920, the Boulder Canyon Act of 1928, the Tennessee Valley Authority Act of 1933, the Rural Electrification Act of 1936, the Bonneville Act of 1937, the Fort Peck Act of 1938, the Reclamation Project Act of 1939, the Flood Control Act of 1944, the River and Harbor Act of 1945, the Eklutna Project Act of 1950, the Falcon Project Act of 1954, and the Small Reclamation Projects Act of 1956. This long-established policy provides that such electric power and energy be disposed of in such manner as to encourage the most widespread use thereof at lowest possible rates to consumers consistent with sound business principles, and that preference in such disposition shall be given to public agencies, municipalities, and cooperatives.

It appears that the decision to repudiate existing Federal power policy comes from the White House, as it is not consistent with Secretary Seaton's stated views to the Senate Interior Committee only 9 months ago. When asked if he believed "that the Department of Interior should adopt a policy, in harmony with Congress, to maintain the principle of public power" Secretary Seaton replied as follows:

> Yes; I see no difficulty there. Whenever the people of a given area, whether it is a region or a State, want public power, it seems to me that they have the determining voice in the matter in any legislation which Congress has passed which makes it possible for those people to exercise their own right of choice. It is a matter which is entirely up to them.
>
> * * * * *
>
> So far as I am concerned, as long as the preference clause is part of the law of this country, as passed by the Congress, the Department of Interior, so far as I am able to see to it, will adhere to the letter of the law.

Now, only 9 months later, in his report to Congress, Secretary Seaton recommends a proposal which he recognizes cannot comply with long-established power policy and with the Trinity authorizing act:

> I am not unmindful of the fact that acceptance of the company's proposal would render it impossible to comply with two of the restrictions contained in the act. The first of these is the provision which requires that contracts for the sale and delivery of the additional electric energy available from the Central Valley project power system as a result of the construction of the plants authorized and their integration with that system shall be made in accordance with preferences expressed in the Federal reclamation laws. The second of these is the requirement that a first preference be given to preference customers in Trinity County, Calif., to the extent of the 25 percent of the additional energy added to the Central Valley project as a result of the construction of the Trinity River division. Since joint development of the Trinity resource would add no energy to the Central Valley project power system, except to the extent that the company provides support under its proposed amendments to the existing sales and interchange contract, it appears that there would be no power from which to satisfy either of the two restrictions mentioned.

Secretary Seaton's recommendation would lay aside existing Federal power policy in the interest of a greater financial return to the Federal Government. The Secretary admits that, by so doing, preference provisions in the authorizing act could not be complied with and preference agencies would be required to pay $86 million more for power and energy over a 50-year period than under Federal development. If the San Luis unit, now proposed for authorization, is constructed, preference customers would have to pay $118 million more for energy.

If it were the policy of the Federal Government to exploit the power potential of Federal projects for profitmaking purposes, a less drastic measure but a more lucrative one would be to simply raise the project power rates. Power rates for the Central Valley project could be brought in line with the existing rates of the private utilities and return to the Federal Government, over the payout period, several times the additional $165 million which the Secretary claims from the P. G. & E. proposal.

There is another approach that might be considered if the project is to be put on a profit-making basis. The company sets the value of the Trinity energy at load center at 13 or 14 mills per kilowatthour. Why shouldn't the Federal Government go ahead with construction of the power plants, keeping the Central Valley project intact, and deliver the energy to the company at the load center at its stated value? The surplus to the Federal Government over the repayment period would be close to half a billion dollars.

IT IS THE POWER CONSUMERS WHO PAY

Second. Acceptance of Secretary Seaton's recommendation, and approval of the P. G. & E. proposal would load hidden charges on the power bills of northern California power and energy users. The homeowner, farmer, and businessman would find the P. G. & E. highly advertised generous payments to the Government on their power bills. Also on their power bills would be the costs to the company for construction and operation

of the powerplants as well as the Federal, State, and local taxes, which the company claims that it would pay if it builds the power facilities. These are all costs to the company which would necessarily have to be passed on to the consumers. Specifically, the Pacific Gas and Electric Co. pays no money it does not collect on the electric bills. The cost of the power houses, the money paid the Federal Government for falling water, as well as the Federal, State, and local taxes, would all be charged to the power users, and at a profit. To put it simply, if the P. G. & E. proposal produces $165 million more in surplus revenues over the payout period than under Federal construction and the P. G. & E. Co. pays $135 million in taxes, then the power consumers pay $300 million more, plus the company's profit.

It is pertinent to point out that just 4 days before Secretary Seaton made his recommendation, the Pacific Gas and Electric Co. submitted a petition to the California Public Utilities Commission asking for an increase in electric rates of almost 6 percent, which would average 37 cents per month per household. The company itself estimated that the electric rate boost affecting 1,735,000 California customers would increase revenues by $16,600,000 annually. Under a system where allowable rates are based upon costs plus a nice profit, why should the company hesitate to raise its offer for falling water by $1,100,000 per year or to place an additional $300 million burden on the power consumers?

PARTITIONSHIP NOT PARTNERSHIP

Third. The Central Valley project was not constructed for profit-making purposes. It was constructed to meet the needs of the people of the Central Valley Basin for water, flood control and for low-cost electric power. Under the Secretary's recommendation and the company's proposal, one segment of the vast integrated reclamation project would be constructed and operated entirely different from the rest of the project. The Central Valley project is a whole integrated system of dams, reservoirs, canals, transmission lines, powerplants and so forth constructed by the Federal Government, all designed for comprehensive development of the basin to protect the people and land from floods, to furnish a dependable water supply for agriculture and defense purposes, and to furnish power and energy at lowest rates possible consistent with project repayment. This recommendation for partnership or partitionship, as it has been referred to, whereby one segment is set apart and operated different from the rest, just does not make sense. Acceptance of the Secretary's recommendation would irreparably disrupt existing operations of the Central Valley project and threaten future development.

ACCEPTANCE OF SECRETARY'S RECOMMENDATION WOULD MEAN THE END OF PUBLIC POWER IN CALIFORNIA AS A DETERRENT TO HIGH POWER RATES

Fourth. The great effort of the Pacific Gas and Electric Co. to put over this proposal goes, of course, beyond the specific facilities involved here. The real purpose of the company is to stop for all time the expansion of Federal power in California in order that it may monopolize the power market in that area. Acceptance of this proposal would set the precedent for future Federal development. Experience and history have shown that in areas of public power such as the TVA area, the Northwest, the Missouri Basin, and California, prevailing power rates, including the rates of private utilities, are lower than in areas where there is no Federal power. Compare, for instance, the prevailing electric power and energy rates in the Northwest with those in the Northeast.

Federal power, therefore, has not only resulted in low-cost power to public agencies, municipalities, and cooperatives, but it has had the effect of holding down the rates charged by private utilities in Federal power areas. Not only have the so-called preference customers benefited but all the users of electric energy in the area have benefited. If Federal power is cut off in California, it will be to the detriment of not only the potential direct beneficiaries of Federal power but also every user of electricity in the area.

PROPOSAL EMPHASIZES POWER OPERATION TO THE DETRIMENT OF CONSUMPTIVE USE PURPOSES

Fifth. Under the P. G. & E. proposal, the project plan of operation would provide for releases of water to maximize power and energy production. The proposed contract includes a very detailed schedule of releases designed to produce the maximum amount of power and energy for integration into the company's overall power system. Although, theoretically, the water needs of the project would retain priority, any time the Federal Government could not meet the schedule of releases for power because of interference with water consumptive use requirements, then the Federal Government would have to pay the company penalties for such noncompliance with the schedule. The proposed contract contains this paragraph:

If, by reason of (1) water supply conditions more adverse than those of record, (2) the authorization of additional divisions of the Central Valley project by Congress, or (3) changes or revision of the crop pattern of said project (the United States is unable to meet the irrigation requirements of said project) (matter in parentheses added), through releases of water made available pursuant to paragraphs (a) and (b) of this article in combination with releases of all water available from the active storage capacities of Shasta and Folsom Reservoirs as defined below, and of such other reservoirs as may be authorized as part of said project the United States may, on advance written notice to Pacific and subject to the provisions of article 12 (d), make available for such irrigation requirements and for use through the powerplants of Pacific's project additional amounts of water even though storage in Trinity or Whiskeytown Reservoir is then less than that specified in table 5 above. Pacific may thereafter take such action as is necessary to provide, from the most economical alternative source or sources, dependable power capacity in lieu of the dependable power capacity which otherwise would be assured by the reservoir storage specified in table 5. If the release of such additional amounts of water by the United States or the action taken by Pacific to provide such capacity causes an increase in the cost to Pacific of furnishing electric power to its customers (the United States shall compensate Pacific for such increased cost by direct reimbursement to Pacific or by appropriate adjustment of the payments provided for in article 13 or both). (Matter in parentheses added.)

The costs to the Federal Government which would result from penalties have not been considered in the evaluation of the proposal. Since the project operating plan is based on historical flows and therefore nothing more than an educated guess, conflicts are bound to arise from time to time between the needs for water to develop electricity and the needs for water to meet requirements of irrigation and municipal water supply. When this serious problem involves the substitution of dollars for water, I fear that it is the water users who may come up short. Even if the priorities are adhered to, I can visualize huge unforseen payments to the company. It seems to me that the basic purpose of the Central Valley project is the storing and releasing of water in the interests of irrigation and municipal water supply. I believe that, in the public interest, such purpose should be fulfilled without imposing payments on the Government of the United States for noncompliance with a specific schedule of operations designed to maximize power benefits.

"MORE FUNDS FOR POTENTIAL IRRIGATION" ARGUMENT NOT VALID

Sixth. Secretary Seaton states in his letter to Congress that acceptance of P. G. & E.'s proposal would "provide substantially more funds for potential irrigation and multipurpose development in the Central Valley project area."

He also states:

It seems to me that the development of power resources of the Trinity River division under a joint proposal such as that offered by the company would mean that power would become a better partner of irrigation development in the Central Valley project area than under all Federal construction.

Unfortunately, the Secretary overlooks two important factors which makes the first statement invalid and proves the second statement false. First, financial studies of the Central Valley project, based on Federal development, indicate surplus revenues sufficient to expand irrigation as fast as the need develops. The need for additional power revenues to assist irrigation development does not exist. For instance, the report of the Secretary indicates a surplus of about $114 million in the repayment analysis of the authorized features. With the San Luis unit added, a recent report indicates a surplus of about $100 million at the end of the repayment period. It is pretty clear that under the present power rate structure of the Central Valley project there will be sufficient power revenues available to carry forward future irrigation development as fast as it is needed. In this connection, in Secretary Seaton's report one of Commissioner Dexheimer's conclusions is as follows:

Construction of the Trinity River division either as an all-Federal undertaking or through the proposed joint development is feasible and justifiable from both as engineering and economic viewpoint. (Under either arrangement there appears to be ample opportunity for expansion of the irriga-

tion phase of the Central Valley project). (Matter in parentheses added.)

The second fallacy in the Secretary's statement is that he overlooks and does not consider the energy needs of the irrigation districts throughout California and the cost to the districts of obtaining necessary energy for pumping. It should be evident that any proposal which results in the irrigation districts having to pay higher rates for their pumping energy does not result in power becoming "a better partner of irrigation."

TAKEOVER PROVISIONS NOT FAVORABLE TO THE FEDERAL GOVERNMENT AND WERE NOT CONSIDERED BY SECRETARY IN FINANCIAL ANALYSIS

Seventh. Consonant with the provisions of the Federal Power Act, the proposed contract between the Pacific Gas & Electric Co. and the Federal Government provides that the United States could acquire at the end of the 50-year contract period the power facilities constructed by the company. However, acquisition by the Federal Government would require payment for the company's net investment in the project, not to exceed the fair value of the property taken, plus severance damages. The financial advantage which the Secretary claims for the company's proposal completely overlooks this matter of acquisition costs to the Federal Government. In other words, the analysis on which the Secretary's recommendation is based overlooks the fact that under Federal construction the Federal Government will own the power facilities at the end of 50 years while under the recommended proposal the company will own the power facilities. In connection with the Secretary's claimed surplus of $165 million under the company's proposal, the report of the Commissioner of Reclamation has the following to say:

For comparison, these two figures require an adjustment that cannot be determined at this time. Under all-Federal development at the end of the 50-year payout period the Federal Government would own outright the fully amortized and operative Trinity River division power facilities, an equity of substantial value. Under joint development the Federal Government could acquire this equity only by payment to the company its remaining net investment plus severance damages. The effect of the required adjustment would be to reduce the difference in surpluses shown above.

It appears that the Federal Government is put in an unfavorable position with respect to takeover of the power facilities at the end of the contract period and that the Secretary has overlooked this in setting out the financial advantages of the recommended proposal.

ASSUMING A POLICY OF "THE MORE SURPLUS THE BETTER" THE AMOUNT OF COMPANY'S OFFER IS STILL TOO LOW

Eighth. When the Pacific Gas & Electric Co. appeared before congressional committees 18 months ago, its offer to the Federal Government for use of the falling water was $3.5 million annually. Since that time the company has increased its offer to $4,617,000 annually or an increase of over $1,100,000 annually. Although on the surface this appears to be a generous offer, it is still too low if it is to be the policy to exploit the power resources to the fullest. Analysis of the offer indicates that it is comparable to loaning the company Federal money at about 3½ percent. The Bureau of Reclamation has allocated to power $94,693,000 of the construction cost of the Trinity River division joint-use facilities. The annual payment of $4,617,000 by the company would just about amortize this power allocation in 50 years at 3½ percent and pay a reasonable share of the operation and maintenance expenses. Therefore, it appears that the offer is not as generous as it may seem on the surface. If it is to be the policy to make money from the power operations then the Federal Government should expect a return on its investment of better than 3½ percent. Other lending institutions get a considerably higher return.

Also, there is another approach that indicates the company's offer is not enough if the policy was to put the project on a profit-making basis. The Pacific Gas & Electric Co. contracts for bulk sales of electricity, such as the contracts with Sacramento Municipal Utility District, Southern California Edison, and various chemical companies, include a clause whereby the price of energy is tied to the cost of fuel. In other words, as the cost of fuel fluctuates the price paid to the company for energy will fluctuate. The company has been attempting for some time to get the California Public Utilities Commission to permit it to include a similar clause in its regular rate schedules. In recent years the price of fuel has gone continually up and the company's recent petition to the Public Utilities Commission for a 6-percent rate increase was based upon increases in the price of fuel oil. In this connection, the company, in its offer to purchase falling water, determined the value of the Trinity energy by a comparison with the cost of steam generation. Therefore, the value of the Trinity energy to the company likewise fluctuates with the cost of fuel, and as the cost of fuel increases the value of the energy to the company increases. Using the company's argument for including an escalator clause in its contracts for disposal of energy, whereby the price is tied to the cost of fuel, why should not a similar clause be included in a contract whereby the company, in a sense, is purchasing energy In other words, as the value of the Trinity energy to the company increases, why should not the company pay more for it? It is my understanding that, with respect to the company's present offer, the energy was evaluated on the basis of fuel oil at $2 per barrel. The price of fuel oil today is in the neighborhood of $2.75 per barrel. Already, then, the value of the energy to the company is considerably more than the company reported as a basis for its offer. Over the 50-year contract period, if past economic trends mean anything, the price of fuel will continue to go up. If it was the policy, then, to put the project on a profit-making basis, it would appear imperative that the Federal Government would have to insist that any contract include an escalator clause tieing the company's payments to the price of fuel.

PREVIOUS CLAIMS BY COMPANY REGARDING THE ADDITIONAL POWER GENERATING CAPACITY UNDER ITS PROPOSAL ARE NO LONGER VALID

Ninth. At the time the Pacific Gas & Electric Co. appeared before the congressional committees its proposal called for installation of 130,000 more kilowatts of generating capacity than the Bureau proposed at that time to install. This higher capacity, of course, was based on integration of the power facilities into the company's overall system and the use of the Trinity facilities for peaking purposes. It was a little difficult at that time to understand how the company could claim this advantage in the face of the understanding we have always had that regardless of who constructed the power facilities the energy therefrom, along with the energy from the other CVP power facilities, would be integrated into the overall system for the benefit of both the company and the Federal Government. Since that time a firm agreement with respect to integration has been reached between the Bureau and the company and the authorized capacity of the Trinity division has been increased to "not to exceed 400,000 kilowatts." Therefore, this argument in favor of the company's proposal is no longer valid and the operating plan will be the same regardless of who builds the powerplants.

SECRETARY'S RECOMMENDATION DOES NOT MEET THE INTENT OF CONGRESS IN AUTHORIZING THE NEGOTIATIONS

Tenth. The authority in the Trinity authorizing act for completing the negotiations did not imply authorization for the Secretary to study proposals which would violate existing law and, as a matter of fact, language in the act itself. In other words, it was assumed that any agreement with the company would include protection for preference customers as well as protection for the power consumers against exorbitant power rates. To make this clear, the Senate report on the legislation carried this statement:

The proviso is in no sense to be understood as an authorization to waive, in any negotiation for the sale of falling water, any preference in the sale or transmission of power as expressed in section 5 of the Flood Control Act of 1944, in the Reclamation Project Act of 1939, or in any other law.

In not following this instruction, there is a serious question as to whether the expenditures for the studies involved in this proposal have not been made illegally.

ACCEPTANCE OF RECOMMENDATION WOULD RESULT IN ADDITIONAL COST OF POWER TO FEDERAL INSTALLATIONS IN CALIFORNIA

Eleventh. Secretary Seaton's report indicates that if the company's proposal is accepted it would result in Federal installations paying about $30 million more for power over the repayment period, and this additional payment by Federal installations would be increased to $71 million if the San Luis unit is constructed. It just does not make sense for the Federal Government to build a project which includes the potential for producing power and to dispose of the power potential without any marketing restrictions while compelling its own governmental agencies to pay excessive private power rates for their required electric energy.

FISH AND WILDLIFE VALUES NOT PROTECTED

Twelfth. The authorizing act for the Trinity project contains a provision to insure preservation and propagation of fish and wildlife, as follows:

Provided, That the Secretary is authorized and directed to adopt appropriate measures to insure the preservation and propagation of fish and wildlife, including, but not limited to, the maintenance of the flow of the Trinity River below the diversion point at not less than 150 cubic feet per second for the months July through November and the flow of Clear Creek below the diversion point at not less than 15 cubic feet per second unless the Secretary and the California Fish and Game Commission determine and agree that lesser flows would be adequate for maintenance of fish life and propagation thereof.

The proposed contract between the Pacific Gas & Electric Co. and the Federal Government includes a schedule of releases of water whereby no water would be released from the Trinity Reservoir for maintenance of fish life for the months of January through September. This is another instance where the proposal is inconsistent with the authorizing act.

Let's Open America's Doors

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an excellent article entitled "Let's Open America's Doors," written by Rev. Father Robert F. Drinan, S. J., appearing in the February 23, 1957 issue of the publication Ave Maria.

Father Drinan is dean of the Boston College Law School and a member of the bars of Massachusetts, the District of Columbia, and has been admitted to practice in the United States Supreme Court. He is also corresponding editor of America.

I agree with the opinions of Father Drinan as expressed in his splendid article.

The views of Father Drinan on this important subject he discusses in his article are worthy of the consideration of all persons. His suggested changes in our present immigration and nationality law are sound.

LET'S OPEN AMERICA'S DOORS

(By Rev. Robert F. Drinan, S. J.)

When the first plane of Hungarian refugees to reach New England touched the runway at midnight on a cold December night at Boston's Logan International Airport, the first American the 75 passengers saw was their new archbishop. In the middle of the night and in piercing cold the purple of the episcopacy and the pectoral cross of Archbishop Richard J. Cushing reminded the refugees that Boston, like Budapest, had prelates heroic in love for those who followed in the path of Christ the Refugee.

The 28,000 refugees now being airlifted to America and freedom have won public sympathy in a way unprecedented even by the displaced persons who came to the States during the last decade. Although there seem to be widespread misgivings over the number of refugees now being admitted and also about the possible disloyalty of some of them, there is, nonetheless, an almost universal acceptance of the idea that the United States has the duty to receive a sizable group of refugees from those more than 150,000 Hungarians who have fled into Austria.

At a time when the public mood is more than ordinarily friendly to the idea of new migrants coming to our shores, it might be well to take advantage of the opportunity to propose a basic reexamination of our immigration laws and, more particular, of the McCarran-Walter Act passed by Congress in June 1952 over the veto of President Truman.

That this act is amazingly well known around the world is common knowledge to anyone who has traveled abroad. This writer recalls vividly a man of Italian parentage in Tripoli, north Africa, showing him innumerable clippings from Italian and Arab Communist and non-Communist newspapers relating the provisions of the McCarran-Walter Act which give preference to northern Europeans of the expense of southern and eastern Europeans. The Italians in Tripoli as well as hundreds of millions of people all around the world have become persuaded that the United States has selfishly and ruthlessly eliminated almost all immigration in the face of a pressing need of many nations for more living room and greater occupational opportunities.

Current controversy over American immigration policy can only be understood in the light of the two distinct waves of immigrants which have come to the ports of the world's richest nation. In 1790 the original racial composition of the nation was formed from persons of northern European stock—mostly of English origin. The country with only 3.9 million inhabitants actively desired more workers to aid in the development of the newly born nation. No trace of serious anti-immigration feeling seems to have existed prior to the substantial influx of Irish, Germans, and Scandinavians in the 1830's and thereafter. The infamous burning of the Ursuline Convent in 1834 in Charlestown, Mass., was probably connected with the growing feeling at that time against all foreign born.

An interesting study has recently been published on the origins of the growth in New England of anti-immigrant feeling. Barbara Miller Solomon in her book Ancestors and Immigrants (Harvard University Press, 1956) traces the rise in conservative New England of that bitter hostility to immigrants which Irish and Italian grandmothers in Boston still tell about.

The major reason for the shift in thinking from a policy of welcoming immigrants to one of hostility to them was the difference in the origin of the migrants. The first wave of immigrants after the formation of the nation came from northern Europe. So long as this continued New Englanders and the Nation in general were hospitable to the newcomers. But when the second wave of immigrants from southern Europe began to grow in numbers and influence anti-immigrant sentiments intensified. Dislike of the foreign born mounted in the 1870's when large areas of eastern cities became exclusively populated with Italians and Greeks.

No sustained sentiment for restrictive immigration, however, developed until the very late 1800's. Such sentiment was understandable in view of the fact that between 1875 and 1903, 11,838,731 person arrived at American ports from European lands. In the wake of this mass migration—the largest migration in the history of the world—it is no wonder at all that Americans began to have doubts about the limits of the melting pot theory.

In 1892 both Democrats and Republicans must have felt that more votes would be gained than lost by including in their respective platforms a plank urging a restriction on the number of aliens allowed to come to American shores. In 1895 the American Protective Association, a nativist or super-patriotic group of 2.5 million members, took a firm position against all immigration. The fear felt at that time was probably not unlike the present disquiet experienced by citizens of New York at the influx of Puerto Ricans, a group that now forms one-third of the archdiocese of New York.

In the years prior to World War I, all orientals were excluded by law, a literacy test was prescribed and other restrictive measures were adopted. But it was not until 1920 that America faced what is conceived to be the urgent necessity of limiting immigration.

After the First World War, Americans beheld the continent of Europe plagued with poverty, distress, hunger, and disease. The Jews of Poland, the unemployed of Italy and the displaced of Germany were reported to be contemplating mass migration to America. A rather serious recession in the United States added to American foreboding on the possibility of an undesirable number of new immigrants in a nation where about 22 million of its 120 million citizens were foreign-born. The agitation for restriction on immigration mounted, so that Congress legislated in 1921 and again in 1924 that no more than 154,000 could enter the United States each year from Europe. No quota, however, was placed then or ever on migrants coming to America from South America or Canada.

Before America's first major immigration law was passed, some public discussion was had but the great debate which such a revolution in American life assuredly called for was not conducted. A great tradition of hospitality and free immigration that had lasted from 1630 to 1920 was ended in a moment of national fear and lack of self-confidence.

What was even worse than the hasty emotional national reaction which precipitated the virtual end of migration to our shores was the formula which Congress adopted to regulate the number of migrants seeking admission to America. A large number of formulas was available to limit the number of immigrants—an objective probably desirable in some form at that time.

But Congress chose the national origins formula and thereby gave public expression and approbation to its conviction that peoples from northern European nations—and especially from England—are to be preferred to those from southern Europe. For that is exactly what the national origins formula does—it allocates to each nation a certain quota based on the number of American citizens deriving their origin from that nation.

Using the census of 1890, Congress granted to England and Ireland about two-thirds of the total of 154,000 which was about one-seventh of 1 percent of the Nation's population at that time. Implicit in this large allocation to English-speaking peoples was the belief that they were more desirable as immigrants than people from Italy or Greece or Spain. The national origins formula presupposed that the racial composition of America in 1890 was a desirable thing to perpetuate—admitting by implication that persons of Anglo-Saxon or Nordic origin made better citizens than Rumanians, Yugoslavs, Ukrainians, Balts, or Austrians.

While the immigration law of 1924 was admittedly designed to restrict immigration from southern and eastern Europe the law did, nonetheless, affirm the desirability for America of receiving 154,000 new citizens annually. The law, however, did not arrange that this number be received each year since it did not provide for unused quotas to be transferred to countries which desired to oversubscribe their quotas. The failure to allow transferability in quotas resulted in

America being deprived of over 60 percent of those aliens whose coming to the United States was declared desirable by the law of 1924.

Of the 3,365,627 visas available for European immigrants between 1924 and 1946, only 1,303,765 or 38.7 percent were actually utilized. The more than 1 million unused visas were the places available to English and Irish who annually declined to fill the quota assigned to those peoples. During this same time, Spain (quota: 250), Italy (quota: 5,645) and other European nations could not take advantage of the largely unfilled allotment of England (quota: 65,261). The immigration law of 1924, in other words, provided for an annual increment in America's population of 154,000, but at the same time enacted a restriction that made this increment impossible of fulfillment.

This racial restriction—the so-called national origins formula—was under attack from the very beginning. Ambassador Henry Cabot Lodge, Jr., has stated that "it is nothing short of incredible that we should * * * have enacted into law such a slur on the patriotism, the capacity, and the decency of a large number of our citizenry."

The National Catholic Welfare Conference has likewise spoken sharply against the use of the national origins formula as the basis of our immigration policy.

The depression with its vast numbers of unemployed very definitely inhibited all discussion of the desirability of a freer and larger flow of immigrants to America. With the end of World War II, however, the people of the least-damaged participating nation felt a moral compulsion to admit some refugees. This feeling has resulted in the first Displaced Persons Act of 1948, under which 205,000 persons could be admitted—all to be charged, however, to the future quotas of the country of the refugees' origin.

Early in his second term, President Truman requested that a study be done with a view to consolidating and liberalizing all Federal laws on immigration. After months of study Senator McCarran, chairman of the Judiciary Committee, and his cosponsor Congressman Francis Walter, came forward with an omnibus bill which, while accomplishing certain desirable results, proved to be unacceptable to the administration and to most religious leaders.

The Senator's proposal reenacted the national origins formula (over the bitter protest of knowledgeable and responsible groups), retained the 154,000 ceiling, gave a token quota of 100 to some oriental nations and placed new burdens on aliens in the United States. This legislation—the McCarran-Walter Act—was enacted by Congress in June 1952.

From the very first, the McCarran-Walter Act has been controversial. In the fall of 1952 a Presidential Commission conducted hearings on the new law in many major cities of the Nation. Catholic spokesmen were unanimous in criticizing various features of the law. * * *

He disapproved in particular of the national origins formula, the restrictive number of immigrants admittable each year and the very broad power conferred on American consuls abroad.

It can be said without qualification that all Jewish and Christian groups in America are united and unanimous in their serious objection to features of the McCarran-Walter Act. Such unanimity on a controversial issue is a very unusual thing among America's religious groups. A few months ago Civiltà Cattolica, a Jesuit fortnightly in Rome which reflects closely the views of the Holy See, commented in a series of articles on the unanimity of the criticism by American religious leaders on the McCarran Act and the Civiltà added its own distinguished voice to this chorus of disapproval.

During the past 2 years, it did not really seem likely that the 84th Congress would act to liberalize our basic immigration law; the 1955 Refugee Relief Act authorizing the admittance of some 200,000 persons provided an excuse for the last Congress to avoid the mounting tide of responsible public sentiment in favor of a new look at America's responsibility to the more than 1 million persons whose names are on the lists of those seeking to gain admittance to a new home in America.

With the explosion in Hungary, however, there seems to be some possibility of action in the forthcoming 85th Congress. What action should be taken?

1. The national origins formula should be scrapped. Aliens should be admitted on the basis of their need to emigrate coupled with their usefulness to America.

2. The present annual quota of 154,000 should be raised to 250,000—a number agreed upon by experts as desirable and approved by the National Catholic Welfare Conference in its testimony to Congress.

3. The unused quotas should be transferred annually to persons in the greatest need.

But questions arise and honest difficulties come up in the minds of good people anxious to be fair to those outside of America who desire a new life. These questions are generally concerned with (1) America's capacity to absorb a larger number of migrants, (2) the possibility of disloyal persons coming in through a more liberal immigration policy and (3) the duty of America to accept migrants in relation to the similar duty of other nations of the world. Let us discuss each of these questions, a clear answer to which is necessary before the United States allows more aliens to obtain her precious citizenship.

First, no economist to this writer's knowledge has ever said that accepting 154,000 aliens each year would be detrimental to the Nation's economy. Nor would any economist state that 250,000 would be harmful since this latter figure is about one-seventh of 1 percent of the 1950 census, just as 154,000 was the same percentage of the 1920 population. Indeed some economists—e. g., Louis Bean—say that the Nation has been retarded by the restriction on immigration since 1924.

One economic analyst has pointed out that the States with the largest proportion of first- and second-generation immigrant families lead the Nation in wealth and industry—as is clear from the States of Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania. A larger labor force, furthermore, would tend to ease the ever-growing demand for women workers—a demand which is now seriously interfering with the home duties of countless young mothers.

Second, the feeling that some subversive elements would slip in if America eased its immigration restrictions is tantamount to saying that our security program at consulates abroad and at reception centers at home is seriously defective.

Quite the contrary is the truth. Immigrants even before the McCarran-Walter Act were "caseworked to death," as one investigator put it. If some aliens who turned out to be disloyal happened to have been admitted in past years, this but proves that lying and deception are an integral part of the Red conspiracy. The fact is, however, that there has been no substantial complaint of any subversive elements among the displaced persons admitted to the United States during the last decade.

Third, has the United States already done as much, if not more, than the rest of the world in accepting new citizens? During the last decade America has, it is true, accepted a number of newcomers which compares favorably with what other nations have done. But America is still one of the least populated areas of the world; other such areas—like Canada—have no rigid barriers and no national-origins formula, yet they are not overrun by applicants. Some Latin-American nations are actively seeking new manpower. No suggestion is being made by any responsible group or organization, however, that America abolish all restrictions on the number or quality of persons to be granted admittance to the United States. A growing number of organizations do, however, favor a searching reexamination of what America can and should do to aid the refugees and the unemployed in the overcrowded areas of the world.

No one has been firmer in speaking of the right to migrate than Pope Pius XII. He has continuously affirmed the right of every man to have those basic necessities of life without which a life of virtue is impossible. The Holy Father has set up in Geneva the International Catholic Migration Office, a central coordinating unit for the vast worldwide work of the church on behalf of migrants. Typical of the statements of the Pontiff on the immigration question is the following delivered to members of the International Congress on Social Studies on June 3, 1950:

"One must face up, in the broader sense, to the duty of giving to innumerable families in their natural, moral, juridicial, and economic unity, an equitable living space, equal in however modest a manner to at least the demands of human dignity."

Has America been prepared to "face up" to the "duty" of giving to families "an equitable living space * * * equal * * * to the demands of human dignity"? Responsible and informed opinion says "No." Now is the hour to begin the "great debate" which should precede any substantial change in our immigration policy. Let us not wait until another world crisis arrives and thousands of refugees by their heroic resistance find a way into our hearts and our fatherland.

So serious a problem as a nation's immigration policy should not be settled on a crisis-to-crisis basis. No group has been more conspicuous than the church in its leadership and charity in all works aimed at aiding immigrants. Let us hope that American Catholics, following this leadership, will continue in their efforts to make our immigration policy one that is totally consistent with our duties to ourselves and to the world.

National Rice Week—March 10 to 16, 1957

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. GATHINGS. Mr. Speaker, why is more of the world's money spent on rice each year than any other commodity, even wheat? Because it is a delicious food; wholesome, easy to prepare, and economical. No finer rice is produced anywhere than in Arkansas, and it is our second largest crop. Yet, for lack of recipes, our local consumption of 6 pounds per person per year falls far under the world's per capita use of 24 pounds. For this reason, I have collected for you the favorite rice recipes of many countries scattered over the earth. Let us boost our Arkansas product. Let us eat more rice.

From the Embassy of France:

ENTREMENTS AU RIZ

One-quarter pint rice; 1¼ pints precook milk; 6 eggs; 3 ounces sugar; pat butter or margine; salt; vanila. Wash rice, drain, then rinse in lukewarm water. Place, well-drained in a casserole with precooked milk, with flavoring added as preferred, sugar, butter, and a small pinch of salt. Put on fire, cover casserole and boil gently over moderate heat for 30 minutes. Do not stir during boiling, to prevent its sticking to bottom of pan. Remove rice from stove, add 6 egg yolks, beaten with a fork. Add more sugar, according to taste. Orange or lemon peel may be substituted for vanila flavoring.

From the Embassy of Turkey:

DOLMAS (STUFFED VEGETABLES)

One-quarter cup uncooked rice; 1 tablespoon tomato sauce (optional); 1 pound ground lamb or beef (from fatty part of meat; 1 teaspoon chopped mint; 1 chopped onion; 1 teaspoon chopped dill; salt and pepper.

Place meat in bowl and add onion, rice, mint, dill, salt and pepper, and tomato sauce. Knead well. This stuffing may be used for a variety of dolmas: eggplant, green pepper, tomato, zucchini (Italian squash). (These may be cooked separately, or together, for assorted dolmas). Place dolmas in saucepan; add 2 tablespoons butter and 1 cup water; cover and cook over moderate heat about 30-40 minutes or until vegetables are soft.

POLAV (RICE)

Two cups uncooked rice; 4 medium tomatoes (or canned tomatoes); one-eighth pound butter or margarine; 3½ cups liquid (water, meat stock, or chicken broth); 2 teaspoons salt.

Wash and drain rice well, then set aside. Cut tomatoes, peeled and seeded into small chunks. Heat butter and tomatoes together until a tomato paste is obtained, then add liquid and salt and boil for 2 minutes. Add rice while liquid is boiling, stir once, cover and cook over medium heat without stirring again until rice has absorbed all the liquid. Turn flame very low and simmer for another 20 minutes. Remove from stove and leave covered for 30 minutes—do not stir.

When transferring rice to serving dish, use a flat serving spoon, handling the rice very gently, to keep it fluffy.

From the Embassy of Brazil:

CANJA (CHICKEN SOUP WITH RICE)

One cup uncooked rice; 1 stewing chicken; 1 tablespoon butter or margarine; small pieces cooked ham; small amount minced onion, parsley.

Cut chicken in serving pieces and brown in butter over low flame. Cover with water, season with salt and pepper, add seasoning (which should be tied up in a small bag), and cook until chicken is tender. Remove chicken from liquid and separate meat from bones and skin. Place chicken back in liquid together with rice. Add ham. Simmer until rice is done. Season again with salt and pepper to taste. Discard condiment bag. Canja is usually served as a soup course, but if allowed to thicken may be used as a main dish.

RICE A LA RIO

One pound rice; salt, and pepper; 1 peeled tomato (if desired); 2 teaspoons shortening; 1 chopped onion, parsley, and very small amount of garlic enclosed in bag.

Rice should be cooked in heavy casserole or stone pot. Melt shortening (if stone pot is used, do this in separate frying pan) and brown rice, stirring continually to prevent sticking. This should take about 5 minutes and is a very important factor in producing a loose product with a nutty taste, which is a prime requirement of Brazilian rice. With the browned rice in casserole or pot, add bag of condiments and tomato; pour salted boiling water until level is slightly above rice in utensil. This is a rather ticklish operation and care is required to avoid hot substance spitting back, which may cause burns. Cover and let boil for 5 minutes over smart fire. Discard condiment bag, then reduce flame and cook until rice is done. Remove from flame and set aside until latent heat in heavy utensil does its share in fluffing rice, which will swell up. When properly cooked, each grain of rice should be separate from the others and not stick to serving spoon.

From the Embassy of Indonesia:

NASI GORENG (FRIED RICE)

Four cups cooked rice; 1 tablespoon tomato catsup; 1 teaspoon chopped garlic; 1 bouillon cube, diluted; 1 tablespoon chopped onions or one-half teaspoon onion powder; 2 tablespoons chopped fresh shrimp or shredded dried shrimp; one-half teaspoon ground red pepper or one-fourth teaspoon black pepper (optional); one-eighth pound butter or margarine.

Saute all the ingredients in the butter, except the rice, on a low flame. Add the rice and mix thoroughly. Remove from fire. Serve hot, garnished with shredded omelet, fried peanuts and pickles. May also be served with any other dry dish, but no sauces.

From the Embassy of Cuba:

ARROZ CON POLLO (CHICKEN WITH RICE)

One pound rice; 1 roasting chicken; 4 large tomatoes or one-half can; one-fourth can petit pois; 2 tablespoons olive oil; 1 pinch of Spanish saffron; 1 onion; 1 garlic bud; 1 green chopped pepper; 1 small can Spanish pimentoes; 1 wine glass dry sherry; 2 cloves; 2 bay leaves; 1 quart shortening; one-fourth can artichokes; salt and pepper.

For arroz con pollo use an earthen casserole, or a Dutch oven (in which case, transfer the chicken to a covered pyrex dish before garnishing). Garnish and allow to steam. Disjoint the chicken and brown quickly in shortening, add chopped onion and bay leaves, saffron, cloves, pepper and salt. Let simmer for 10 minutes. Cover with water and boil until chicken is tender. Add rice, previously washed, cook over a moderate fire until the water has been absorbed, then sprinkle the sherry and olive oil over the top. Cover and allow to steam on a very slow fire until done.

From the Embassy of Lebanon:

STUFFED SQUASH

One-half pound uncooked rice; 2 teaspoons salt; 1 pound ground shoulder of lamb; one-half teaspoon pepper; 16 long summer squash; 1 cup tomato paste; one-quarter teaspoon cinnamon.

Scoop the squash. Mix the other ingredients. Stuff the squash with the meat and rice mixture. Arrange the stuffed squash in a 6-quart sauce pan. Cover with hot water to which has been added one 2-ounce can tomato paste, and boil gently until tender—about 30 minutes.

From the Embassy of Egypt:

RICE OF DAMIETTA

One pound rice; one-half cup pine nuts; 6 whole cloves; 1½teaspoons salt; one-quarter pound butter; 1 medium onion; 1 quart chicken broth; 1 cup white raisins; 1 stick celery; 2 tablespoons tomato paste.

Wash rice and drain until fairly well dry. Melt butter in heavy medium sized skillet. Add rice to brown very slowly in skillet. Sprinkle finely chopped onions over rice. Add the 2 tablespoons tomato paste. In a separate pan, fry nuts in a little butter; add to rice mixture. Add salt and mix well. Stir in chicken broth and cover skillet with tightly fitting lid. Simmer for a half hour. Stick cloves into the celery and add to the pot. Simmer for another half hour. Then add the cup of raisins and cook another 15 minutes before serving.

From the Embassy of New Zealand:

RICE PUDDING

One and one-half ounces rice; 1 pint milk; 1 tablespoon sugar; one-fourth teaspoon salt; small piece butter or margarine; flavoring; nutmeg, lemon rind, vanilla, or bay leaf.

Wash the rice. Put the rice, milk, and sugar in a greased pie dish. Add the flavoring and stir well, or grate nutmeg on top. Bake in moderately hot oven, reducing heat after 10 minutes. Cook slowly for 2 hours.

From the Embassy of Greece:

PILAF

One cup rice; one-eighth pound butter or margarine; two cups clear chicken broth; salt to taste.

Bring chicken broth and half of the butter to boil in a saucepan. Wash and strain rice thoroughly. Put it into the boiling chicken broth, stirring until broth comes to a boil again. Add enough salt, cover well, and allow to boil on a very low fire until all the broth has been absorbed. Heat the remaining butter until it becomes brown and pour it over the cooked rice, leaving it covered for about 5 minutes. Then serve with any roast or boiled dish. A little pepper, if desired, may be added.

LEMON AND EGG SOUP

Two teaspoons rice; 4 cups broth (beef, lamb or chicken); lemon juice (to taste); 1 egg; salt, pepper (to taste).

Bring broth to a boil and add rice. Let it boil until rice is cooked. Beat the egg well and add lemon juice. Pour some of the broth little by little into the beaten egg and lemon juice, stirring briskly at the same time in order to prevent the

curdling of the egg. When this mixture is warm enough pour it back into the soup, over a weak flame and stir briskly until it comes to a boil.

From the Embassy of Italy:

CROCHE DI RISO (RICE CROQUETTES)

One-half pound rice; 2 eggs; 2 cups peanut oil; 4 ounces grated Parmesan cheese; 2 tablespoons chopped parsley; 1 cup toasted bread crumbs; salt and pepper.

Wash and boil rice in 3 quarts of salted water for about 25 minutes or until soft. Drain and cool. Beat eggs lightly; add to rice. Add cheese and parsley and mix thoroughly. Roll in small balls (about size of walnut); dip in breadcrumbs; fry in deep hot oil about 3 minutes or until golden brown. May be served as side dish with meat or fowl. Serve hot. Serves 6.

RISOTTO MILANESE (RICE MILANESE)

Two cups rice; 1 large onion, sliced; 4 ounces grated parmesan cheese; 2 quart chicken brother; one-half pound chopped chicken giblets; one-quarter pound butter or margarine; one-half teaspoon saffron; salt and pepper to taste.

Cook giblets in pint of boiling salted water about 20 minutes or until tender. Remove; chop into small pieces.

Melt butter in large pot; fry onion over low flame about 5 minutes or until brown. Remove onion. Add cleaned, washed rice and stir for 5 minutes to prevent burning. Then add 1 cup of broth; stir constantly. Dissolve saffron in one-half cup of broth; allow to stand 5 minutes. Then strain saffron; add colored broth to rice, stir well. Gradually add remainder of broth as the rice absorbs its. When rice has cooked about one-half hour, add half the cheese and continue stirring. Add giblets, stir constantly. Add additional cup of broth if rice becomes too dry. Entire process takes about 45 minutes, and when done is moist and creamy. Add balance of grated parmesan cheese.

From the Embassy of Israel:

PALESTINE RICE PLATE

One cup rice; 4 medium tomatoes; 1 green pepper; one-half pound ground meat or diced cooked meat—liver or kidneys are excellent—1 onion; I clove garlic.

Fry meat in some fat until brown. Remove meat, add to the fat the rice, tomatoes, pepper, onion, and garlic, and season with salt and pepper—some saffron may be added—and pour over whole 2 cups of boiling water. Cook for 15 minutes. When water is absorbed, add the fried meat, stir, taste to assure that seasoning is adequate; cover and leave on very low heat until rice is done.

From the Embassy of Mexico:

ARROZ A LA MEXICANA (MEXICAN STYLE RICE)

One-half pound rice; 4 ounces shortening; 4 ounces cooked peas; 6 tablespoons tomato puree; 2 hard-boiled eggs; one-half teaspoon onion juice; 2 cups meat stock; 1 teaspoon chopped parsley; 2 avocadoes; 1 cup cold water; 2 Mexican chorisos—spicy Mexican pork sausages.

Soak rice in hot water 15 minutes. Wash it well in cold water and drain. Skin sausage, fry well in shortening. Take out and reserve. Fry rice in same grease. When golden, pour off grease and add tomato puree and onion juice. Reduce flame. As mixture dries, add water, salt, and cooked peas. When water has evaporated, add hot meat stock, and cover. Simmer over slow flame until done—grains should be dry, soft, and separate easily. Serve on hot platter, sprinkle with parsley, garnish with slices of hard-boiled egg, strips of avocados, and slices of sausage.

WHITE RICE

One-half pound rice; 3 ounces butter or margarine; one-half teaspoon juice of an onion; 2 cups of milk; salt; 4 ounces shortening; one-half pound cream cheese; 2 cups of cold water; 4 ounces of cooked peas; 6 peppers.

Soak rice in hot water 15 minutes. Wash well in cold water, drain and fry in shortening with onion juice. Before the rice browns pour off grease and add water. When dry add milk and salt to taste. When it starts to dry again, add cooked peas and skinned, veined and seeded peppers, roasted and filled with the cream cheese. Cover pan and let rice cook over slow fire until done. Add butter or margarine in small pieces, when melted serve on a hot platter.

From the Embassy of Cambodia:

PHOAT KHSAT (ROYAL RICE)

Three cups cooked rice; 2 chicken legs, uncooked; ½ pound lean pork; 1½ cups medium white sauce; salt and pepper; juice of 1 lemon; 4 shrimp, shelled and deveined; 4 to 6 cloves, garlic; 20 scallions; one-eighth teaspoon of Chinese 5-spice essence; 2 eggs, slightly beaten; three-fourths cup of lard or fat; pinch of fennel seed; 2 tablespoons of vinegar; 3 tablespoons of powdered sugar; 2 tablespoons of pimento strips.

Wash chicken, pork, and shrimp, then dice. Brown garlic and scallions in fat in large skillet. Add diced meat and shrimp and saute until flavor is nicely blended, about 30 minutes. Pour cooked rice over mixture and mix well. Add fennel, vinegar, white sauce, five-spice essence, sugar, salt, and pepper. Heat a few minutes to blend flavors. Pour eggs into greased skillet making a thin layer. Heat until almost firm then turn over. Remove from heat, cut into very thin strips and add to the rice mixture. Place rice mixture in a serving dish and garnish with the pimento strips. Serves four.

From the Embassy of Iran:

LOOBIA POLAU

Three cups rice; one-half pound butter or margarine; 3 cups cut string beans; one-half cup chopped onions; 3 cups round steak cubed; 1½ teaspoons salt; 3 tablespoons salt; 1 teaspoon tumeric powder; one-fourth teaspoon black pepper.

Wash rice in lukewarm water about four times and drain, then cover with water after adding 3 tablespoons of salt. Soak in salt water for 2 hours. Then add onions and saute until light golden brown. Add meat and brown lightly. Add beans. Cook mixture for 10 minutes; then add salt, pepper, tumeric powder, and 2 cups water. Cook until liquid has evaporated. Remove from fire, drain salt water from rice and add 2 quarts boiling water. Boil for 5 minutes. Remove from fire, drain rice in strainer and rinse with warm water. Into a heavy cooking utensil (a Dutch oven is very desirable) put the remaining one-fourth pound butter and melt. Pour one-half of this mixture into another container and put to one side. Put one-half of the rice into the heavy utensil with the remainder of the melted butter and add all of the meat mixture on top of it. Then place the remainder of the rice on top. Cook over a slow fire for 25 minutes. Add remainder of melted butter by spreading over the top of the mixture. Continue to cook over a slow fire for about 1 hour. When ready to serve, remove untensil from fire and set in shallow pan of warm water for 10 minutes. Place on platter for serving. The rice in the bottom of the pan should be crisp and golden brown and easily removed for cutting into small squares and placing on top of the dish. Serves eight.

From the Embassy of Australia:

CREAMED RICE SHAPE WITH APRICOT SAUCE

One cup rice; 2 cups boiling water; 1 slice lemon rind; three-fourths pint warm water; 2 tablespoons dried milk; 1 dessert spoon butter or margarine; 4 tablespoons sugar; 1 teaspoon vanilla; 1 dessert spoon lemon juice.

Wash rice, thoroughly cover with boiling water; add rind, cook quickly and drain thoroughly. Add dried milk into warm water, add sugar, cook over low heat, stirring frequently until thick. Remove from heat, add buter, vanilla, and lemon juice. Put into shaped mold, chill for 1 to 1½ hours. Unmold onto serving dish and surround with apricot halves. Pour apricot sauce over it. For the sauce recipe, one will need:

One cup syrup from apricots; 2 teaspoons arrowroot (cornstarch) blended with some of cold syrup; 1 dessert spoon of lemon juice; one-half teaspoon grated lemon rind; 1 tablespoon apricot jam.

Put into pan, stir till boiling and simmer 2 minutes. Color slightly if wish with lemon coloring and allow to cool before pouring over rice shape.

From the Embassy of Saudi Arabia:

RICE WITH LAMB AND NUTS

1 cup uncooked rice; 1 pound lamb chunks; 2 handfuls pine nuts; 1 handful of almonds; 4 tablespoons butter or margarine; salt, pepper, cinnamon.

Put lamb through meat grinder. Melt butter and add ground lamb, pepper, salt, and cinnamon. Fry the pine nuts until golden; drain and put aside. Fry the almonds in the same manner. Add the washed, uncooked rice to the lamb and simmer for about 5 minutes. Then add boiling water (enough to cover the rice). Let the rice and meat mixture cook until water is absorbed and rice is cooked. Add the sauteed pine nuts and the almonds to the rice. Mix well and serve.

From the Embassy of Germany:

RICE A LA TRAUTMANNSDORFF

Three-fourths cup rice; 2 cups milk; 3 tablespoons sugar or vanilla-sugar extract; 2 tablespoons rum or brandy; one-half envelope gelatin; 1 cup whipping

cream; peaches, apricots, or cherries to decorate.

Boil rice in water, pour water away, and bring rice again to a boil in the boiling milk. Let the rice get cool and mix into the mass the gelatin, sugar, and brandy well mixed together. After the rice cools off, mix the whipped cream in, pour into a bowl and chill well. Put on a plate and decorate with peach halves, apricot halves, or black cherries.

SWEET RICE WITH APPLE SAUCE, SERVES 4

One and one-fourth cups of rice, two-thirds tablespoon sugar; vanilla extract; apple sauce; 4 cups milk; salt; 2 tablespoons butter or margarine.

Rinse rice and bring to a boil in salt water. Pour the water into the sink and put the rice into the boiling milk and let it rest. Flavor the rice, mix the butter in and if you like cover it with sugar and cinnamon. Should be served with apple sauce.

From the Embassy of Ireland:

IRISH PUDDING

One pint milk; one-half ounce butter or margarine; one-half ounce sugar; 1 egg; flavoring.

Two ounces rice.

First: Wash the rice by putting it into a strainer then allow cold water to run through it. Second: Bring the milk to the boil, sprinkle in the rice, bring back to the boil, stirring all the time. Cover with a lid, place over a low heat (with a gas stove use an asbestos mat) and cook gently until the grains swell and become soft, thus absorbing a lot of the milk. Stir occasionally. Time, about 30 minutes. Third: Add sugar, butter, and flavoring, mix well and allow to cool slightly. Fourth: Beat the egg, pour the rice on to it, beating to prevent the egg from curdling. Fifth: Grease a pie-dish and pour the rice into it. Sixth: Bake in a moderate oven until set and nicely browned—about half an hour. Seventh: Sprinkle a little castor sugar on top and serve. Note—If liked, a little nutmeg may be grated on top of pudding before putting into the oven, instead of adding flavoring.

From the Embassy of the Philippines:

KAKANIN AND BIBINGKA (ROYAL RICE CAKE)

Rice; sugar; salted eggs; native cheese; grated coconut; granulated sugar.

Galapong, or rice dough, serves as the base for most of the kakanin, and is prepared by soaking rice in water overnight and grinding the rice the next day in a small hand-driven native stone mill. The dough becomes sour from the overnight soaking and thus serves as its own leavening. When an extra rise in the dough is desired, as in those popular little rice cakes called bibingkas, a small amount of well-fermented galapong is mixed with the dough. The ingredients used in bibingkas vary. Granulated sugar is sometimes used for sweetening, or panicha (cane sugar in lump form). Salted eggs, native cheese, grated coconut are added refinements. The interesting thing about this native cake is the way it is baked. The thin batter prepared from the galapong is placed in clay pans, covered, and, as a Tagalog nursery song goes, is baked so that there is fire both above and below it.

BOMBONNOS DE ARROS

One cup boiled rice; 2 eggs; 6 teaspoons coconut milk; 2 teaspoons baking powder; one-half teaspoon salt; 1 cup flour; 1 teaspoon vanilla.

Boil rice (soft boiled) and set aside. Mix and sift the flour, baking powder, and salt. Add the well-beaten eggs, coconut milk, then the soft-boiled rice, and mix thoroughly. Add flavoring. Drop by spoonfuls into hot fat and when golden brown remove and drain. Serve hot with thick sirup coating.

From the Embassy of Japan: Rice is rarely cooked with other ingredients in Japan. Most often it is eaten plain with other dishes of the meal. To us, rice is best as is. The use of flavoring on rice to some Japanese is like covering a fine steak with catsup to some Americans. Please note, however, that rice is eaten at all meals, including breakfast.

My favorite rice recipe:

RICE WITH MUSHROOMS

One cup uncooked rice; 1 can consomme; 1 small can mushrooms; one-eighth pound margarine.

Melt butter in skillet. Add rice and fry until it pops like popcorn. Put rice in a baking dish and add the consomme and mushrooms. Cook 45 minutes in oven at 350 degrees. Thanks to Mrs. John Cooper, West Memphis, for first introducing me to this.

Is This Republicanism?

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. MASON. Mr. Speaker, the following book review by Harold Lord Varney—carried in the March 1957 issue of American Mercury—is a satirical analysis of the book A Republican Looks at His Party, written by Arthur Larson, a ghost writer of Presidential speeches in the recent campaign and the newly appointed Director of the United States Information Agency (USIA).

The review is also an excellent exposé of the fallacies and fictions of this modern political dogma. Mr. Varney points out in no uncertain language that modern Republicanism is just a new name for the same old New-Fair Deal nostrums advocated by both Frankling D. Roosevelt and Harry S. Truman. The $64 question is, Will stanch, old-line, Taft Republicans swallow this nostrum under its new name because it is sponsored and advocated by a popular President and his palace guard?"

The book review follows:

IS THIS REPUBLICANISM?

(By Harold Lord Varney)

The composite impression which the informed reader gets from reading A Republican Looks at His Party is that here is an author who is just too slick to be true. Mr. Larson is one of those writers who never commits himself to a controversial statement without knotting it up with so many qualifications and "on the other hands" that it can almost be used interchangeably as a brief for either side.

He has studied with profit the skilled word wizards of Madison Avenue. With Stuart Chase, of semantics fame, he has a keen sense of the difference between good and bad words in public relations (Mr. Chase once supplied a congressional committee with a long list of words that induce favorable and unfavorable public responses). Author Larson is the master of the subtly loaded word in political discussion. No writer since Adlai Stevenson has made a greater art of sounding impressive and portentous and saying nothing.

That Ike likes this kind of book is a revealing index to the state of his mind on the eve of his second administration. It is difficult to escape the conclusion that the President and those around him are embarked on an effort to transform the Republican Party into something which is scarcely distinguishable from the late lamented New-Fair Deal. Mr. Larson is the prophet of this amazing adventure.

Reading his text is like trying to hold quicksilver. His meaning slides and oozes through the conceptual molds by which we ordinarily apprehend ideas. We are left, after our experience, with a brainful of unsubstantiality.

For instance, Mr. Larson is against big and dominating government (p. 173). But he then goes down the line and praises as new republicanism all the proposals of statism which initially made their unwelcome appearance with Roosevelt and Truman.

He is for free enterprise. But he is also for major spendings to underpin national prosperity and employment. He is for farm subsidies, for more social security, for more foreign aid, for more Government control of credit, and for a program of trade union benefits which consumes, in tabular form, a full page of his text.

He takes a wrist slap at J. Maynard Keynes, the economic mentor of the Roosevelt administration, and then annexes to modern republicanism the whole body of the Keynes compensatory economy.

He utters some kind words for States rights, but then he proceeds to include within the area of Federal control all the powers which have driven the States into outraged protest.

He is against inflation but he is also uninterested in any of the economy moves which would check Government extravagance at its source.

In serving up this mess of political confusion, Mr. Larson is not breaking any new trails. He is simply stating more lucidly and convincingly the familiar pablum that the outnumbered left wing of American business has been embalming in its pamphlets and studies for the last decade.

Where have we heard Mr. Larson's arguments before? We have heard them in the dreary tracts, which, for 11 years, have issued from the publication offices of the Committee for Economic Development. We have heard them in the solemn reports of the National Planning Association. We have read them in the New Republic, in the Reporter, and in the cocksure literature of the whole postwar procession of liberal thinkers. Mr. Larson's contribution has been to rewrite this whole left-of-center literature and give it the label of republicanism.

Mr. Larson got his start in the Government service under the Wallace-headed Foreign Economic Division, and the Leon Hend-

erson-headed Office of Price Administration. Some of the spirit of these wartime agencies rubbed off on him. Without admitting the fact, perhaps even to himself, he supplies the Eisenhower administration with a doctrinal link to the age of Roosevelt.

It is understandable that President Eisenhower welcomes such an accession as Arthur Larson. Himself a congenital blurrer of distinction, he feels at home in the ideological world which Larson has erected around him. He finds arguments in this book to confirm his historic pose as the man who is above all political parties.

But it is difficult to see how this book of denaturization can aid the Republican Party. In an era where there is a desperate need for positive answers to definitive questions, A Republican Looks at His Party will deepen the fogbank that now surrounds so many Americans. Actual Republicans will find few answers to their imperative questions in this literary flight into the obscure.

Virginia Farm Bureau Federation Looks at Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include a statement presented today to the Subcommittee on General Education of the House Committee on Education and Labor by Mr. M. A. Hubbard, executive secretary of the Virginia Farm Bureau Federation.

I believe it merits the attention of the House:

You have now before you for consideration several proposals designed to provide the States and their political subdivisions increased Federal aid to education.

These are financially fascinating propositions, but from the long-term standpoint, they pose a terrible threat to the future health and wellbeing of our political institutions, to our economic order, and to our continuing status as free citizens in a democratic society.

We are not unmindful of the benefits of education. We are fully appreciative of the fact that education has largely been responsible for our progress in forging ahead and becoming in a few short years the richest, the most powerful, and the most influential nation on the face of the earth. Education has made it possible for us to develop and manage successfully a free enterprise economy of unparalleled vigor and productivity—where ordinary people with average incomes enjoy the benefits of goods, gadgets, and services which are quite beyond the reach of even the wealthiest classes in most countries. What is even more important, with all of our materialist achievements, we have been able to maintain a system of government under which we have enjoyed freedom to worship, to work, to achieve, to speak our minds freely, and to be rewarded for our efforts, usually in fair proportion to the value of our contributions to the welfare of society.

We should never fail to appreciate the fact that education has been a major contributor to our progress, but it is equally important for us to remember that it has been education of a special type—always under the control and administration of local people—the some people who furnished the children to be educated. The diversity and variety which is assured by the cooperative administration of 48 State governments and a great multitude of local administrative units is a major bulwark against the evils of centralized school administration.

Virginia is one of the poorer States from the standpoint of the per capita income of our citizens. We rank 32d among States and 17 percentage points below the national average. This is recognized in the formula used for distributing funds under the Kelly bill (H. R. 1) and also under the administration bills—S. 889 and H. R. 3986. Under each of these measures there would be only 10 other States which would stand to gain more than the Commonwealth of Virginia. Under the Kelly bill, other States would provide Virginia with 180 additional classrooms and under the administration proposals—S. 889 and H. R. 3986—other States would contribute 159 classrooms. Looking at these propositions purely from a dollars and cents—bricks and mortar standpoint, it would appear that we should be wholeheartedly in favor of increased Federal aid for school construction. This would be especially true of our rural areas which are particularly hard-pressed in the matter of providing adequate financial support for school construction and operation. The Farm Bureau has a larger dues paying membership in these areas than any other general farm organization in Virginia. I need not tell you that farmers have not been doing too well financially in recent years, which make it all the more difficult to provide, from local and State tax sources, the increasingly large sums needed for school construction and maintenance.

Yet in 1949, and every year since that time, in the face of mounting school financing difficulties, our Farm Bureau members have continued to express firm and undiminished opposition to Federal aid to education. This is what they said in 1949:

"We are not unmindful of the advantages which might be gained through a better equalization of educational opportunities among the several States by a program of Federal aid to education.

"However, when these advantages are carefully balanced against the danger inherent in a constantly increasing Federal debt and the extreme likelihood that eventually the educational systems of several States will be increasingly subjected to centralized Federal control through the medium of Federal-aid programs to the States and their political subdivisions, we are strongly of the opinion that a program of Federal aid to education would be a serious mistake.

"We suggest instead that a more prudent course would be for the States and their political subdivisions to carefully examine the possibilities existing at the local level for raising the funds needed for the improvement of educational facilities. Unless and until such possibilities have been carefully explored and fully utilized, we can see no justification in requesting that the Federal Government assume obligations and responsibilities which we ourselves may choose to ignore or neglect."

Why do we continue to take this position? Is it because we fail to appreciate and understand the part which education has played in the unprecedented progress which our Nation has made in the few short years since we became a Republic of free people? Certainly not. We know well enough that we could not have developed and successfully managed the complex political and economic institutions of our free-enterprise economy without a school system which made available to each student all of the education which he or she was willing to work for or was capable of absorbing.

Nor are we unmindful of our own Mr. Jefferson's admonition: "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be." We suspect that people generally understand this. It is because of this understanding that they have been willing to make and are continuing to make decisions to tax themselves in the States and localities in order to provide adequate educational facilities. We think the record is a good one.

Information supplied by the United States Chamber of Commerce indicates that—

In 1947 increased enrollments called for 9,500 classrooms—16,000 new classrooms were provided.

In 1950–51 increased enrollments called for about 20,000 new classrooms—44,000 were provided.

In 1955–56 increased enrollments called for 38,500 new classrooms—67,000 were provided.

The most recent estimate of the United States Office of Education for 1956–57 placed the need at 41,300 classrooms—69,000 were built. It is to be assumed that a certain percentage of these were replacements for old inadequate facilities. Even so, the record still apppears to be a good one.

In the 10-year period, 1945–46 through 1955–56, Virginia spent a total of $346,348,377 in capital outlay on our public-school system. During this same period, teacher salaries have increased by 109.4 percent. Expenditure per pupil in average daily attendance has been increased from $90.25 in 1946 to $200.90. It is estimated by our State department of education that the costs of needed construction between now and 1960 will amount to a total of $220 million. We are asking for no assistance in meeting this obligation. We prefer doing it in our way without either assistance or interference.

Hardly a day passes without a newspaper account of some Virginia locality taking action of one sort or another to provide more adequate provision for the education of our children. The State government has underway at the present time a thoroughgoing study of our entire tax structure with the idea of providing a larger measure of State support for our schools. The problem is not yet solved, but we can and will provide a solution and it will be a far better one than any that could be offered by the Federal Government.

We make no pretense that our present educational system is perfect. It is far from perfection. But its imperfections are not all traceable to the lack of money. One of the Nation's leading school administrators, Dr. H. I. Willett, superintendent of schools for the city of Richmond, Va., recently stated that "in too many high schools, it has been possible for a pupil to elect himself out of an education. Is it true that many pupils select subjects that are easy rather than a program that more effectively utilized their talents?"

This indiscriminate use of elective courses by students seeking the easy way is one of the basic weaknesses of our schools. Is this weakness traceable to a lack of money? It is not. It has come about because all too many parents and pupils have somehow gotten the erroneous notion that education can be bought, paid for, and possessed by anyone who can afford the going price—like a sack of potatoes or a new automobile. The solution to this problem cannot be found in the Federal Treasury. It is a matter of attitude—money is not involved.

If our educational system is to continue to carry out so splendidly the objectives which Mr. Jefferson had in mind, its financing, management, and control must continue to be the direct responsibility of the people who furnish the children to be educated. There is no surer way to shrink, shrivel, and diminish the citizen's interest in education than to take from him the direct responsibility for financing, operating, and controlling the schools where his children are edu-

cated. Without this citizen-interest, the public-schools system will gradually become a thing separate and apart from the lives of people at the community level—control will become more and more centralized and with centralized control will come uniformity of method, of curricula, of source material, and in the end, conformity to one single pattern acceptable to the central authority. This is not the pattern of public education that has made the United States an oasis of freedom, plenty, and opportunity in a world that is rapidly becoming a desert of political suppression, police-state harassment, and economic poverty. The sickening cadence of the goose step is too high a price to pay for the vaunted efficiency of centralized control. Education without understanding is a very dangerous commodity. The highly literate Hitlerite Germany should be proof enough that education in itself is no guaranty of either freedom or democracy. It takes education of a special sort—decentralized and under the control of the smallest unit of government capable of reasonably efficient administration.

We know, of course, that those who plead for Federal aid say that control will remain with the States and localities. Since when has any responsible legislative body begun appropriating the taxpayer's money without specifying how it is to be used? To our knowledge, this has never been done, and in our opinion, it would be the height of fiscal irresponsibility ever to do it.

Our friends in professional educational circles occasionally ask us, how do you justify your support of Federal aid to vocational education while you strenuously oppose Federal aid to education as a whole? There is a vast difference between a narrowly specialized phase of education directed toward instruction in technical knowhow and the broader field of education in general, the purpose of which, among other things, is to inculcate into the mind of the student a proper understanding of our political and economic philosophy along with the principles of what we might broadly term "right living." It is in this area of education that centralized control, in the hands of the wrong people, could be disastrous.

Our experience with Federal aid to vocational education, however, has served well to convince us of the complete fallacy of the argument that we can accept Federal aid without Federal controls. Proponents of the Smith-Hughes Act of 1916 argued loud and long that there would be no Federal control. It is interesting to note that regulations propounded under this act now fill a 108-page book entitled "Administration of Vocational Education." On page 4 of this book we find the sentence, "Each State is required to submit a plan which must meet with the approval of the Federal Office of Education." If no controls are involved, we would like to have an interpretation on the meaning of this sentence.

Federal, State, and local taxes are estimated to absorb over 29.1 percent of our total national income in 1957. This is close to the point where inflationary pressures become almost irresistible as wage and salary earners fight to maintain their "tax reduced" living standards, either through demands for higher wages or demands for free Government services which they were formerly able and willing to provide for themselves. These pressures singly or in combination could set off a spiral of inflation that would tear at the very foundation of our political and economic institutions.

The Secretary of the Treasury and a former President of the United States are both predicting that unless we follow a more prudent course in public expenditures, we may well bring on a depression that would curl your hair. In the face of all the storm signals, it seems to us the height of folly for the Federal Government to undertake responsibilities and obligations which traditionally and very properly belong to the States and their political subdivisions.

The thing that we now need above all else, if we are to remain a solvent nation, is prudent economy in the use of tax money. Yet we know that any expansion or extension of Federal grants or the grant-in-aid principle is an infallible method of encouraging extravagance and profligacy in the use of public funds. It is the bargain sale technique on a grand scale of enticing people to spend more than they can afford for things they can, without hardship, do without.

The Federal Government with its staggering obligations for national defense and other proper and appropriate Federal activities is in no position to either indulge in extravagance or to encourage the States and localities into doing so.

If the Federal Government is genuinely concerned about the shortage of school classrooms, there is a way that it can safely be of great assistance.

It can and should concentrate fiercely on the problem of eliminating extravagance and waste in the expenditure of Federal funds. It can and should unmercifully prune from their recommended budget all proposed increases that cannot be amply justified on the basis of the safety and welfare of the people of the United States.

When this has been done, it will likely be found possible to lessen the burden of Federal taxation enough to enable the States and localities to collect sufficient additional funds to more adequately meet their own responsibilities in the field of public education. This is the traditional way—it is the efficient way and it is the only safe way to insure proper support of our public school system.

Yes; we do indeed face a crisis, but the real crisis is not in our public school system. The critical issue now before us revolves around the proposition of whether we as a Nation have the prudence and the fortitude to deny ourselves the frills in order to hold on to the fundamentals and to match our soaring ambitions with our limited willingness to pay.

Just What Is Modern Authority?

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. DAVIS of Georgia. Mr. Speaker, Mr. Garland B. Porter, of Atlanta, Ga., has written an interesting article relating to Gunnar Myrdal's book which was used as modern authority by the Supreme Court in its school decisions of May 17, 1954, in which cases the Court undertook to amend the Constitution.

Mr. Porter's article is entitled "Just What Is Modern Authority?" I have asked unanimous consent to insert this article in the CONGRESSIONAL RECORD, and attach it herewith as a part of my remarks:

JUST WHAT IS MODERN AUTHORITY?

(By Garland B. Porter)

(EDITOR'S NOTE.—In the decision of May 17, 1954, the Supreme Court referred to modern authority to support outlawing segregation—this is a look at Myrdal's book.)

Although the Supreme Court of the United States had been edging away from States rights generally for some time, and had handed down several decisions that led away from the general direction of the separate by equal doctrine of handling the Negro problem, the South was not prepared for the radical edict the Court promulgated on May 17, 1954, which said in effect that a Negro child cannot get an education free of complexes except in the presence of white children.

The separate but equal doctrine was based on the *Plessy* v. *Ferguson* decision of the Supreme Court of 1896. That decision was of eight members of the Court, a lone dissenter being Associate Justice John Marshall Harlan (grandfather of the present member of that name). Three years later Harlan, in 1899, wrote for the unanimous Court the famous *Cummings* v. *Richmond County Board of Education* decision, which case went up from Georgia; the *Plessy* v. *Ferguson* decision went up from Louisiana. In his 1899 decision Harlan stated "the education of the people in schools maintained by State taxation is a matter belonging to the respective States." He denied interference "on the part of Federal authority."

On November 21, 1927, the unanimous Court handed down a decision written by Chief Justice William Howard Taft under the title *Gong Lum* v. *Rice*, saying in so many words: "The right and power of the State to regulate the method of providing for the education of its youth at public expense is clear."

These decisions and this doctrine were clearly stated and fully known to all students of constitutional law. They were the clear interpretation of the 9th and 10th amendments, and section 4 of article 4 that guarantees to every State a republican form of government. However, in recent years there had been a growing propaganda spearheaded by the National Association for the Advancement of Colored People, and joined in by sentimentalists and politicians catering to the growing Negro vote, to reverse these traditional applications of the fundamental law. The propaganda had been skillfully labeled "civil rights."

The decision of May 17, 1954, was on the Brown case, coming up from Clarendon County, S. C., originally argued before the Court by the late John W. Davis, a distinguished constitutional lawyer, so dedicated to the principle involved and so certain of the rights of the States that he did so without compensation. We call attention to a most interesting phase of this latter proceeding, as pointed out by James F. Byrnes, only living former member of the Supreme Court. Had the Court been unanimous in its decision as to Mr. Davis' arguments, it would have rendered a decision in a few months. However, after many months the Court asked for reargument, with specific reference to certain relevant factors, the first of which was:

"What evidence is there that the Congress which submitted and the State legislatures and conventions which ratified the 14th amendment, contemplated, or did not contemplate, understood or did not understand, that it would abolish segregation in public schools?" As Mr. Byrnes pointed out in his documented treatise on this subject in U. S. News & World Report of May 18, 1956, this question would not have been asked if a majority of the Court already had been satisfied the Congress and legislatures had intended by the amendment to prohibit segregation in the public schools. However, after hearing the reargument the Court, through the pen of Chief Justice Earl Warren, wrote a unanimous decision holding segregation to be unlawful. To answer this we need only to call attention to the fact that the same Congress which had passed the 14th amendment later authorized segregated schools in the District

of Columbia. Obviously, the Congress had not intended to outlaw segregation.

In setting aside the previous Supreme Court decisions, the Court as constituted on May 17, 1954, stated "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is simply supported by modern authority." Then footnote 11 appeared. This footnote listed certain "authorities" and surprisingly enough these included a number who have been cited as subversive by the constituted Federal authorities. But the major reference was "And see generally Myrdal, An American Dilemma." It is this specific and amazing "authority" that I will now review for the southern and the American people who are interested.

An American Dilemma was written by Gunnar Myrdal, imported from Sweden by the Carnegie Corp., to make a study of the Negro problem in the United States. It was stated that someone who knew nothing at firsthand of the problem was desired, so that a fresh mind might be turned to the task. In this particular, the study was off to a good start, for Myrdal admitted he knew nothing about the situation. The volume, which appeared in 1944, covers 1,483 pages of the most remarkable material I think I've ever read about Negroes, and the most amazing thing is that the same set of facts he uses for a given conclusion affects me in precisely the opposite manner. Perhaps this is due largely to the fact that when one has lived half a century in a given spot on this earth's surface, what one knows and feels is so deeply imbedded in the subconscious that the conscious mind is just about made up. In fact, there is scant praise to be given a mind that is forever open, that never hits upon anything so solid that it can fasten upon conclusions. The Swedish sociologist seemed to have made up his mind, when he reached the end of his book, that the Negro American and the white American were just about on a par, excepting for a shade of color. Well, with maybe a little edge given to the Negro.

As you read this exposition of Myrdal's alien philosophy, reflect upon the fact that we in the South are accused almost daily in the national press of being unlawabiding, subversive, and spreaders of hate because we do not bow down to the edict of May 17, 1954, as the law of the land. Law of what land? The law of this land is based upon the Constitution and flows through a long chain of Supreme Court decisions leaving education in the hands of the States.

It is certain that Myrdal never did comprehend the heart of our problem, for he was able to say, on page 115: "The white American race" is gradually beginning to be merely a joke even among the populace, except in the South."

LAW AND ORDER

On page 12 he is discussing law and order and finds that it represents such a crucial element both in the American creed and in the spotty American reality. In the next paragraph he begins examination of American conservatism and says: "This conservatism, in fundamental principles, has, to a great extent, been perverted into a nearly fetishistic cult of the Constitution. This is unfortunate, since the 150-year-old Constitution is in many respects impractical and ill-suited for modern conditions and since, furthermore, the drafters of the document made it technically difficult to change even if there were no popular feeling against change.

"The worship of the Constitution also is a most flagrant violation of the American creed, which, as far as the technical arrangements for executing the power of the people are concerned, is strongly opposed to stiff formulas, Jefferson actually referred to the American form of government as an experiment." Pause for a moment—what is he driving at? Of course, at the time of Jefferson there was nothing either hypocritical or unpatriotic in referring to our form of government as an experiment; it was just getting its start. It was based on deep and honest appraisal of human experience in the Old World and on Anglo-Saxon law. Jefferson was helping frame it; to have said it was a tried and proven instrument of human affairs would have been insane. So why does Myrdal quote him thus? From reading further into his idea of the American dilemma I gather that he is laying the foundation to arraign this experiment we have on this continent, and quotes one of the honest founders to support his own, Myrdal's, socialistic theory.

Having quoted Jefferson, he continues: "The young Walt Whitman, among many other liberals before and after him, expressed the spirit of the American Revolution more faithfully when he demanded continual additions to our great experiment of how much liberty society will bear." Don't be amazed, gentle reader, that is the Swedish Socialist speaking; those are his words. He is the man who impressed our Supreme Court; he is believed more implicitly than the impractical words of our 150-year-old Constitution. But read on:

"PLOT AGAINST COMMON PEOPLE

"Modern historical studies of how the Constitution came to be as it is revealed that the Constitutional Convention was nearly a plot against the common people. Until recently the Constitution has been used to block the popular will: the 14th amendment inserted after the Civil War to protect the civil rights of the poor freedmen has, for instance, been used more to protect business corporations against public control." (It says this, ladies, and gentlemen, in cold type: I honestly wonder what was happening in the minds of the nine wise men when they read that?)

In the next paragraph Myrdal pulls some of the stingers out of his above analysis; he says that the "Negroes, the new immigrants, the Jews, and the other disadvantaged and unpopular groups, could not possibly have invented a system of political ideals which better corresponded to their interests." The book as a whole is devoted to analyses of how to turn the system to their interests. On the next page is this important finding: "Another cultural trait of Americans is a relatively low degree of respect for law and order" (p. 14.) We begin to feel thankful that the Carnegie Corp. advanced the money for Dr. Myrdal to come over into Macedonia and help us. How comforting.

Dr. Myrdal comes to the facets of the Negro problem in some most amazing words. They prove that when a man goes to a problem of human affairs with nothing more than objective data, with no instinctive feeling for what it is all about, he can appear quite naive to a person who has lived with the problem for half a century. This man Myrdal not only misses the boat, to my mind, but he did not even hear the whistle. He has the most elaborate array of modern ideas I've run across in a single volume. It will be impossible even to approximate listing enough of them to give the full view, but I will pick some here and there that I marked when reading the opus. He runs into the fear of amalgamation of the races. This does not seem to worry him. In fact, no race is pure, he says, and puts his fears at rest—if he ever had any. But he finds (on page 59) that this fear is not what it seems: "The announced concern about racial purity is, when the economic motive is taken into account, no longer awarded the exclusive role as the basic cause in the psychology of the race problem." It's all money, we learn. (The Negro, bear in mind, is claimed to represent some $16 billion of a total of more than $300 billion. The white man covets the Negro's paltry 16 out of 300. But that's not all: we are pilloried throughout the liberal world for the abject poverty of the Negro. In fact, the Negro is practically on charity in our world of wealth.)

A few pages later he says: "Negroes are in desperate need of jobs and bread, even more so than of justice in the courts, and of the vote. These latter needs are, in their turn, more urgent even than better schools and playgrounds, or, rather, they are primary means of reaching equality in the use of community facilities."

Here is something that will be news to the National Association for the Advancement of Colored People. On page 62 Myrdal quotes Robert R. Moton, who seems to be a favorite "authority" of his (Moton's a Negro):

"As for amalgamation, very few expect it; still fewer want it; no one advocates it." Such thinking as this pervades Dr. Myrdal's contribution. "It must be taken for granted in the final outcome of things that the color line will be wholly obliterated. While blood may be thicker than water, it does not possess the spissitude or inherency of everlasting principle. The brotherhood of man is more fundamental than the fellowship of race." This is from Kelly Miller, a Negro.

Concludes Myrdal, "Negroes have always pointed out that the white man must not be very certain of his woman's lack of interest when he rises to such frenzy on behalf of the danger to her and feels compelled to build up such formidable fences to prevent her from marrying a Negro."

Now, here comes Myrdal down our street: "The modern Negro leader will try to solve this dilemma by iterating that no Negroes want to intrude upon white people's private lives. But this is not what southern white opinion asks for. It is not satisfied with the natural rules of polite conduct that no individual, of whatever race, shall push his presence on a society where he is not wanted. It asks for a general order according to which all Negroes are placed under all white people and excluded to not only the white man's society but also from the ordinary symbols of respect. No Negro shall ever aspire to them, and no white shall be allowed to offer them." This statement, as well as others in the book, reveals the utter bias of Myrdal and his failure to understand the white southerner's views. He observes, however, that there is also "plenty of discrimination in the North." However, that word "discrimination" needs a lot of examination itself before we set it aside to cool.

When we used the word it is meant to carry the meaning that something is done or not done because of some bad or reprehensible reason. When we take our money home each week for our own use, we discriminate against our friends and neighbors, we use it for our own selfish needs. When a man moves into our neighborhood and buys a home and begins to pay taxes, he ought to be allowed to vote; but he cannot. He has to stay there for a matter of months or maybe a year before he can vote. But he lives there and pays for the privilege. When you go to a dance and pay attention only to a certain pretty girl, you discriminate against other equally deserving girls, excepting their lack of charm, sex appeal, or beauty of face or form. So what is the catch? This: The 14th amendment said all persons born or naturalized in the United States are citizens. Citizens have certain rights, among them that of voting, and "life, liberty, and property." But the voting angle was covered by the 15th amendment. (The 13th had simply killed slavery.) The phrase "race, color, or previous condition of servitude" did not appear until the 15th amendment. Since that time, the word "discrimination" has been one of vast argument in this Nation.

CAN'T UNDERSTAND DIFFERENCES

But to get back to Myrdal, on page 69 he tips his hand, as we say in the good and ancient game of American poker. "It has

often occurred to me, when reflecting upon the responses I get from white laboring people on this strategic question, that my friends among the young Negro intellectuals, whose judgment I otherwise have learned to admire greatly, have perhaps, and from natural reasons, not had enough occasion to find out for themselves what a bitter, spiteful, and relentless feeling often prevails against the Negroes among lower class white people in America. Again, relying upon my own observations, I have become convinced that the laboring Negroes do not resent whites in any degree comparable with the resentment shown in the opposite direction by the laboring whites. The competitive situation is, and is likely to remain, highly unstable."

The last sentence is of little meaning; however, other portions of the quotation show that Myrdal does not know one thing of what he is talking about. The Negro in America knows that his position is not the same as or equal to the white man; he has learned this not in just one generation, but in many. Myrdal does not know the Negro race is a different race; but the American Negro, having lived in this atmosphere, knows it. The American white man, especially in the South, knows it. Many in the North, because they have been reared where there are few Negroes, do not make much of the fact. Myrdal notes these facts, but seems to miss the essential meaning—where there are great numbers of Negroes, the whites have one view of the Negro problem; where there are few Negroes, the whites have exactly an opposite view. In Sweden where the Negro is just about unknown, Myrdal got no feeling of their race difference at all. In fact, Sweden has a number of basic differences from ours: I read a short time ago that about 15 percent of the population in Sweden is illegitimate, I do not vouch for this, but I read it, I read within the last few weeks that drunkenness in Sweden is increasing in great degree. We will not raise these statistics against Dr. Myrdal, but it does seem that he might use a little of his time at home and not worry us with his off the cuff theories—however, it must have been the Carnegie money that attracted his towering intellect.

He finds it worthy of mention, on page 69, that "The Marxian solidarity between the toilers of all the earth will, indeed, have a long way to go as far as concerns solidarity of the poor white Americans and the toiling Negroes. This is particularly true of the South, but true also of the communities in the North where the Negroes are numerout and competing with the whites for employment." A bit further along he says, "We must guard against a superficial bias (probably of Marxian origin) which makes us believe that the lower classes are naturally prepared to take a broad point of view and a friendly attitude toward all disadvantaged groups." I will say that his arguments and observations revolving around this theme are among the most nonsensical that I have ever read as coming from a man supposed to have a world reputation.

The reason is that he does not comprehend the fact of race. While it might be possible for a forest fire to jump a road in a forest, and thus spread from the poor people of one nation to another where both are members of the same white race, it does not follow that the fire can jump a broad river of race, where millions are involved as in the United States. In fact, it will not make the jump, as is proved by the facts. Although there are many instances of friendship and helpfulness between Negroes and whites in this Nation, particularly in the South, where most of the Negroes live, the line of race is observed, for the simple reason that race is something instinctively felt.

As regards Negroes, it is felt powerfully in Africa and in America, and these are the only two spots on the globe where Negroes and whites live together in vast numbers. This is something that most Europeans will not comprehend, nor will most Americans who live in places remote from large Negro concentrations, such as California, where Negroes are less than 5 percent of the population—and the background of Chief Justice Warren. While he might think his permission to allow his daughter to go to a mixed dance with a Negro escort proves he is broadminded, in the South, where the Negro problem is acute, it proves merely that he is devoid of pride in his own race and ought to be ashamed of himself. (See Cosmopolitan magazine, October 1955, p. 126.)

On page 702 appears rather surprising datum: I quote: "In southern cities the Negro upper class will often adhere more closely to strict puritanical standards of conduct than the white upper or middle class." I've lived in the South all my life; the aforementioned just goes to show that we can always learn something. On page 1388, in the footnotes, Myrdal quotes Hortense Powdermaker: "While they observe and inculcate in their children the puritanical code of which their ancestors were deemed incapable, the descendants of the whites from whom they learned the ideals of behavior are tending to greater laxity." It's good to learn that the Puritan movement is being kept alive in this unsuspected corner.

Also this will come as a surprise to most southerners. Myrdal's researches have upset previous notions of odors. On page 1213, he quotes one Ashley-Montagu who speaks from his experiences and anatomical laboratories that he "has never had any occasion to remark any appreciable difference of the Negro's genitalia as compared with those of whites." This quotation is in defense of Myrdal's case in chapter 6 that there are slight differences between the races but that the white man grossly exaggerates them in his imagination. On page 1213, he quotes further from the authority Ashley-Montagu: "Negroes do have a larger number of sweat glands than do whites. But this does not prove that their body odor is different. Many white authors refer, however, to such a difference as an established fact." Another authority, William Archer, in Through Afro-America, says: "To the best of my belief, the body odor of which we hear so much is mainly a superstition." This also is quoted on page 1213. So there's no further point in worrying about Negro odors.

We cannot possibly do justice to this book in a few pages, as we have said; but we do wish to expose it as an alien product. In this vein let's see Myrdal's view of American womanhood. On page 560 he gets down to the case of insulting the South. He even stoops to the tactic of appraising lynching. He presents an array of authorities on this subject. He says "The danger of the Negros' desire to rape white women has acquired a special and strategic position in the defense of the lynching practice," This. allow me to say, and in print, is positively false. The practice of lynching is not defended anywhere, and lynching has disappeared as a menace to society.

He quotes Tuskegee Institute's figures that "Between 1889 and 1940, 3,833 people were lynched, about four-fifths of whom were Negroes." This being true, some 900 were white folks, let it be said. However, by 1950 the average had dropped to less than one a year. The cry of lynch-rule has been kept alive simply as a device for confusion. Myrdal continues that "a visitor to the South will hear even today from lower class whites that 'a lynching now and then' is expedient or necessary in keeping the Negroes from becoming 'uppity'." This sort of inflammatory statement in the book can do nothing beyond damage to the whole problem. It has no place in an honest appraisal of race relations. Nor has this quotation, page 562:

"The South has an obsession with sex which helps to make this region quite irrational in dealing with Negroes generally. In a special sense, too, as William Archer, Thomas P. Bailey, and Sir Harry Johnston early pointed out, lynching is a way of punishing Negroes for the white Southerners' own guilt feeling in violating Negro women, or for presumed Negro sexual superiority. The dullness and insecurity of rural southern life, as well as the eminence of emotional puritanical region, also create an emphasis upon sex in the South which especially affects adolescent, unmarried and climateric women, who are inclined to give significance to innocent incidents."

At this point he quotes Walter White, for years executive secretary of NAACP, and a Negro who claimed to be sixty-three-sixty-fourths white: "Lynching is much more an expression of southern fear of Negro progress than of Negro crime." White, by the way, married a white woman. His absurd claim to be only one-sixty-fourth Negro is in line with much of the NAACP propaganda. To be that, it was necessary for at least one of his progenitors to have been full white for seven generations.

The improbability of that sort of score-keeping is obvious. However, it is well-known in Atlanta, where his father was a mail-carrier, that both immediate parents had Negro blood. Therefore, add at least another generation. How many people can go back eight generations, especially where Negro lines are being traced? And yet the press generally, in the North, in his obituary, labeled him as stated above.

On page 553 Myrdal says: "The South has the highest crime rates in the country. Both Negroes and whites in the South have a higher crime rate than the average for the Nation. Within the South, however, the number of convictions of Negroes is not much greater, on the average, than their proportion to the population." That's Myrdal, the man to whom our august Supreme Court referred us in the famous footnote which Ike shrugged off. Let's look at the record.

The late W. A. Bonger, professor at University of Amsterdam, in his work Race and Crime, says: "In conclusion, it must be remarked that the criminality of Negroes in the Northern States is considerably higher than in the Southern States, actually 3 to 1." These two foreign observers must have had different sources of facts.

However, there is an actual record, and it supports Professor Bonger. The speech of Congressman JOHN BELL WILLIAMS, of Mississippi, is quoted in the CONGRESSIONAL RECORD as of March 27, 1956. He says, "The big lie campaign touched off by the sociological fiat of the Supreme Court has reached such magnitude that the time has come to set the record straight."

He cites that "integrated Ohio sent more Negroes to prison in 1950 than did the segregated States of Arkansas, Tennessee, and South Carolina combined. Those 3 Southern States, according to the 1950 census, have a Negro population that exceeds that of Ohio by 1,266,247." Jumping to the score farther east, Congressman WILLIAMS continues: "On a per capita basis, New York sent 9 times as many Negroes to the penitentiary as whites; Pennsylvania sent 8½ times as many Negroes to prison as whites.

"New Jersey's population is 7 percent Negro, but 35 percent of their felony convictions were Negro * * *. The same pattern holds true practically throughout the integrated States * * *. The Negro crime rate is 681 percent of the white crime rate in the integrated States. The Negro crime rate in the segregated States, by contrast, is only 248 percent of the white crime rate." These are figures subinitted to the Department of Justice by the States and constitute the authentic record of the nation. Myrdal ran into figures of this nature (as of

his writing) and reflects them elsewhere in his book; why, therefore, would he make such a disparaging statement on page 553? It is obvious that he, as is true in all cases where I have examined findings of so-called interracial researches and organizations, sides with the Negro and impugns the white race.

The book is tightly packed with all manner of data and interpretations aimed at the worst view of the Negro's lot in this Nation; and it paints the whites, most especially in the South, as biased, bigotted, and shameless. But, as will always be true of propaganda writing, the logic is faulty: on page 1335 he quotes a Negro, J. W. Johnson, as speaking in most critical terms of the Supreme Court for having failed on occasion to side with the Negro. Said Johnson: "In the last analysis, he lost his vote because of the attitude of the Supreme Court." It was not surprising that the Supreme Court was under fire at that time, winning, along with the Constitution, the impatience of Myrdal, for he was writing in the early 1940's. But now the average white southerner is whiplashed for not kowtowing to the current craze for the Negro vote. However, Myrdal has his glory: his book is cited by the Supreme Court as the final truth.

A most telling reference appears on pages 740, where Kelly Miller is quoted in his estimates of Booker T. Washington and Frederick Douglas; Washington was scored because he always deferred to the helpfulness of the white folks. Each became a Negro symbol of his time, even though of contrasting philosophy, said Miller, who concluded: "Thus all truly useful men must be, in a measure, time servers; for unless they serve their time, they can scarcely serve at all." Myrdal would be happy, no doubt, and so would Miller, with the philosophy of Solicitor General Simon E. Sobeloff who participated in the Government's arguments before the Supreme Court before its decisions of May, 1955, on how their edict of May 17, 1954, should be implemented. Said Sobeloff: "the court seeks (at times) the opportune time to (take action) just as Congress or any other policymaking body might."

On the Court at the time the May 17, 1954, edict was written was Justice William O. Douglas, who, with all but two of his associates had never served a day as a judge before being elevated to that august Court. His book, We the Judges, is recently off the press. For those who have thought that a law is a law until repealed by due process, he has some startling thoughts. On page 428 of his learned tome, in which he compares India's judiciary with ours, Justice Douglas says:

"The judiciary must do more than dispense justice in cases and controversies. It must keep the charter of government current with the times." He brings in stare decisis (standing by prior principles and rules) on page 429: "Stare decisis is a principle of policy and not a mechanical formula of adherence to the latest decision, however recent and questionable, when such adherence involves collision with a prior doctrine more embracing in its scope, intrinsically sounder, and verified by experience."

On page 431 he says that a judge finally "comes to formulate his own views, rejecting some earlier ones as false, and embracing others. He cannot do otherwise unless he lets men long dead and unaware of the problems of the age in which he lives do his thinking for him." This is a judge, bear in mind. A judge must not, therefore, be guided by the law and by duly constituted precedents, but he must do his own thinking. I would say that the gentleman is misplaced and should be in the legislative branch.

And now—bear clearly in mind that this is the prize example of modern authority cited by our Supreme Court as fully justifying their edict reversing a hundred years of constitutional precedents.

Corn and Feed Grain Program

SPEECH

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn to provide acreage reserve programs for diverted acres and for feed grains, and for other purposes.

Mr. ANFUSO. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, as you all know, I have no personal interest in this legislation. I do not grow any corn in my district. I doubt that any corn is grown in the entire city of New York. I have listened to this debate very attentively and I hope that all of the Members now listening will listen to me with the same attentiveness with which I have listened to them.

I listened in committee and I heard both sides, and many times I pleaded for unanimity.

We from the city have no interest in this legislation. It will cost us money, but we are willing to spend money whenever it is going to help a segment of the population of this country and we are certainly willing to spend money if it is going to help the farmers and create general prosperity in this country. We are willing to spend money provided that it is a just expenditure of money. But I certainly do not like, and I do not think it is the American way, to come here and say that it is either this legislation or no legislation. I think it is the purpose of the Congress to legislate and that this prerogative does not belong to the administration.

I admired the statement of our distinguished Speaker on yesterday when he said those very words, when he said that he had served under many Presidents and he had occasion to disagree with them, whether they were Democrats or Republicans. I will not transfer my authority to legislate to anyone, and I do not think that any Members of this House, be he Democrat or Republican, should transfer that authority.

This is the question I would like to ask the Republican side of the House. What is so perfect about the Andresen bill? When the administration came before our committee they opposed it. There must be something in it that the administration does not like. If the Republican administration comes here and is opposed to the Andresen bill, how am I, from Brooklyn, N. Y., to vote on this legislation?

May I say this? I did not rise to talk until the gentleman from Missouri [Mr. JONES] offered his amendment. Because I am in some doubt I appreciated his amendment which limits itself to this so-called emergency.

I also think that the amendment here, limiting it to 1 year, is a very good one. I think that we should have more time to consider this very serious legislation. I believe both sides should be amenable to suggestions at all times and not take the position it is either this or that. That is my expression to the House. I believe the amendment offered by the gentleman from Missouri [Mr. JONES] is a good one.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, will the gentleman yield?

Mr. ANFUSO. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. The gentleman referred to an amendment which I had proposed. This amendment is agreed to by quite a substantial number of members of the Committee on Agriculture. We have offered it in good faith. It is a short amendment. It is one to handle an existing emergency.

The gentleman says he does not raise corn in his district, and I am inclined to agree with him, but certainly he eats poultry, dairy products, meat, and the other things that come from corn, and he is interested in getting good quality products and getting them at reasonable prices. We expect to give the gentleman just exactly that.

Mr. ANFUSO. I agree with what the gentleman says, but is it not also true that in committee there was a division, a very strong division, on the gentleman's amendment? Is it not also true that when we deal with farm legislation—and this is my expressed view, which I have expressed many times—that there ought to be unanimity among the farmers? There should not be a 14-to-12 division in committee and hope to get a favorable decision on the floor.

Corn and Feed Grain Program

SPEECH

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage-reserve programs for diverted acres and for feed grains, and for other purposes.

THE ANDRESEN CORN EMERGENCY AMENDMENT

Mr. AUGUST H. ANDRESEN. Mr. Chairman, when the Committee rose on yesterday we had concluded general debate and the first section of H. R. 4901 was read, after which I offered an amendment which the Clerk has just reported. I want to discuss that amendment in the time alloted to me in order that I can clear up any misunderstanding as to the purpose and intent of the amendment.

This amendment is the substance of H. R. 3011 with the elimination of section 2 in that bill dealing with price supports, which have been found to be unnecessary, and providing amendments to the Soil Bank Act. In the first place, those were the changes that were made in the amendment that I proposed.

The amendment proposes that the corn-acreage allotment for each of the

crop years 1957, 1958, and 1959, shall be not less than 51 million acres. At the present time and under the old formula the Secretary of Agriculture, in accordance with that formula, has fixed the acreage for the 1957 corn crop at 37.3 million acres. This amendment of mine seeks to raise that to 51 million acres for the 3 crop years, which will then be the termination of the acreage reserve in the soil bank.

In the second place, I have eliminated, as I said before, the support-price section of my original bill, which fixes the minimum support price to be given to corn in the commercial corn area for the farmer who complies with the corn-acreage allotment at not less than 75 percent of parity. That is existing law. It is not necessary to have a repetition of that in this legislation, so I omitted it from my amendment after conferring with my colleagues. The amendment comes to you now without the price-support provision, which is already protected by existing law.

I have an opinion from the General Counsel of the Department of Agriculture setting forth those facts, which I will include in the RECORD, but I will not read it here now because I think it is generally recognized by all Members familiar with the agricultural laws that we have heretofore passed a law fixing the support price between 75 and 90 percent of parity for all basic commodities.

This letter from the Department which will be placed in the RECORD is in my opinion a correct interpretation of the law and, therefore, the price support sections were not necessary in the bill or amendment.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
OFFICE OF THE GENERAL COUNSEL,
Washington D. C., March 5, 1957.

Hon. AUGUST H. ANDRESEN,
House of Representatives.

DEAR CONGRESSMAN ANDRESEN: This responds to your request for a statement of existing law regarding the minimum level of price support on corn grown in the commercial corn area by producers who comply with their acreage allotments.

The principal provisions of law which govern in the situation stated above are a part of the Agricultural Act of 1949, as amended. Section 101 of that act provides in substance that price support must be made available to producers of basic agricultural commodities who are cooperators in the price-support programs at the levels of support specified in the supply percentage tables thereafter stated in the section. The supply percentage table applicable to corn is in section 101 (a) and the minimum support level therein authorized is 75 percent of parity.

It follows that under the laws now in effect the level of price support for corn to producers in the commercial corn area who comply with their acreage allotments cannot be less than 75 percent of the parity price for such corn at the beginning of the marketing year. The level could be set higher than 75 percent of parity depending upon the relationship of normal supply to actual supply.

Sincerely yours,
R. L. FARRINGTON,
General Counsel.

To secure the benefit of the price support, which is now fixed at $1.36 a bushel for 1957 in the commercial corn area, a farmer must comply with his corn-acreage allotment. That is No. 1. That is also a provision in my amendment. In addition, a farmer must not only comply with his corn-acreage allotment but must also place 15 percent of that corn-acreage allotment in the acreage reserve, or an acreage equal to 15 percent of his corn allotment of other tillable land in the conservation reserve of the soil bank.

THE ANDRESEN AMENDMENT

That, notwithstanding any other provision of law, the acreage allotment for corn for each of the calendar years 1957, 1958, and 1959 shall not be less than 51 million acres.

SEC. 2. Section 106 of the Soil Bank Act is amended by adding a new subsection at the end thereof as follows:

"(c) For the purpose of price support in the commercial corn-producing area for any crop of corn for which an acreage-reserve program is in effect a 'cooperator' shall be a producer who (1) devotes an acreage of cropland (tilled in normal rotation), at the option of the producer, to either the acreage-reserve program for corn or the conservation-reserve program, equal to 15 percent of such producer's farm allotment for corn, and (2) does not exceed the farm acreage allotment for corn."

That should be clear to everyone because it is very simple and easily understandable.

A farmer does not, therefore, necessarily have to put his cornland in in order to get the benefit of price supports. He must, however, comply with his corn-acreage allotment. Then, he can use other tillable land and place it in the conservation reserve; or if he takes cornland, he will place it in the acreage reserve.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. POAGE. It is clear then that the farmer does not have to actually reduce his corn acreage under this bill in order to be eligible for soil-bank payments; is that correct?

Mr. AUGUST H. ANDRESEN. That is correct. He must comply with his corn-acreage allotment. If he takes some tillable land, up to 15 percent, of his corn-acreage allotment, then that goes into the conservation reserve and not into the acreage reserve, as provided in the majority bill.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. ARENDS. That means, however, that a man must take his reduction in cornland plus the fact that if it goes into the acreage reserve, this is additional acreage on top of it. Is that right? If he takes the acreage in corn, he takes a reduction in other tillable land.

Mr. AUGUST H. ANDRESEN. He will get a new corn-acreage aloltment, if this amendment prevails, based on 51 million acres for the commercial corn area. Then, he can take 15 percent of other tillable land based on the corn acreage allotment and place it in the conservation reserve to get conservation reserve payments but not acreage reserve payments. There is a difference between the two because the average conservation acreage payment, I think, is about $12 or $15 an acre whereas if he kept that out of the cornland, then he would receive approximately $40 or $42 an acre, which would be his payment. That would be his payment. That would be an actual reduction of his corn acreage allotted for this year.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. JENSEN. To clarify this portion of the gentleman's amendment to the soil bank act for 1956, if a Farmer elects to put land in the conservation reserve, as the gentleman has explained, is he then in full compliance even though he puts no land in the soil bank?

Mr. AUGUST H. ANDRESEN. The conservation reserve is part of the soil bank.

Mr. JENSEN. I realize that.

Mr. AUGUST H. ANDRESEN. He must comply with the corn acreage allotment at the same time.

Mr. JENSEN. He must comply with his corn acreage allotment, but what I am trying to find out is this. If he puts land in the conservation reserve, which pays say $10 or $15 an acre; will he then be in full compliance and be entitled to seal corn under this act?

Mr. AUGUST H. ANDRESEN. If he complies with the corn-acreage allotment, in answer to the gentleman, then he is entiled to his price support.

Mr. JENSEN. And, if it is other than cornland?

Mr. AUGUST H. ANDRESEN. That is right. It has to be tilable land.

Mr. JENSEN. I understand that. So, under those conditions that farmer would be in full compliance and could receive the benefits provided in the bill.

Mr. AUGUST H. ANDRESEN. That complies with my amendment.

Mr. JENSEN. And he could seal corn under the regular program? Is that right?

Mr. AUGUST H. ANDRESEN. That is right.

Mr. COOLEY. Mr. Chairman, will the gentleman yield for a correction? The gentleman made a statement that the farmer could be required to put 15 percent of his corn acreage in the soil bank.

Mr. AUGUST H. ANDRESEN. Not corn acreage. He can put either corn agreage, that is 15 percent of his corn acreage, or his 15 percent of his other tillable land into the soil-bank program.

Mr. COOLEY. But he is not required to do it—he may do it; is that correct?

Mr. AUGUST H. ANDRESEN. No; I would construe my amendment to mean that was one of the requirements. We want to make this soil bank work, and in order to make it work we have added that provision here. The soil bank has never had a fair trial. It went into operation late last year after corn and other products were planted. We want to get a full year's trial on it, and we have the opportunity to get it by passing this emergency legislation so that the farmers can know what they can do. In that way we will know whether the soil bank works or not.

Mr. JENSEN. The reason you are permitting him to put a part of his land in the conservation reserve is because he

will take some land that was in grain last year and put it in the conservation reserve, and by so doing we will have a reduction in our overall grain supply?

Mr. AUGUST H. ANDRESEN. That is right. The gentleman is correct.

Now, Mr. Chairman, considerable was said yesterday about the cost of the program. I have had the experts in the Department of Agriculture figure the cost of my amendment, and also the cost of H. R. 4901 proposed by our distinguished chairman [Mr. COOLEY]. I do not have time to read the letter from the Department but I will place it in the RECORD. In substance, the letter states that my amendment will not raise the appropriation one iota. There is absolutely sufficient authorization to cover the entire program that has already been set up in the budget and that is before the Appropriations Committee at the present time.

Some speaker who was talking for the committee bill said yesterday that my bill would raise the cost of the operation of the program by $2 billion. There is no correctness in fact in that statement. The experts in the Department of Agriculture, men who have been working on this program, say that my amendment will not increase the cost one dollar. The authorization has been made and the appropriations requested in the budget will cover my amendment without one additional cent.

On the other hand, the same experts have analyzed the committee bill, and they state definitely—and I will place this in the RECORD—"thus the total potential cost involved in the committee bill is about $950 million." Nearly a billion dollars. If you are interested in economy, here is a chance for you to help reduce Government expenditures rather than to increase the budget and the appropriation by $1 billion to carry out the provisions of the committee bill.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, March 6, 1957.

Hon. AUGUST H. ANDRESEN,
House of Representatives,

DEAR CONGRESSMAN ANDRESEN: This is in reply to your request for information as to the potential costs of H. R. 3011, as amended, as compared with H. R. 4901.

Under H. R. 3011 no additional funds are authorized. Any payments earned by corn producers would be part of the $750 million maximum already authorized for the acreage reserve program. The proportionate share budgeted for corn for the 1957 acreage reserve program is $217.5 million.

On the other hand, under H. R. 4901 the maximum which can be earned in any one year under the acreage reserve program is increased from $750 million to $1 billion. The maximum which can be earned under the feed grain portion of this bill is $300 million. In addition, section 2 of H. R. 4901 does not establish any budgetary limits and all earnings are in addition to the $1 billion potential mentioned above. Section 2 of H. R. 4901 provides for a feed grain diversion payment on the basis of 18 percent of the respective acreage allotments for each of the basic commodities times the corn rate per acre, or 60 percent of the support price times the normal yield of the feed grain diverted in the county whichever is higher, but in no event less than $10 per acre. On the basis of a commodity by commodity analysis of this item a maximum of $696 million can be earned. Thus the total potential cost involved in this bill is about $950 million.

Sincerely yours,

E. T. BENSON,
Secretary.

Mr. HOEVEN. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. HOEVEN. And is it not correct to say that in addition to the potential cost there must be added the cost of administration?

Mr. AUGUST H. ANDRESEN. There is no question but what it will take a large number of men to cover the committee bill, because it takes in the whole country. I do not quarrel with that. It takes in the whole country, but the committee bill will involve a tremendous amount in administrative expense to determine all the factors that are covered by the bill.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. ARENDS. If I understand you correctly, then, the question was asked so many times yesterday as to the cost of the so-called committee bill—it is estimated by the best official reports you can get as being $950 million additional?

Mr. AUGUST H. ANDRESEN. That is right. Nine hundred and fifty million dollars is the very best estimate, if the program is carried out.

Mr. CHRISTOPHER. I would like to ask a clarifying question if I may.

Mr. AUGUST H. ANDRESEN. I am sorry; my time is about up.

Mr. CHRISTOPHER. I wish the gentleman had an extra minute; I would like to clarify this.

Mr. AUGUST H. ANDRESEN. Undoubtedly some question will be raised during the course of this debate on the so-called Daniel amendment. The Daniel amendment was adopted last year. It establishes the support price outside of the commercial corn area providing there is a support price in the commercial corn area for noncompliance corn. There has been no support price established for noncompliance corn up to the present time, but we have every reason to believe that there will be, and if there is, corn grown outside the commercial corn area will be 82½ percent of the support price established within the commercial corn area. I also have a letter on that which will be placed in the RECORD showing the effect of the Daniel amendment.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
OFFICE OF THE GENERAL COUNSEL,
Washington, D. C., March 5, 1957.

Hon. AUGUST H. ANDRESEN,
House of Representatives.

DEAR CONGRESSMAN ANDRESEN: This responds to your request for my advice concerning the legal requirements with respect to price support for corn in the noncommercial area under section 308 (d) (3) of the Agricultural Act of 1956.

Under section 308 (d) (3) if, for the 1957 crop, price support is made available in the commercial corn-producing area on noncompliance corn (i. e., to producers who do not comply with their corn acreage allotments), price support must be made available on corn produced outside the commercial area at a level which meets the following requirements: (1) it must be not less than 70 percent of the parity price of corn as of October 1, 1957, and (2) it must be a level which the Secretary of Agriculture determines is fair and reasonable in relation to the level at which price support is made available for noncompliance corn in the commercial area, taking into consideration specified factors. These factors include the normal price relationship between corn inside and outside the area, the supply of corn outside the area in relationship to the demand therefor, and the ability to dispose of stocks of corn outside the area acquired under the price-support program.

Section 308 (d) (3) does not control the level at which price support is made available for noncompliance corn in the commercial area. Such level is controlled by section 101 (d) (5) of the Agricultural Act of 1949, as amended, which authorizes price support to be made available for noncompliance corn at such level, not in excess of the level of price support for compliance corn, as the Secretary determines will facilitate the effective operation of the price-support program. The level at which noncompliance corn is supported in the commercial area rests, therefore, within the discretion of the Secretary, subject to the limitation that such level cannot exceed the level of support for compliance corn.

Sincerely yours,

R. L. FARRINGTON,
General Counsel.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HILL. Mr. Chairman, I ask unanimous consent that the gentleman from Minnesota may be permitted to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield to the gentleman from Pennsylvania.

Mr. FULTON. What is the basic reason for the difference between the price in the commercial corn-growing area and other areas of the country? Is not that discrimination? Why not treat everybody alike?

Mr. AUGUST H. ANDRESEN. That is a good argument, for all the other basic commodities have that kind of treatment. It happens that the commercial corn area takes in a little more than 800 counties where corn is grown in this country. Outside of that area, and I can say it has expanded, they do not raise as much corn as they do in the commercial corn area.

Mr. FULTON. My point is that if you do establish a support price on corn outside the commercial corn-growing area, then if a price is established for support, why is it not the same?

Mr. AUGUST H. ANDRESEN. All I can say to the gentleman is that I did not have anything to do with fixing the commercial corn area. I was against it, and I am still against it or any expansion in the production of corn. I hope our committee can get together and write a general law changing that section of the act of 1938 so that we can get on a proper basis all over the country.

Mr. CHRISTOPHER. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I do not want to yield for a speech.

Mr. CHRISTOPHER. I did not come down to heckle the gentleman.

Mr. AUGUST H. ANDRESEN. I will yield for a question, but I refuse to yield for a speech.

Mr. CHRISTOPHER. I would like to ask a question.

Mr. HOFFMAN. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HOFFMAN. I ask that the well be cleared.

The CHAIRMAN. The gentleman from Michigan makes a point of order that the well should be cleared. The gentleman will step back to the seats to ask his question.

Mr. CHRISTOPHER. I want to ask a question about the 51 million acre base.

Mr. HOFFMAN. Mr. Chairman, I insist on my point of order.

The CHAIRMAN. The gentleman from Missouri will suspend. We want to comply strictly with the rules. The gentleman will stand back out of the well, please, while the question is propounded.

Mr. CHRISTOPER. I want to know about the allotment under that base.

Mr. AUGUST H. ANDRESEN. Now, let me explain the base of the new acreage for the commercial corn area.

Mr. COAD. We did not get the question. What is the question?

Mr. AUGUST H. ANDRESEN. Let me answer it. I have anticipated what it is going to be. This would establish a new allotment for the commercial corn area of 51 million acres. The former corn acreage allotment is based on 37 million acres.

Mr. CHRISTOPHER. That is right.

Mr. AUGUST H. ANDRESEN. If we pass this bill, and I expect we will, the new corn acreage allotment for each farm where they raise corn will be increased on the 51 million acre basis. Does that answer the gentleman's question?

Mr. CHRISTOPHER. One more question, if I may. Is the farmer when he gets his new corn allotment required to place a part of that new acreage in the soil bank? Or can he plant his share of that 51 million acres and be in compliance? Is it mandatory?

Mr. AUGUST H. ANDRESEN. He has to place 15 percent of his corn acreage allotment in the bank either out of his corn acreage or out of other tillable land on the farm to be in compliance.

I now yield to the gentleman from Indiana.

Mr. HARVEY. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield to the gentleman from Indiana.

Mr. HARVEY. I think it is fair to say to the gentleman from Pennsylvania concerning the differential between commercial and noncommercial counties that the commercial counties are determined entirely upon a formula which, in brief, makes them either a corn-producing county or a non-corn-producing county. A person who is producing corn in a commercial county is entitled to certain support programs and ceiling provisions. As a matter of administrative procedure, let me say that in counties where there is very little corn it would be excessive in cost to provide ceiling arrangements. So in those areas corn, where it is only partially grown, is treated in the same category as other supplemental feed grains.

Mr. AUGUST H. ANDRESEN. I thank the gentleman for his contribution to my remarks.

If you are interested in economy, if you are interested in putting through an emergency program for the commercial corn areas, then you should cast your vote for my amendment. I urge you to do so. The time is urgent. Corn planting is only a few weeks away and the farmer must make his plans if he is going to properly get his crop into the ground.

Furthermore, let me point out to you that the life of the soil bank, its failure or success, depends upon the enactment and the passage of my amendment. I am satisfied that this amendment will be enacted into law and approved at the other end of the Avenue. I am also convinced that the committee bill will not be approved. I am not telling you how to vote; I am just urging you to vote for the Andresen amendment which represents the best opinion of the minority members of our committee, and they are unanimous on that point.

Corn and Feed Grain Program

SPEECH

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (4901) to establish a minimum acreage allotment for corn, to provide acreage reserve programs for diverted acres and for feed grains, and for other purposes.

Mr. COOLEY. Mr. Chairman, I rise in opposition to the Andresen amendment.

Mr. Chairman, I think all of us know now just how unfortunate this day is for those constituents of ours who till the soil of our Nation. I said yesterday that the house of agriculture is divided. We all know now that the house of agriculture is divided. It is unfortunate that we are divided along political lines because corn is one of the great crops of our country and it is grown in just about every section of this vast Republic of ours.

I have taken the floor now to resent the castigation of our committee by a member of that committee.

I have served on that committee for 22 years. Every man and woman in this House knows that I have been proud of every member of our committee. I have praised them throughout this country as friends of the farmers, as dedicated public servants, as men who wanted to serve not only agriculture but all the people of our Nation.

Now we sit here in this Hall today and hear Mr. HILL from Colorado come here in an effort to besmirch, malign, and slander the Committee on Agriculture and, worst of all, he did it in a vicious and a sinister fashion.

Mr. HILL. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. No. I did not interrupt you and I am not going to yield.

Mr. HILL. You are not telling the truth.

Mr. COOLEY. You admitted here in this well of the House today, and it will be in the RECORD tomorrow if you are brave enough to leave it in there, and your constituents will read what you said, that you voted to report a bill out purely for the purpose of saving the political life of one of its members. And you ought to leave it in the RECORD. When one of your own colleagues challenged you, because it was hard for him to believe that you would make such an admission on the floor of the House, that you yourself had been actuated by politics in voting out a bill.

I still think we have one of the finest committees in this Congress, and I say that notwithstanding Mr. HILL's membership on the committee, because I am devoted to him. I have admired him, and I have bragged on him as I have the other members of that committee.

I want you to know this, that never before in my life have I begged people to cooperate in the drafting of legislation to the extent that we begged the Republicans, during consideration of this matter. This gentleman here on the front row, the gentleman from Illinois [Mr. SPRINGER], has made a reasonable and a plausible suggestion, but do you think anybody on the committee will offer that as an amendment? His suggestion was, Why do we not just deal with corn in all sections of the country and eliminate the treatment of other feed grains? Is not that the gentleman's position? That is perfectly plausible and reasonable. I for one would be willing to sit down right now and work it out.

But if you adopt the Andresen amendment, everything is over. You could not then bring in Mr. SPRINGER's idea and put it into this bill. If there is something in this bill that is bad, I challenge every one of you to offer an amendment to strike out some part of it. If you do not like the $10 minimum or the $50 maximum, if you do not like section 3, take it out. But for goodness' sake, do not let us stand here and pass a bill merely because it bears the name of AUGUST ANDRESEN.

What happened to Mr. Benson's bill? You all are so proud of Mr. Benson and his record. Why has not someone introduced his bill?

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(Mr. COOLEY asked and was given permission to proceed for 3 additional minutes.)

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Indiana.

Mr. HALLECK. The gentleman, I am sure, understands that the responsibility for drafting legislation dealing with agriculture is on the part of the committee. In the past I have heard the gentleman speak unkindly of Mr. Benson. I am a little surprised that he would object to the committee's having written its own bill. Specifically, I would like to ask the gentleman this: What the gentleman has just said is an admission as of today that his bill, that he is sponsoring, is not perfect and should be amended?

Mr. COOLEY. Let me be heard on that. I have no pride of authorship. My name is on it because Mr. ANDRESEN did not want to leave his name on it after we had worked our will on the bill.

I introduced the bill to bring it to the House in a sincere effort to provide for the corn-growing area. This is exactly what they wanted. I, for one, would right now consider seriously, and I talked to Mr. ANDRESEN about it, substituting our corn section for his corn section, but we canont substitute clear across the board.

Mr. HALLECK. May I ask the gentleman a second question, if the gentleman will permit me? There is no difference then between the majority and the minority members of the committee as to the sections of the bill dealing with the problems of the commercial corn area.

Mr. COOLEY. There is quite a difference.

Mr. HALLECK. I thought I understood you to say just now so far as you were concerned, you were willing to take the Andresen bill and substitute that for the corn section of your bill.

Mr. COOLEY. I said I was willing to consider it. We gave him in this bill, as I understand it, just about 51 million acres. That is what he has asked for.

Mr. HALLECK. In other words, there is substantial agreement between the majority and the minority Members?

Mr. COOLEY. That is on that matter.

Mr. HALLECK. In other words, there is substantial agreement between the majority and the minority Members as to what is needed with respect to corn.

Mr. COOLEY. Of course, I am only speaking for myself, and I am not speaking for other members of the committee, but so far as I am concerned, I said in the committee I will let you write the corn section, but for Heaven's sake let us deal with corn across the Nation as Mr. Benson and Mr. McLain said we should deal with it and not just throw away $217 million and come up with more feed grain next year than we had last year.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. AUGUST H. ANDRESEN. The gentleman correctly stated that my name was on the original bill. It was on the original bill which is the corn bill. Then, the majority members of the committee voted to substitute their own bill for the corn bill, and my name was still on it.

Mr. COOLEY. You could not say that it was our bill.

Mr. AUGUST H. ANDRESEN. The Cooley bill is not the Andresen bill in any shape or form.

Mr. COOLEY. I know that. I agree. The gentleman from Texas [Mr. POAGE] said yesterday that it was not a perfect bill. I said I thought it was a pretty well worked out bill. Now, if you want to strike out some part of it, let us face up to it and start striking out. But, do not oppose this substitute.

Mr. AUGUST H. ANDRESEN. Why do you not strike it all out and vote for the Andresen bill?

Mr. COOLEY. Nothing would give me greater pleasure than to please my dear friend, but I am trying to get across one thing. You are here now asking for $217 million to give it away in the commercial corn area, and you will accomplish nothing.

Corn and Feed Grain Program

SPEECH
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage reserve programs for diverted acres and for feed grains, and for other purposes.

The CHAIRMAN. The gentleman from Minnesota is recognized for 2½ minutes in support of his amendment.

Mr. H. CARL ANDERSEN. Mr. Chairman, first, I think there are as good men on the Republican side as on the Democratic side with reference to agriculture. During my 18 years I have seen splendid work by Democrats on that great committee and by Republicans on that great committee. Yesterday and today I have had the feeling that I was more or less attending the burial of the remains of the farm bloc which used to do so much good for agriculture in America. I am sorry to have to witness what I witnessed yesterday and today.

When we consider the greatest of all occupations is agriculture, when we consider that corn is the one great commodity we think of when we talk about agriculture, and finally after a lot of political harangue, I get an opportunity on the second amendment to be offered to this legislation today, to speak for 2½ minutes.

The purpose of my amendment is simply this: It is recognized in the Midwest that the present law makes it impossible for a man who has failed to comply with his corn allotment to even offer barleyland or oatland to go into the conservation reserve, for which he could expect an average of $10 an acre. Because of that law—and I called it to the attention of the House last year, and you all know that I am very much interested in the soil bank. I was the initiator of it in the Congress of the United States. We made a mistake last year when we made it impossible for 60 percent of the corn farmers, who failed to comply, to at the same time offer to put feed grain acreage in the conservation reserve at $10 an acre. At the same time, we all agree that it is the feed grain production that has corn in trouble. My amendment simply corrects that situation.

If you will recall, last year several of the leading agriculturalists on both sides of the House said it should have been in the legislation. Accept this amendment, and you will prevent the production of 150 million bushels of oats and barley which would otherwise go into direct competition with corn.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield.

Mr. JENSEN. Is it not a fact that your amendment will do more for the little farmer who would like to get into the soil-bank program than any amendment that could possibly be offered to this bill?

Mr. H. CARL ANDERSEN. I feel so.

Mr. JENSEN. And is it not also a fact that if your amendment prevails there will be more acres of corn taken out of production and put into the soil-bank reserve than otherwise would be the fact?

Mr. H. CARL ANDERSEN. I think the gentleman from Iowa will agree with me that the basic purpose of the soil bank has been forgotten. We have gone into an extensive acreage reserve program which has no conservation features in the least. We are being asked by our Subcommittee on Agriculture Appropriations to put up $1,254,000,000 for this coming fiscal year.

Legislative Issues as Viewed by Voters of the Seventh Congressional District of Virginia

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the results of a questionnaire sent to 53,000 voting households in the Seventh Congressional District of Virginia. Answers were received from 6,476 of them, as compared with 3,668 returns on a questionnaire sent the same number of families last year.

The questions and results follow:

	Yes		No		No opinion	
	Number	Percent	Number	Percent	Number	Percent
1. A resolution before Congress would authorize the President to use American troops to combat future Communist aggression in the Middle East and to spend approximately $400,000,000 in Middle East countries at his discretion. Do you favor this?	2,308	35.6	3,694	57.0	474	7.3
2. A bill in Congress proposes that the Federal Government should contribute out of Federal tax revenues toward financing local school construction, subject to local compliance with Federal regulations. Do you favor this?	2,189	34.0	4,078	62.7	209	3.2
3. For the operation of the United States Government in the fiscal year ending June 30, there is being spent, pursuant to appropriations by Congress $68,900,000,000. It is now proposed that for next year Congress should approve the spending of $71,800,000,000. Do you favor this?	777	12.0	5,358	82.7	341	5.3
4. Last year Congress adopted a soil-bank plan which, at an annual cost of approximately $1,300,000,000, pays farmers for taking certain farm lands out of production. Do you favor this continuation of the soil bank?	2,068	31.9	4,010	61.9	398	6.1
5. The closed shop is outlawed by the Taft-Hartley Act. A bill in Congress would legalize agreements in the construction industry under which unions could select the employees on construction jobs and require that new workers join a union within a short period after going on the job. Do you favor this?	989	15.3	5,227	80.7	260	4.0
6. For the purpose of protecting the civil rights of citizens from discrimination on account of race or religion, a bill in Congress proposes, among other things: 1. That the President appoint a commission with power to subpena persons and records to investigate claims of discrimination. 2. That the Attorney General might bring lawsuits, with lawyers and court expenses paid by the taxpayers, to recover money for people who claim their civil rights have been violated. 3. That citizens, under Federal court injunction, might be sentenced to prison without jury trial for violating, or being about to violate, another's civil rights. Do you favor this bill?	758	11.7	5,312	82.0	406	6.3
7. A bill in Congress would extend the Federal minimum-wage and overtime law to retail stores and service establishments. Do you favor this?	3,358	51.9	2,707	41.8	411	6.3
8. Present law provides for the admission of 865 Hungarian quota immigrants a year. In recent months, nearly 25,000 Hungarians have been permitted to enter the United States, most of them on temporary permits. A bill in Congress would make these temporary admissions permanent and liberalize future immigration of refugees from other countries. Do you favor this bill?	1,499	23.1	4,624	71.4	353	5.5
9. A bill in Congress provides for an increase in overall number of immigrants admitted to the United States each year, and for an additional increase in immigrants from Southern and Eastern Europe by transferring unused immigration quotas to countries whose quotas are exhausted. Do you favor this bill?	1,271	19.6	4,831	74.6	374	5.8
10. Do you favor the bill in Congress which provides that Hawaii and part of Alaska become the 49th and 50th States of the United States?	4,480	69.2	1,332	20.6	664	10.3
11. In the present fiscal year, there is being spent, pursuant to appropriations by Congress, $4,100,000,000 in military and economic aid to foreign nations. A bill now pending would increase the amount to $4,400,000,000 for the next fiscal year. Do you favor this increased support for the foreign aid program?	1,070	16.5	5,052	78.0	354	5.5
12. Without emphasis on any particular proposal, do you favor generally the program proposed by President Eisenhower?	2,678	41.4	2,812	43.4	986	15.2

Many of those returning the questionnaire expressed doubt that the language of question No. 6 describes fairly the provisions of the pending civil rights legislation. This merits special comment, because I believe it is highly important for the people to realize how drastic the bill is. If the question is unbelievable, it is only because the bill is unbelievable. Space did not permit including other incredible elements of the legislation.

Senator BYRD has described it accurately as "the most vicious proposal ever made to Congress." Mr. Virginius Dabney, the enlightened editor of the Richmond Times Dispatch, has said:

The civil-rights program also appears to negate the right to trial by jury, and it would enable the Attorney General to file, at public expense, suits on behalf of persons who contend that their civil rights have ben violated. Another provision would seem to empower a proposed civil rights commission to summon any citizen from any part of the United States to any other part to defend himself against charges the nature of which was completely unknown to him prior to receipt of the subpena.

Is it a self-conscious anger born of embarrassment which seems to prompt pseudo-liberals to cry "unfair!" or "bias!" when their proposals are made to stand public judgment for what they are?

Minnesota, Milton Rosen, and the Truth

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. HUDDLESTON. Mr. Speaker, for the past several days I have been inserting in the CONGRESSIONAL RECORD newspaper articles dealing with the recent visit of Mr. Milton Rosen, Commissioner of Public Utilities in St. Paul, Minn., to Birmingham. While in Birmingham, Mr. Rosen was interviewed by our local newspapermen and stated that northerners are often misinformed about the condition of Negroes in the South. His remarks have been criticized by Negroes in St. Paul, who have demanded that he resign his office.

As a followup, it is my privilege, under leave to extend my remarks, to insert in the RECORD an editorial which appeared in the Wednesday, March 6 issue of the Birmingham (Ala.) News. The editorial follows:

MINNESOTA, MILTON ROSEN, AND THE TRUTH

Down to Alabama recently came Milton Rosen, holder of an elective office, that of public utilities commissioner in St. Paul, Minn. This community and its sister city across the northern reach of the Mississippi River, Minneapolis, have relatively few Negro citizens, though Indians—segregated Indians—are for them a problem.

In Birmingham, Mr. Rosen found absolutely no Negroes hanging from tree limbs, he saw no rioting and the Negro people he observed did not appear to be victims of lashes and broadax blows. So he allowed himself to be quoted during a press conference in Mayor Morgan's office, as saying the people in the North are not completely informed as to the condition of Dixie's Negro citizens.

Back home, Commissioner Rosen has run into a barrage of criticism, principally from Negro groups, a dining car union local and the chief of the St. Paul Urban League. His critics don't like what he said down here and contend that they don't understand how Rosen could hold the views he expressed. The union group demanded his resignation.

Lamented the commissioner in a letter to our mayor: "No matter who you tell the truth to sometimes you step on other people's toes."

No objective southerner is going to contend that the lot of the Negro is everything it might be, and Mr. Rosen didn't say that. True, too, as the Minnesota dissenters contend, there have been riotings and bombings, and law and order have been threatened from time to time. This disturbs law-abiding southerners even more than it disturbs Yankees.

But the commissioner was merely trying to say that the lot of Negroes is not miserable as many up North have tried to say it was.

The hard fact remains that Mr. Rosen is eminently correct in stating that northerners are often misinformed about the South, and the southern point of view. Many a northerner who has moved South to take a place in the rapidly expanding Dixie industrial development knows this, and will admit it. Mr. Rosen simply learned in short order what a lot of others have learned.

The Minnesotan is a candid, honest man. We trust he sticks by his guns.

If the firing gets too hot, however, let him consider moving down here. He's a man who wouldn't find it difficult to fit in. "Set another plate at the table, Maw, we might have comp'ny."

New Eberhard Faber Pencil Co. Plant Publicizes Wilkes-Barre Throughout United States, Canada, and South America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Record on March 1, 1957, which discusses the impact which the new Eberhard Faber Pencil Co. plant has made

on Wilkes-Barre and the prestige and good public relations which have accrued as a result of this new installation:

Wilkes-Barre through its industrial fund has aided the world's oldest and largest pencil company to establish its worldwide headquarters at Crestwood Industrial Park. Now, when the wheels of the modern factory have been turning for scarcely 2 months, Eberhard Faber returns the favor by publicizing Wilkes-Barre throughout the United States, Canada, and South America.

Greater Wilkes-Barre Chamber of Commerce's monthly publication Progress bears evidence of this fact as 10,000 issues carry the story of the company and of Wilkes-Barre abroad—and at the pencil company's expense. In the past this area has suffered adversely because of damaging and, in more instances than not, half-truths which have been published. Now, the tables are turned.

The prestige and the good public relations resulting from the splendid cooperative effort of Eberhard Faber cannot be measured in dollars and cents.

Cloyd H. Marvin, President of George Washington University

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. BETTS. Mr. Speaker, recently George Washington University celebrated the 30th anniversary of the presidency of Dr. Cloyd H. Marvin. I was particularly thrilled with this event because Dr. Marvin was born and raised in my hometown of Findlay, Ohio. On the occasion of this celebration, Dr. Marvin was besieged with congratulations and praise from well wishers in all walks of life, including President Eisenhower. However, the most significant tributes came from the university itself, where Dr. Marvin has devoted his time and talents for three decades. The following editorial from the university publication the Hatchet is significant:

PRESIDENT MARVIN BUILDS A UNIVERSITY

At this time we wish to express our sincere admiration and deep respect for Cloyd H. Marvin, president of the George Washington University. For 30 years, President Marvin has worked with and for the faculty and the students making the university what it is today. This tribute, conceived and executed by the student body, can only show a small measure of our gratitude.

When President Marvin came to this university from the University of Arizona in 1927 it was a small and not fully accredited school frequently referred to as the "G Street High School." Today it is accredited on the same basis as are the other great universities of our Nation. During the 30 years President Marvin has been here, enrollment has tripled, university endowments have become 4 times as great and the actual physical properties of the university, such as buildings, have increased almost 18 times. Today the university owns 930,782 square feet of land as compared to the 139,771 square feet it owned in 1927. There are now more than twice as many members of the full-time faculty as there were in 1927 and more than 3 times as many part-time faculty members.

But a university is not made wholly of stone and mortar, books and bank accounts, nor can we measure the man who has made the university great solely by these means. Behind the buildings, the endowment funds and other tangible assets, there must be a guiding spirit to unify and inspire. President Marvin has provided that spirit for our university.

It is a spirit of academic freedom and integrity, a firm belief in democratic principles and in democracy, a belief in the Nation and the youth of the Nation. It arises from a belief in himself and the things that he stands for: "Education has been and will continue to be the means of building hope in our democratic society. Educational disciplines assumed for democracy, will overcome the exactions of totalitarianism wherever it may be found." It arises from belief in a power outside of and higher than himself.

It is President Marvin's spirit which gives this university the best in faculty, equipment, and classroom teaching, which gives us loyal and generous alumni, a devoted faculty and student body, and the inspiration to grasp the ideas which are put before us and make them our own academic standards.

For the spirit which is guiding us we are grateful. For the school he has given us we are grateful. Our university, and that which it stands for, will always be a part of our lives. What we have found here we owe to one man—President Cloyd H. Marvin. And for this we thank him.

Forty-fifth Anniversary of Girl Scouts of America

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, this week the Girl Scouts of the United States of America are celebrating their 45th anniversary. Since their founding in 1912, by Juliette Gordon Low, the Girl Scouts have developed a remarkable and respectable record. During their entire history they have held fast to their ideal to learn to cooperate and work together, to prepare basically and fundamentally for the responsibilities of life and to know and understand those qualities necessary for happiness and successful living.

On this 45th anniversary, the organization of Girls Scouts is national in scope and extends all over the United States of America. In addition, its influence has extended beyond the seas. During the last 10 years many troops of Girl Scouts have been organized in many countries of the world. It is of real significance and value to the cultural development of our community life to know the Girl Scouts of America carry on a worldwide exchange-of-persons program with Girl Scouts of other lands.

As a part of this program, Girl Scouts from many of our neighboring countries are brought to the United States to live and work with the Girl Scout organizations of America. In like manner, American Girl Scouts visit many foreign countries. This interchange is not only of great value to the individual girls involved but it is also of considerable value to our respective countries. Conducting themselves according to the ideal of the Girl Scouts everywhere, these girls contribute friendship and good will and help greatly in the international understanding that is so basic and so necessary for permanent international peace.

The Girl Scouts all over the world are increasing in membership and in troop organizations. This increase must be encouraged by the adult citizens of all communities. The Girl Scouts not only deserve the support of the adult citizens of their respective neighborhoods, but they should have the active encouragement of everyone, for theirs is an organization which not only developes a finer citizenship but it also greatly assists in international cooperation and understanding.

It is a genuine pleasure and honor for me to congratulate the Girl Scouts of America and the Girl Scouts of Lowell on this 45th anniversary. To be a member of the Girl Scouts is an accomplishment. It is something worthy of pride. It is an organization in which every girl can benefit for within its activities it is possible to learn the basic qualities for community leadership and to understand the responsibilities necessary and required for tomorrow's motherhood.

The Girl Scout movement, constantly expanding, has become indeed one of the great international organizations whose benefit to mankind is unmeasurable. The Girl Scouts have earned respect and admiration and deserve the support of everyone.

Color Shows Telecast From the Boston Store in Wilkes-Barre Over Station WBRE

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Wilkes-Barre Times-Leader-Evening News of March 4, 1957, disclosing that the Boston Store in Wilkes-Barre is the first department store in the Nation to be wired for live telecasting and which makes it possible for many local citizens to see color TV programing in the making as WBRE-TV became the 32d station in the Nation to feature live color television:

COLOR SHOWS ARE TELECAST—HUNDREDS SEE PROGRAMS GO ON AT STORE

The Boston Store, the first department store in the Nation to be wired for live telecasting, is making it possible for Wilkes-Barreans to see color TV programing in the making as WBRE-TV today became the 32d station in the Nation to feature live color television.

This morning hundreds of persons jammed the store to see color programs being telecast.

Starting today, WBRE–TV augments its network color schedule with at least 6 hours weekly of local colorcasting, according to David M. Baltimore, vice president and general manager.

Wired for live telecasting since April 1956, the Boston Store will be the scene all week of many color-telecasting events. Color TV sets have been installed on every floor.

Charles Sakoski, Sr., chief engineer of WBRE–TV, is in charge of the color presentation. Franklin D. Coslett and Fred Foerster are station coordinators, with John Green, Jr., of the Boston Store in charge of the programs.

WBRE–TV, the Nation's first million-watt TV station, was among the first 20 TV stations in the United States to start network color-casts on January 1, 1954.

Needs of Handicapped and Underprivileged Children

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I have received from Mrs. L. E. Green, Rolla, Kans., setting forth the need for assistance for our handicapped children. These people have been known to me for many years, and I have known the child since birth. The parents of this child have exhausted their financial resources in trying to correct the condition of this child which is known as cleft palate. This is a most deserving case and I urge that more funds be made available by the Congress for dental research in this particular field. This is just one of many, many cases, as 1 out of every 700 births in the United States has a cleft condition of the palate or lip:

ROLLA, KANS., *February 23, 1957.*

J. FLOYD BREEDING,
Fifth District Congressman,
Washington, D. C.

DEAR MR. BREEDING: I feel it is only proper to address you so, although we think of you as FLOYD here in your community, of course. I am well aware of the fact that you are a very busy man, and more so, just now, with the work you are doing for the farm program, since we depend on the farmers for our living, as most small businesses do here; we are very interested in this. However, we have other problems as well, and the one most urgent right now is the completion of our 12-year-old daughter's plastic surgery and dental work. You are familiar with her case. She has had 10 operations and will have at least 2 more. Now this has been provided for; but the dental work, that started a year and a half ago and must continue for several more years, is a different matter. It was upon reading the account in the papers of our Government paying the medical bill for King Saud and his son that infuriated me so; that and knowing that we must borrow the money to pay our income tax; and thus prompted this letter.

Needless to say, with the amount of taxes we have paid we could very well take care of this medical expense. But over a period of 12 years the cost has been a great deal more than we could stand. We have spent about $10,000 for this work, and $892 the past year and a half, was for dental work alone. Our State provides for the care of handicapped children who need medical care and surgery. However, we did not take advantage of this at the time our daughter was born, and have paid the entire amount ourselves. Now we are faced with the unpleasant knowledge that we are unable to continue paying these enormous costs. The State or Federal Government has never made any provisions for children who must have dental work done on completion of surgery. For cleft lips and palates this work takes years, and the average wage earner cannot possibly hope to pay the entire amount. Children like this need this one thing, yet our Government pays a king's bill without turning a hair on our money—money that not only my child could use but many others like her. I realize the importance of paying our income taxes, but when it is used for a man well able to pay his own medical expenses I think something should be done about it. The needs of our own people—and there are certainly enough of them—are important, too. We have driven thousands of miles for this care for our child. Our car is worn out; it is repairs nearly every trip we make for it; we cannot afford a new one, or even a better one; yet the man who bought 60 new Cadillacs has his medical bill payed by us. I find it very difficult to take this willingly, and it goes without saying that I'm mad about it. And I'm appealing to you for help on this problem. I am aware that it takes time for these programs to be established, but I'm sure you will do all you can for it.

Sincerely yours,

EVA GREEN.

Our National Parks

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an address delivered by Assistant Secretary of the Interior Hatfield Chilson at a danner sponsored by the American Planning and Civic Association, held in Washington on March 6.

In his remarks, Mr. Chilson highlights some of the accomplishments thus far under the Mission 66 program, as well as future plans for development of our national parks:

I am delighted to be here this evening.

Let me begin by paying tribute to all the citizen organizations which are working to help make our national parks better. I have in mind many organizations: The American Planning and Civic Association, the National Conference on State Parks, and a host of other groups that sponsor National, State, and local park programs.

Without these organizations our work could not succeed. They stimulate new programs. They arouse and sustain public support. They give advice. They further public understanding of the park programs.

Among those groups the American Plannings and Civic Association has a particularly long and splendid record. The establishment of the National Park Service within the Department of the Interior was due in no small measure to the efforts of the associations' members. They have worked long and hard for the establishment of many of our national parks and monuments and have consistently defended the integrity of these areas. To the Department of the Interior in general and the Park Service in particular, the association has long been a source of strength. Its officers have been men and women of courage and vision. I think particularly of the late Horace McFarland, General Grant, Horace Albright, Tom Wallace and Mis Harlean James.

Before such an audience as this I naturally want to talk about the future of our national parks.

Last year the National Park Service observed the 40th anniversary of its establishment. Today it is firmly embarked on a 10-year program of improvement and development designed to remedy the 15 years of accumulated deficiencies of the past—deficiencies which were the result of war, of insufficient appropriations, and of somewhat sad, but very cold, public apathy. People just weren't interested in doing everything necessary to keep our national parks the way they should be. Well, this 10-year program of the National Park Service now ushers in what promises to be, perhaps, the most rewarding era in Park Service history.

This program, as you know, is Mission 66. It is a 10-year program approved by Congress in 1956 and designed to reach its goal in 1966, a year which will see a minimum of 80 million visitors come to our national parks, and a year which will also mark the golden anniversary of the National Park Service.

Here's how the program got started. Early last year the President invited Secretary McKay, Director Wirth, and their assistants to a Cabinet meeting for an unprecented review of the problems and plans of the National Park Service. There in the Cabinet room of the White House, Connie Wirth outlined the bold, imaginative, and practical objectives of mission 66. When he was through with the presentation which lasted some 45 minutes, the President made a typical response. It was quick, and it was penetrating. What he said was simply this: "Get on with the job."

A few weeks later the mission 66 program was sent to the Congress with the firm support of the President and his administration.

Promptly and enthusiastically the Congress agreed that mission 66 was a program long overdue in this country. One measure of the congressional support it has received is the $68 million budget approved for the Park Service in the current fiscal year, as compared with the budget of some $33 million in 1953.

The mission 66 program is comprehensive: it provides for the protection, the preservation, the management, the public use, and the development of the entire park system.

It calls for a fresh look at the problems and the future of the national parks. Under it we seek to retain the best from the past, to benefit, if we can, from old mistakes, and to develop new policies and practices which will effectively serve the needs of the future.

In working on mission 66, we are keeping one principle uppermost in our mind: the primary justification for a National Park System lies in its capacity to provide enjoyment, in its best sense, for our citizens, now and in the future.

Now, let me just reel off some statistics on a few of the practical things that will be done. Five of eight authorized national parkways will be completed, at a cost of $179 million. Hundreds of miles of park roads and trails will be constructed and repaired at a cost of $214,600,000. One hundred and ninety million dollars' worth of buildings, utilities and miscellaneous facilities will be put up; among these are thousands of additional campsites, numerous picnic areas, and all types of structures for public use and enjoyment, for management and maintenance purposes. Sewer, water, communications, and power systems will be provided in areas where private sources cannot feasibly provide them. Where necessary, new conces-

sion facilities will be constructed and operated with private capital. Legislative authority exists for all these undertakings.

This is part of the broad plan for the 10 years. And already much has been accomplished, with the solid support of the Congress, even though the program will be only 8 months old the day after tomorrow.

For example, 573 projects have been programed for accomplishment under the 1957 fiscal year appropriation, about twice as many as in the 1956 appropriation.

Seven hundred new campsites are under construction; many have been completed. Visitor's centers, utility structures, and systems, employees' housing facilities, roads and trails—all these are being built. For 229 owners we have bought or optioned nearly 700,000 acres of inholdings; we have received 15 gifts of land and water areas amounting to more than 422,000 acres. We have commitments in donated funds of over a million dollars.

Next year we plan to do even more. The 1957 appropriation is 30 percent higher than that of 1956. But the 1958 appropriation, now before the Congress, is higher than that of 1957 by an additional $10,631,000.

In 1958 we shall not only continue and increase our construction work, we shall also begin a much-needed planning program.

As you know, there is widespread interest among conservation organizations, legislators, and representatives of State and Federal agencies in the preparation of an inventory of our park resources and of a long-range plan to meet our people's future needs for outdoor recreation. Such a plan is particularly necessary because our population, industries, and cities are expanding. We must not permit this trend to take from our people their opportunities for finding enjoyment and inspiration in areas of secenic, scientific, and historical interest.

Planning is therefore essential now. In July of this year, under the mission 66 program, work will begin on the development of a national recreation plan. In the development of this plan the National Park Service will consult with leaders in the fields of conservation and outdoor recreation.

The governors of the States and Territories will also be invited to participate in the planning activities. Representatives of the Park Service's five regional offices will work closely with State officials in recreation, conservation, forestry, fishing, and hunting. At every possible opportunity Park Service personnel will meet with private conservation and sportsmen's groups to seek advice and suggestions on recreation needs and problems.

Within the Federal Government itself an Interagency committee has been established through which the Park Service can get advice and cooperation from other Federal agencies.

An example of such cooperation is the assurance which Secretary Benson has given of his interest in having the development work in national forests fit in with the expanded activities in nearby national parks, and the assurance that has been given him that Interior will help the Forest Service advance its program called Operation Outdoors.

In 1961, following the work of all these people, the national recreation plan will be published. Every 5 years thereafter it will be revised. It will describe the Nation's long-term needs for parks; for recreation areas; for areas of historic and scientific interest; for hunting, fishing, camping, skiing, mountain climbing, and the like. It will project these needs to the year 2000.

Included in the broad national recreation plan will be the results of a number of special studies. I shall mention only three. There will be a National Park System plan study to determine what the system should include and to provide factual data which will help both legislative and executive officials when they consider the merits of new park proposals. Are certain types of parks too generously represented in the system? Should they be retained in it? What areas are of outstanding interest to the people of the Nation? Are these areas adequate for our country's foreseeable need? This study will answer such questions.

Secondly, there will be a historic sites survey, to complete our national inventory of historical and archeologic sites that should be preserved. This survey began pursuant to the Historic Sites Act of 1935 but it was interrupted by World War II. In resuming work on it, the National Park Service plans to coordinate its efforts closely with those of the American Institute of Architects and the National Trust for Historic Preservation, as well as with those of State historic and conservation organizations.

Finally, there is the historic American building survey, also begun in the 1930's, interrupted by World War II, and now resumed. Under this survey records are made and preserved, through measured drawings and photographs, of existing monuments of the builder's art in the United States.

Through these and other activities the national recreation plan will contribute to the enjoyment and education and good health of the American people in the coming years.

Because the State parks play a very significant part in this plan, I am delighted to know that there are here tonight a number of the State park directors who are members of the board of directors of the National Conference on State Parks. Tomorrow, I understand, you will hold your annual winter meeting to consider a number of State park problems.

It is important to remember that we have more than 2,000 State parks and that to these parks come 200 million visitors every year—4 times as many as come to the national parks. Like the national parks, these State parks need more development, more money, more staff if they are properly to serve the needs of their visitors. I am therefore delighted to learn that many States are developing long-range programs to meet these needs. The $82 million, 5-year program in California is an outstanding example.

I want to assure you that the officials of the National Park Service will do everything they can to cooperate with State officials in planning park and recreation programs. I am glad to be able to say that the mission 66 program provides for an increase in the cooperative assistance which the Park Service gives to the State agencies. This cooperation, I need not add, is a two-way street. In the past the Park Service has often got from the States valuable help and advice. Without such help and advice in the future many efforts under mission 66 could not succeed.

But I have every confidence that these efforts, and, indeed, the entire mission, will succeed. And as it succeeds, it will help assure that our national parks will be what the American people want them to be.

The American tourist of the 20th century possesses an intelligent curiosity. He wants to know the story that lies behind our national parks and monuments and historic shrines. He wants to know what earth forces lie behind the geological marvels, the natural processes and the scenic beauties he is viewing. He wants to know exactly what happened at some historic spot; and as a citizen, he wants his children to know. To help satisfy this curiosity is one major goal of mission 66.

Another is to preserve the wilderness qualities and primitive settings which give our national parks and monuments their chief values.

Still another goal is to provide the physical facilities which will be necessary if the increasing millions of park visitors are to enjoy the wonders they have come to see.

While this program goes on, the Department of the Interior and its National Park Service will be ever mindful of the mandate handed down by the Congress of the United States some 40 years ago. That mandate, as forceful and as pertinent today as it was when it was written, is this: "To promote and regulate the use of the Federal areas known as national parks, monuments, and reservations—and to conserve the scenery and the natural and historic objects and wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

Have you ever heard a more challenging charge?

The task ahead is a big one. All the accumulated deficiencies of 15 years in our National Park System quite obviously cannot be remedied overnight. The program must proceed in orderly fashion. Some areas which cry for help will simply have to wait for several years for much needed improvements.

And please remember this: In our anxiety to get this program completed, it may often seem like a long, long time until 1966. But I believe we can face the future with the expectation that the challenges and tasks of tomorrow will be met and disposed of effectively.

For I am confident that all the people who love and cherish our national parks and monuments all over this country will continue to provide the sustained support necessary to reach the goals we have set for mission 66. And I assure you taht the Department of the Interior will continue to the full its support of the National Park Service in this undertaking. For we are determined, as President Eisenhower is determined, and as I believe the Congress of the United States is determined, that this great mission shall succeed.

The Constitution Says "Trial by Jury"

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I call to the attention of the House an editorial published in the Nashville (Tenn.) Banner of March 7, 1957, entitled "Trial by Jury."

It is most timely and appropriate. I commend its reading to my colleagues:

THE CONSTITUTION SAYS "TRIAL BY JURY"

Not once, but twice—applying in both criminal cases and common law, or civil lawsuits—the United States Constitution specifies the right of defendants to trial by jury. And one important question that should be before the Nation right now is, "Can any 'code' outside the framework of that organic law, contravene the provision?" Is it subject to whim, or extrajudicial barrier?

It's a serious question that first was raised in the present instance in connection with the Clinton case, notwithstanding belated assurances that Federal authorities have relinquished the challenge; and that as prosecutors they now intend to consent to trial by jury in that case. The very fact that the challenge was raised in the first place erects its own warning of drift from the constitutional restraints.

Congress assuredly has the duty, as Senator JAMES O. EASTLAND declares, to check that trend by specific legal rebuke—and no-

where does it more positively belong than in the legislative domain so recklessly projected in the civil rights extravaganza. What, otherwise, would happen there, if the United States Government were vested with the power it seeks as prosecutor and judge?

It is not properly the right of any officer to decide—by whim, or expediency, or as a matter of his own discretion—whether a defendant or defendants shall have a trial by jury.

The danger of such loose interpretation of this constitutional provision was pointed out in the Clinton case almost immediately after evidence arose that it was in danger of being sidestepped or short-circuited. It did not transpire just yesterday, when Washington authorities blithely expressed "willingness" to abide by that fundamental provision; or even when the joker was slipped into an unseemly deck by making the "United States" chief party to that judicial proceeding, thus invoking the "code" which could have preempted the right stated.

It is a principle that must not be demolished, as if the charge of contempt of court justified counteractive devices in contempt of the Constitution.

The Declaration of Independence arraigned the English Government, remember, for "depriving us in many cases of the benefit of trial by jury." If that was fundamental 180 years ago, it is no less fundamental now.

How has the Supreme Court held on these matters over the years? It's profitable to look at history.

In 1864 a citizen of Indiana who had not been in military service was sentenced by a military tribunal to be hanged for disloyal conduct. The Supreme Court held in 1866 that he should have been tried before a jury in a court of law, the courts of Indiana never having been closed by the war. The United States was prosecutor in that case, remember. And the High Tribunal ruled as it did, citing the Constitution to sustain it. It employed this language:

"Time has proven the discernment of our ancestors; for even these provisions, expressed in such plain English words that it would seem the ingenuity of man could not evade them, are now after a lapse of more than 70 years, sought to be avoided. Those great and good men foresaw that troublous times would arise, when rulers and people would become restive under restraint, and seek by sharp and decisive measures to accomplish ends deemed just and proper, and that the principles of constitutional liberty would be in peril unless established by irrepealable law."

It is time, indeed, to take a look at history, and at current events—and remember beyond possibility of trespass the language of unrepealed law assertive and protective of basic rights.

Stay Strong at Home

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Stay Strong at Home," which appeared in the March 8, 1957, issue of the Franklin Favorite, of Franklin, Ky.:

STAY STRONG AT HOME

In our immediate concerns about foreign policy, the Israeli-Arab conflict and the Eisenhower doctrine for the Middle East, it remains most important that we keep our eyes sharply focused on economic conditions at home. The basis for any constructive foreign policy, and for the very defense of the United States itself, is the health of American economy.

Also, a program of constructive foreign aid can only be accepted if the line of prosperity is held in this country. And finally, it should not be forgotten that in the first years of the cold war, Russian policy seems to have been based on, among other premises, the assumption that there would be a depression in the United States. With every sign of weakness in American economy, we can expect the Russians to press us more strongly.

It is far too soon to cry gloom. But with the rising price index and with expressions of concern, even from the administration, it is not too soon to be prepared, and to remain most attentive to economic trends. The solid rock of all constructive action abroad and of the diplomatic and military defense of this country is the American economic apparatus. This is obvious.

But obvious or not, it must be watched and guarded, and with this, the high standard of living of the American people must be equally guarded.

Corn and Feed Grain Program

SPEECH
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage reserve programs for diverted acres and for feed grains, and for other purposes.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield to the gentleman from Iowa.

Mr. JENSEN. Here we give a lot of lip service to the family-sized farm, but that is about as far as we ever go. The gentleman's amendment would do good and would benefit those who live on the family-sized farms, would it not?

Mr. H. CARL ANDERSEN. Certainly, every quarter-section farmer who finds it impossible to plan within the small allotment of 30 acres of corn that is given to him would put perhaps 10 or 15 acres of land into the conservation reserve and would take the $10 or $15 per acre paid to him, but there is this little quirk in the law that says he cannot do it, consequently there is a roadblock in the way of his taking advantage of the soil-bank operation.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield to the gentleman from Indiana.

Mr. HALLECK. Do I understand from what the gentleman just said that his amendment would open up this bill to payments for feed grain that are not presently included in the Andresen bill and about which we have been talking ever since this controversy started?

Mr. H. CARL ANDERSEN. Not at all. I am talking to an entirely different point. The gentleman refers to a proposed acreage-reserve program for feed grains, and I am talking about the present conservation reserve program. My amendment would help take the equivalent of 150 millios bushels of feed grain out of production through the conservation reserve. It would have no relationship whatsoever to the controversy over a proposed feed grain acreage reserve program.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield.

Mr. AUGUST H. ANDRESEN. I may say to the gentleman that some of the provisions of his amendment are contained in the majority committee bill. I would suggest that we should try to write a strictly corn bill here on the floor. I am perfectly willing to sit down with other members of our committee and write a general farm bill that would deal with all these problems and consider the gentleman's amendment on its merits.

Mr. H. CARL ANDERSEN. My colleague admits that the idea is good, but he says the time is not now. I may say to my colleague from Minnesota [Mr. AUGUST H. ANDRESEN] that my amendment, in principle, is just as important to his particular bill as the $51 million acre allotment for which I have voted. It is just as important as the 15-percent feature that the gentleman has in his bill. Moreover, it is strictly corn legislation. I hope the gentleman does not object to it.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield.

Mr. AUGUST H. ANDRESEN. Knowing the gentleman's ability and knowledge of agriculture, and particularly corn, I am satisfied that he is acting on his own volition in supporting the Andresen amendment.

Mr. H. CARL ANDERSEN. That is correct. I think I have a reputation for always voting my convictions in what I believe to be the best interests of the good people I represent here in the Congress. At times, however, I find myself in somewhat the same predicament our corn farmers found themselves last December when the corn referendum was before them. It is quite obvious that they did not have the opportunity to vote for what they really wanted and needed, and so they cast their ballots for what appeared to them to be the lesser of two evils. Although I do not see evil in either of the propositions before us today, I am in about the same spot as the corn farmers were last December in that I must choose between proposals neither of which will, in my judgment, get the job done that needs to be done.

The Cooley-Poage bill before us has much to recommend it. However, I do have serious doubts, Mr. Chairman, as to the ultimate cost of the Cooley-Poage bill. We must reduce Federal budgets wherever possible, and it seems inconsistent for us to vote for a program on which we cannot even calculate the potential costs. There are additional deficiencies such as the failure to provide a fair minimum corn acreage allotment such as the gentleman from Minnesota

[Mr. AUGUST H. ANDRESEN] and I have both advanced in our bills.

I say that in all seriousness the Cooley-Poage bill contains major deficiencies; but at the same time do not let anybody thing that I am entirely satisfied with the Andresen substitute; I am not. However, like the corn farmers last December, it is my judgment that the better course for us would be to accept the Andresen substitute and hope that it will be further improved before final passage.

As a minimum, we must have that 51 million acre allotment for corn provided in the Andresen substitute and also in my own bill. Let me tell you briefly some of the other provisions we should have.

Something should be done about the method of apportioning corn allotments to individual farmers. Under the present law as it is administered by the Department of Agriculture, we are in many instances perpetuating inequities. By following the process of making allotments based on historical acreages, we are penalizing the good farmer who followed a diversified program and rotated his crops and giving a bonus, so to speak, to the minority of farmers who mined their soil during the base period. There is something basically wrong with a program which gives one farmer on a half-section of land only 30 or 40 acres of corn allotment and his neighbor on the half-section across the road 100 acres or more. That should be corrected.

Another very important provision we urgently need is a higher support level under our corn. When I went before the Committee on Agriculture to testify on my bill, several majority Members stopped me the minute I mentioned the words "90 percent of parity." They expressed the view that it was a waste of their time for me to even discuss it, but no one questions the fundamental fact that farm commodity prices are at the heart of all our troubles in agriculture today. Either you believe in price supports or you do not believe in them. There is no part-way or partial approach to this problem of prices. I happen to be one who firmly believes in the principles of price supports and I do not mind saying so.

Now, we are faced with a practical situation in which many seem to be afraid to vote for what they say they believe in because of a possible veto. Let us look for a moment at this problem. Most of the critics of price supports argue that they help the small farmer the least and encourage the big operators to produce the great surpluses piling up in Government bins and warehouses all over the land. They all say they want to help the little fellow, the family-type farmer, and I am offering a solution to the problem. We should adopt something along the lines suggested in my bill whereby we would make the 90-percent of parity supports available on the first 4,000 bushels of corn per farm, and I would welcome an amendment to extend that same principle to the other basics on family-size farms. In this manner we would extend maximum protection to the family farm and also hold that protective umbrella over all production.

None of these features are in the proposals before us. They are important features and if the legislative situation is such today that we cannot get action on them, they should be given priority in the enactment of any other farm legislation.

Now, however, I am hoping the committee will approve the amendment I have just offered as it will do much in my opinion to alleviate the problem we seek to cure.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I will be glad to yield to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. I think the House should know that the gentleman from Minnesota, who now has the floor, is a dirt farmer in his own right, and that he is the ranking minority member on the Agriculture Subcommittee on Appropriations and that he has been with that committee for many, many years. He has to consider many problems as the able gentleman from Mississippi [Mr. WHITTEN] has just said, dealing with this bill. If it is passed it will become the responsibility of the Appropriations Subcommittee on Agriculture to act; and, as I say, the gentleman who now has the floor is the ranking minority member on that subcommittee. That will be a big problem to resolve and the gentleman from Minnesota [Mr. H. CARL ANDERSEN], knowing agriculture as he does, certainly knows what the corn farmer and the other farmers of America deserve and should have. I hope his amendment will be agreed to.

Mr. H. CARL ANDERSEN. Mr. Chairman, I do not like to become personal or mention my own personal affairs in this matter, but let me give you a little example of what has actually happened on my own farm in this connection. The young man who is my partner told me last spring: "CARL, I cannot operate with an 80-acre allotment on these 369 acres. We have got to have more corn than that. I cannot go into the program and make enough money to get by on." I said, "Henry, I will leave it up to you."

That is why we were forced to overplant on our allotment. But the law says, in effect, that CARL ANDERSEN and Henry Boll cannot offer 40 acres of good productive land in which we had already seeded alfalfa for the conservation portion of the soil bank. I really wanted to put some of this in the soil bank but could not do so. This also applies to hundreds of thousands of corn farmers and that is why so few of them have gone into the program in my area. My amendment would open the door for them.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Wilkes College of Wilkes-Barre Wins Middle Atlantic Wrestling Tournament

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following account of Wilkes College's triumph in the Middle Atlantic wrestling tournament held this month at Gettysburg College. The account was written by Jack Curtis, director of public relations, Wilkes College:

FEATURE STORY ON A REAL CHAMPION—HERE'S HOW THEY DID IT

Advocates of the theory that a concerted team effort will whip a group playing as individuals pointed proudly to the Middle Atlantic wrestling championships held at Gettysburg last weekend.

For little Wilkes College, which saw four of its men lose in the finals, still had enough points from a well-balanced team effort to become Middle Atlantic wrestling champions.

The Colonels of John Reese thus ran up their 18th win without a loss in team competition including 10 dual meet victories this year. That balance did the trick all year—when an expected winner would lose, a predicted loser won, and in the end, Wilkes always won.

In the tourney, Wilkes won 4 second places, a third, a fourth, and saw its other 2 men (of an 8-man team) earn advancement points to give it just enough of an edge—2 points—to beat out second-place Muhlenberg and dethrone third-place Lafayette.

A score of 52 points in the first MASCAC meet open to the entire conference membership was a fine showing for the winners, which had sent the largest representation—four—into the finals.

Oddly, Muhlenberg, the nearest team to Wilkes for the team crown, had lost a 29-5 dual meet to the Colonels only a week before the Mid-Atlantics. The Mules, however, won three first places in the meet, a feat which would ordinarily assure them of the championship.

"Every one of the boys contributed to our win," Coach Reese stated, "and not one of them gave in, even though two of them lost out in the early rounds."

That "not giving in" was the factor which won for the team, the esprit de corps of which any team in the Nation would be proud to possess. Walt Glogowski, 167 pounder, was pinned by the defending champion in his first match on a hard-luck move which backfired.

But Big Walt came crack to capture third place in his division, and it was his victory which provided the margin by which the Colonels won. He scored another point by pinning his opponent in an earlier match.

Then there was little Skeeter Williams who had not even been seeded in the meet. He met the fourth-seeded 123 pounder in the first match, then another topflight grappler and in the semifinals, the first man in the class. He finally lost on a referee's decision after a tie in two overtimes in the finals.

Jim Ward, 130 pounds, was favored in his class and breezed into the finals. He was pinned with 21 seconds to go in his bout, after having built up a big lead. The odd part of his loss was that he helped his oppo-

nent. Not satisfied to ride out and win by a decision, Jim tried for a pin and in doing so slipped into a pin hold himself.

Here was the case of a boy who just had about too much competitive zeal—he never stopped trying.

And that was the story of the 1957 Middle Atlantic States Athletic Conference wrestling champion, Wilkes College. The Colonials never stopped trying and that little intangible extra they showed paid off.

American Indian Policy

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1957

Mr. McGOVERN. Mr. Speaker, under leave to extend my remarks, I wish to call attention to an editorial in the Christian Century of February 13, 1957, which points up the need for an improved Indian policy.

We recognize the Indian people of this Nation as the first Americans. We ought to recognize, too, that Federal Indian policies should be geared to the long-range welfare of our Indian brothers.

The Christian Century editorial is reproduced in full as follows:

WE NEED A NEW INDIAN POLICY

Within the last 4 years, about 12 percent of trust lands allotted to American Indians have been taken out of trust. Oliver La Farge, whose recent report to the directors of the Association on American Indian Affairs included this statement, said that about 1,600,000 out of 13,500,000 acres of allotted land are involved. He pointed out that 23,000 acres of the Pine Ridge Reservation were sold by Sioux Indians in 1955, and this is only one of several reservations in South Dakota. A half-million acres of Indian land were alienated in 1955, but the rate at which land passed from Indian to non-Indian hands slowed up in 1956 because of the prolonged drought in the Western States. Loss of lands affects Indian reaction to all sorts of proposals. For example, last month 200 Indian and white leaders met in South Dakota to discuss community development. Experts in agriculture, health, and Indian affairs met with Sioux, Winnebagos, Omahas, and Three Affiliated Tribes at the invitation of the Bureau of Indian Affairs. La Verne Madigan, director of the AAIA, reports: "For 5 days the experts eagerly tried to tell the Indians how rural towns all over America make themselves better-governed, healthier, more beautiful places to live in. For 5 days the Indian leaders of the Great Plains tried to tell the experts that there could be no Indian communities to beautify if Indian lands continued to pass out of Indian ownership at the present ominous rate. The Indians feared the motives of the experts who talked about how to improve a community but not about how to save it from obliteration. The experts were defeated by the Indians' fear for their land. Our Government must end this oldest of Indian fears in order that tribal and white leaders may meet without distrust." We agree, but have little hope that the present administration will stop the transfer of individually allotted land from Indians to non-Indians unless public opinion is aroused.

HOW WE CAN HELP THE INDIANS

If public opinion can be aroused, the Bureau of Indian Affairs can radically improve its conduct. The Bureau has a revolving loan fund of which $7.8 million is not now being used. The fund is increasing because it is not being used as Congress intended. The Bureau could make this money available to tribes, which would then be in position to purchase every acre of allotted land which any Indian may want or need to sell. Such purchases by the tribes would keep the land in the possession of the Indian people. The tribes could resell the land to individuals or could retain it in tribal ownership. The latter course would probably be a better one to follow in most instances, since tribally owned land is not so easily alienated as are individually owned plots. Why does the Indian Bureau prefer to allow its lending fund to accumulate in idleness while the Indian estate is dissipated year by year? One reason is that the Indian Bureau is permeated with the philosophy that money-lending should be a private enterprise, regardless of the intent of Congress in making the money available or the needs of people who cannot qualify under ordinary standards for loans. The Bureau also justifies its action by declaring that House Concurrent Resolution 108, an action of the 83d Congress, states Indian policy for the Congress. It declares that it is the purpose of Congress to terminate all Federal services to Indian tribes as soon as possible. This action should be repealed, since it is not the Indian policy of Congress. No termination bill has been approved by Congress since the elections in 1954, and none is likely to be approved by the present Congress. In place of 108, Congress should enact the proposal made by Senator MURRAY, of Montana. Senate Concurrent Resolution 3 calls for enactment of an American Indian point 4 program. It would begin full-scale economic development of Indian communities, and it would maintain the land base without which those communities would perish, and with them what remains of Indian culture.

Another GOP Apologist Not What the TVA Needs

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I call to the attention of my colleagues in the House an editorial appearing in the Nashville Tennessean of recent date entitled "Another GOP Apologist Not What the TVA Needs." It is appropriate and timely. I hope the membership of the House will read it:

ANOTHER GOP APOLOGIST NOT WHAT THE TVA NEEDS

As the time for appointment of a new member of the three-man TVA Board draws ever nearer, the smooth-talking Gen. Herbert D. Vogel has convincingly—if inadvertently—underlined the importance of that choice.

In an interview with a private power magazine published in the visitors corner on this page today, the TVA Chairman does his best to create the impression that the administration which appointed him—and which soon will name a second Board member—has only the best intentions toward the valley development.

But his eagerness to put the best of all possible faces on an ugly situation and to minimize the crisis confronting the TVA is in itself a revealing indication of the administration's real attitude.

And, furthermore, not even the glib military man chosen by President Eisenhower to preside over this symbol of "creeping socialism" can entirely gloss over the facts of the matter. Even under the friendly questioning of the private power industry's interviewer, General Vogel concedes, in his own fashion, that all is not as well as GOP spokesmen would have the Nation believe.

He denies, for example, that the administration is trying to throttle the TVA. But then he has to explain that TVA is now dependent on its own revenues alone for expansion and that it cannot operate that way very long.

And while referring to Congress' unwillingness to provide continuing appropriations to finance this expansion, he neglects to point out that the GOP administration has successively cut TVA requests each year it has been in office until it now is proposing no appropriations at all for expansion.

That, of course, points up the need for a self-financing plan, as General Vogel explains. But the differences he dismisses as details about the kind of plan to be adopted actually involve the fundamental question of whether the TVA board or the hostile Budget Bureau is going to control the agency.

* * * * *

And when General Vogel speaks of tightening up the TVA organization and sharing the responsibilities of the general manager, it is pertinent to recall that as much as 2 years ago a somewhat similar proposal he made—over the objections of the two other board members—brought from Chairman CLARENCE CANNON, of the House Appropriations Committee, an angry charge that the Chairman was seeking to set up a dictatorship.

It does make a difference, therefore, as to whether the new TVA board member is susceptible to General Vogel's views—despite his statements to the contrary. In a less temperate statement last November, even General Vogel himself let it be known that he expected things to be different this year, when the membership of the board will be changed.

It is a question of whether the board is to be controlled by members dedicated to TVA, jealous of its independence, and willing to fight for its needs or by apologists for a policy of attrition that already has brought the agency into the shadow of a critical power shortage.

Letter to Detroit Common Council

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. JOHANSEN. Mr. Speaker, under permission to extend and revise my remarks, I include the following letter which I have written to the Common Council of the City of Detroit in response to a resolution adopted by the council relative to an increase in pay for postal employees:

MARCH 11, 1957.
COMMON COUNCIL, CITY OF DETROIT,
HON. THOMAS D. LEADBETTER,
City Clerk, Detroit, Mich.

SIRS: I am in receipt of a letter under date of March 7, 1957, from the Honorable Thomas D. Leadbetter, city clerk of Detroit, together

with an undated copy of a resolution of your honorable body reading as follows:

"Whereas our postal employees, underpaid for many years, should receive favorable consideration in their quest for increased remuneration in recognition of the faithful and exemplary service they render: Now, therefore, be it

"*Resolved*, That we urge our national legislative members of Michigan to do everything possible to bring about this measure of relief to the employees of one of our most important bureaus of government.

"Adopted unanimously."

In the spirit of fairness and respect, I must suppose that the members of the common council, in adopting this resolution, acted on the assumption that they were exercising the constitutional right of petition for the redress of grievances. I am a firm believer in that right, but I believe there are other principles involved in this action.

I invite your attention to the fundamental separation of the powers and responsibilities under our Federal form of government, and I respectfully suggest that the common council of Detroit on further consideration, might not wish to appear in the role of a lobbyist for a particular group of Federal employees or for their employee organizations.

I also venture to suggest that the premise asserted by your resolution that "our postal employees (have been) underpaid for many years"—whether true or false—has not been a subject of official investigation or determination by the common council of Detroit.

I further respectfully suggest that a corresponding appeal on my part as a Member of Congress, or an appeal by formal resolution of the Congress of the United States, to the common council of Detroit to provide relief in the form of pay increases to the firemen, policemen, or other employees of the city of Detroit, would quite justifiably be regarded by your honorable body as entirely out of order.

As a Member of Congress and as a member of the House Committee on Post Office and Civil Service, I am aware of the faithful and exemplary service of employees of this important bureau of the (Federal) Government.

As a Member of Congress and as a member of the House Committee on Post Office and Civil Service, I shall, without reference to the unanimous resolution of the common council of Detroit, endeavor to continue in the future as I have in the past to meet, to the best of my ability and judgment, my responsibilities to all Federal employees and also to the Federal taxpayers of the Nation who are called upon to underwrite the ever-mounting costs of Federal Government.

Yours very truly,

AUGUST E. JOHANSEN.

Shooting Preserves Helping To Meet Demands of Sportsmen

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. CEDERBERG. Mr. Speaker, controlled public shooting on privately owned preserves was one of the topics discussed a few days ago at the North American Wildlife Conference held here in Washington.

Many States now have this type of controlled hunting. They include Arkansas, Connecticut, Delaware, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Missouri, New York, New Jersey, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, West Virginia, and Wisconsin.

Michigan was one of the earliest States to have this type of hunting but its law was repealed during the depression. There is now growing agitation to have it renewed in my State, where we already have a somewhat similar plan for public fishing in privately owned trout lakes.

Recently my hometown newspaper, the Bay City Times, commented on this plan editorially and called the defeat of Michigan's earlier law a "blow to pheasant hunting on public ground as well as private."

As a matter of information and because of the growing interest in the preserve program I am submitting an address at the North American Wildlife Conference by Mr. Charles Dickey, of the Sportsmen's Service Bureau, which explains the manner in which the program operates. It follows:

SHOOTING PRESERVES IN THE UNITED STATES

(By Charley Dickey)

Shooting preserves are privately owned and operated areas where pen-raised game is released for hunting, usually upon payment of a fee by the shooters. The term "shooting preserve" implies in most instances that there is an extended season, no bag limit on released game, and that the areas are licensed or sanctioned by State game commissions.

The first State to legalize shooting preserves was New York, in 1910. Since all of the earlier State laws and literature used the term "shooting preserve," the North American Game Breeders' Association, Inc., has voted to standardize that term. "Shooting preserve" is historically correct, in contrast to other terms which have sprung up, such as "regulated shooting," "controlled shooting," "fee hunting," "put-and-take shooting," "pay-as-you-go shooting," and several others. The board of directors of the North American Game Breeders' Association, Inc., requests the assistance of State game commissions in standardizing shooting preserves.

The name "shooting preserve" indicates that the area is open to the public, and where the preserve is open to the general public on a membership basis, the same terminology would apply. If the grounds is closed to the public, it should be referred to as a private shooting preserve.

HALF OUR STATES HAVE THEM

More than half of the States now have shooting preserves, either under statutory law or rulings of the game commissions. Eight or ten additional States probably will introduce legislation during 1957 to legalize shooting preserves. Many other States plan to liberalize existing laws because game management experts now realize that 6 months of hunting is possible under properly written and administered preserve regulations.

Ringneck pheasants are by far the most popular game released. Mallards are second and quail are third. Chukar partridge rank fourth. Most States permit additional game birds and animals to be included, but these four will obviously continue to be the most popular. A few operators released coturnix quail in the 1956–57 season; results indicate that this relatively new species will be adaptable to preserve operations.

The paying customers are the ones who determine how much sport a shooting preserve must provide. If the customers demand tough-wing shooting, and are willing to pay for the best, the operator will give it to them. If the hunters want easy walking, birds stocked close to trails, and all open shooting, the operator will cooperate. Most shooting preserve operators are in the business to make a living. They are willing to supply the type of hunting the sportsmen demand.

There are rumors that hunters have been complaining of short seasons and not enough game. Private enterprise wants to help game commissions by providing shooting preserves where hunting can be enjoyed 6 months each year. Yet some of the firmest opposition to the hunters' dreams of long seasons has come from those who have the job of maintaining the sport. Often this opposition arises from lack of understanding caused by failure to study successful programs in other States. Adamant refusal to consider the whole idea of shooting preserves has not been unknown.

SPORTSMEN INITIATE PLAN

It has been the sportsmen who have started most of the constructive legislation to enable shooting preserves to operate. If they have not gotten underway in your State, they will. Therefore, it would be much better to prepare ahead by learning how other States have administered their shooting regulations.

Preserve laws or regulations must be written so that they are fair to the operators, to the State game commission who must administer the laws and, by all means, to the sportsmen in general. In the interest of the public, which owns wild game, the State is entrusted with game management. Any doubt as to whether or not a State should have shooting preserves stems primarily from the fear that wild game will be shot inadvertently by hunters who use these areas. How can that be handled?

Let's not try to fool anyone. A few wild birds may be shot on preserves. These areas are operated by humans who are subject to error the same as in any other enterprise. It is up to the State to see that its preserve regulations require that many, many more birds escape from the area than wild ones are shot. The way most of the shooting preserves have been obliged to operate, it is not a simple trade of 1 pen-raised bird for 1 wild bird; it is more often a trade of 10 to 20 pen-raised birds escaping for every wild one taken inadvertently.

In the 1956–57 season in Pennsylvania, about 35,000 pheasants escaped from preserves to become State property. Aside from the free birds that the public gets, there are those other advantages such as extended seasons; additional places to train dogs; no bag limits; in some cases, new and different kinds of birds to shoot and, quite important, the people know where they can hunt and be sure of finding game.

To protect the public, State regulations should include:

1. A maximum acreage.
2. A minimum acreage.
3. A minimum seasonal release of each species.
4. A maximum percentage of allowable recovery of each species.

These four points are the essence of shooting preserve laws; the rest is mere detail.

There should be a maximum acreage because some operators tend to buy or lease more land than is needed. The two largest shooting preserves in this country—in number of pheasants shot—operate on about 400 acres each. There are many efficient operations on 200 acres or less. An operator is better off with 300 acres that have been developed properly in cover than with 1,000 acres of poorly developed land. For most of the Nation a maximum of 1,000 acres per preserve is ideal. This allows plenty of room

in case owners wish to handle quail. Some of the Western States may feel that a higher maximum, say 2,000 acres, is needed. But some limit definitely should be fixed on the total number of acres that may be included in one preserve.

A minimum acreage is needed so that the operator's neighbors cannot too easily license their land with the hope of shooting overflow birds on an extended-season basis. The minimum acreage helps to keep down the jacklegs who might try to take advantage of the regulations. A minimum of 100 acres is ideal for most of the country, particularly in the East. The one exception is that a 50-acre minimum should be permitted where only mallards are released.

One reason for not making a higher minimum is that many operators have successful preserves on less than 200 acres. A happy medium must be found. The minimum acreage should not be set so high as to make the owning of a preserve discriminatory; or set so low as to make it too easy to own a preserve. In some States the minimum acreage has been set too high, and some operators are leasing more land than they need or use just to meet State regulations.

MINIMUM BIRD RELEASE REQUIREMENT

To be sure that a shooting preserve owner operates within the spirit of the program, a minimum seasonal release should be required. This keeps out illegitimate operators, and is insurance that birds will escape from the area. Without a minimum release a farmer might license his grounds next to an existing area to get a free ride on escaped birds. But if he is required to release a minimum of 100 pheasants a year to get his license, an investment of several hundred dollars counting pen cost, he will think twice before making application.

Again, a happy medium is needed for seasonal releases. If a minimum of 1,000 pheasants is required, it would be discriminatory against groups wanting to open on a small scale. Suppose an operator had a successful pheasant grounds but wanted to experiment with chukars; he would have to raise or buy 1,000 birds and might get stuck with a large number if the hunters did not like them.

A minimum seasonal release of 100 birds of each species used is a far more satisfactory way of protecting the public's rights than high license fees.

To further protect the public, many States have a maximum recovery percentage for the preserve season. New York allows only 80 percent of the total number of pheasants released to be recovered. This means that for every 5 ringnecks stocked, 1 must go free to surrounding farms.

This percentage seems to be fair both to the operator and the general sportsman. It is insurance that enough birds are escaping to make up for any wild birds that might be taken. With mallard ducks, necessarily flighted under strict control, a recovery of 100 percent should be allowed.

There will be no arguments from the operators on an allowable seasonal recovery of 80 percent for pheasants. Most of them are happy to recover 70 percent, especially if their preserves are open to the average hunter. New operators often recover less than 60 percent the first year.

The percentage of recovery is governed through the issuance of tags by the State game commission. Naturally, the commission has the authority of inspection and can take a bird count at any time. Instead of issuing a tag for each bird bought or raised, tags for only 80 percent are issued. Since cocks and hens are shot before and after normal open seasons, there never is any difficulty in getting the operator to tag birds before they are removed from his shooting preserve.

In addition to these four protections, the general public has still another safeguard. An operator may have from $10,000 to $50,000 invested in a preserve. If he violates the regulations, he could have his license revoked and automatically be put out of business. With the investment which is required to get started, operators tread the straight and narrow.

The administration of preserve laws has been kept simple in most States. There is no need for complicated regulations.

Many of the States that have had preserves for a number of years have special nonresident licenses for preserve shooting only. It hardly seems fair to charge a nonresident $15 or $20 to shoot on a preserve where the game is released from pens. In this connection, Maryland has a well-accepted special license. It sells for $5.25 and is applicable on any Maryland preserve for the 6 months season. It does not allow a nonresident to shoot any species except those released. Even more liberal are New York and Connecticut laws, which do not require any type of hunting license for preserve shooting, either for residents or nonresidents.

TYPES OF STATE LICENSES

If your State has preserves, but is charging the regular nonresident fee to hunt on them, you will soon be getting requests from sportsmen for a special nonresident license, applicable only to preserves. If your State plans to legalize preserves, it is wise to include a provision for issuing special nonresident preserve licenses in the initial legislation so that a future bill will not be necessary.

In 1921, the old Biological Survey made an administrative ruling that mallard ducks, more than two generations removed from the wild, could be taken without regard to bag or season limits. Later black ducks were added. That administrative ruling has been in effect ever since, although several State game commissions have tried to disregard it. There is little chance that the ruling will be, or even could be, changed because successive secretaries of the Department of the Interior have accepted it for 36 years. Control of the domestic ducks was relinquished and there is legal doubt that it could ever be regained, even if the United States Fish and Wildlife Service so desired, one reason being the large number of game-farm mallards found in all parts of the Nation.

The domestic duck ruling still is causing difficulties in several States. Sportsmen, wanting to have mallard flighting areas, have not been able to get definite answers from their game commissions on the legality of extended seasons and no bag limits for duck preserves. The States say they do not have authority to grant extended domestic duck seasons, and the United States Fish and Wildlife Service says that it has long since released control. Some States have taken the attitude with sportsmen of: "You go ahead and shoot game-farm mallards out of the migratory season and see if we will arrest you."

There is only one solution to the problem. This matter was dumped into the laps of the States in 1921, and it is up to the individual States to make their own rulings on domestic ducks. The sportsmen are doing the only thing that they can do when they go howling to their legislators.

All the States need do is grant themselves the power, if they do not already have it, to license domestic duck-shooting areas. Then, if an operator wants to open on a flyway with the obvious intent of using domestic ducks as live decoys, the State can refuse to license the area. If the preserve is off the flyway, and is a legitimate operation, then the State can grant a license. The whole problem is that simple; yet some States, after 36 years, do not have their regulations straightened out.

Where a State has a preserve season for pheasants, quail, or chukars, the simplest thing to do is to add mallards and blackducks, more than two generations removed, with the same seasonal limits. There is no reason why domestic ducks should not be fair preserve game at least 6 months a year.

To simplify identification of legal shooting-preserve mallards and blackducks, some technicians have suggested that a ¼-inch hole be punched in the outer web of the right foot of each duck before the bird reaches 6 weeks of age. By the time the preserve season opens, the hold will have scarred over and will be visible plainly only upon holding the spread web up to a light. This simple procedure will aid in rapid identification of domestic mallard or blackducks, and eliminate the possibility of mixing migratory ducks with their pen-reared cousins.

With the publicity that shooting preserves received in 1956, it is absurd for State game commissions to ignore the Federal ruling on ducks. Those States agencies that try to dodge the issue are certain to come under the fire of sportsmen.

SHOOTING PRESERVES ON THE INCREASE

There is a definite need for State game commissions to know which shooting preserves are open to the public and which are not. In a survey made by the Sportsmen's Service Bureau last year, to obtain material for a directory, 8 out of 11 States did not know which preserves were open to the public. The sportsmen, who are supporting the commissions, could not write their own commissions and find out where they could shoot on a preserve. In one State the game commission had no such listing, but the department of commerce, a block down the street, had a complete list.

Shooting preserves are on the increase and the game commissions will be getting more and more requests for listings. Before the operator receives a license to open he should be required to fill out a simple form stating whether the preserve will be open or closed to the public, and whether or not the operator wants his preserve listed in publicity. The license form naturally collects other pertinent data such as location, type of game released, address, phone number, and other information.

Shooting preserves are bound to grow. Sportsmen are going to demand more realistic laws for extended seasons so that operators will have enough hunting days to make a living. It takes a lot of money to get into the business and there is no need to worry about a mad rush to open preserves.

The future will see a leveling off with three general types of preserves: private grounds; preserves catering to the strictly sporting shooter, who is willing to pay a little more for extra services and top hunting; and preserves catering to the middle-income bracket. Already there are many preserves where hunters can bag two pheasants for $10. This is the price range which nearly every hunter can afford at least once or twice a year.

Shooting preserves will not solve all of our game problems but they do keep a lot of hunters happy in more than half the States. With the years of successful preserve operation in so many States, and with the experience they have gained and are willnig to pass on, every State game commission should make it possible for its sportsmen to enjoy shooting preserves. Enlightened free enterprise, with game and conservation commission cooperation, can and will lend a hand to meet the demands of the American sportsman, today and in the future.

Let the Honored Dead Rest

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. DOWDY. Mr. Speaker, I have a letter from a father whose son was killed in action in World War II and whose body lies in Belgium. Any comment would detract from his expressed sentiments, and I ask unanimous consent that his letter, with the editorial accompanying it, be included in the Appendix of the RECORD.

The letter and editorial follow:

THE STATE NATIONAL BANK,
El Paso, Tex., February 26, 1957.

The Honorable JOHN DOWDY,
House Office Building,
Washington, D. C.

DEAR MR. DOWDY: Attached hereto is a reprint of an editorial "Let the Honored Dead Rest." It was published in the Herald-Post of this city on February 9, 1957.

As the proud father of a son, a combat infantry officer who was killed in action in World War II, I heartily concur in the sentiments expressed and hope that the proposed travesty will not be carried out as indicated. I feel that the Tomb of the Unknown Soldier in Arlington Cemetery is symbolic of my son and the other sons who have died in the service of their country since our Republic was founded, and for those who, if fate may so decree, will also die for their country.

Our lad's mortal remains are buried in a United States military cemetery, with his comrades, in far away Belgium. I feel and know that he and they rest in honored glory.

I know there are many who feel as I do but who will not write you, and there are others who all too soon forget. I hope you understand.

Sincerely yours,

CHRIS P. FOX.

[From the El Paso Herald-Post of February 9, 1957]

LET THE HONORED DEAD REST

The Defense Department, reluctantly carrying out the will of Congress, has announced plans to remodel the shrine in Arlington which is the Tomb of the Unknown Soldier.

The majestic structure which honors the unidentified dead in all our wars will be modified to make room for two more unknowns, one from the Second World War and one from the Korean war.

There will be a ceremonial selection of the bodies, now resting in American military cemeteries abroad. These will be moved to Arlington with funeral and reburial services set for Memorial Day 1958.

No change is contemplated in the famous tomb or in its inscription: "Here Rests in Honored Glory an American Soldier Known But to God."

How that inscription is to be made to fit three unknown soldiers is no more clear than the motives for the change. All our war dead of the last 180 years rest in honored glory wherever they are and this tomb stands sentinel for them all. It is unique among American memorials, gaining honor with age. Once it has been torn open, the precedent has been set to tear it open again.

Actual work on the plans still is months away. We hope they will be reconsidered and abandoned. These honored dead lie in peace, wherever they are. We should let them rest.

Federal Education Support Program Not an Evil

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Federal Education Support Program Not an Evil," which appeared in the March 7, 1957, issue of the Leitchfield Gazette, of Leitchfield, Ky.:

FEDERAL EDUCATION SUPPORT PROGRAM NOT AN EVIL

Opposition to Federal aid for education purposes appears to be based on two premises which are not unassailable even though thought to be so by persons afflicted with one-way thinking. The premises, and it must be stressed that they are such, are first, that Federal support means Federal control, which would be worse than local control, and second, that taxpayers must pay for schools anyway, so why not leave the problem to local decision.

Approaching the first premise: that Federal support means Federal control, it must be pointed out that this Nation has become progressively more powerful and the people more prosperous during the time there has been a gradual strengthening and enlarging of Federal services. Far from being an infringement of individual rights, the constitutional use of Federal powers gives the Nation and the individual as great a voice in government through elected congressional representatives as he receives through State and local representatives.

Because they represent their own States and districts, Members of Congress retain close touch at home, often keeping better posted than local officials on opinion. At the same time Congressmen are acquainted with the national scene as it relates to the local one, thereby making their decisions more apt to be for the general welfare.

The second premise, that because taxpayers must foot the bill anyway, collection and use of school funds should be left to local and State agencies, produces an interesting goal if pursued to its ultimate meaning. If it is better to keep education supervision under present agencies, then by the same reasoning it would be better to retreat further, stopping public education altogether and letting individual parents decide how much and how long their children should be exposed to schooling, hiring teachers themselves and paying for them. This would mean that those persons unfortunate enough to have no children would have no education bills but might have to contribute a good bit more to the support of illiterates.

Very few persons seriously advocate abandoning public schools, so if we are to have them, they should really be public schools and not provide a superabundance of facilities in one community against primitive conditions in another. Some States, such as Kentucky, are saddled with outmoded constitutions which hamper realistic distribution of school money. Fortunately, Kentucky has eliminated one roadblock to better distribution of school money, still our educational program leaves much to be desired.

For many years Kentucky has been exporting her population about as fast as they are educated. Much of the cream of our youth have gone into other States to enrich those States with their skills and energy. Is there justice in Kentuckians paying entirely for the education of people who eventually make their homes in other States? Youth from rural areas of Kentucky are going to Louisville for employment; however, through equalization funds, the people of Louisville have contributed to the education of these young people.

Federal support of education simply means a wider distribution of the tax load required to provide badly needed new funds. If the program is applied nationally as has been done in Kentucky it will mean a better educational program more nearly approaching the concept of public education as envisioned by founders of this plan to eliminate illiteracy and its threat to progress. It is believed that persons who oppose Federal aid to schools are against additional taxes more than they are for a better America.

Public Power

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. SCUDDER. Mr. Speaker, in the developing controversy over the recommendation by Secretary of the Interior Seaton that the Federal Government enter into a partnership plan with a private-utility company for development of the power facilities of the Trinity River project in California, the large majority of leading newspapers in the northern and other sectors of California favor the partnership plan.

One such newspaper is the Oroville (Calif.) Mercury. Its publisher, Dan L. Beebe, cooperated with me when I introduced on March 30, 1950, a bill to authorize construction of the Feather River project. This project was set aside in favor of the Trinity proposal which, without power, could not be economically justifiable.

If the private-utility company is permitted to construct the powerplants, the American taxpayers would be saved $55.5 million in capital outlay. The company would also pay to the Federal Government, for falling water, $165 million over the 50-year repayment period. In other words, $220.5 million would be paid to the Federal Government for a project estimated to cost $225 million—sounds like good business.

In addition, the private company would pay Federal, State, and local taxes during this period amounting to some $145 million.

This wide difference in savings to taxpayers was set forth in a March 6 editorial in the Oroville Mercury. I desire to include it herewith for the information of Members of the Congress who will be called upon to make the final decision in this controversy:

GIMMICK USED TO FOOL US ON PUBLIC POWER

Down in Sacramento, one of two cities in California where power from the Central Valley project is distributed, the Sacramento Bee, powerful protagonist of public power, seriously makes the statement that it is not true that "the people of Vermont or Missouri are helping to pay for the low-priced power enjoyed by the customers of the Sacramento Municipal Utilities District."

"The fact is," says the newspaper, "Federal power and water projects cost the Govern-

ment nothing, for the cost of each is repaid by the power and water customers."

Notice the gimmick in between the first and second paragraphs. The newspaper makes a switch. In the first statement it is talking about the people in other States. It switches from the people to the Government, but you aren't supposed to notice it.

Let's continue with the people. Could the newspaper say, "The fact is that Federal power and water projects cost the people nothing"? Certainly not. For when the projects finally are amortized after 50 years, if they are amortized, which is seldom, the money is not returned to the pockets of the taxpayers, as we all know from experience.

So if we continue to talk about the people—the taxpayers—we can go on to figure, in the case of Trinity power, how much more it will cost them if the Government pays the cost than it will cost them if it is developed by the power company, as proposed by the company and Interior Secretary Seaton.

If the power company plan is accepted it will mean to the Government a surplus over 50 years of	[1] $165,000,000
The company, in addition would pay in Federal, State, and local taxes the sum of	145,600,000
Also, under those circumstances, the Federal Government would be saved a capital investment of	55,500,000
Total saving	366,100,000

[1] If the Government were to get as much money from public power it would have to raise Central Valley project rates .9 of a mill, or 20 percent. Sacramento definitely would not like that.

It seems clear, then, that if the Government accepts the opportunity to get that additional money out of the Trinity power it will have more money, as Seaton says, to develop other water projects in California, and that it will not need to ask for so much from taxpayers generally.

The difference between the low CVP power rates and the money the P. G. & E. will pay for the Trinity power is $165 million. Certainly, then, the taxpayers of the country are being nicked when the power is sold to preference customers like Sacramento and Roseville instead of going out over the lines of the company.

How We Delayed Victory in the Pacific in Moscow's Interest

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. BOW. Mr. Speaker, "The Enemy at His Back" is the title of an unusual and noteworthy book of Mrs. Elizabeth Churchill Brown.

It is the story of how we lost the peace after wining world War II—a story that contains many lessons for our guidance in these perilous days.

I include with my remarks a review of this work by Mr. Forrest Davis of the Cincinnati Enquirer, which I hope may inspire many Members to read the volume.

The review follows:

HOW WE DELAYED VICTORY IN THE PACIFIC IN MOSCOW'S INTEREST

(By Forrest Davis)

WASHINGTON.—I take it that no sober analyst of military strategy and global power relationships would deny that the Communist imperial system's conquest of continental China cataclysmically altered the balance of power against the United States.

It was the addition of that vast, populous, and ancient land preempting the Asian land mass that confronted us with the prospect of a two-front war against an enemy operating from deep within the Eurasian "heartland" defined by Sir Thomas Mackinder.

A Soviet Russia, cynically committed to world conquest and contemptuous of the West's humanitarian values, would be formidable enough but manageable.

It is the sweep of the Communist imperium, arching from East Berlin to Hanoi, that occasions the profound anxiety giving rise to our ring of bases and alliances from Alaska eastward around the earth to Japan and South Korea.

How was a China faithful to us gathered into the Soviet imperium to our immense harm?

The evidence is, I believe, overwhelming that the United States policy after the defeat of Japan—the Truman administration's insistence upon a Chiang Kai-shek coalition with the Yenan Communists when we had abandoned such policies in Europe; the incomprehensibly defeatist Marshall mission, our starvation of the Nationalist armies of munitions as they had the Communists defeated—accomplished the conquest of China for Moscow. That is one tragic story.

But to that story there was a prelude; a prelude that is the subject of a stunning, convincing, and remarkable new book, The Enemy at His Back, by Elizabeth Churchill Brown.

I have called it stunning because, basing itself upon a wealth of documentation from memoirs, Pentagon papers, congressional inquiries, Japanese and Chinese sources, it confirms the incredible but accurate surmise that our Government delayed victory in the Pacific in order to allow Soviet Russia to participate and thereby reestablish its military position in the Far East.

Our Government, no; men and forces in our Government who, under what we now know as a pretext, argued that we needed the Red Army to finish a Japan already driven from the seas, starving at home, and seeking peace.

We come, in truth, in this book to one powerful man, Gen. George C. Marshall, Army Chief of Staff, who alone, against the judgment of the competent air and naval authorities, insisted almost to the end that Japan would have to be taken by invasion; an invasion calling for a million men and half that many casualties.

I have called The Enemy at His Back remarkable because it is the product not of a professional historian nor a political journal. Its author describes herself as a curious housewife deeply puzzled over why, when it became successively known that the Japanese were probing for peace from December of 1944 onward, our Government continued to fight; why we felt it necessary to engage in the bloody, 5-weeks shambles of Okinawa, the slaughter of Iwo Jima, and finally the highly dubious employment of the A-bombs over Hiroshima and Nagasaki.

The fact that Liz Churchill Brown is, indeed, an accomplished housewife and gardener and likewise curious is, however, only part of the story. It by no means detracts from her solid achievement to note that she is also the wife of Constantine Brown, the most perceptive and knowledgeable foreign affairs columnist in Washington, who went from a German university into war correspondence on the Russian front in 1914 and has since then been sifting the political affairs of mankind through a detached, informed, and discriminating mind.

The book's impact results from the relentless presentation of evidence from Yalta to Hiroshima, all tending to show that our Government ignored Japanese peace feelers and for only one discernible aim: to allow Stalin to move 25 Red army divisions eastward to the borders of Manchuria.

Taking advantage of Japan's life-and-death preoccupation with the United States forces in the Pacific, Stalin had denuded the maritime provinces of troops for his European campaigns. Had the Far Eastern war ended in the spring of 1945, when well it might, Soviet power would have been negligible in that quarter.

The commander of the Japanese Kwantung army in Manchuria would have surrendered to Gen. Albert C. Wedemeyer, allied generalissimo in China, the vast Japanese military stores in Manchuria and the 800,000 tons of supplies we shipped Stalin by way of Vladivostok would have fallen into the hands of the Nationalist, not the Communist Chinese. In which case, no Red conquest of China.

I can do no more than sketch the conclusions of this vital and impressive book in the broadest terms. Mrs. Brown concludes that the interests of Moscow in the Far East governed the decisions producing the calamitous delay in grasping victory.

What she displays throughout is a sorry vista of wartime officialdom at work; pertinent information choked off before reaching the highest White House, State Department, and Pentagon levels; ignorance, buckpassing, indecision, sheer incompetence in the councils of state.

"The Enemy at His Back" is a chilling, dismaying book. It is a veritable must for those who wish to inform themselves concerning the scope of the Communist web into which our Government was seduced through its alliance with Moscow. A must also for students intent upon learning with what addled folly the high affairs of this Republic can be conducted.

Orphans' Benefits Under Social-Security Law

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. BERRY. Mr. Speaker, it has been brought to my attention that under the present social-security law, adopted children are, in certain instances deprived of benefits which I believe should be restored. With that in mind, I have introduced a measure in the House today to provide that the adoption of a child shall not terminate his entitlement to child's insurance benefits under the Social Security Act.

Under the present law, when a child of a deceased insured person is adopted, his payments end unless the adopting person is the child's stepparent, grandparent, aunt, or uncle. I am advised that as a result of this provision, there have been instances where children have been kept in the homes of grandparents,

for example, who could not give them the care and guidance they needed, but who would not consent to their adoption because the grandparents wanted to retain this social-security income. Younger couples, who would like to adopt these children, are prevented from doing so by the operation of this law.

In the case of veterans' benefits, including insurance, pension, and compensation, the children of deceased veterans continue to receive these payments even after adoption, as long as they meet the age and other general requirements. To me, it seems only fair that the same procedure should apply to social-security benefits. After all, the natural parents of these youngsters contributed to the social-security program with the understanding their dependents would be taken care of after their death.

I believe the program could be administered in much the same manner as the Veterans' Administration handles payments to minors. Generally speaking, the court names a legal guardian for the child, and close supervision is maintained on the expenditure of the benefits paid. Annual audits are made of the accounts to make certain proper use is being made of the funds paid to the child.

It would be entirely possible, for example, that the payments could be accumulated and used for the education of the child in later years. Regardless, there would be no question but that the child himself would receive the benefits, and the adopting parents would receive no personal gain.

It is my conviction that it is the responsibility of Congress to correct the existing system whereby orphans, when adopted, are, in certain cases, denied benefits to which they are rightfully entitled. I hope favorable action will be taken on my bill during this Congress.

Strength in Unity

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Strength in Unity," which appeared in the February 27, 1957, issue of the Park City Daily News, of Bowling Green, Ky.:

STRENGTH IN UNITY

Once more Western Europe has moved a big stride toward the economic and political unity which may in time bring it truly abreast of the modern industrial age.

France, Italy, West Germany, Belgium, Holland, and Luxembourg have just agreed to establish—over a 12- to 17-year period—a broad common market for their respective industrial products.

This means that their present constricting tariff walls and other trade barriers would go down and the six nations would in a very real sense become one country economically. In fact, the agreement also embraces all their overseas territories.

In addition to this, the six agreed upon a pool of their atomic-energy resources under a European Atomic Energy Commission. To a continent continuously short of other power sources, this combine may prove of the most vital significance.

A common market for Western Europe already exists in coal and steel. What is now to be set up would be an extension of that arrangement to the full range of Europe's output.

Such a tariff-free union has been urged for years as a basic step toward giving the continent the real benefits of industrialization. The economists insist that mass production techniques, with consequent advantages in lower prices to consumers, cannot be realized without broad mass markets. A Europe chopped up int ovarious walled-off segments fails to provide them.

It should be noticed that Britain is absent from the group of nations which will sign the common market pact in Rome next month. But this does not mean Britain is indifferent to the need for a wider European trade area.

Britain has in fact proposed a European free-trade zone which could include the common-market nations and any others who might care to join. Somewhat different rules would be applied to the use of tariffs, but the general aim would be the same.

All of these developments are viewed most hopefully in America, where for many decades the advantages of the broad single market have been apparent. Here mass production has reached its highest levels.

If these plans are executed well, Western Europe may also move toward a higher economic plane. And it may lay the groundwork for a political union that could contribute heavily to the peace of the world.

Establishment of Weather Station in Gulf of Mexico

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I am presenting herewith the following resolution adopted by the Louisiana Wild Life and Fisheries Commission on February 26, 1957, urging Congress to establish a weather station in the Gulf of Mexico to provide more adequate weather information for the protection of the Gulf States fishing fleets. I am presenting this resolution to bring this proven need to the attention of all the Members of Congress:

RESOLUTION ADOPTED BY THE LOUISIANA WILD LIFE AND FISHERIES COMMISSION AT THE REGULAR MEETING HELD ON FEBRUARY 26, 1957

Whereas the gulf coast is the only coast without a weather station offshore and there is a proven need for more adequate weather information in this highly productive section of the United States; and

Whereas Congressman T. A. THOMPSON, of Louisiana, introduced in the 85th Congress, 1st session, H. R. 478 on January 3, 1957, to provide that one floating weather station shall be maintained at all times in the Gulf of Mexico to provide storm warnings for States bordering on the Gulf of Mexico; and

Whereas lives and property amounting to over $2 billion are in jeopardy due to lack of information from the central and western Gulf of Mexico, where destructive storms form very suddenly: Therefore, be it

Resolved, That the Louisiana Wild Life and Fisheries Commission urge immediate consideration by Congress of the United States to establish a weather station in the Gulf of Mexico, because existing land-based facilities have proven inadequate for the needs of our fishing fleets, who now range far beyond the scope of radar stations, and that the economy of the Gulf States fisheries is seriously threatened because of the lack of weather protection which would be provided by a weather station in the Gulf of Mexico.

This is to certify that the above and foregoing is a true and correct copy of excerpt from the mintues of the meeting of the Louisiana Wild Life and Fisheries Commission, held on February 26, 1957.

F. L. CLEMENT,
Director.

Thomas Masaryk: Founder of the Czechoslovak Republic

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. RODINO. Mr. Speaker, America has always been considered a bulwark for democracy. For this reason many oppressed people have found refuge in our great country. Here they have found hope; here they have had the opportunity to better themselves economically and socially; here they have obtained liberty allowing them to speak and worship without the fear of intimidation and oppression.

Thomas Masaryk the great Czechoslovak patriot was among those who fled from subjugation and sought shelter in our free country. It was during his stay here that Masaryk saw embodied many of the ideals of democracy which he hoped one day could be enjoyed by the Czechoslovak people. It was here that he visualized a free and independent Czechoslovakia patterned after the American system of government.

The formation of this new republic, however, was not to be an easy task. Nevertheless, much of the inspiration for the emergence of this new nation came from Thomas Masaryk. Before World War I, Masaryk had already gained international distinction for his courageous stand against oppression. As a member of the Austrian Parliament he resisted the encroachments of Germany in Austria. Consequently, with the outbreak of war he was forced to flee to Italy, Switzerland and later London. Finally, he found refuge in America—the "mother of exiles." Here he accomplished much of the work for Czechoslovak independence.

In our country, he was free to place the case of the Czechoslovak people before the eyes of the world. Here he met and gained the respect and admiration of President Wilson for his constant struggle. Here he convinced the allies of the righteousness of the Czechoslovak cause. Here the Czechoslovak Republic

was finally formalized. On August 23, 1918, the Foreign Relations Committee of the United States Senate declared the liberation of the Czechoslovak people as one of the conditions of peace. Later on November 18, when the Austro-Hungarian monarchy collapsed, the Republic was established and Masaryk was elected as the first President. Under his leadership Czechoslovakia became one of the foremost democracies in Europe.

Today, on the 107th anniversary of the birth of Thomas Masaryk, the Republic for which he struggled so valiantly to establish is no longer free. The Kremlin has enslaved the people. However, the spirit of Masaryk lives on in Czechoslovakia. The people remember his teachings; they remember the benefits derived from a free society. These glorious memories serve as an inspiration to the people of this subjugated country.

This feeling was perhaps best expressed by President Benes at Masaryk's funeral in 1937 when he said:

Though he passes on Masaryk is still with us * * * President-liberator, we will remain faithful to the heritage which you have laid in our hands.

What Conservation Means to Labor

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD a portion of a speech made by Andrew J. Biemiller, director of the AFL–CIO legislative department, before the 22d North America Wildlife Conference in Washington, D. C., on March 5, 1957.

Organized labor has a commendable record of supporting many programs beyond the scope of wages and hours when those programs are considered of benefit to all men. Labor's interest in conservation matters is manifest in the following remarks taken from Mr. Biemiller's recent address. It should be of interest to conservationists, farmers, woodlot owners, and public-power groups:

WHAT CONSERVATION MEANS TO LABOR

(Address by Andrew J. Biemiller, director, legislative department, AFL–CIO, before the 22d North America Wildlife Conference, March 5, 1957)

From the coming of the first settlers to America until the beginning of this century, the surge to the West and the urge to till the soil was so great that few recognized any obligation to future generations to preserve our forests, our rivers, and the fertility of our soil. With a population of only a few millions and an area of millions of square miles, our resources seemed boundless.

Then came our great President Theodore Roosevelt and his chief forester, Gifford Pinchot. They forced the Nation to evaluate the condition of its rivers, its forests, and its soil.

The condition was bad. Forests were being rapidly depleted and farmlands abandoned because of erosion. The rivers were filling with silt, causing a loss of navigation and an increase in floods.

During the Roosevelt administration, the Reclamation Act was passed, which brought the Federal Government into programs for water storage and irrigation. Congress was urged to purchase large forest tracts to halt the rapid leveling of forests and to protect the watershed of navigable streams. Attention was drawn to farming practices which resulted in erosion and poor crops.

Roosevelt also referred to turn over hydroelectric power sites, which belong to all the people, to private industries. On several occasions, he vetoed bills which would have done so.

The preference clause, which is very much a political issue even today, was born under the Roosevelt administration. In 1906, Congress provided that surplus water and power developed at irrigation projects be leased, with preference for municipal purposes. Indeed, the idea of comprehensive resource development began with the Pinchot-Roosevelt conservation partnership.

Though he was criticized and reviled by the private interests of his day, few now deny that Theodore Roosevelt was a great Republican President and a great servant of the people's interest.

The next great forward step came during the administration of Franklin Delano Roosevelt. The interdependence of forests, rivers, agricultural land, fish and game in conservation policy was fully recognized in the legislation establishing the Tennessee Valley Authority. For the first time one decentralized arm of the Federal Government was able to coordinate all activities for the full development of a whole river valley.

What are the benefits that have been derived from the work of TVA?

We have reforested the land. We have encouraged the conservation of the soil. The fish population of the rivers and lakes and the game population of the land have been substantially increased. Large areas have been opened to recreation—on both land and water—which did not exist or were not utilized before.

In addition, the terrible floods which once destroyed are now controlled. Navigation in the valley's streams has made a significant economic contribution to industry. The development of hydroelectric power has brought a higher standard of living to the people whom it serves.

No single endeavor by the Federal Government has done more to meet the needs of conservation and availability of low-cost power in a single area.

This is a monument to the New Deal and to Franklin Roosevelt. It came at a time when the strong hand of the Federal Government had been almost removed from conservation efforts, and gave new life to the drive to preserve our natural resources.

Though he was criticized and reviled by the private interests of his day, few now deny that Franklin Roosevelt was a great Democratic President, and a great servant of the people's interest.

Although F. D. R. brought us to a new level of activity, the Congress again began to backtrack. A proposal to extend the TVA principle to the Missouri Valley was ignored.

We are now in a new era of conservation policy. It began sometime in 1953. These are some of its manifestations:

WILDLIFE REFUGES

We are told by some officials of the present administration that its record on creating wildlife refuges has been exemplary, especially in comparison with the record of its predecessor. We are told, in fact, that the present administration has set aside 80,000 additional acres for wildlife refuges and that its predecessor took 400,000 acres out of wildlife protection.

The facts do not support the claim. Inspection reveals that 400,000 acres were relinquished by the Fish and Wildlife Service, but that each and every one of these 400,000 acres are now under the control of the National Park Service. Not one single acre was taken out of wildlife areas.

The claim that 80,000 acres were added to wildlife refuges by the present administration is also unsupported by the facts. The real increase in Federal refuges amounts to only about 25,000 acres. The difference between this figure and the 80,000 figure seems to be represented in the increase in the size of State wildlife refuges.

ECHO PARK DAM

Without touching the merits of the upper Colorado River storage project, it will be interesting for conservationists to note that as originally planned during the previous administration that project did not include a certain dam known as Echo Park. The project did include that dam when proposed by the present administration.

TIMBERLANDS GIVEAWAY

And let us not forget the bill introduced in the House by an Oregon Republican in 1953. That was the great national forest robbery bill. If the bill had passed, any sustained-yield timber operator who had part of his lands requisitioned by the Government could have marched into national forests or wildlife refuges or national parks and take equivalent lands for timber cutting.

You will remember that that bill was killed largely through the efforts of a freshman Montana Democrat and a great supporter of conservation measures, LEE METCALF.

Mr. METCALF is still serving in the House of Representatives, thanks to the good people of Montana; and the author of the bill has been retired, thanks to the good people of Oregon.

GRAZING BILLS

Then there were two bills introduced by the Republican chairmen of the House and Senate Agriculture Committees in the 83d Congress. As introduced, those bills would have given sheep and cattle grazers certain property rights in national forest lands. Those bills were supported by the Agriculture and Interior Departments.

As I recall, the committees made some amendments to those bills and broke the united front of conservation opposition to them. But everyone agrees that what they tried to do originally would have been a backward step in the protection of our national-forest lands.

AL SARENA

All the blame for anticonservation measures cannot, of course, be laid to Congress.

The Department of the Interior taught us that mining is not restricted to minerals like coal and iron and copper and gold. You can also mine vegetable products, such as, for example, timber.

Back in 1951, a mining company named Al Sarena tried to get land patents in the Rogue River National Forest. In those days, the Bureau of Land Management and the Forest Service said there was not enough mineral content in the ore samples Al Sarena produced to justify a mining operation. My former boss, Secretary of the Interior Oscar Chapman, refused to give them the patents.

But in 1954 Mr. Chapman was no longer around and the patents were issued. A congressional investigating committee discovered last year that up to that time Al Sarena had mined somewhere between 1 million and 2 million board-feet of fir trees and pine trees, but not one cupful of mineral ore.

These are the facts which show us the progress of our Nation's conservation programs. It is not an appealing picture.

But enough of the past. Let us look to the future, for there lies the real challenge.

Today we have 170 million people living within the borders of the United States.

Forty-three years from now, in the year 2000, when our children and our grandchildren and our great-grandchildren will be living and working and playing, there will be, we are told, about 275 million persons in our country. That amounts to an increase of over 60 percent in the next 43 years.

We are using up our land area at a fast pace. We are crowding the plains and the wide open spaces.

In the year 2000, where will 275 million Americans find the lands, the forests, and the streams in which to camp and hunt and fish and live with the restorative beauty of nature?

With our increasing population, there will be others demanding land. Industrial expansion will eat up huge chunks of land. Farming and grazing operations will expand.

If we are to meet the challenge of our growing population we shall have to plan now to reserve nature's gifts for coming generations.

Between 1953 and 1956 the Federal Government added 517,000 acres to our national park system under authorizations by Congress. Unfortunately 405,500 of these acres, at Isle Royale National Park, were submerged lands in Lake Michigan and consequently subject to somewhat limited use.

The present administration last year made a laudable proposal in its mission 66 program. It proposed to spend $786 million over the next 10 years to modernize, expand, and improve the national parks system.

This is certainly a necessary and forward-looking program. The National Parks Service estimated that the number of visitors to our national parks would rise from about 54 million last year to about 80 million in 1966.

Unfortunately, the same administration asked only $11 million to start mission 66 in its first year. At this rate, we would be well into the 21st century before the planned work would be completed. This year, the second year of Mission 66, $20 million was requested in the budget for this purpose. At this rate, the program which they hope to complete in 1966 would not be completed until 1996.

I'm sure it is clear to everyone here that greater efforts will have to be made by the people interested in conservation and the people interested in natural-resources policy generally if we are to meet the challenge posed by a growing nation.

Conservationists have been concerned largely with the development of wildlife refuge, national parks, and national forests. They have not paid direct attention to cooperation with, for example, advocates of public power in attempting to get comprehensive development which would include the goals of both groups.

Let me remind you of the words of Gifford Pinchot on his thoughts while horseback riding in our own Rock Creek Park just 50 years ago. He wrote:

"The forest and its relation to streams and inland navigation, to water power and flood control; to the soil and its erosion; to coal and oil and other minerals; to fish and game; and many another possible use or waste of natural resources—these questions would not let (me) be. What had all these to do with forestry? And what had forestry to do with them?

"Here were not isolated and separate problems. * * *

"Suddenly the idea flashed through my head that there was a unity in this complication—that the relation of one resource to another was not the end of the story. Here were no longer a lot of different, independent, and often antagonistic questions, each on its own separate litle island, as we had been in the habit of thinking. In place of them, here was one single question with many parts. Seen in this new light, all these separate questions fitted into and made up the one great central problem of the use of the earth for the good of man."

Thus did Gifford Pinchot show us that all of us who are interested in our national resources and in the development of our land have a common, and not a competing, interest.

Secretary Weeks Speaks Before Women's National Republican Club in New York City

---

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable Sinclair Weeks, Secretary of Commerce, before the Women's National Republican Club in New York City last Saturday, March 9:

We gather today in this, the first year of the second century of the Republican Party, proud of its accomplishments and determined that our generation shall lay the foundation of another hundred years of dedicated service.

At the start of a new Congress and a reelected administration, it is a fitting time to take our bearings and chart our course. So let's study some of the lessons of recent events and discuss frankly a few controversial topics which Al Smith used to call hot potatoes.

I shall try to do so without reflecting narrow partisanship and by giving full credit to those Democrats in Congress and the Nation who believe in sound principles and support the President.

THE NEW DEALISM CHARGE

Now let's tackle the first controversial "hot potato"—New Dealism.

Right here I should like to say a word to those old friends we sometimes hear complaining that the Eisenhower program is "just like the New Deal."

Obviously, this just isn't so, period.

How short are some memories. How blind are some eyes. If the Eisenhower program really is a repeat performance of the New Deal why is it that old line New Dealers and a new crop of left-wingers are fighting that program tooth and nail?

If it is a New Deal carbon copy, why did the Republican National Convention—representing rock-ribbed Republicans from every State in the Union—endorse that program?

This administration's actions are different in spirit from the New Deal practices of its predecessors, who tried to pack the Supreme Court, seize the steel mills, and draft strikers into the Army.

The record clearly proves the sharp contrast between our middle-of-the-road administration and the New Deal, which fostered socialized medicine and socialized agriculture, filled regulatory agencies with members hostile to private enterprise, tried to make electric power a Federal monopoly, used the tax system to change the social order—encouraged the squandering of tax funds, harrassed honest business, retarded the sound recovery of agriculture, set class against class, played politics with civil rights, treated spy hunts as red herrings and some of whose leaders even condoned corruption.

Let those who grumble that we are New Dealish point out in what way the following great popular accomplishments of the Eisenhower administration are a second edition of the New Deal.

We rejected the despairing philosophy that prosperity must be based on a war boom. We stopped the agony and slaughter in Korea and thereby freed a peacetime economy to produce the greatest prosperity in all history.

We rejected the alien theory of nursemaid government, which claims that distant bureaucrats know better how to run business and meet a payroll than businessmen.

In sharp contrast, and often with the help of members of both parties in the Congress, we created a climate favorable to private competitive enterprise and free labor, we removed straitjacket controls, we reduced Government competition with private industry we checked fast-rising inflation, we kept Government's hand off the scales in collective bargaining, we checked monopoly and helped small business by enforcing antitrust laws, we established new programs to promote world trade, we made the greatest tax cut in history, paid installments on the public debt, balanced the budget twice, and plan to do it again this time. And we are making progress with the recommendations of the Hoover Commission.

The disposal of the Government's smelter in Texas, its synthetic rubber plants, and the liquidation of the RFC and its former activities, plus the release of cash previously held for working capital for these programs, have resulted in a return to the United States Treasury of more than $1 billion. That's the kind of benefit the public receives when this administration gets government out of business— and I have cited only a part of this particular program.

Yes, my friends, when President Eisenhower was inaugurated in 1953, the New Deal went out and a new day dawned.

A wave of confidence lifted this Nation to unprecedented heights of prosperity because of his inspired leadership.

That which this administration is doing today is a projection of the Republican record of the past 4 years and is in keeping with the 1956 Republican campaign promises.

THE 1958 BUDGET

Now, let's tackle a second "hot potato"—the budget. It provides for the expenditure of $71.8 billion between next July 1 and June 30, 1958, to finance national security and other services. It was designed to carry out the Republican program of peace, prosperity, and progress.

In order to present the whole truth about the budget, let us tell the public some of the facts which some critics fail to mention.

It is a fact, based on the latest comparative figures, that while Federal expenditures went down 13.2 percent, State and local spending went up 22.8 percent.

It is a fact that our population has grown more than 11 million in the last 4 years—that in the same period our gross national product rose more than $49 billion and that our national income increased $40 billion. Obviously the Federal Government must expand some functions to keep pace with this tremendous growth.

It is a fact, nevertheless, that whereas in 1953 the budget, measured against the gross national product, was 20 percent, it has now gone down to about 16 or 17 percent.

It is a fact that the chief reason for the current size of the budget is national security—payment of former wars and spending to keep us out of future wars. The price of security and peace is not cheap.

This problem can be readily appreciated by showing where the budget dollar goes: 62.6 percent of expenditures are earmarked directly for national security, including defense and aid to our free nation partners; 27.7 percent are earmarked for interest on the national debt, veterans' benefits, agricultural supports, and grants to States; 9.7 percent are earmarked for all the rest of Government—executive, legislative, and ju-

dicial—actually less than a dime in every dollar appropriated.

I repeat with grim emphasis that Americans, living under the awful shadow of the hydrogen bomb, must pay a lot of money to remain free and stay alive.

A disturbing paradox of modern times is that while science, technology, and invention have enriched modern civilian life, these innovations also have increased the heavy burden of national defense.

Every year it takes more money to buy the absolutely essential new weapons in the field of guided missiles, atomic forces, and other ultramodern war material.

One example will suffice:

The old B–29 bomber plane cost $693,000; our current B–52 bomber costs $8 million. Suppose a necessary household expense jumped from $6.93 to $80, can you imagine what a problem that would create in a family budget? Yet that is the comparative increase in just one type of modern airplane.

If we are ever to escape from the increasing burden of military expense, we must concentrate our utmost efforts in easing world tensions, in making friends among the nations, in spreading international good will, and in bringing a just and lasting peace to this war-cursed generation.

I say—what I believe is the response of every woman at this gathering—that no man on earth is working harder and doing more to bring this era of peace than our great President, Dwight D. Eisenhower.

Because the price of survival is so high, we dare not waste our substance. If we are to provide the private savings to produce the new plant and equipment that create jobs for the growing number of young people, we must do a better job in reducing the drain of taxes.

I should like here to enlarge on my reference to that portion of the budget—27.7 percent—which goes for interest, veterans' benefits, agricultural supports, grants to States, etc.

The almost insatiable demand of different groups and different people for new government services and the continued expansion of the old is one of the most difficult aspects of the budget problem. In turn, the temptation on their Representatives in Congress to vote for money to be spent in their districts is almost irresistible. And, just so no one will think I'm trying to let the executive branch off too lightly, let me admit that in my opinion we in the executive branch can improve upon our record in this regard.

If we ever are going to be able to tighten the tap on public spending, all of us must throw our weight against the mounting pressure, year after year, to swell special favors, subsidies, pet projects, grants to States and pork-barrel expenditures. By all of us, I mean the executive branch, the Congress, and the public.

Ask most anyone today if he favors reducing the cost of government and the reply is "Yes." Then suggest stopping some Federal service which he wants and the reply is a loud "No." We'll not get very far in reversing the trend in Government spending if everyone says, "Cut the other fellow's benefit, but don't touch mine."

If every section, every segment, every pressure group succeeds in grabbing more and more, the future economy could crumple under the increasing weight of taxes. But if, on the other hand, the aroused people of the United States rise up and demand greater economy in Federal, as well as local and State appropriations, then they will get greater economy.

Let me ask every woman in this room to reflect a minute: Are you a member of any group which is pressing for projects that will expand the Federal budget? Is your husband? If you are, consider well whether your activity in this respect is right or wrong.

MEETING MODERN NEEDS

Still another "live wire" subject is meeting modern needs.

Complicated life in an urban industrial society and the rapid progress of science create many serious problems—undreamed of a few years back—which must be solved soon or we and the coming generation could face stagnation in our economy and other critical conditions.

Progress in an electronic-atomic age is one of the corner stones of the Eisenhower Republican program.

To meet modern needs, programs have been designed for highways, peaceful uses of atomic energy, water resources, power development, St. Lawrence seaway, flood control, soil bank, widened opportunities for small business, a transport policy aimed at cheaper transportation and a 4-year emergency program of Federal cooperation with States in overcoming the critical shortage of schoolrooms.

Although there may be some differences of opinion about some of these items, they are aimed at helping to create valuable private and public assets and at meeting the requirements of a growing population and a growing economy.

For example, in my own Department is lodged the duty of protecting the safety of those who fly—now and in the jet age.

Already the highways of the sky face congestion. The situation is being handled now. But it could grow more dangerous in the years ahead as slow-moving vertical-flight helicopter cross the slanted path of commercial and military pets, traveling at breathless speed.

If we do not get ready now to safeguard the airways of the future, the toll of tomorrow's crackups and collisions could be appalling.

To forestall such a hazard, the President appointed Edward P. Curtis, an outstanding expert, to recommend a long-range solution. In the interim the Civil Aeronautics Administration of the Commerce Department is embarked on the greatest air safety program in history and is providing air navigational aids such as radars, electronic devices and other safe air traffic conrtols. But this is costing money—nearly three times the bill in 1953.

One of the great current and future needs which we are trying to meet at the Bureau of Public Roads of the Commerce Department is modern highways. Had public demands not been neglected so long, we might not have had such traffic bottlenecks and road accident slaughter as now.

Although the President's highway program is by far the greatest public works program in all history, its cost does not appear in the budget. Instead of passing along debts for our children to carry we have undertaken—thanks to sound legislation—the first major project of its kind that is entirely self-liquidating. Pay-as-you-build taxes on the gasoline and oils of highway users are footing the bill. Not a mile of road is laid until the money to pay for it is in the Treasury.

MODERN REPUBLICANISM

In conclusion, let us size up modern Republicanism—about which there is so much interesting talk today.

Modern Republicanism is not something brand new, dreamed up recently—as some folks think—by maverick stargazers. It is as old as the principles of the first successful Republican candidate for the Presidency, Abraham Lincoln.

The Republican Party, in its finest hours, has been concerned with human freedom and human welfare. In fact, it was born to fight for freedom—and still does.

The Republican record of a century clearly proves that all through our history our party has provided sound government services to foster the well-being of farmers, workers, businessmen, children, and others, and to meet future national needs.

The Lincoln administration founded the Department of Agriculture and initiated the first Homestead Act, which gave land to farm families who would work it. Republicans passed the Sherman Antitrust Act to protect small business against monopoly. To insure workers' rights Republicans started the Bureau of Labor which later became the Department of Labor. Republicans established the merit system through the Civil Service Act of 1883.

Republicans proteced family health through the passage of the Pure Food and Drug Act and the Meat Inspection Act. Republicans in 1912 established the Children's Bureau after the passage of child labor laws in many Republican States.

The Panama Canal was built to meet future needs. Under President Theodore Roosevelt, programs also were launched to conserve the Nation's forests, minerals, and water resources. One of the conservation measurees to preserve water and timber resources was the Weeks' Act of 1911—introduced in Congress by my father, when he was a Representative.

Later the Reconstruction Finance Corporation was established; the Federal land banks were strengthened; a new system of agricultural credit banks was organied and the Home Loan Bank System was created to assist individual farm and individual home owners. These latter protections against adversity were initiated in the administration of your honored guest, that life-long humanitarian—President Herbert Hoover.

Republican policies today are the expression of our party's great century-old principles, dressed in the clothing of this current age.

So we are in keeping with a century of Republican accomplishments for the American people, when Republicans insist that Government must have a heart as well as a head.

We also are in harmony with our 1956 platform, in step with our Republican President and in line with the overwhelming majority of American citizens, when we support programs reflecting a hard head, a warm heart, and a far-seeing eye.

Let us go home with renewed faith that Republican policies are helping to encourage a healthy and growing economy with prosperity widely shared and are helping to advance peace, justice, and freedom. Let us, by our attitude on public issues, prove worthy of the trust the American people have placed in our party and in our great President, Dwight D. Eisenhower.

Such a Man Is Sam Rayburn

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. BLATNIK. Mr. Speaker, a sure sign of a man's greatness is the respect and admiration in which he is held, not in any single area or region, but in all parts of the country and from people in many walks of life. Our beloved Speaker, the gentleman from Texas, is such a man—admired and respected by all

Americans, be they from North or South, East or West, rich or poor, great or small.

Back in Minnesota's northeastern Eighth District the name SAM RAYBURN symbolizes the progress made by the people of the area since the terrible days of the depression. They know of his role in making that progress possible. As a young lad, working my way through school in the depression days I knew of this man from Texas. So did my unemployed father and thousands of other iron-ore miners like him. And during the war years we knew we had a dedicated, able, responsible, and thoughtful leader guiding the Congress through those perilous times.

There is no question but that the warmth, understanding and deep concern which he had for all the people was felt clearly by the people of Minnesota's Eighth District. They felt that, although they had never seen him or met him. They felt they knew him because they knew he understood and was aware of their own day-to-day problems. In their hearts there has been deeply inscribed the high esteem and deep affection in which he has been held by so many for so long.

And I share those feelings deeply, myself. From the time I first came to the House 10 years ago SAM RAYBURN has been a constant source of leadership and inspiration to me. Although an extremely busy man himself he was never too busy to listen to the problems of others at any time and to give to others not only guidance and sound advice but personal assistance at every opportunity.

Indicative of the high esteem in which the people of the Eighth District of Minnesota hold SAM RAYBURN, is an editorial from the Chisholm Free Press, written by Miss Veda F. Ponikvar, editor and publisher, who has recently won national honors for her excellent editorial writing. The editorial is as follows:

SUCH A MAN IS SAM RAYBURN

Forty-five years ago, a young man by the name of SAM RAYBURN, from Texas, was elected to Congress.

It was the year of 1912. America was standing on the threshold of a brilliant star. The frontiers were daily moving westward, but the steel mills and the molten metal were on Gary's doorstep, and Chicago had not yet begun to enjoy the position of the trade winds and the web of railroads. People were working 15 and 16 hours a day, and 7 days a week.

Imbued with ideals, and with challenge coursing through his veins, SAM RAYBURN began his career of statesmanship, little realizing then that he was destined to become a leader and philosopher for thousands—millions of little folks who would one day come to look upon him as the "father of the Congress."

International policy was a problem then, as it is today, and with measured astuteness and a courage that inspired the strong and strengthened the weak, SAM RAYBURN studied, made his decisions, and never faltered. He understood the delicate positions of the little nations; and long before many of his colleagues, this deep thinker and keen analyst predicted the road of the aggressor and dictatorial powers. Blessed with humility, patience and justice, this man of government began to assume roles of leadership. Men of both political parties began to seek his counsel. He was stern and firm; yet just and understanding.

As America groped its way through the First World War, and suddenly found itself in the frivolous, spending twenties, the people of Texas kept returning their favorite son to Congress. His mannerisms and genteelness were infectious, and white or black, Catholic, Protestant, or Jew, Republican or Democrat, everyone loved SAM RAYBURN. And when the bubble burst, and the breadlines became heavy, SAM RAYBURN, who came from a State that knew wealth as well as poverty, became a close adviser, and a man of powerful legislation that brought new hope to men and women everywhere.

And just when it appeared that this man of letters and true statesmanship could perhaps enjoy the fruits of a solidified and expanding era, he was called upon again to come forth and help steer the ship of state through some of the darkest hours of a global war. The years of strain and responsibility would have overburdened many another man, but not SAM RAYBURN. With willingness, he accepted the new and many duties. His greatness radiated around him, and men of all political faiths were astounded at the energy and magnanimity of this man. At his door, the rich and the poor, the known and the unknown found a new kind of energy, and faith in government. And men elected to Congress have found it wise and expedient to have the stalwart Texan as the Speaker of the House for over 15 years. He is rich in friendships; revered in his counsel; respected for his fine mind.

In a world weighted with intrigue and callousness, men like SAM RAYBURN stand apart like a pendulum. The scale of balances that brings justice and fair play into its proper perspective.

Colton once said that in life we shall find many men that are great, and some men that are good, but very few men that are both great and good.

We are fortunate to have in our generation a man that is both great and good. Such a man is SAM RAYBURN.

Resolutions for Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a recitation of the resolutions adopted on February 17, 1957 at a mass meeting of Lithuanians, held at the Lithuanian Naturalization Club Hall, in Worcester, Mass.:

At a mass meeting held by Lithuanians of Worcester, Mass., under the auspices of the Lithuanian Aid Association, on February 17, 1957, at the Lithuanian Naturalization Club Hall, in said Worcester, the following resolutions were unanimously adopted:

"Whereas the 16th day of February 1957, marks the 39th anniversary of the declaration of Lithuania as a free and independent Republic, and her demonstration to the world of her ability of self-democratic form of government and progress;

"Whereas the unlawful, 'by brutal force of arms' occupation of the Republic of Lithuania by Russia, and the commitment of atrocities against her people, the destruction of her institutions, and her democratic form of government, are continued, by Russia at the present day;

"Whereas the Soviet Union has consistently and unilaterally violated all of the pacts and declarations solemnly underwritten by the Soviet Union, viz.: 'Peace and nonaggression pacts with the Baltic States' the 'Atlantic Charter,' 'Four Freedoms,' 'United Nations Charter,' 'Yalta Declaration,' and the 'Potsdam Agreement;'

"*Resolved*, That the Lithuanians of Worcester, Mass., do most vigorously condemn and protest against Russia's such unlawful 'brutal force of arms' occupation of the Republic of Lithuania, and the commitment of atrocities against her people, the destruction of her institutions and her democratic form of government, the violation of pacts and peace treaties;

"*Resolved*, That the Lithuanians of said Worcester, do hereby petition the Government of the United States of America to repudiate and terminate all pacts, concluded without consent or knowledge of the Congress of the United States at Teheran, Yalta, and Potsdam, already unilaterally voided by Russia, and to reassert the principle of the 'Atlantic Charter' by demanding that all 'Russian military forces, government, and agents, be forthwith evacuated from Lithuania and all other countries now behind the Iron Curtain' and that Lithuania and her people be liberated and be restored as a free and independent Republic among the nations of the world according to the principles enunciated in the 'Atlantic Charter';

"*Resolved*, That a copy of these resolutions be forwarded to the President of the United States of America, the Secretary of State, the Senators and Congressmen of the United States from Massachuetts, and to the press.

"MICHAEL J. ZEMAITANTIS,
"Chairman.
"JOHN P. PALUBECKAS,
"Secretary.
"DANIEL M. LETTIC,
"Commander, Lithuanian War Vets Organization, Inc."

A Bill To Promote Uniform Accounting, Auditing, and Cataloging in the Department of Defense

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. DORN of South Carolina. Mr. Speaker, I am introducing today a bill which I believe will promote a saving of the taxpayers' money in the Defense Department. This bill will provide for another department in the Department of Defense charged with supplying all branches of the Armed Forces with common-use items. It will eliminate the many and various pipelines of supplies going in different and often in opposite directions to the various branches of the defense services.

I believe this bill would save our taxpayers money in promoting uniform accounting, auditing, and cataloging of all common-use items. This bill has the backing of the Citizens Committee for the Hoover Report and is designed in the interest of a sound economy and better fiscal practices.

This Congress can do something to cut this proposed budget. This is a step in that direction. I believe some saving can be accomplished even in the Defense Department. This would be a good be-

ginning. It was widely argued at the time the Unification Act was passed in 1947 that unification would promote a great saving of money. That saving has not been forthcoming and it is time for the Congress to implement the Unification Act with a bill of this nature.

The Heart of the Matter

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. MULTER. Mr. Speaker, the settlement of the Arab refugee problem is of utmost importance if we are to have lasting peace in the Middle East. In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 8, 1957:

THE HEART OF THE MATTER

When the last of the Israeli troops pulled out of the Gaza strip yesterday and the United Nations emergency force moved in one problem was solved. But other problems remained. One is what is to become of the Arab refugees? There were about 216,000 of these in the Gaza strip when the Israelis came in last November. There are at least that many now, plus perhaps 60,000 who are not technically refugees but who do need help from the United Nations. In Jordan there are more than 500,000 refugees, of whom nearly 80 percent are receiving rations. In Lebanon there are over 100,000, most of whom require help. In Syria there are nearly 90,000.

These refugees are in more senses than one the heart of the matter. Most of them have subsisted about 8 years on food and other necessities provided by the United Nations Relief and Works Agency. Last year this agency was able to spend at the rate of about $27 a year for each refugee on its rolls. This pitiful sum provided a daily ration of about 1,600 calories, or about half what the average American receives, plus some shelter, some clothing, some medical care, some education. The achievements measured against the resources have been remarkable.

The UNRWA has never had enough money. This is the report that Director Henry R. Labouisse had to make last year and the year before that. It is a report that he had to amplify at the end of 1956 because the flurry of war in the Middle East and the occupation of the Gaza strip by the Israeli Army had added to the difficulties and to the cost of administration. Since the money available was limited, some of the extra funds spent in the Gaza strip were at least indirectly diverted from Jordan, Syria, and Lebanon, which had not been invaded.

The result was that resources that were inadequate last summer are now desperately depleted. UNRWA has been obliged to use for immediate needs capital funds that had been intended for rehabilitation. If the United States produces about $8,750,000, which it has promised for the period ending next June 30, UNRWA can run that long on its present restricted program. If it did not get this money or the equivalent it would have to shut up shop at the end of the present month.

This will surely not be allowed to happen. The Government at Washington is authorized by the resolution that has now passed both the Senate and the House to spend up to $200 million during the balance of this fiscal year for economic and military assistance in the Middle East. What is here contemplated is the beginning of a long-range program, not hand-to-mouth relief. Some of it, this year and in years to come, should go to help the displaced Arabs. It is physically impossible for many of these unfortunates to return to Palestine. Yet they must be resettled somewhere, as an essential requisite to peace in the Middle East.

But this will require a considerable investment of capital. Director Labouisse has estimated that the proposed Yarmuk-Jordan development could support 224,000 workers and their families—but at a capital cost of nearly $162 million. A large-scale development in the Sinai desert would aid many thousands of refugees if arrangements could be made with Egypt to get the necessary water. There are scores of smaller projects: Little factories in the Gaza strip and in Jordan, small agricultural projects, a few home industries such as weaving. But the total that these retail projects can achieve is not great compared with the massive and increasing need.

The Israeli Foreign Minister, Mrs. Golda Meir, ended her speech to the general assembly last Friday with this sentence: "There is no limit to what we are prepared to contribute, so that all of us, together, can live to see a day of happiness for our peoples and see again from that region a great contribution to peace and happiness for all humanity."

There can be such an outcome if the Arab refugees are treated as human beings and not as counters in a political game. Will Israel stand by this lofty principle? Will the Arab states accept it? Will America, in the interests of peace, throw her own economic and sympathetic weight behind it?

Middle East Economic and Military Cooperation

SPEECH
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mrs. GREEN of Oregon. Mr. Speaker, I rise in opposition to House Joint Resolution 117, as it now stands before this House. Five weeks ago, I voted against the original version of the resolution, but I then expressed the hope that it would be so amended that I could vote for it upon its return to the House. If mere partisanship were the basis of opposition to this resolution, I could not oppose it. Nor will I vote on a proposition of this sort simply to prove that the Nation is unified. Unity is of little value if it is unity behind the wrong principle.

This appearance of unity is a very dubious one. As I have listened to the arguments on the floor this afternoon, I am struck by one thing. Members on both sides of the aisle have spoken of the resolution in terms of the President's backing of it. They have spoken to the effect that the amendments made elsewhere, while they have weakened the resolution, still leave it palatable. The gentleman from Ohio [Mr. VORYS] suggested that we might have to gulp, but gulping was only a minor discomfort in the performance of our duty. Other members have suggested that the amended resolution is better than the original, but not much better. But one thing I have waited in vain to hear. Neither Republicans nor Democrats, neither isolationists nor internationalists, from the East, the West, the South, the North, from no section of the House have I heard the suggestion that the resolution was a good one.

I cannot vote for a resolution which find no defense in itself. I would like to take a little time to examine the resolution itself, to compare the resolution of 5 weeks ago with the instrument before the House today. At that time, Members objected because we had only 1 day to debate a resolution with 5 sections and 2 provisos. Today we are asked to pass upon a totally different resolution, with 6 sections, and 4 provisos, and we are allotted 1 hour in which to do this. Five weeks ago I protested the gag rule. Today, the rule is even less defensible. I am, as are other Members, grateful that the other House was able to spend considerable time in discussion of this resolution.

The resolution we have before us today differs from the resolution of 5 weeks ago in several significant respects. First, we find that the House language purporting to authorize the President to employ armed forces has been changed in an attempt to comply with the constitutional objections many of us raised in the Chamber on January 30. The attempt to do this in the other House has vindicated that attempt, although better students of constitutional law than I have doubts as to the constitutionality of the resolution, even as amended. At the end of section 2 of both the original resolution and the amended resolution there stands a proviso. In the original document, the Congress recognized quite specifically the obligations we have assumed, and to which we have made obeisance, under article 51 of the United Nations Charter. The original resolution provided that when the United States used force, such use would be reported to the Security Council, and would in no way affect the responsibility of the Security Council to take such action as it deemed necessary to preserve international peace and security. In other words, the original resolution recognized the paramount role of the United Nations in the preservation of peace in the Middle East as elsewhere. The resolution as amended waters this proviso down to the point of complete meaninglessness. It provides that we will employ our forces, if we do, in consonance with our treaty obligations and the Constitution. In the hearings before the House committee, the Secretary of State said that our treaty obligations included our obligations under the charter. So perhaps the two statements are identical in meaning. If so, why are we reluctant to say so? Why do we remove from the resolution one of the few passages which indicates to the world that we are not deserting our professed devotion to U. N. principles and procedures? If there is a difference between the two statements, if the amended resolution means that we do not intend to honor our charter obligations,

then the administration's professed satisfaction with the amended draft is indeed ominous, and I certainly cannot vote for it.

As to the other body's insistence that the actions be carried out in consonance with the Constitution, I would assume that any President would carry out his own responsibilities in accord with the Constitution. The administration of this program will be the President's responsibility, and his oath to uphold and defend the Constitution is adequate safeguard. It is presumptous of the Congress to write such a provision into the law.

There are differences between the two versions in respect to the expenditure of money for military assistance and particularly for economic aid. It is evident that the resolution before the House today is less flexible, less hospitable to economic aid, and certainly less reassuring to the world that the United States has other approaches to insecurity than the military one. The resolution in this respect is a poorer one than when it left this House, and I cannot support it for that reason.

I am amazed by the fact that 2 weeks' debate elsewhere on this resolution resulted in tightening the restrictions on economic aid and military spending, but left the incredibly broad statement on the use of troops unchanged in its substantive effect. Is the Government of the United States more careful of its money than of its citizens' blood?

However, Mr. Speaker, all these observations about the resolution are unimportant by comparison to the one major weakness which this resolution shares with the draft that this House approved 5 weeks ago. In both cases, the resolution is simply soothing sirup. That there is a critical situation in the Middle East no one denies. That it calls for a forthright policy on the part of the free world, and particularly on the part of the United States, is a self-evident statement. But we are told by other Members that this resolution embodies such a policy. What is it? As I read the resolution—and this objection applies to both versions—the United States simply announces that under unspecified conditions, which occur in an undefined part of the world, it will do some undescribed something—maybe. Compared to this resolution, a firm declaration of opposition to sin is a model of detail and clarity.

The resolution will not bring us 1 millimeter closer to the solution of the basic problem of the Middle East—the bringing about of a modus vivendi between Israel and her Arab neighbors. The supplying of arms to the nations of the area, in fact, should be approximately as effective in stopping impending war as the pouring of gasoline on hot coals would be in the stopping of fires.

The danger of this resolution, Mr. Speaker, is that its passage may be used as a solution in itself. Having set forth our slogan, we still have no policy in the Middle East, and this resolution will not create a policy—good or bad. Resolutions embodying empty slogans are no substitute for a real policy under any circumstances. Under circumstances in which we stand near the cataclysmic opening second of the third and last world war, such resolution is a shameful evasion of our duty and our Nation's responsibility in the world.

Should the United States Ratify International Conventions To Promote Justice for the Individual?

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my remarks before the Conference of National Organizations called by the American Association for the United Nations on Major Issues Before the United Nations: United States Responsibility, at the Mayflower Hotel, Washington, D. C., on March 4, 1957:

It is good for the American Association for the United Nations to be sponsoring today's meeting at the Mayflower. I hope that there will come of your deliberations a modern Mayflower compact, resolving that now is the time for all good men to come to the aid of the U. N.

Not that it is necessary, in order to save the U. N., that we kill it with kindness. Though I count myself a stanch supporter of the U. N., I have been much disturbed recently at our indiscriminating use of the U. N. without taking the trouble to think through the policy which we hope the U. N. will adopt. It is not enough, when a tough problem comes along to escape the responsibility for formulating a just position by saying "Let's refer it to the U. N." To use the U. N. as a vehicle for escapism, as we did in Hungary, merely places great strains upon the U. N., and gives nourishment to its critics, without helping much to solve the problem. When the Gadarene swine are grunting toward the abyss, it is sometimes wiser to attempt to guide them away from it rather than join in the procession. When we use the U. N.—and we should use it more often—we must do so purposefully, in an effort to find a solution that is just, and to persuade other nations of its justice.

Nowhere is this principle of joining in, and showing our best side when we do it, more important than in the field of international conventions to promote justice for the individual.

The fundamental philosophy of the U. N., embodied in its charter, is that a country's domestic policies, as they affect the rights of individuals, influence its foreign policies and, therefore, the prospects for world peace.

Who today would deny that the internal policies of Nazi Germany—its degrading the human rights of large groups and classes in its population, its vulgar racism, its destruction of civil liberties—determined its foreign policy and left in its wake all over the world a heritage of poverty, misery, dislocation, and death? Who today would deny that the domestic philosophy of the Soviet Union has a bearing on the turmoil in the Middle East, on the need of our own country and our allies to expend on armaments resources which could better be devoted to raising standards of living throughout the world?

Who would deny, for that matter, that the inherent kindliness and decency and generosity and love of freedom of our own people, as reflected in our civil institutions, are the best hope of a forward-looking American foreign policy?

My point—that what a nation does with its own men and women affects what becomes of mankind—is a central theme of the U. N. Charter. The charter recognizes that the existence of a peaceful and stable world depends upon the development of higher standards of living and of human rights within the domestic spheres of nations. In article 55 of the charter, the United Nations sets forth its undertaking to promote higher standards of living and "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." And the purpose? To create "conditions of stability and well-being which are necessary for peaceful and friendly relations among nations. * * *"

The statesmen, including our own, who participated in the drafting of the United Nations Charter stressed that again and again. Even today it is constantly on the lips of those who represent their governments on U. N. bodies.

This, then, is the proposition—that a decent respect for human rights, in the only place where a human being can live today—the nation-state—is a precondition of world peace.

If this proposition is valid, doesn't it follow that the best interests of the United States are served when we encourage and participate in U. N. efforts to safeguard human rights throughout the world?

For a time, we seemed to follow this policy. It was a proud moment for most American when the Humans Rights Commission was appointed, with Mrs. Franklin D. Roosevelt as its first Chairman. Shortly afterward the Commission went to work on an international declaration of human rights.

This declaration was adopted unanimously in 1948. It has had a wide international effect. Although not a treaty, it has become a source of law. Constitutions of new governments incorporate some of its principles. Court decisions cite its standards. Resolutions of the General Assembly quote from it.

But if these human rights are to have meaning, they must be embedded into the organic law of member nations. This can be done most effectively by treaty or convention commitment. Until 1953, our Government's position was just that. The need to translate the U. N. declaration on human rights into action by covenant was movingly expressed by an American statesman in an address before the Carnegie Endowment for International Peace in September 1948. He said:

"I hope and believe this Assembly will endorse this declaration (on human rights). But we must not stop there. We must go on with the drafting of a covenant which will seek to translate human rights into law. It does not minimize the importance of our own Declaration of Independence to recognize that the Constitution and its Bill of Rights were required to establish the body of law necessary to achieve practical results. So with the declaration before the Assembly. It is an important proclamation of principles and should be approved. But that approval is only a step toward fulfilling the faith in fundamental human rights, in the dignity and worth of the human person, and the pledge to practice tolerance that is contained in the preamble to the United Nations Charter."

Now, the man who made this admirable statement of good intentions was none other than Mr. John Foster Dulles. But, alas, Sec-

retary of State Dulles had been in office but a couple of months, in April 1953, when he told the Senate Judiciary Committee, which was considering a proposed constitutional amendment to limit the treaty power, that the administration does not "look upon a treaty as the means which we would now select as the proper and most effective way to spread throughout the world the goals of human rights * * *." He called, instead, for a new approach which would emphasize education. In other words, we wouldn't try to pass an international law against genocide and human slavery. Instead, we would educate the mass murderers and slave traders. And what do you suppose is the name devised by the State Department for this decision to do nothing? Why, they call it the United States action program. Who says John Foster Dulles doesn't have a sense of humor?

Now, I have no quarrel with Secretary Dulles when he says that education plays an important role in the effort to create higher standards of human rights in the world. With the governor of that anonymous southern State, I believe that "Education is a wonderful thing. It ought to be taugh in the schools." But I refuse to believe that education by itself can be an adequate substitute for more positive action to advance human rights internationally.

Let me be perfectly clear. Of course, I don't think that the United States should automatically ratify every international treaty or convention proposed for the protection of human rights. Every tub must stand on its own bottom. The Senate should scrutinize every such treaty with the greatest care before ratifying it. I fully recognize that there exist wide disparities in the world in the concept of human rights, and in the meanings attributed to commonly used terms, such as democracy, liberty, equality, discrimination. I also acknowledge that international treaties in the field of human rights raise intricate legal and constitutional issues, such as the problem of Federal as against unitary states, and the very basic question of the division of authority and jurisdiction as between the international community and national states.

But to counsel prudence is surely not to say that we must boycott the proposed international agreements, as we are now doing. It is surely not to say that we must take down the flag of American leadership in human rights.

Let's look at some of the treaties which our Government has decided cannot even be submitted to the United States Senate for scrutiny and decision.

Take the convention against genocide, ratified by more than 40 members of the United Nations. They are not afraid of outlawing such a hideous crime. But this country, which denounced Hitler's crime of genocide as much as any country, now will not ratify a convention to outlaw the crime. The irony is that some Members of the Congress who oppose ratifying the genocide convention have demanded that Russia be cited for the crime of genocide. It isn't enough to say that of course we will not commit such a crime. The point is, are we willing to put our force behind international law against the crime?

Or take the convention to protect the status of women. American women have political and economic equality. They may vote. They may hold property in their own names. They have won almost complete emancipation. The women of a great part of the world do not enjoy these standards. They want the same political and economic equality that American women enjoy. They look to the women of this country for leadership. Think of the shock when they learn that this country will not even submit to its Senate for ratification these agreements to grant other women the standards that our women have attained.

Or take the question of slavery. The League of Nations had an antislavery convention. Recently the United Nations wished to produce anther antislavery convention that could deal with new forms of slavery which have become altogether too evident. But here again, the United States could not go along, either in helping draft the convention or in ratifying it. Can anyone possibly believe that the ratification of an antislavery convention, with obligations that would be binding upon our Government and the States, could inflict hardship upon anyone in this country? Slavery has disappeared from the American scene. But it exists in a very considerable part of the world. There are 600,000 slaves in the Arab countries alone. An international agreement to outlaw the slave trade would be respected by a great part of the civilized world. Primitive peoples taking their place in the life of the United Nations want to live up to its standards. Some will defy it, but in the long run, the force of world opinion in favor of standards incorporated in international agreements would secure the gradual elimination of slavery.

How ironic it is that our Government should decline to soil its fingers with treaties which deal with subjects on which our own standards are among the highest in the world. What nonsense it is to oppose a treaty outlawing slavery, for examole, and thus deprive us of a basis for attacking the Soviet system of forced labor by political prisoners.

Why are we being such Nervous Nellies about this? Is it because we fear that by signing an international treaty we will be compelled to lower our own constitutional guaranties of human rights? If so, we are wrestling with a phantom. For the purpose of these human rights treaties is to set minimum standards. Certainly in such matters as slavery, genocide, and the rights of women, our own standards are far above these minimums.

But what of the armument that by becoming parties to such a treaty, we expose our judicial decisions and administrative acts to international review? The short answer is simply this: If as Americans we uphold the rights guaranteed by our Constitution and our laws, the occasion will never arise when the world community will have cause to question our decisions and acts.

Today, the melancholy fact is that the United States stands almost alone in opposing in principle treaties relating to human rights. Do we want, by default, to leave the initiative for human progress in the hands of the false friends of human rights?

It is time that we give up being afraid. Other nations are not. Why should we be? It is time for us to resume a position of leadership in the United Nations' struggle for human rights; to suggest international conventions when they are practicable; to take the lead in their drafting and their ratification.

Men are born free, but in a great part of the world they are still in chains. I want the United States to take the lead in the liberation.

Asinine Position

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. MACK of Washington. Mr. Speaker, I recently addressed the House on the subject of our unjust transportation tax and its serious effect on the industry of the Pacific Northwest. The Daily Journal of Commerce, of Seattle, Wash., editorialized on this same subject, and I ask unanimous consent to have it included at this point in the RECORD.

The editorial follows:

[From the Daily Journal of Commerce of Seattle, Wash., March 1, 1957]

ASININE POSITION

The excise taxes on transportation, which now amount to 10 percent on passengers and 3 percent on freight, are among the most inexcusable of all taxes. These levies were imposed during the last war to discourage unnecessary travel and shipping. The idea was that they would naturally end with the war. But they are still in effect. By contrast, similar taxes during World War I were repealed shortly after that conflict ended. During World War II, Canada had a transportation tax but repealed it 9 years ago.

Commenting on the excise taxes on transportation, the Denver Post says:

"At a time when transportation facilities are adequate and their use should be encouraged to reduce congestion on public highways the Government is in the asinine position of discouraging this by penalizing those who do patronize the railroads, airlines, and bus lines * * * A vicious feature of these Federal transportation taxes is the way they build up. The rates remain the same but they are a fixed percentage of the passenger fare or freight rate and every time these are increased the cost of the tax goes up. The freight tax is a multiple tax, levied and collected several times on the same article, in that it applies to raw materials as well as finished products."

It should be remembered that this is not a tax on the carriers concerned. It is a tax on the user—on every person who travels or uses freight service. So it affects everyone, directly or indirectly, and injures the transportation industry of the Nation.

Georgia-Made Products Week

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the State of Georgia, and the people of Georgia, have played an essential and important part in the establishment and development of this great country from the earliest days down to the present.

Georgia was one of the Original Thirteen Colonies. Her people have been present upon every important occasion which has marked the progress of our country—beginning with the Continental Congress and the Declaration of Independence, and continuing to this good day. Georgia products have contributed to the growth of our country throughout its history.

The Governor of Georgia, Hon. Marvin Griffin, has proclaimed the week of March 11–17 "Georgia-Made Products Week."

The DeKalb New Era, the official newspaper of my home county, carried the following editorial in its issue of last week:

GEORGIA PRODUCTS

Today we salute Georgia's manufacturers, their more than 320,000 employees and the estimated 14,000 different products now being made in our State.

By official proclamation Gov. Marvin Griffin has designated March 11–17 as "Georgia-Made Products Week," and urged the full support of all citizens.

Few people realize that even before James Edward Oglethorpe climbed the steep bluff overlooking the Savannah River we have had business and industrial citizens. America's strength—the lifeblood of our Nation flows from our mines, mills, farms, and factories.

They continue to shoulder their ever-increasing responsibility. They remain good citizens.

The Associated Industries of Georgia, and organizations composed of outstanding manufacturers and industrialists, have prepared a very interesting and informative article regarding Georgia's products. Georgia is a leader in many fields. As people from other sections of our country and the world become acquainted with Georgia's many advantages, they come to live with us and to establish new businesses and industries within our borders. We welcome them to our favored section. We appreciate their contribution to our progress, as they appreciate the benefits which they derive as newcomers to this great section of the United States.

Under unanimous consent previously granted, I am inserting herewith the article prepared by the Associated Industries of Georgia:

Gov. Marvin Griffin has designated March 11–17 as "Georgia-Made Products Week," and urges all citizens to give their full support to this statewide observance.

With 7,000 Georgia manufacturing plants now turning out a record-shattering volume of more than 14,000 different products, the week has been set aside as a time to recognize the high position Georgia industry now holds in the field of manufacturing.

Associated Industries of Georgia, the 41-year-old organization supported by more than 700 of the State's manufacturers and industrialists, and the Georgia Junior Chamber of Commerce, have joined forces as sponsors of "Georgia-Made Products Week."

Georgia industry, now employing more than 320,000 men and women, is playing an ever-increasing role in keeping America strong. More than at any time in history it is certainly true that, from Georgia's mines, mills, farms and factories flows America's strength.

In our State this strength takes on many forms. Few people stop to realize the extent to which our industry has become diversified. Georgia plants are now manufacturing or processing yarn, twine, tire cord, worsted and woolen materials, venetian blinds, awnings, jalousies, veneer, plywood, flooring, tufted chenille products, airplanes, toys, jewelry, novelties, thread, textile equipment, cotton goods, sheeting, towels, upholstery, automobiles, tapestry, surgical, orthopedic, dental and optical supplies, films, signs, pots and pans, advertising, sheet metal, furniture, rayon, synthetic yarns, books, magazines, newspapers, plastic yarns, rubber, plastics, cottonseed, oil, pecans, peanuts, paper, paint, varnish, roofing.

Naval stores, varied wood products, canned and frozen fruits, monuments, oil, meat, poultry, seafood, machinery, metal, lumber, pulpwood, apparel, bags, shoes, bagging, bakery products, beer, wine, soft drinks, brick, clay, tile, brooms, mops, brushes, cabinets, store fixtures, candy, sugar, sirup, flavors, canvas products, tents, caskets, burial vaults, morticians' supplies, chemicals, chemical products, cement, concrete products, cosmetics, toilet preparations, saddles, dog collars, cotton waste, cotton gins, rugs.

Cross-ties, utility poles, dairy products, ice cream, doors, sash, millwork, drugs, medicine, electrical equipment, fertilizer, flour, grist, feed, nails, tacks, barbed wire, mattresses, bedding, knit goods, hosiery and many other miscellaneous items.

Georgia was once known solely as leader in the production of agricultural products. The day seems near when all areas of the State will enjoy the long-sought balanced economy between industry and agriculture.

Comparing Georgia with the South and the Nation, the value of manufactured products for the period 1945–55 was up 212 percent in Georgia, 202 percent in the South, and 158 percent in the Nation. Farm income increased 74 percent in our State, 52 percent in the South and 42 percent in the Nation.

Per capita income in Georgia jumped 31 percent between 1950 and 1955 compared with 27 percent in the South and 24 percent in the Nation.

With 1957 well underway, early indications point toward Georgia again breaking many more records in the field of manufacturing.

FACT SHEET—GEORGIA-MADE PRODUCTS WEEK

Total number of manufacturing establishments in Georgia in 1955 according to Manufacturer's Record Blue Book	6,700
New plants added in 1956, according to Gov. Marvin Griffin's message to the legislature on the state of the State	360
Total, Jan. 1, 1957	7,060
Value of output of manufacturing establishments in Georgia in 1955	$4,049,000,000
Estimated increase 1956 over 1955	$301,000,000
Total	$4,350,000,000
Value added by manufacture	$1,650,000,000
Total number of men and women employed in manufacturing enterprises in Georgia in 1956 (estimated)	320,000
Value of crops produced in Georgia in 1955	$354,938,000

Latest official estimated figures reveal that value of Georgia's total manufactured products is now 11 times greater than the State's agricultural output.

It is now recognized generally that the Southeast is the fastest growing industrial section in the United States, and within the past 2 years Georgia is recognized as the fastest growing State industrially in the Southeast. This is supported by statistics.

The more than 300 new manufacturing plants which located in Georgia in 1956 have a capital investment estimated at $165 million. These new industrial citizens have created 11,000 new jobs with an estimated annual payroll of $32 million.

Georgia holds first place in the Southeast and fourth place in the United States with respect to heavy industries established within its boundaries since the close of World War II, being exceeded only by California, Texas, and Ohio, in the order named.

Value of manufactured products for the period 1945–55 is up 212 percent in Georgia, 202 percent in the South, and 158 percent in the United States.

Farm income increased 74 percent in Georgia, 52 percent in the South, and 42 percent for the entire United States.

Per capita income in Georgia increased 31 percent between 1950 and 1955, and during the same period the increase was 27 percent in the South and 24 percent in the United States.

Conference of Democratic Party Leaders of Wisconsin

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include and commend to the attention of the membership of this body, three resolutions adopted during a recent conference of Democratic Party leaders of Wisconsin.

These recommendations pertain to vital issues of our day: to the plight of small business, to the civil-rights question, and to the Middle East crisis. I sincerely hope that they will receive careful consideration from the Members of this body.

The resolutions follow:

RESOLUTIONS ADOPTED AT A CONFERENCE OF DEMOCRATIC PARTY OF WISCONSIN OFFICERS HELD AT MILWAUKEE FEBRUARY 23, 1957

CIVIL RIGHTS

Whereas the Democratic Party has long furthered the interests of minority groups in economic and social fields and must now lead the way to complete elimination of discrimination and segregation, the number one domestic problem of our time; and

Whereas the desire for party unity should not transcend our moral obligation of leadership as a national party; and

Whereas the Eisenhower administration has failed to use the moral authority of the Federal Government to resolve the growing tensions in the South: Be it

Resolved, That this conference urges the Democratic Party to assume uncompromising leadership in assuring civil rights to all citizens, and in pursuit of this purpose, we urge the passage by Congress of legislation (1) to ensure the right to vote, (2) to protect the physical security of minority group members, and (3) to end discrimination in hiring and firing; and

We further request that the President use his moral power and influence to expedite the enforcement of the Supreme Court decisions against segregation in public transportation and segregation in public education, and we ask him to call immediately a conference of southern leaders, both Negro and white, to discuss the best means of achieving rapid and peaceful integration of public schools.

SMALL BUSINESS

The bugaboo of inflation used by the administration to raise interest rates was not the real problem confronting the country as evidenced by the decline in agriculture, home building and small business.

Your committee finds that the Republican policy of hard money is leading small business and farmers into bankruptcy. Due to raising interest rates and curtailing credit, the building industry is curtailing operation which means great unemployment. Farmers are being liquidated everywhere and bankruptcies are increasing by leaps and bounds. The tight-money squeeze is endangering 4½ million small-business men and millions of

farmers, which means an unemployment situation that reminds us of the Hoover depression.

his problem confronting small-business men, home builders, farmers, and others affected by the tight-money squeeze is essentially a problem of whether economic decisions are going to continue to be left in the hands of private bankers acting in behalf of private interest or whether the Government should assume its inescapable responsibility to see that the Nation's monetary and credit policy is directed toward promoting the welfare of all groups in the country.

Big business has little or no difficulty in obtaining funds during this tight-money squeeze. For the safety of this country the interest spiral must stop. What is needed is an even, adequate flow of funds into all areas at reasonable rates supervised by the Federal Government.

Small business should get tax relief and we recommend passing of Congressman ZABLOCKI's tax bill and also passing of the Democratic congressional bill providing direct Federal loans to support the GI mortgage market or, as an alternative, the investment of national service life insurance funds in GI mortgages at par value and, if necessary, additional purchase by a substantially enlarged Federal National Mortgage Association program.

We ask endorsement of House Resolution 85, providing for the Committee on Banking and Currency to conduct a full and complete investigation and study, with respect to any matter or matters in the field of national monetary and credit policies and the financial structures.

MIDDLE EAST

Whereas the Eisenhower administration had indicated that it may support the move by the Arab-Asian bloc to vote sanctions against the State of Israel; and

Whereas this Eisenhower administration did not indicate support for sanctions against the Soviet Union aggression in Hungary, the longstanding Egyptian flouting of U. N. resolutions with respect to Israeli use of the Suez Canal, free passage of shipping in the Gulf of Aqaba and provocation in the form of commando raids originating in the Gaza strip; and

Whereas the Eisenhower administration has accepted the Arab nations' standards by not issuing travel visas to American citizens of Jewish faith and does not send American servicemen of the Jewish faith to bases leased in Arab countries; and

Whereas such discriminatory standards are contrary to longstanding American principles expressed in the Constitution and Declaration of Independence; and

Whereas the Eisenhower administration fumbling in the Middle Eastern area has alienated our established friendship with the democracies of France and England; and

Whereas the Eisenhower administration support of the Nasser regime in Egypt has alined us with a totalitarian dictatorship within the orbit of the Soviet Union; and

Whereas all this has been done in the interests of oil versus human rights: Now, therefore, be it

Resolved, That this statewide conference of Wisconsin Democrats does go on record as opposing the imposition of sanctions on the State of Israel and does urge our representatives in the U. N. to support the strengthening of the U. N. forces in the Middle East so as to provide Israel with assurances sufficient to stabilize the area which will permit them to withdraw their forces.

It Might Have Been Thus

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1957

Mr. MULTER. Mr. Speaker, the following article, which appeared in the Congress Weekly of January 14, 1957, makes most interesting reading. This article first appeared in the Jerusalem Post of December 14, 1956:

IT MIGHT HAVE BEEN THUS

(By Ephraim Kishon)

War broke out in May 1957.

The armies of Egypt, Syria, and Jordan, under joint command, penetrated Israel's borders practically along their whole length. The Israel Army was not surprised by the blow, but lacking heavy weapons and especially an adequate air arm, had to limit itself to defensive maneuvers. The Arab invasion was supported by 3,000 Soviet tanks and 1,100 planes. Why the small Jewish state had been unable to procure proper defensive weapons before the expected Arab blow fell—that is a riddle which only history will solve. In October 1956, there were unconfirmed reports about allegedly large quantities of modern weapons from certain Western Powers, but it seems that these were made dependent on certain operations connected with the Suez crisis and therefore did not materialize. Redtape held up all but 7 of the 24 jets purchased in Canada.

Made bold by the attackers' initial successes, Saudi Arabia, then Iraq, and finally Lebanon also declared war on Israel.

The Israel Government immediately appealed to the U. N., whose machinery however took some time before it got into motion. World public opinion had been caught completely unawares by the Arab attack: Nasser, President of Egypt and Jordan, had assured the world at large only a few weeks before that he was concentrating all his efforts on the region's economic consolidation. The huge quantities of Soviet arms in Arab hands caused universal consternation.

Even before the Security Council convened, Secretary General Hammarskjold had sent two personal emissaries to the Middle East, but they did not receive entry visas to Egypt and had to follow events from Copenhagen. The United States immediately convoked the Security Council for the weekend and drafted a cease-fire resolution. The resolution received the required majority vote, but the Soviet Union used its veto right, stressing that it saw in the Arab action a glorious chapter in the struggle for freedom of the subjugated colonial peoples. The Venezuelan delegate accused the Soviet Union of having conspired in the preparation of the attack, and Ambassador Eban brought documentary proof that Soviet officers and advisers were directing the operations. The Soviet foreign minister branded the Israel declaration "a typically Jewish provocation." The Pope broadcast an appeal for the preservation of the Holy Sites.

The Arabs had meanwhile reached Israel's large cities and were bombarding them with rockets. The Security Council again met in emergency session, but Russia again vetoed the cease-fire resolution. At American pressure, the U. N. Assembly met in special session and passed the cease-fire resolution. But the drafting of the final text took a number of days, as the original draft called for an "immediate" cease-fire, while the Indonesian amendment used the expression "as soon as possible." The parties finally compromised on "speedy." By then, the fighting had reached the heart of the large cities. The United States threatened to apply economic sanctions against the belligerents unless they stopped fighting within 5 days, and India's Nehru appealed to Nasser to be humane with the Jewish civilians. Quite unexpectedly, Saudi Arabia nationalized Aramco. President Eisenhower ordered the Navy's partial demothballing and sent a letter to Marshal Bulganin. The Arab Supreme Command agreed to the cease-fire.

On the shores of bombed-out Tel Aviv and Haifa 82,616 Jewish survivors were sheltered in camps under U. N. protection.

And then world conscience awakened.

Public opinion was gripped by such consternation that its echoes reverberated even in the eastern bloc. "History has tragically caught up with the imperialists' puppet state," Izvestia wrote. "Israel was a reactionary, feudalistic body, its Government an oppressive military dictatorship, but the sufferings of innocent population cannot fail to awaken compassion in the camp of peace, which always fearlessly champions the cause of the small nations. It cannot be denied, however, that Israel called its doom upon itself by the provocative attitude it adopted. The artificial miniature state had for some time now been the West's arsenal, and the Jews, armed to their teeth, took on increasingly arrogant airs toward their peaceful neighbors. The Jewish nation, whose history is so imbued with suffering, will now again have to seek refuge among hospitable nations. As always, the Soviet Union will ensure full rights for its citizens of Jewish origin."

After this article in Izvestia, there was no more mention of the affair in the Soviet press. Czechoslovakia simply ignored the Mideastern war, but a few courageous voices in the Polish press stated that their joy over Nasser's victory was not unmixed. Marshal Tito sent Nasser a long congratulatory telegram, while in the name of the working Hungarian people, Premier Imre Nagy sent his best wishes.

The West did not mince its sympathy for Israel. The most famous politicians sounded warning notes. Sir Winston called Israel's liquidation the century's badge of infamy, and the usually reserved Sir Anthony declared: "We witnessed sad events indeed, which make the strengthening of the United Nations Organization imperative." Hugh Gaitskell eulogized Israel at a memorable session of the House of Commons: "They were our friends," he cried, "heroes and socialists. We shall always cherish their beloved memory."

Public opinion in the progressive Asian states also reacted. Krishna Menon, India's chief U. N. representative, is said to have declared at a private meeting: "We are forced to condemn the reckless step of our Arab brethren."

At his Tel Aviv victory parade, Nasser stood surrounded by Soviet officers. In Iraq, the Communist Party staged a coup and seized power. King Saud declared his regime a People's Democracy. State Department circles expressed apprehension lest the Soviets gain a certain degree of influence in the Middle East. President Eisenhower submitted a special bill to Congress for the immediate admittance of 25,000 Israel refugees.

The President's speech sparked unprecedented worldwide enthusiasm. Switzerland immediately offered 2,000 transit visas and Guatemala increased its quota for Jewish immigrants from 500 to 750. Socialistic labor the world over held spontaneous rallies and sharply condemned Arab aggression. In a number of Western capitals, students demonstrated in front of the Arab legations. Some window panes were smashed. The International Pen Club condemned the Arabs' barbaric action at a public meeting; UNESCO appropriated $200,000 for Israel refugees. The Brazilian Parliament observed a minute of silence in the cause of Israel justice. Japan and South Korea sent medicaments. The Scandinavian countries announced their willingness to admit any number of Israel orphans. Under pressure of public opinion, the New Zealand Government proposed a pact of eternal friendship with Israel's memory. Australian Prime Minister Menzies called the Arab aggression "infamous." At a national conference of American Jewish organizations, the Assistant Secretary of State made a solemn promise (with the President's approval) to the effect that "in future the United States would devote greater attention to the problems of small nations and prevent the recurrence of similar excesses." While expressing their deep regret, State Department spokesmen stressed that up to a certain point Israel herself was to blame for her fate, as she had not prevented the Arab attack in time.

The world press gave Israel its unreserved sympathy. In the Herald Tribune's commemorative issue, the Alsop brothers glorified Israel's democratic character, stressing the great loss the world had suffered with the demise of the small model state. Ed Murrow openly came out for Zionism on TV and declared that "every American Jewish family was entitled to be proud of the heroic Israel nation." The until then unsympathetic Manchester Guardian fervently beat its breast and declared that Israel had been perfectly right and that "its tragedy would for centuries burn like an accusing torch under the window of the world's conscience."

The necessity for a political settlement was first pointed out by Marshal Bulganin, who proposed to convene a five-power conference in Cairo "with the participation of all interested parties.' The Soviet Government made another goodwill gesture by requesting Nasser not to demand excessive material compensation for the permission to exacuate the Israel refugees. This humane Soviet step made an extremely favorable impression the world over.

The Israel refugees, scattered over the four corners of the earth, were overwhelmed with affection and admiration. They inspired such a wave of enthusiasm for Israel as had not been witnessed since the creation of the Jewish state. In most countries main thoroughfares were named after Israel, and the U. N. memorial session decided almost unanimously not to fill the chair of the Jewish delegate but to leave it vacant; also to let the Zionist flag stay among those of U. N. member states. Enthusiasm reached its climax when the Russian Foreign Minister unexpectedly proposed the holding of an Israel Day. World peace again had good prospects, humanity was again filled with hope for a brighter and happier future. Israel itself became the international symbol of justice and morality.

Israel did not wait until May 1957, but rashly smashed the Egyptian war machine in the Sinai Peninsula and thereby lost the opportunity to win the whole world's sympathy. And that is a great pity. God knows when it will again have such a chance.

Mr. Folsom's Colossal Error

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. GWINN. Mr. Speaker, for 25 years the United States Office of Education has been a hot center of propaganda, reports, speeches, studies, estimates, and conferences in a buildup for Federal aid for schoolroom construction. It prepares and publicizes the so-called figures of shortages across the Nation. It exercises a kind of national monopoly of information on this subject. Indeed it has been the only source up until the committee hearings. That Office apparently wants to substitute Federal intervention for liberty of the people. The United States Office of Education has certain natural satellites. One is the National Education Association, one of the biggest lobbies in Washington, with hundreds of thousands of members and spends millions of dollars annually. Another is the Council of Chief State School Officers, the top professional leadership in education. Now it appears these figures are grossly inaccurate and misleading. And the United States Office of Education is responsible.

On April 30, 1954, Mrs. Hobby, then Secretary of the Department of Health, Education, and Welfare, testified before the Senate Committee on Labor and Public Welfare, that:

> The school facilities survey conducted under title I of Public Law 815 shows an existing shortage of instruction rooms for public elementary and secondary schools of approximately 340,000 in 1953.

This study was made at a cost to the Government of $1,800,262.25 and to the States of $2,187,801.26, and took a period of 4 years, beginning in 1950 and ending in 1954. At the conclusion of the study it was generally considered that it was outdated and of little value.

This fact is emphasized by the action of Secretary Hobby after the above appearance before the Senate committee in April 1954, by letter printed in the hearings of the House Education and Labor Committee dated July 30, 1954, in which she wrote:

> To construct school buildings to provide 370,000 classrooms currently needed would cost $10 billion to $15 billion.

Everyone admits now, with Mrs. Hobby, that the whole show of calamity for the children and deficits in school construction was worse than erroneous. It induced a statement by the President, in his special message on education to the Congress February 8, 1955, relying on the information in which he repeated the fiction when he said:

> The latest information submitted by the States to the Office of Education indicates that there is a deficit of more than 300,000 classrooms.

Thus it became an accepted fact there is a schoolroom shortage of grave proportions. The damage to the idea of freedom and responsibility of the States for their own children was done. This is a good example of predetermining our thinking by Government propaganda.

On February 16, 1955, before the Senate Committee on Labor and Public Welfare, Mrs. Hobby testified again to this effect:

> The State school-facilities survey, which is the only national survey that we have, is now 2 years old. So I do not believe anyone can say with absolute certainty what the classroom shortage in the United States is. We believe it is over 300,000 classrooms.

By March 29, 1955, Mrs. Hobby was thoroughly disturbed. She appeared before the House Education and Labor Committee and completely revised her previous estimate:

> On the basis of the reports * * * received * * * we find a substantially different picture of classroom needs from the projections previously made on the basis of the 1951 survey * * *. Our rate of classroom construction has increased since 1953 from 50,000 to 60,000 classrooms per year * * *. We find that the estimated classroom deficit by the year 1959–60 would be 176,000 classrooms, rather than 407,000.

With all that money and 4 years spent, Mrs. Hobby, herself a very competent public servant, could not get a correct figure. Mrs. Hobby pointed out that:

> The State estimates thus show that the classroom deficit is much less than that projected a year ago. A continuing improvement is to be anticipated in the next 5 years, if we can maintain current construction levels.

Now, in February 1957, here comes Mr. Folsom with a questionnaire which the Health, Education, and Welfare Department officials admit themselves was not sent out with any intention of its being used as the basis on which Congress would be asked to appropriate $3,600,000,000 or an equivalent large sum of money for school construction. The resulting tabulation of estimated and incomplete figures on Circular 490 is referred to by officials as a "quickie" study.

Mr. Folsom, reducing Mrs. Hobby's figures further, says the shortage is only 159,000 as of October 1, 1956. So, on Mr. Folsom's estimates, the States have exceeded again what the Federal bureaucracy estimated the States would do. But Mr. Folsom plays the same old song that the States are still unable to do the job and the Federal Government must come into the picture. He says this in spite of the fact that his present information comes from sources that had no business to make estimates of schoolroom shortages for the purpose of getting billions of appropriations. Indeed, the estimates were not collected for such use as he now makes of them. The personnel of the Research Department of the United States Office of Education professed to be shocked to think that their figures were being used as a basis for asking for such appropriations. They

made it clear that they were. They admitted that the information on Circular 490, the only information used to support the shortage of 159,000, was practically all estimates or guesses generally by some clerk or assistant. Several States did not answer at all. In only seven States did the superintendent of education or assistant superintendent sign these United States Office of Education questionnaires for the information in question.

Mr. Folsom has made no survey, conducted no study on the ground to get his 159,000 figure. Not a man went into the field from Washington to visit a single school district out of the 51,000 he now presumes to speak for. It would have been much easier to ask the school districts themselves directly about their shortages. Not one has been asked. No governor, no legislature, no school board has come forward asking for Federal aid. Federal aid and control is literally being thrust on the States in spite of themselves so far as the record or testimony goes. The answers reported in Circular 490 of the Department of Health, Education, and Welfare came by a most informal, precarious route—sometimes as a result of post cards sent out to the local superintendents of schools; sometimes the schoolteachers answered them. Not a single bit of information about the schoolroom shortage came from any school board, the only authority that can speak for any school district. It alone can speak for the people on schoolroom shortage and its obsolete schoolrooms, if any. There may be, often is, violent differences of opinion on these matters between the school board and the superintendent of schools.

Some of the questionnaires were filled in by pencil, some in ink, some by notes and in a large proportion of them the notation was made generally in ink "these are estimates" or "estimates only" or "no information available."

Where there was no information available the United States Office of Education took on the job itself of making its own estimates or guesses on the schoolroom shortages. If it did not like the answer that came back from the person who filled in the questionnaire in the State Education Office it would return it to the State for revision.

The United States Office of Education complained to one State about its failure to answer the questionnaire to the satisfaction of the Department of Health, Education and Welfare. It threatened the State official by saying, "The United States Office of Education does not want to make an official complaint regarding the inadequacy of data supplied by your State." Of course he was under no obligation to reply at all. Yet we are assured that we shall have Federal aid without Federal control.

In several instances the figures were very considerably raised. Old estimates were stricken out and new estimates put in as a result of the United States Office of Education telephoning or writing a State. After that, increases were written in. They make up a substantial part of the 159,000 schoolroom needs. Indeed, where States failed or refused to answer the questionnaire at all, the United States Office of Education itself made up an additional 19,000 new schoolrooms needed for those States all in even nice round figures. If there was ever a case of a bum's rush involving billions by a professional group, this is it.

There was no attempt to indicate how many needy school districts there were in the country. Of course not, these Folsom figures were made up in a few days as a sort of a quicky annual inventory taking. They had no relation whatever to needy districts as compared to wealthy or well-to-do districts clearly able to take care of themselves. No one knows whether there are 10 or 1,000 needy districts so far as the Folsom figures go. All that circular 490, the only report guessed at or otherwise on the subject of alleged shortages shows, is that there is a total of 159,000 quickly estimated or guessed at shortages. On the face of the report, about 85 percent of these are States quite able to meet their own needs.

By surprise, Mr. William M. Adams, chairman of the municipal securities committee of the Investment Bankers Association of America, came forward to ditch completely Mr. Folsom's much publicized figure of 159,000 shortage. Mr. Adams produced daily records of school bond sales advertised and sold and the prices of bonds sold in each State up to date. By taking the total sales of school bonds for the Nation for a year we can get the number of schoolrooms the proceeds will build. $30,000 will on the average build 1 schoolroom for 30 pupils. By dividing $30,000 into the total funds raised for the Nation for schoolroom construction we get the total number of classrooms built from those funds with close proximity.

Mr. Adams, businessman himself and a statistician of note, with two assistants and with their bond sales publications and other documentary papers, showed that 96,600 new classrooms will be financed on the basis of money made available by school-bond sales for 12 months beginning October 1, 1956. Mr. Adams' two assistants were Mr. Frank Morris, research director, and Mr. Gordon Calvert, municipal director, of the Investment Bankers' Association. This organization is the recognized national authority on school-bond sales and municipal securities.

Mr. Adams said, in part:

> The actual financing during the past 4 months (beginning October 1, 1956) demonstrates indisputedly that State and local school agencies have been able to finance school construction at prevailing interest rates.

Indeed, it is apparent that with few exceptions school-district bonds are one of the best investments in the country and sell at very low interest rates.

Mr. Adams continues:

> In short, the school financing for the past 4 months (beginning with October 1, 1956) projected for a full year would mean an expenditure for school construction of approximately $2,900,000,000 to provide about 96,600 classrooms in addition to the 69,200 scheduled for completion—

As shown on Circular 490, hereto attached.

If you divide $2,900,000,000 bond sales mentioned by $30,000, the average schoolroom cost for the Nation, you come out with 96,600 classrooms mentioned by Mr. Adams above. Up-to-date figures show February 1957 is accelerating the rate of sales of bonds compared to previous months. Thus Mr. Folsom's estimates may be ready for another reduction of proposed Federal aid. But it is apparent from the testimony that in the South where practically all the classroom shortages are, the cost of constructing a classroom is less than $10,000 in many States. For example Georgia, in her statewide program of construction now going on, builds for considerably less than $10,000 per classroom. So that it is possible in the South, if let alone, they may double or even treble the classroom construction and thus make the total far above the 96,000 calculated on the basis of average cost for the Nation. If that is true, then the Folsom figures of estimates and guesses becomes the more ridiculous.

The records above referred to by Mr. Adams are confined in their accuracy and show the rate of construction in the States by another published figure for the Nation. That is to say, November 9, 1956, through January 31, 1957, school boards had authorized bond sales aggregating over $1,920,825,000. These are not actual sales, but they are authorizations recorded for the period. This means that the school boards have voted to recommend the issuance of school bonds for schoolroom construction and that the people in the school districts had voted to approve the proposition to that extent. This was done, remember, between November 9 and January 21 just passed.

We must add to this figure the construction funds generally available through regular current appropriations of the school districts out of current taxation, sinking fund provisions or other means of financing other than public sale of bonds. That amounts to about 30 percent of the total. And on that basis we have actual provision or authorization of over $2,743,000,000 already committed by vote of the people to schoolroom construction. That is over 91,400 new classrooms at $30,000 per classroom as figured in the first case. This is new financing in terms of authorization in addition to 69,200 classrooms already financed as of October 1, 1956. This approach projected for 12 months roughly confirms the first calculation measured by school bond sales.

Witnesses testified that additional bond approval elections are scheduled according to the public press for coming months at about the same rate that has been applicable for the past year or two. Large amounts of authorized school bonds are being offered and sold daily on the markets of the country. For example, continuing from Mr. Adams' testimony:

> The Bond Buyer contained invitations for bids on Friday, February 15, for $14,127,500 school bonds; on Monday, February 18, for $35,745,000 school bonds; on Tuesday, February 19, for $28,176,000 school bonds; and

The President's speech sparked unprecedented worldwide enthusiasm. Switzerland immediately offered 2,000 transit visas and Guatemala increased its quota for Jewish immigrants from 500 to 750. Socialistic labor the world over held spontaneous rallies and sharply condemned Arab aggression. In a number of Western capitals, students demonstrated in front of the Arab legations. Some window panes were smashed. The International Pen Club condemned the Arabs' barbaric action at a public meeting; UNESCO appropriated $200,000 for Israel refugees. The Brazilian Parliament observed a minute of silence in the cause of Israel justice. Japan and South Korea sent medicaments. The Scandinavian countries announced their willingness to admit any number of Israel orphans. Under pressure of public opinion, the New Zealand Government proposed a pact of eternal friendship with Israel's memory. Australian Prime Minister Menzies called the Arab aggression "infamous." At a national conference of American Jewish organizations, the Assistant Secretary of State made a solemn promise (with the President's approval) to the effect that "in future the United States would devote greater attention to the problems of small nations and prevent the recurrence of similar excesses." While expressing their deep regret, State Department spokesmen stressed that up to a certain point Israel herself was to blame for her fate, as she had not prevented the Arab attack in time.

The world press gave Israel its unreserved sympathy. In the Herald Tribune's commemorative issue, the Alsop brothers glorified Israel's democratic character, stressing the great loss the world had suffered with the demise of the small model state. Ed Murrow openly came out for Zionism on TV and declared that "every American Jewish family was entitled to be proud of the heroic Israel nation." The until then unsympathetic Manchester Guardian fervently beat its breast and declared that Israel had been perfectly right and that "its tragedy would for centuries burn like an accusing torch under the window of the world's conscience."

The necessity for a political settlement was first pointed out by Marshal Bulganin, who proposed to convene a five-power conference in Cairo "with the participation of all interested parties.' The Soviet Government made another goodwill gesture by requesting Nasser not to demand excessive material compensation for the permission to exacuate the Israel refugees. This humane Soviet step made an extremely favorable impression the world over.

The Israel refugees, scattered over the four corners of the earth, were overwhelmed with affection and admiration. They inspired such a wave of enthusiasm for Israel as had not been witnessed since the creation of the Jewish state. In most countries main thoroughfares were named after Israel, and the U. N. memorial session decided almost unanimously not to fill the chair of the Jewish delegate but to leave it vacant; also to let the Zionist flag stay among those of U. N. member states. Enthusiasm reached its climax when the Russian Foreign Minister unexpectedly proposed the holding of an Israel Day. World peace again had good prospects, humanity was again filled with hope for a brighter and happier future. Israel itself became the international symbol of justice and morality.

Israel did not wait until May 1957, but rashly smashed the Egyptian war machine in the Sinai Peninsula and thereby lost the opportunity to win the whole world's sympathy. And that is a great pity. God knows when it will again have such a chance.

Mr. Folsom's Colossal Error

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. GWINN. Mr. Speaker, for 25 years the United States Office of Education has been a hot center of propaganda, reports, speeches, studies, estimates, and conferences in a buildup for Federal aid for schoolroom construction. It prepares and publicizes the so-called figures of shortages across the Nation. It exercises a kind of national monopoly of information on this subject. Indeed it has been the only source up until the committee hearings. That Office apparently wants to substitute Federal intervention for liberty of the people. The United States Office of Education has certain natural satellites. One is the National Education Association, one of the biggest lobbies in Washington, with hundreds of thousands of members and spends millions of dollars annually. Another is the Council of Chief State School Officers, the top professional leadership in education. Now it appears these figures are grossly inaccurate and misleading. And the United States Office of Education is responsible.

On April 30, 1954, Mrs. Hobby, then Secretary of the Department of Health, Education, and Welfare, testified before the Senate Committee on Labor and Public Welfare, that:

The school facilities survey conducted under title I of Public Law 815 shows an existing shortage of instruction rooms for public elementary and secondary schools of approximately 340,000 in 1953.

This study was made at a cost to the Government of $1,800,262.25 and to the States of $2,187,801.26, and took a period of 4 years, beginning in 1950 and ending in 1954. At the conclusion of the study it was generally considered that it was outdated and of little value.

This fact is emphasized by the action of Secretary Hobby after the above appearance before the Senate committee in April 1954, by letter printed in the hearings of the House Education and Labor Committee dated July 30, 1954, in which she wrote:

To construct school buildings to provide 370,000 classrooms currently needed would cost $10 billion to $15 billion.

Everyone admits now, with Mrs. Hobby, that the whole show of calamity for the children and deficits in school construction was worse than erroneous. It induced a statement by the President, in his special message on education to the Congress February 8, 1955, relying on the information in which he repeated the fiction when he said:

The latest information submitted by the States to the Office of Education indicates that there is a deficit of more than 300,000 classrooms.

Thus it became an accepted fact there is a schoolroom shortage of grave proportions. The damage to the idea of freedom and responsibility of the States for their own children was done. This is a good example of predetermining our thinking by Government propaganda.

On February 16, 1955, before the Senate Committee on Labor and Public Welfare, Mrs. Hobby testified again to this effect:

The State school-facilities survey, which is the only national survey that we have, is now 2 years old. So I do not believe anyone can say with absolute certainty what the classroom shortage in the United States is. We believe it is over 300,000 classrooms.

By March 29, 1955, Mrs. Hobby was thoroughly disturbed. She appeared before the House Education and Labor Committee and completely revised her previous estimate:

On the basis of the reports * * * received * * * we find a substantially different picture of classroom needs from the projections previously made on the basis of the 1951 survey * * *. Our rate of classroom construction has increased since 1953 from 50,000 to 60,000 classrooms per year * * *. We find that the estimated classroom deficit by the year 1959–60 would be 176,000 classrooms, rather than 407,000.

With all that money and 4 years spent, Mrs. Hobby, herself a very competent public servant, could not get a correct figure. Mrs. Hobby pointed out that:

The State estimates thus show that the classroom deficit is much less than that projected a year ago. A continuing improvement is to be anticipated in the next 5 years, if we can maintain current construction levels.

Now, in February 1957, here comes Mr. Folsom with a questionnaire which the Health, Education, and Welfare Department officials admit themselves was not sent out with any intention of its being used as the basis on which Congress would be asked to appropriate $3,600,000,000 or an equivalent large sum of money for school construction. The resulting tabulation of estimated and incomplete figures on Circular 490 is referred to by officials as a "quickie" study.

Mr. Folsom, reducing Mrs. Hobby's figures further, says the shortage is only 159,000 as of October 1, 1956. So, on Mr. Folsom's estimates, the States have exceeded again what the Federal bureaucracy estimated the States would do. But Mr. Folsom plays the same old song that the States are still unable to do the job and the Federal Government must come into the picture. He says this in spite of the fact that his present information comes from sources that had no business to make estimates of schoolroom shortages for the purpose of getting billions of appropriations. Indeed, the estimates were not collected for such use as he now makes of them. The personnel of the Research Department of the United States Office of Education professed to be shocked to think that their figures were being used as a basis for asking for such appropriations. They

made it clear that they were. They admitted that the information on Circular 490, the only information used to support the shortage of 159,000, was practically all estimates or guesses generally by some clerk or assistant. Several States did not answer at all. In only seven States did the superintendent of education or assistant superintendent sign these United States Office of Education questionnaires for the information in question.

Mr. Folsom has made no survey, conducted no study on the ground to get his 159,000 figure. Not a man went into the field from Washington to visit a single school district out of the 51,000 he now presumes to speak for. It would have been much easier to ask the school districts themselves directly about their shortages. Not one has been asked. No governor, no legislature, no school board has come forward asking for Federal aid. Federal aid and control is literally being thrust on the States in spite of themselves so far as the record or testimony goes. The answers reported in Circular 490 of the Department of Health, Education, and Welfare came by a most informal, precarious route—sometimes as a result of post cards sent out to the local superintendents of schools; sometimes the schoolteachers answered them. Not a single bit of information about the schoolroom shortage came from any school board, the only authority that can speak for any school district. It alone can speak for the people on schoolroom shortage and its obsolete schoolrooms, if any. There may be, often is, violent differences of opinion on these matters between the school board and the superintendent of schools.

Some of the questionnaires were filled in by pencil, some in ink, some by notes and in a large proportion of them the notation was made generally in ink "these are estimates" or "estimates only" or "no information available."

Where there was no information available the United States Office of Education took on the job itself of making its own estimates or guesses on the schoolroom shortages. If it did not like the answer that came back from the person who filled in the questionnaire in the State Education Office it would return it to the State for revision.

The United States Office of Education complained to one State about its failure to answer the questionnaire to the satisfaction of the Department of Health, Education and Welfare. It threatened the State official by saying, "The United States Office of Education does not want to make an official complaint regarding the inadequacy of data supplied by your State." Of course he was under no obligation to reply at all. Yet we are assured that we shall have Federal aid without Federal control.

In several instances the figures were very considerably raised. Old estimates were stricken out and new estimates put in as a result of the United States Office of Education telephoning or writing a State. After that, increases were written in. They make up a substantial part of the 159,000 schoolroom needs. Indeed, where States failed or refused to answer the questionnaire at all, the United States Office of Education itself made up an additional 19,000 new schoolrooms needed for those States all in even nice round figures. If there was ever a case of a bum's rush involving billions by a professional group, this is it.

There was no attempt to indicate how many needy school districts there were in the country. Of course not, these Folsom figures were made up in a few days as a sort of a quicky annual inventory taking. They had no relation whatever to needy districts as compared to wealthy or well-to-do districts clearly able to take care of themselves. No one knows whether there are 10 or 1,000 needy districts so far as the Folsom figures go. All that circular 490, the only report guessed at or otherwise on the subject of alleged shortages shows, is that there is a total of 159,000 quickly estimated or guessed at shortages. On the face of the report, about 85 percent of these are States quite able to meet their own needs.

By surprise, Mr. William M. Adams, chairman of the municipal securities committee of the Investment Bankers Association of America, came forward to ditch completely Mr. Folsom's much publicized figure of 159,000 shortage. Mr. Adams produced daily records of school bond sales advertised and sold and the prices of bonds sold in each State up to date. By taking the total sales of school bonds for the Nation for a year we can get the number of schoolrooms the proceeds will build. $30,000 will on the average build 1 schoolroom for 30 pupils. By dividing $30,000 into the total funds raised for the Nation for schoolroom construction we get the total number of classrooms built from those funds with close proximity.

Mr. Adams, businessman himself and a statistician of note, with two assistants and with their bond sales publications and other documentary papers, showed that 96,600 new classrooms will be financed on the basis of money made available by school-bond sales for 12 months beginning October 1, 1956. Mr. Adams' two assistants were Mr. Frank Morris, research director, and Mr. Gordon Calvert, municipal director, of the Investment Bankers' Association. This organization is the recognized national authority on school-bond sales and municipal securities.

Mr. Adams said, in part:

> The actual financing during the past 4 months (beginning October 1, 1956) demonstrates indisputedly that State and local school agencies have been able to finance school construction at prevailing interest rates.

Indeed, it is apparent that with few exceptions school-district bonds are one of the best investments in the country and sell at very low interest rates.

Mr. Adams continues:

> In short, the school financing for the past 4 months (beginning with October 1, 1956) projected for a full year would mean an expenditure for school construction of approximately $2,900,000,000 to provide about 96,600 classrooms in addition to the 69,200 scheduled for completion—

As shown on Circular 490, hereto attached.

If you divide $2,900,000,000 bond sales mentioned by $30,000, the average schoolroom cost for the Nation, you come out with 96,600 classrooms mentioned by Mr. Adams above. Up-to-date figures show February 1957 is accelerating the rate of sales of bonds compared to previous months. Thus Mr. Folsom's estimates may be ready for another reduction of proposed Federal aid. But it is apparent from the testimony that in the South where practically all the classroom shortages are, the cost of constructing a classroom is less than $10,000 in many States. For example Georgia, in her statewide program of construction now going on, builds for considerably less than $10,000 per classroom. So that it is possible in the South, if let alone, they may double or even treble the classroom construction and thus make the total far above the 96,000 calculated on the basis of average cost for the Nation. If that is true, then the Folsom figures of estimates and guesses becomes the more ridiculous.

The records above referred to by Mr. Adams are confined in their accuracy and show the rate of construction in the States by another published figure for the Nation. That is to say, November 9, 1956, through January 31, 1957, school boards had authorized bond sales aggregating over $1,920,825,000. These are not actual sales, but they are authorizations recorded for the period. This means that the school boards have voted to recommend the issuance of school bonds for schoolroom construction and that the people in the school districts had voted to approve the proposition to that extent. This was done, remember, between November 9 and January 21 just passed.

We must add to this figure the construction funds generally available through regular current appropriations of the school districts out of current taxation, sinking fund provisions or other means of financing other than public sale of bonds. That amounts to about 30 percent of the total. And on that basis we have actual provision or authorization of over $2,743,000,000 already committed by vote of the people to schoolroom construction. That is over 91,400 new classrooms at $30,000 per classroom as figured in the first case. This is new financing in terms of authorization in addition to 69,200 classrooms already financed as of October 1, 1956. This approach projected for 12 months roughly confirms the first calculation measured by school bond sales.

Witnesses testified that additional bond approval elections are scheduled according to the public press for coming months at about the same rate that has been applicable for the past year or two. Large amounts of authorized school bonds are being offered and sold daily on the markets of the country. For example, continuing from Mr. Adams' testimony:

> The Bond Buyer contained invitations for bids on Friday, February 15, for $14,127,500 school bonds; on Monday, February 18, for $35,745,000 school bonds; on Tuesday, February 19, for $28,176,000 school bonds; and

on Wednesday, February 20, for $19,474,500 school bonds—a total of over $97,500,000 in the last 4 days.

If you project these figures for a year we come out again as illustrated above.

Mr. Adams then pointed out that:

Bond sales during the last 4 months should provide about 32,600 additional classrooms, and the rate of school bond sales during the last 4 months projected for the full year would provide construction of over 96,600 classrooms in addition to 69,200 classrooms scheduled as of October 1, 1956, for completion during the current school year. These figures show that there is no crisis in classroom construction and that State and local agencies are rapidly providing the needed classrooms.

We rejoice in the knowledge of this great progress made in the traditional American way.

If the States have done as good a job in education as the local educators have themselves boasted for years, down until the present-day madness for Federal interference took possession of its leadership, then what has happened to change the character of the American people so radically? What has made them suddenly quit doing in the last 25 years what they have always done before throughout the history of our country?

The answer is obvious. The bureaucratic personnel in great numbers in the United States Office of Education were lulled to sleep on their own assumptions that the States were so poor or negligent or willful or selfish that the Federal Government should have to come to their rescue; it must prod them or cajole or offer them costly bribes. Meantime the States were actually outdoing themselves building more school rooms than the said bureaucrats wanted to think possible.

A farmer representing the American Farm Federation, with 2,600 county farm bureaus out of the 3,000 counties, in commenting upon the alleged and "temporary" nature of the so-called education crisis, said that we are all beginning to learn that "there is nothing so permanent as a temporary Federal program—a Federal aid." The farmers don't want any Federal aid. The main purpose of his volunteering to come to Washington to express the opposition of the farmers of this country, represented by one of the largest farm organizations that we have, was to oppose vigorously Federal aid and control of education because of the experience of the farmers with Federal aid and control in the so-called subsidy food and farm programs. They have their stomachs full of that.

To vote for this legislation Congress must find: First, that there is a shortage of 159,000 classrooms on the basis of the testimony of a single witness, namely, the United States Office of Education, and, second, that the States or the people themselves are financially unable to build the necessary requisite number to meet their needs. It would have to believe the unsupported testimony of the United States Office of Education. It would have to overlook the unreliable guesswork of the United States Office of Education. On the record on the basis of experience Mr. Folsom must soon withdraw his present-day figure of 159,000 and reduce it as Mrs. Hobby did hers.

To illustrate the utter futility of the Federal Government attempting to inject itself into the business reserved to the States and the people especially in education, consider this fact: 41 of the legislatures of the States are meeting this very year, 1957; many of them will adjourn in a few weeks, all of them probably by June or July. Most of them will not meet again for 2 years. All the bills being considered by the Committee on Education and Labor provide that the State legislatures must set up a matching plan in order to qualify for Federal aid under Federal legislation. So that if the Congress should pass any one of these bills providing Federal aid, it would be in the year 1960 before anything could be done at all, that is for the States that qualify to receive Federal aid. Such a State would have to appropriate funds by act of the legislature in order to qualify for matching. Some of them would have to submit the proposition to a vote of the people before they could provide such funds. So that on the face of it, if we take the United States Office of Education figures—which is very hard to do for any purpose—all the States will have met their own needs by 1960—see the United States Office of Education Circular 490—except 10, and 5 of these will have provided for themselves by 1962–63.

Testimony in opposition to Federal aid to education from nearly all of the States, either by personal appearance of witnesses or by filed reports or by letter or telegram, will be reported by me in another speech on this subject in a day or two. Thus the Members may know what their own States have said on this subject.

FEBRUARY 13, 1957.

CIRCULAR 490, UNITED STATES OFFICE OF EDUCATION

This is the summary of information by the United States Office of Education of the Department of Health, Education, and Welfare from answers to a questionnaire, copy of which is attached, sent out by the United States Office of Education to the State departments of education of the 48 States and Territories. The number of needy districts does not appear. The information supplied to the United States Office of Education was in summary form, as called for in the questionnaire. The breakdown between the school districts able to build their own school rooms and those that it is claimed are financially unable to do so will have to be supplied by other testimony.

State, by region	Inventory of instruction rooms		Additional instruction rooms needed (as of fall, 1956)			
	Completed during 1955–56 school year	Available beginning 1956–57 school year	Total	To accommodate excess enrollment reported	To replace unsatisfactory facilities (exclusive of those in col. 21)	Instruction rooms scheduled for completion during 1956–57 school year

[1] Includes estimate for nonreporting States.
[2] Data not available.
[3] Represents ¼ of the remaining 414 classrooms to be constructed for the school years 1955–56 through 1958–59 under the 1955 School Building Act.
[4] Includes 123 new classrooms produced by remodeling other space and 353 abandoned classrooms reoccupied.

The number of needy districts out of a total of 80,000 estimated for all of the States (see col. 21) will obviously be much less than the 80,000 figure. The need for replacing so-called unsatisfactory facilities, that is, old buildings and rented buildings, is, of course, subject to wide differences of opinion as to what are obsolete facilities. The figure of 79,000 (see col. 22) should also be broken down to indicate the able and unable districts to provide for themselves. So that it is apparent that instead of having a shortage of classrooms last year of 370,000 it has been reduced as of October 1956 down to 159,000. We have a smaller figure even than 80,000 if we are to confine Federal aid to the needy school districts.

Life on $54.18 a Month

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, from Mrs. Myra Graham of Linden, Wis., I have received a letter that I hope will be read by every Member of this body. There are a handful of widows of Spanish War veterans who are trying to eke out existence on the pensions of $54.18 a month. That is their only income. In the 84th Congress, this body unanimously passed a bill increasing the pensions to $75 a month, but unfortunately the bill fell by the wayside in the other body. I have introduced the same bill in this Congress and I hope and pray that again this body will pass the meritorious measure and that this time the action in the other body will be favorable. Now, Mr. Speaker, I am letting Mrs. Myra Graham speak for herself and for all of these fine women, all deep in the evening of life, widows of men who fought for our country. These old women are trying to keep body and soul together in these times of inflation on the pittance of $54.18. The letter follows:

LINDEN, WIS., *February 14, 1957.*

DEAR CONGRESSMAN O'HARA: I am writing you at this time to thank you for your effort to support the widows' bill.

I am a Spanish-American War widow and am 86 years old and living all alone and owing to the high cost of living I find it very hard to buy fuel and pay running expenses.

I can't get into an old-peoples home under $20 a week and I find now I am not able to take proper care of myself and I can't get hired help under $1 per hour so my present pension of $54.18 just won't pay for common necessaries. Telling you my present circumstances is like the following. I had to get out and shovel snow from my doorway when it was 8° below zero, in order to get to fuel for my stove. How many Senators or even Congressmen would do this?

I am asking you to let the committee read this letter and perhaps they will realize what the old widows are enduring while they have plenty.

Please try to help us all you can.

I am,

Respectfully,

Mrs. MYRA GRAHAM.

Ike Promotes Kalijarvi

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial of March 1, 1957, from the Laconia Evening Citizen, Laconia, N. H., entitled "Ike Promotes Kalijarvi."

The editorial follows:

IKE PROMOTES KALIJARVI

We were delighted to read yesterday of the promotion given Dr. Thorsten V. Kalijarvi, former executive director of the New Hampshire Planning and Development Commission. President Eisenhower has nominated him to the post of Assistant Secretary of State for Economic Affairs.

Dr. Kalijarvi has been a Deputy Assistant Secretary of State in the same branch. The higher post has been vacant since August 1955, when Samuel C. Waugh, of Nebraska, became President of the Export-Import Bank.

When Dr. Kalijarvi resigned his position at Concord to go to Washington, we predicted great things for him at the National Capital, and his progress has been noteworthy.

He was a staff consultant of the Senate Foreign Relations Committee for 6 years. When the Eisenhower administration came into power in 1953, he joined the State Department.

In 1940, President Engelhardt, of the University of New Hampshire, became chairman of the State Planning and Development Commission by appointment of Gov. Francis P. Murphy. When Frederick Clark resigned 2 or 3 years later the opportunity to bring Dr. Kalijarvi into the State service came, and President Engelhardt was quick to act.

He said the University of New Hampshire would be sorry to lose Professor Kalijarvi but his talents should be made available to the State for the benefit of all the people. Dr. Engelhardt had notable plans in mind to improve the State's economy, especially the small towns, and it is regrettable he did not live to see them all fulfilled. Some of them he got under way and they worked well.

Dr. Kalijarvi taught political science at the State university, as he had done previously at the University of Michigan. He and Mrs. Kalijarvi were welcome guests for a number of years at the Evening Citizen Authors' tea. He has produced a number of books on international affairs, on which he is a recognized authority. Still greater responsibilities at the National Capital may be confidently expected for him. He is a man whose ascent of the ladder it is a pleasure to watch.

A Flag

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the New York Times of March 8, 1957, will be of interest to all of our colleagues:

A FLAG

The question has been raised in a recent news story in this paper as to how big is a flag. There is no standard-size American flag. The main criterion is that the flag's width be two-thirds of the length. We think that there are certain general dimensions, however, that should be observed.

A flag is a symbol, of course, and as such it should represent the qualities for which it stands. Consequently it can be large or small. It should be large enough to deserve respect and allegiance wherever it is flown. But it should not be so big that it can serve as a ready shield for scoundrels, the intemperate or the ignoble. It must not be so small that it is easily forgotten in the times or places where liberty is a dim and distant thing. It must be large enough to win a place dear to the hearts of its sons and daughters. But it should not be so big that its sight strikes terror and fear where it is shown.

It should be large enough to cover all its people, not just the few. It should not be so small that it is easily waved in moments of wild, careless enthusiasm for causes that in a more sober, reflective moment would be rejected as unworthy. It matters little if a flag's history is long or short, its colors bright or pale, its design simple or complex. What matters is that where the banner waves those who live under it dwell in peace, in liberty and in justice.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

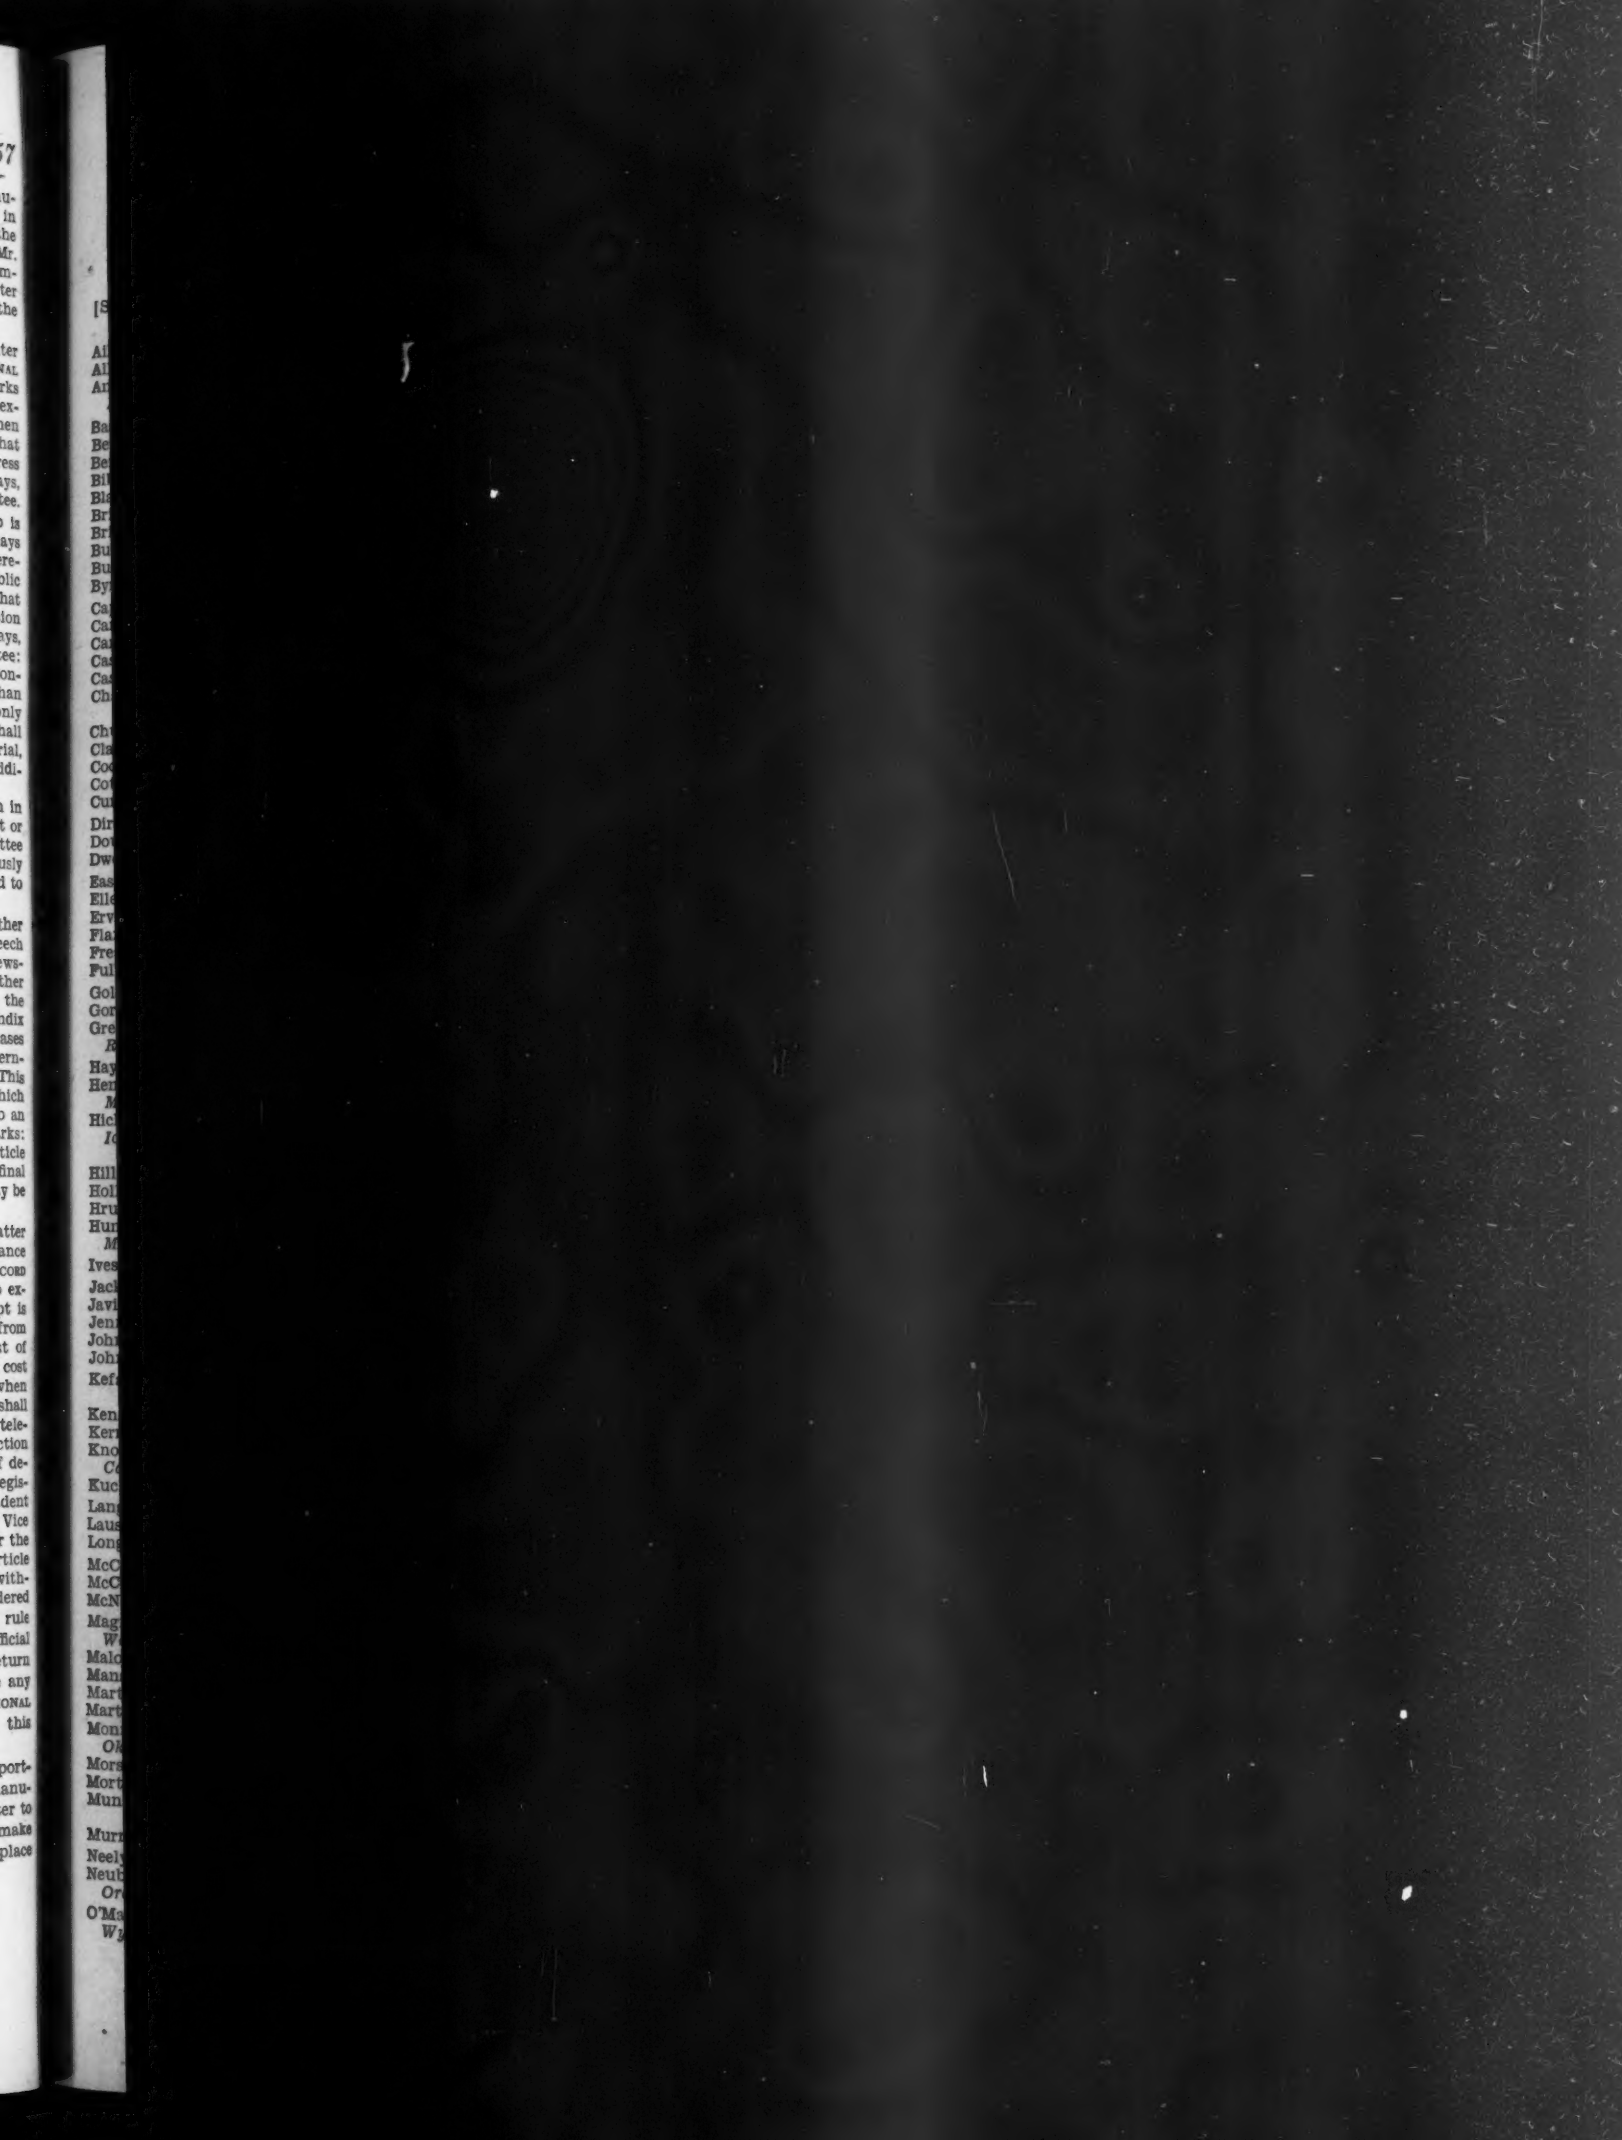
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

Where Do Old People Fit in Modern Society?

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. DOLLINGER. Mr. Speaker, on January 3, 1957, I reintroduced my resolution to establish a Commission on Utilization of Manpower in the United States—House Joint Resolution 30.

It provides that it shall be the duty of the Commission to conduct an investigation and study of all phases of employment of older workers in the United States for the purpose of determining what the basic problems are in the fields of employment, health, education, and community services in connection with the utilization of our older population group, what the Federal Government's responsibilities are or should be with respect to the solution of any of these problems, and what order of priority should be given these problems in planning methods for their solution, with emphasis on the status of the older age group within our population with respect to its manpower potential in the current situation, extent of the bias against hiring older workers and extent to which ceilings on hiring ages are applied by employers; extent to which opportunities for gainful activity of older persons have not kept pace with the rapid growth in our aged population.

Our ever-increasing older population presents many grave problems; employment, adequate housing, income, medical care, morale, to mention some of them. After serious study and much research, I have come to the conclusion that only the Federal Government can tackle the job of finding a solution and that the entire matter must be handled on a nationwide basis in order that practicable plans can be formulated. I hope to get congressional action on the resolution during this session of Congress.

Mr. Earl Ubell, science editor of the New York Herald Tribune, wrote a series of articles in which he discusses problems of the aging. I think he did a splendid job. The articles give us so much valuable information that I am including them in the CONGRESSIONAL RECORD so that all Members of Congress may have the opportunity to read them.

The articles follow:

[From the New York Herald Tribune of February 24, 1957]

A NEW OUTLOOK ON OLD AGE—SCIENCE OFFERS US 20 MORE YEARS OF LIFE; WHAT DOES IT MEAN: DAYS OF EASE OR HARDSHIP?

(This is the first of 12 articles on the problems of growing old.)

(By Earl Ubell)

Science has given most of us at least 20 more years of life than our grandparents could count on. What are we going to do with those added later years?

Are we going to shuffle down to the park every day and play checkers?

Will we keep on working earning our own way and living in our own homes?

Do we see ourselves as sick and aged, possibly bedridden; empty human shells in wheelchairs in a chronic disease hospital?

Or will we find repose in retirement * * * fishing, reading, puttering in the workshop, or garden as we dreamed we might?

Do we think our children will give us, if we needed them, bed and board? Will they respect us, give us the status we deserve?

Can we now think clearly of the years ahead when we won't be working, or when as a housewife, the houshold chores will dwindle away and when our income will be cut to one-tenth of what it is now?

Or do we push these thoughts out of our minds? What will we do?

At this moment, 14 million men and women in this country have the answers to those questions. They are the people over 65. They are finding out what it means to become old in an urban, industrialized and impersonal society. What is happening to them?

A 70-year-old widow lives with her daughter and son-in-law, as do 13 percent of her contemporaries. She chatters incessantly, has no other function but to criticize the young parents for their ways of drinking, smoking, and child rearing. Where will it end?

A couple—he is 83 with a spine infection, she is 68 with hardening of her brain arteries—live (as do 3 out of 4 in that group) in their own household. But they have an income under $2,000 a year. What happens when the old man goes to the hospital as he must? Who pays?

ACCIDENT-PRONE OR SELF-SUFFICIENT

A vigorous man of 64 who has worked as a machinist for the same company all his life must retire next year under his firm's rules. His pension is adequate, but far less than he is earning. He has never done anything but work. What will he do in retirement? Even now he is terribly depressed at the thought and has had two accidents in the shop in the last month. His foreman eyes him suspiciously.

But there are other old people. A 75-year-old chief of a suburban library is healthy and active. She runs the place with the verve of a woman 20 years younger. She lives alone and likes it. She never interferes with her children, but visits them often and they like to have her. She has friends and even a few enemies—acquaintances she doesn't get along with but that doesn't bother her.

Is this woman in the majority or minority of old people? The experts don't know. By their own admission, scientists and social workers have paid most attention to the infirm, the indigent and the mentally ill. The plight of these people screamed for action. As a result, official thought has turned again and again to homes for the aged, to hospitals, and other institutions.

Miss Ollie Randall, consultant to the National Committee on the Aging and a pioneer in the search for answers for the aging, simply says, "It's the squeaking wheel that gets the grease."

Yet, at this moment only 1 out of 20 old people are in institutions. To be sure, there are at least half a million persons in such places, many of them barely existing under substandard, and even subhuman, conditions.

Even what is known about the medical, mental, and biological processes of aging has been warped by the scientists' admitted focus on this single institutional class. The leaders in the field of gerontology—the study of the aging—are beginning to admit that the impact of the aged is broader and far more subtle.

There is the whole question of income maintenance. How can housing, health, and nutrition be kept optimum when earnings have, as in the cases of 2 out of 3 aged, dropped to less than $1,000 a person?

And at a time when money comes in at a bare existence level, the old person has the real fear that a long-term illness may strike at any moment, wiping out his savings, using up his pension and social security income. At this time 1 out of 7 have during the year an illness lasting 3 months or more.

PROBLEM TO BE FACED: WHERE DO THEY FIT?

But the most profound of all questions, the one we will have to answer one day, and the single underlying theme of aging: where do old people fit in modern society? At the turn of this century 1 person in 25 was over 65, two-thirds of them living in rural communities. Now 1 in 12 is over 65, and two-thirds are in cities where family dwelling places are small.

How can an old person, whose chances of finding work may be only 1 in 3, make himself part of a stream of life in a work economy? Isn't there a time to stop working? To retire? How can a retired person function in society? What is the grand involvement of their last years? What should it be? The experts don't know.

How the aging find their way in society will affect everyone, for in 15 years, thanks to medical advances, 1 in every 10 persons will be over 65. This single group will cast up to one-fourth of votes in elections. They will be the heaviest concentration of old people ever experienced by mankind.

Unless adequate housing, income, medical care are provided for the aging; unless a way is found to involve them in American life once more; unless years of neglect are overcome, the aged—and this is the view of au-

thorities—will stop waiting and start grabbing.

[From the New York Herald Tribune of February 25, 1957]

A NEW OUTLOOK ON OLD AGE—MORALE IS FOUND HIGHEST AMONG THOSE WHO WORK; TIME FOR CREATIVE SELF-REALIZATION IS ALSO URGED

(This is the second of 12 articles on the problems of growing old.)

(By Earl Ubell)

No single ideal of successful old age has captured the energies and imaginations of old people in America today. That fact stands out from the few scientific studies that have been made. We know what to do with youth and middle age but no one seems to know what old age is for.

Thousands have succumbed to the lures of Florida to pass the rest of their days in the sunshine. Many have found quiet happiness there.

A handful—the Baruchs, the Hoovers, and even many lesser known—have achieved classic old age: patriarchs who, with repose and equanimity, continue to portion out wisdom and to influence their families and communities.

But most others remain in their own homes, in most cases hemmed in by low income and fearing the momentary visitation of illness. They try to do what they have always done, always found satisfaction doing: work.

The desire to work dominates the 14 million over 65 in this work-centered society of ours, if the evidence is to be believed. Two out of five of these older men and 1 out of 10 women are still working. Retirement is being resisted.

Dr. Lillien J. Martin, the grand pioneer in helping old people and who died in 1943 at the age of 92 after a lifetime in gerontology, reported that the most bitter complaint of old people was: "I'm no use to anyone, not even myself."

GLOOM FOR THE INACTIVE

One old woman, who had received a beautiful chair as a gift, told Dr. Martin's aid: "Yes, I'm rocking myself to death in it."

Dr. Bernard Kutner, in a study of 500 old people for the Russell Sage Foundation, found the highest morale among those still gainfully employed. Those active in clubs, hobbies, and other interests had somewhat lower morale and gloom swept over the inactive. Married housewives and employed widows were far better off emotionally than the inactive widow.

But Dr. Harry Levine, who as director for old-age centers for the New York City Department of Welfare founded the idea of day centers for disemployed old people, asserts as strongly as he can: "There is a time to stop working for money."

Old age to Dr. Levine is a time for maturity; a time for creative self-realization in art, reading, and craft; a time for voluntary work in society; for contributing social know-how to the family and a time of preparation for the acceptance of death.

Beween these two poles—work versus free time—the country's old people make their compromises. They work where and when they can. A comparative few have hobbies and other interests. They visit their children. They watch television.

In general, as they live apart from their relatives other than their wives, time stretches out in front of them like a railroad track across the desert.

Dr. Leo W. Simmons, a professor of sociology at Yale University, concluded after a study of many primitive societies that successful aging ties closely to property rights and to social usefulness.

"People have aged most successfully," he said, "when they have discovered or created for themselves effective positions and roles in the very societies of which they are a part."

But in this country, another study shows, the status of aged groups—with the exception of propertied upper-class widows and retired farm owners—has declined steadily in the eyes of the public. The old in this country are not creating effective positions for themselves.

TWO INGREDIENTS FOR SUCCESSFUL OLD AGE

Mrs. Geneva Mathiasen, director of the National Committee on the Aging, points out that there is still time for the old to find their way. "After all," she said, "nobody knows what a natural, healthy, economically secure old age is like. It's never existed for large portions of the population."

Whatever the old find as their grand involvement in life, two ingredients must be present in any recipe for successful old age—health and economic security. The two are intertwined.

Dr. Kutner, in his study, found good health among 80 percent of the high-income high-social group compared to only 50 percent among the poor old people.

However, the well-to-do people in Dr. Kutner's survey seemed little affected in their morale by poor health, while the poor in ill health felt dismal. Morale was higher generally among the economically secure than among the poor.

WHEELCHAIR DOESN'T DAMPEN HER SPIRIT

What actually happens to people? Here is a case that departs from statistics. A broken hip did not lower the spirits of a 72-year-old woman in a chronic disease hospital. She had a small income from subletting rooms in her apartment, and she was eager to get out of the wheelchair to get back to work.

"I remember my father always taught us to observe things," she said. "He took us out to the woods and gave us prizes for spotting unusual birds or plants. I have always liked observing things.

"We were always taught to bear no bitterness either. If we fought during the day—my brothers and sisters—we had to make up before dinner time. It was over. These are the things I remember."

So here is a woman who never married, rarely goes to church, does newspaper puzzle contests, has no economic resources. Yet she appears not the least bit mindful of her ill health or the thought of being old.

Is she a successful oldster? By some standards, no. By her own, yes. She seems to have inner resources acquired in her youth, and in spite of what some would call a narrow life she has a good time in her old age.

The lesson from all this for the young and middle aged is a simple one: take care of your health as best you can, develop as many resources for economic security as you can, work if it is possible, or, in its absence start looking for ways to involve yourself in the community as a useful citizen.

And failing all this, look within yourself for hidden emotional resources: a bird your father showed you, the love of a laughing grandchild, or the strength from your religious faith. It's as simple as that.

A NEW OUTLOOK ON OLD AGE—HOW THE BODY DECLINES: SCIENTISTS SEEKING A WAY TO RELIEVE THE INEXORABLE DETERIORATION OF OLD AGE

(This is the 3d of 12 articles on the problems of growing old.)

(By Earl Ubell)

The old man—he was 89—trudged on a treadmill. Lest he fall, a parachute harness hung from the ceiling gripped him about the waist. Wires spun from his arms and legs carrying electrical impulses to meters and dials. The man's face paled slightly as the moving walk accelerated.

How was the old man's heart reacting to the walk? Had his breathing rate changed? How much energy did he use in walking? How did his muscular efficiency differ from that of a young man? The instruments had the answers.

Experiments such as these, conducted in only a handful of laboratories, are telling scientists what it means—biologically and psychologically—to grow old.

It means, for example, that if the old person's tiny blood vessels in his arms and feet do not constrict when chilled, the blood wastefully pumps heat out of the body. Result: Arguments between an old mother and her daughter over the setting of the thermostat.

It means that the oldster's vision becomes reduced, the higher pitches of sound are not heard and the ability to act quickly declines. This results in an apparent loss of intelligence, but when the old person is allowed to set his own pace he can learn new things.

How many intelligent, capable old people have lost their jobs because they were expected to learn something at high speed under poor visual conditions?

Over all, growing old means a reduction in the use of energy. This may be attributed to weakened muscle strength and reduced activity. The slow degeneration of the thyroid gland may be responsible.

To the brain, age brings hardening of the arteries that feed the nerves. Then arteriosclerosis can dim memory and start the aged to babbling. That is why some old people forget their addresses, their grandchilden's names and often even don't remember to eat.

NEW HOPE GROWS FOR BRINGING RELIEF

The decline in facility is real. The susceptibility to numerous new diseases actually increases. The rate of body growth slows and stops. Sexual activity—as Dr. Alfred C. Kinsey found—drops to a minimum. Each change brings with it another mark adding to the total picture known as old age.

Scientists have new hope that they will discover ways of helping physicians relieve the inexorable deterioration of old age. By understanding the mental and physical apparatus of the old, they will help the aging carve a useful place for themselves in society.

And, they have reason to believe they may succeed in accomplishing what the medieval sorcerer failed to do by magic: increase man's allotted span of life. There are but a few clues here.

Dr. Louis I. Dublin, consultant to the Institute of Life Insurance, reports that every available bit of information sets man's biological age limit near 100 years. Every report of men living longer than that—for example the Indian from Colombia reputed to be at least 150—brings with it suspicious proof of age.

Although science and public health have increased the expected length of life at birth by more than 20 years since the turn of the century by knocking out infectious diseases, little progress has been made in expanding the later years.

CANCER, HEART ILLS STRONG FACTORS

In 1900 your 60-year-old grandfather could expect to live about 14 more years. Today if you are 60 and a man you may expect to live about 15 years longer. This is because cancer and heart disease still take their greatest toll in old age and science has found little control of these afflictions.

Still there is hope. One scientist starves a colony of mice and retards their physical development. Another does the same to fruitflies. The average life spans of both are increased. Can it be that a longer period of growth influences longevity?

One scientist raises waterbugs and a second grows mice. Both raise two lines of beings: one selected as the offspring of young moth-

ers; the other line as the progeny of old mothers.

The young-mother lines increase in vigor and live longer than the old-mother groups, which grow feeble and die out. Insurance statistics suggest, too, that offspring of young mothers live longer than those of older ones. Can there be a chemical—a factor for long life—present in the young animal and handed down to its children?

And finally a Dutch experimenter grows male mice isolated from females. The males become shaggy and lice-ridden, finally dying of what appears to be old age.

But by placing a young female mouse in the cage with the old rodent, the male animal is kept clean, well fed, and healthy, his life span increases considerably. Is there some unknown potent social psychological force that increases life span?

(Dr. Bernard Kutner, in his study of 500 old people, found the poorest morale among the widowed and unmarried who lived apart, socially and residentially.)

In spite of these and other experiments, there is no accepted theory of aging. Some scientists believe that old age is the pitiable result of a series of biological insults—disease, injuries, privations—throughout life.

Others assert that imposed upon the insults is a slow process of aging itself brought about by the accumulation of toxins—particularly calcium—in the body's cells where all the chemical reactions take place. That is why, they say, the speed of electrical impulses through nerves slows down in old age.

And some say that aging is part of the program of human life. The complex processes of life that mesh so neatly to produce infancy, puberty, and virility slowly get out of tempo with each other to produce a discordant chemistry and old age.

But the fact of aging is clear and measurements demonstrate that many biological and psychological powers actually decline with age, while others remain steady throughout life. Even so, individuals age differently.

Dr. Nathan Shock, of the United States Public Health Service and a leader in the research into aging, says it is possible to fix a calendar age and mental age but it appears impossible at this time to give a man a physical age.

By this he means that if you have a heart that is as vigorous as the average 30-year-old, you may have kidneys as feeble as those of a man of 80. But there is no way to determine an average physical age for the young in heart and old in kidneys.

If a physical age could be set in such cases, questions of retirement and employment would be more easily answered. The young man at 80 could be easily separated from the old at 55.

But there is much more to learn. Information on the biology of old people has come largely from those in institutions who are not representative of the whole age range. More work has to be done with normal old people.

[From the New York Herald Tribune of February 27, 1957]

A NEW OUTLOOK ON OLD AGE—JOB BARS START RISING AT 40, BUT REAL BARRIER IS 65; $4 BILLION YEARLY INCOME LOSS LAID TO FIXED LIMIT

(This is the 4th of 12 articles on the problems of old age.)

(By Earl Ubell)

There is no more pathetic story than that of the man capable and willing to work but who is unable to find a job. He is considered too old. He scans the want ads every morning, skipping those that set age limits, marking down those that do not. But he knows from experience what is likely to happen.

"Of course," the personnel director will say, "we do not have an age limitation in our company. But our pension and insurance system would be prohibitively expensive if we hired too many men of your age. Sorry."

Sometimes they lie and say the job is filled. They give other excuses but no job. To the old man this forced unemployment is a spotlight of his uselessness. Socially dead, and often with no other interests, he waits for biological death.

FOUR BILLION-DOLLAR INCOME LOSS

Yet if this man and about a million more like him were back in the labor force, they could add, according to Dr. Sumner Slichter, of Harvard University, about $4 billion a year to national income. At this moment only 2 out of 5 men older than 65—about 2,500,000—are employed.

The further irony is that we now have the greatest number of working people in this country's history and the greatest proportion of old people. They are in the best of health, but we have the lowest participation of the old in the labor force since 1900, when 7 out of 10 worked.

Although those over 65 are hardest hit by age discrimination, the practice reaches into the younger groups, as Secretary of Labor James P. Mitchell pointed out recently. Industry considers salesmen "old" at 40, telephone linemen at 45, bookkeepers at 55.

A 56-year-old machine-tool operator in Detroit wrote Secretary Mitchell:

"I had 30 years' seniority in my former job, but now the company has merged with another and moved away. I have been trying for 2½ years to find a job in the automobile industry, but nobody wants a man over 40."

Women drop out of the labor force even more rapidly, from 40 percent employed in young adulthood to 10 percent in the 65-and-over group. The social pressure on them to be employed, however, is not as great as on men.

A much more subtle problem confronts the aging woman, whose principal occupation in 3 out of 4 cases is keeping house. Her children grow up, her household chores contract, and she becomes, in the absence of outside interests, as functionless as her disemployed husband.

In the old-age group, half of the women are widowed, compared with only 1 in 4 men. The engagement of this large group of women in some useful occupation is recognized by the experts as one of the greatest challenges in the old-age problem.

PRESSURE OF YOUNG MEN BELOW FELT

The men who are employed feel the pressure of the young men below them. "Make room for the young," constantly echoes through the old man's mind. One of the reasons originally given for the Federal old-age insurance program was to get older workers out of the labor force.

Is retirement good for those over 65? Some studies show that retired workers are healthier and live longer than those who stay on the job. One study shows that morale drops soon after retirement, then climbs slowly.

But the workers themselves seem less inclined to retire. A study made by the Consolidated Edison Co. showed that 65 percent of retired workers did not want to retire: One-third because of financial pressures, the others because they wanted to work.

In a national study, made by the Bureau of the Census, more than half of the people over 65 who stopped working did so for health reasons. Only 6 percent retired voluntarily because of age, 10 percent having been retired under compulsory regulations.

At present, the merits of flexible or mandatory retirement are under vigorous debate. Under the plan of flexibility a worker may retire at the specified age, usually 65, or continue working with the assent of his employer. Under the mandatory retirement plan he must stop working at 65.

The forced retirement is easiest for the company to apply. No exceptions. No headaches. No cries of favoritism. No union complaints. But the company, it has been shown, can lose valuable workers, sometimes to competing firms. This is especially irritating when many studies show that older workers are almost as efficient as younger employees in many areas of work.

The plan of flexibility requires delicacy. But the rewards are great. Consolidated Edison found that it saved $111,000 out of its pension funds by not retiring 82 workers who wanted to continue. The decision to retire, however, may be difficult to make, especially since there are no clear-cut ways of determining the physical age of a worker. Some may be older physically than their years; others much younger.

Those who do retire sometimes meet with economic disaster as they attempt to use their savings to enter small business. Mrs. Geneva Mathiasen, director of the National Committee on the Aging, guesses that the bankruptcy rate for new businesses started by people over 65 must be inordinately high.

"The chicken farmer who has been working hard all his life to make a go of it finally retires to a small apartment in the city where he can be near his children," she said, "but the city man, without any experience, thinks he's going to buy that farm and make a great success out of it."

To forestall such failures, many companies are instituting preretirement counseling. Such counseling includes advice on how to get medical help, how to involve oneself in the community, how to do a hundred and one things with the copious free time that retirement brings.

Labor unions have become interested in the retired worker, too. The United Automobile Workers have 50,000 retired, voting members who wield great power in certain locals. Unions are beginning to include anti-age discrimination clauses in their contracts too.

State Senator Thomas C. Desmond, of Newburgh, chairman of New York's legislative committee on aging, recently suggested a legal bar to age discrimination in the State. Massachusetts already has such a law. Before long, the old people may have enough votes to get such legislation in many States.

A NEW OUTLOOK ON OLD AGE—THE ECONOMIC PROSPECT: 2 OUT OF 5 MEN OVER 65 AND 4 OUT OF 5 WOMEN GET LESS THAN $1,000 A YEAR

(This is the 5th of 12 articles on the problems of old age.)

(By Earl Ubell)

"How is it," the old woman asked, "that I took care of 10 children and now 10 children cannot take care of one mother?" This widow, who at 68 lives alone in a cold-water flat, gave a human twist to the statistic that in American life today old people have little income. The figures for 14 million persons over 65? Two out of 5 men and 4 out of 5 women receive less than $1,000 a year. Only 1 in 12 has an income above $60 a week. One out of 10 has no income at all.

OLD-AGE BENEFITS BRIGHTEN OUTLOOK

And were it not for the spectacular rise of Federal old-age insurance in the last 2 decades, the outlook for old people would be much darker. At present, half of the men in that age group and 40 percent of the women get old-age benefits.

In the future things may improve, particularly for those workers in industries with pension plans. They will receive incomes from social security and their pensions which in some cases will go as high as $260 a month.

Generally, however, income from all sources for the aged group now is on the

average one-third of that of those who are but 10 years younger. The big drop in income comes from disemployment.

Such a contraction in funds has it effects not only on morale, as Dr. Bernard Kutner found in his study of 500 old people, but also on housing and health. Even though two-thirds own their own homes, lack of funds tends to make them rundown.

ELDERLY NEED LESS TO SURVIVE

On the whole, old people need less with which to survive because they do not have the expense of going to work. But their standard of living drops * * * fewer new clothes, a lowering of the quality of food, and, at a time when they are needed most, outside interests and church attendance may decline.

With 1 in 7 oldsters suffering from an illness of 3 months or more in any 1 year, low income makes them medically indigent. Any sort of illness throws the low-income person on the public assistance rolls. In recent years, however, the proportion getting Federal public assistance has declined slightly thanks to the increase of old-age insurance benefits.

The problem of meeting medical bills may be acute for the old-age group, particularly when many private insurance companies cancel, or do not issue, health insurance policies to those over 65. Some will pay a single claim on an old man's first illness and then cancel the policy. These practices keep premium rates low but do not provide adequate protection.

There has been increasing pressure to bar by legislative action this insurance discrimination against old people. Such a law would help the aged get insurance at a time when they need it most.

One thing is clear, support of the aged by children is not the rule. The Bureau of the Census found that regular contributions in cash to the aged from relatives and friends not living with them appear to be a negligible source of income.

OCCASIONAL GIFTS ONLY MINOR HELP

However, occasional gifts are being made by relatives to old people and may average about $20 a year for 20 percent of the aged couples and 30 percent of the widows and widowers living alone.

The Federal-insurance program covers the biggest proportion. Between 1948 and 1956 the fraction receiving these benefits jumped from 1 in 8 to every other person over 65. The total now stands at about 6,500,000 according to the latest estimates.

Under the new schedules of payment, the 65-year-old worker can get family benefits up to $200 a month and he can earn up to $1,200 more a year without losing this income. This depends on his having earned at least $350 a month before retiring.

In addition, under the new law workers who become disabled are eligible for the same benefits as the retired worker.

The impact of social-security programs has been felt particularly in housing, where as a result of the fixed monthly income more than 80 percent of the aged now live in their own households. How the new law and benefits will affect the future social development of the aged is unknown at this moment.

MANY POSSESS NO MONEY AT ALL

There are, of course, many old people who have no money income at all. These are a large proportion of the 500,000 in institutions. However, the chronically indigent population among the aged may be as high as 1 in 10: 1,400,000 persons.

Those who work are in the best position of all since they continue to make money at about the rate of the rest of the population. However, only 2 out of 5 men have gainful employment when they reach 65 and over. Only 1 in 10 may be working past the age of 75.

Taking the financial picture as a whole, the future looks much better for the old person than at any time in the past. Social security accounts for most of the improvement, while industrial pension plans also make for optimism.

However, if the trend toward disemployment continues, the aged worker will get into more financial difficulty in the future and in 15 or 20 years, when he has one-fourth of the votes in a national election, he may do something about it.

In California a few years ago, the aged caused to be adopted a public welfare plan that would have bankrupted the State and had to be repealed in a year. The next time there may be no repeal.

NEW OUTLOOK ON OLD AGE—GERIATRIC CLINIC AIDS IN MEDICAL, PERSONAL PROBLEMS; HELPS AGED COUPLES FIND A MORE SATISFYING LIFE

(This is the 6th of 12 articles on the problems of old age.)

(By Earl Ubell)

Under no circumstances would his wife let him work. She would not consent to his visiting the grandchildren because that meant he would have to climb a flight of steps. After all, she would admonish him like a solicitous mother, he had a heart attack 6 years ago and now he was 72—an old man. She was 58.

For this man—a skilled cabinetmaker—life had become a painful biological prison. More than a few times he thought of escaping. His patience was rewarded after a friend suggested he visit Beth Israel Hospital's geriatrics clinic.

Like half of the 14 million persons in this country who are over 65, this man had a serious medical problem. It cut across the whole of his life. And but for his illness and overprotective wife, he might still be a useful man.

SOMETIMES THE CLINIC FINDS THEM JOBS

Beth Israel's geriatrics clinic is one of only a few in the country; Boston had the first.

"The doctors there are giving medical checkups," a friend of the cabinetmaker told him. "They tell you what to eat, how to take care of yourself. They even find you a job."

A job? It didn't seem possible but then he went to Stuyvesant Square and 12th Street to Beth Israel Hospital.

Haltingly, he asked the receptionist where the special clinic for old people was. He was directed to the geriatrics nurse to arrange an appointment.

Perhaps it was his reaction to that first visit—respect and consideration for one needing help—that encouraged the man to return for his appointment even though his worrisome wife tried to discourage him. "It might affect your heart," she said.

In the waiting room, on his second visit, the man was in the company of other old people. Their ills were among those that afflict many over 45: diabetes, heart disease, arthritis, kidney ailments, high blood pressure, and tuberculosis. The cabinetmaker wanted to talk to them, but his impaired hearing shut him off.

SOCIAL HISTORY OF PATIENT HELPS

When his turn came, he was taken first to the chief social worker to answer many questions about his social history. Knowing of the patient's poor hearing, the social worker asked the questions in a loud voice.

Patiently, she drew out details of his life. The heart attack, he lamented, had made him useless. The life of a son, who lived at home, was being ruined. The son wanted to get married, but was supporting his parents and feared to leave lest something happen to them.

Next step at the clinic: One of five physicians who serve the clinic without pay traced the patient's health record as far back as the old man's memory would go. About the heart attack? No, it hadn't been too bad, he recalled, but his wife was in terror that he would die. Any pain? Yes, in his back. Probably from his heart, he said.

The doctor thumped the old man's chest, listened to the heart beat, checked for cancer, treated nerve reflexes, searched for those silent infections so common among the old.

Then the electrocardiogram, to measure the extent of that old heart damage. A nurse took blood for anemia and syphilis tests, urine to check for diabetes. Another doctor administered a brain wave test in search of the first sign of paralysis fairly common in men of his age.

PSYCHIATRIC TEST FOLLOWS PHYSICAL

Later: Another physician talked to him gently. It was the psychiatrist. This consultation is part of the program because almost one-third of first admissions to State hospitals are persons over 65. More important, old people are often lonely, with feelings of futility and fear.

The psychiatrist probed. The old man wanted to work, but, of course, his heart * * *. (The psychiatrist already knew that the old heart attack hadn't been as bad as the man presumed.) About his wife: he couldn't seem to do anything without her.

Through it all * * * the nurses, the physicians, the psychiatrists, the tests, the social workers * * *, the old man began to take interest because people were showing an interest in him. He looked toward the day of the big conference on his case.

The clinic, assigned him a physician, a man to whom the cabinetmaker could take his troubles, both medical and mental. It was this doctor who told him:

WITH THE FACTS IN, HELP FOLLOWS

"Your heart is not bad at all," he said, "that old scar on your heart is quite healed. The pain you feel is arthritis in your spine. We can do something about that. We also think you're not eating properly. And, oh yes, we're giving you a hearing aid."

A dietitian called a conference for the old man and his wife (she had been to the psychiatrist, too). They needed to eat less since their bodily demands for energy were less as they grew older. Any excess calories were turned to fat. They must limit their starch and sugar intake or digestive disturbances might result. No cooking in fats, either

The dietitian emphasized the value of meat and fish for protein content and lots of green, leafy vegetables to overcome constipation. Perhaps it would be a good idea to take occasional vitamin pills, since oldsters seem to need more of them.

Another talk with the social worker. The doctors had said he could work—not too much, to be sure—so the social worker found a job for him as a cabinetmaker in a factory for the handicapped, a sheltered workshop.

Things are better at home now, in spite of the fact the old man was injured recently in an auto accident. Now he looks forward to getting well. His wife understands that for him to live is to work and she interferes as little as possible. The son looks toward a life of his own.

Actually the cabinetmaker was lucky. The clinic now has its maximum of 100 patients and cannot take any more. But this same program can be done through other clinics in general hospitals if they focused on the problem.

Dr. Lee Burney, United States Surgeon General, proposes demonstration programs by the Public Health Service of "well oldster" clinics to help older persons stay well, because health is one of the basic problems in the overall pattern of aiding the aging.

Official medical circles also recognize that the care of the aged will fall largely on the family doctors. Not every city can have a geriatrics clinic.

But physicians have yet to learn how to use the services of social workers, dietitians, and other social personnel. They also have to learn to focus on the old man or woman as having not only a physical ailment but perhaps a debilitating mental and social condition which often can be improved.

[From the New York Herald Tribune of March 3, 1957]

NEW OUTLOOK ON OLD AGE—1 OUT OF 7 BECOMES CHRONICALLY ILL EACH YEAR; TECHNIQUES BEING DEVELOPED TO REHABILITATE THEM

(This is the seventh of 12 articles on the problems of old age.)

(By Earl Ubell)

Chronic disease, more than anything else, can be the heaviest blow to the average older person's chance of a comparatively secure life in his later years.

If he recovers, the ailment—defined as chronic if it last 3 months or longer—is likely to leave his health shaken, sap his finances, and set off a chain of circumstances leading to a dangerously low standard of living. With his savings drained, he usually moves to a poorer dwelling, not infrequently to a slum. His eating habits become irregular. Thriftily he cuts recreation and buys little, if any, new clothes. Result: his morale and general health slowly decline.

Until recently, physicians in general were less interested in chronic ailments of the aged than in trying to keep the young healthy. The philosophy of "why spend so much time on an incurable" dominated. That attitude is changing. More and more, physicians are turning to the chronically ill older patients and getting increasing numbers back on their feet.

1 OUT OF 7 CHRONICALLY ILL EACH YEAR

These old people may not be cured but the difference is between a miserable, bedfast existence or a bright, happier outlook with a measure of physical independence. The cold fact, in this respect, is that 1 out of 7 older persons will be chronically ill each year.

Twenty years ago a hip injury or a stroke to an older person would have ended fatally within a few months in 8 cases out of 10. Bedridden, the victim soon would be covered with bed sores, kidneys would stop working, and finally pneumonia would step in.

The case of a 75-year-old woman now at Goldwater Memorial Hospital in New York with a broken hip illustrates the change that has taken place. Unfortunately, the new techniques for the aged and chronic sickness have not spread far enough nor fast enough.

The old widow at Goldwater, a former seamstress, fell on the steps of her house. Her fragile hip bone snapped. Within a few days surgeons had inserted a metal pin to clamp the sheared edges of the bone together. The next day she was in a wheel chair in the sunroom of the hospital's rehabilitation service.

There she saw a cross section of what can be seen in hospitals for chronic diseases of the aged. It was only a small fraction of the chronically ill aged. Eighty-five percent are found outside institutions: a total of more than 1,700,000 in their homes, in the homes of relatives or with friends.

NEW HOPE FOR VICTIMS OF PARKINSON'S DISEASE

Several women in that sunroom had suffered strokes. A brain artery had clogged or burst, shutting off blood to the nerve cells and damaging them beyond repair. Half, sometimes all, of the body is paralyzed. Frequently speech is lost.

She also saw severe cases of diabetes, patients who had lost a limb because of gangrene. Others were crippled by arthritis which froze arm and leg joints. Others had fractured hips, too.

These were the "fortunate" ones. The old men and women with shaking palsy may never get out of the hospital. However, a new operation in which a deep brain center is destroyed with alcohol injections gives new hope for these victims of Parkinson's disease.

The old with chronic heart pains may now be relieved with new drugs, but their chances of getting out of bed or out of the wheel chair are slim. There are also new drugs for high blood pressure than can enable an old person to leave the hospital.

Those with the least chance of recovery are the mentally ill among the aged, of whom there are 150,000 in institutions. Unfortunately, medical science has little to offer these patients whose brain arteries are hardening and producing mental confusion.

In also any mental hospital there are old men and women unable to care even for their smallest personal needs even to the extent of having to be fed like babies. Many have been that way 5 years or longer.

Medical authorities like Dr. Lawrence Kolb, former assistant United States Surgeon General, have asserted that many old people do not belong in mental hospitals but they are sent there because they have no place else to go. But a survey made by Connecticut State Mental Hospital physicians demonstrated that almost all aged patients had mental changes requiring hospitalization.

The recent increase of old persons in mental hospitals can be attributed to the large increase in oldsters in the population and to the benefits of penicillin and other compounds which are keeping them alive longer in the institutions.

So the old woman with the hip fracture can consider herself lucky. Even the amputees and the paralyzed may look forward to the possibility of caring for themselves again. Some stroke victims might even regain partial or total speech.

At Goldwater, only an occasional patient is kept in bed in the geriatrics rehabilitation section. This is because the hospital endeavors to restore the physical abilities of patients after surgery and medicine have done their work. That is rehabilitation.

POTENTIALITIES ARE EVALUATED

Dr. Michael Dasco, who directs the service, first evaluated the old woman's potentialities. How bad was the break? How strong was she? Did she have any other medical difficulties? How soon could she walk again? Did she have mental problems?

Then the slow, upward climb for the patient toward self-reliance began. Although the woman was 75, lifting weights (small ones) was prescribed to strengthen her arm muscles for the eventual use of crutches. The tempo of her calisthenics increased to improve her breathing ability, revive her flaccid muscles, limber stiffened joints, and increase her body tone.

Finally she was put on her feet, even before the hip bone had completely healed. But she was supported to keep her full weight off the slowly mending break. It has been found that bones that do not bear weight get even more brittle.

She learned to get in and out of bed by herself again, to climb into a wheel chair and to navigate it. After 8 months she was walking unaided. The bones were set.

Not every case is a success. The stroke victims often don't fare as well. But they can learn to do many things with 1 hand and 1 leg paralyzed: getting dressed, shaving, getting in and out of bed * * * among the hundred and one activities the unimpaired do instinctively every day.

FOUR OUT OF FIVE REHABILITATED IN ONE COUNTY HOME

A study of patients in the county home for aged in Allegheny (Pittsburgh) County, Pa., showed that of 308 bedfast patients, 4 out of 5 had been rehabilitated sufficiently to walk in a program for which less than $200 was spent on equipment. Two-thirds of the patients were older than 50; all had been in the home many years.

But many of the disabled aged in this country do not get the chance to learn to walk again or even to get out of their beds. Almost 200,000 in homes for the aged and nursing homes do not even hear the word rehabilitation.

A few, including the Mary Manning Walsh Home and the Home for the Aged and Infirm Hebrews, both in New York, have full-scale medical, social, and rehabilitation programs. Others are beginning to catch on to the possibilities.

But the nursing homes, again with exceptions, give minimal care for an average charge per patient of $200 a month. One United States Public Health Service study of homes in 13 States showed that in some places as many as a quarter of the patients had not seen a doctor in 6 months.

In New York special homesteads are being planned for those chronic patients who no longer need hospital care but who cannot get adequate care anywhere else. Some charge that this is an attempt to reestablish the poorhouse of former times.

Welfare Commissioner Henry McCarthy declares that New York will never see the dilapidated city home again. The homestead will compare favorably, he says, with the best of private homes for the aged. If so, a new era in the care of the poor, infirm, aged has begun.

NEW OUTLOOK ON OLD AGE—MANY OF THE LONELY AGED IN SLUMS; "WHERE CAN I GO?" EXPERIMENTS IN HOUSING OFFER HOPE FOR THE FUTURE

(This is the 8th of 12 articles on the problems of old age.)

(By Earl Ubell)

At some crucial point in his later years, and old person finds himself emotionally or economically tied to the place in which he lives. That happens long after his home has become a machine too dangerous and difficult for him to operate.

By that time, he no longer has a choice in finding a new dwelling. If he does move, it frequently coincides with a major crisis in his life: Widowhood, chronic illness, or loss of income or savings. Yet 4 out of 5 old persons maintain their own households.

What happens to an average old couple living in a 2-story 7-room house? Why are the aged living in the slums of almost every big city? Penniless widows comprise one-quarter of all women over 65; where do they go?

There are some unpleasant answers in the United States Bureau of Census information. But there is hope for the aged in this respect in a dozen new experiments in housing for them. The developments are insignificant in number, but they point to the future.

LIVE IN HOUSE WHERE THEY REARED CHILDREN

The census information indicates that typical among the 2 out of 3 old couples who are living in their own homes is the man and woman who still have the house in which they reared 4 children. They have the old mohair living-room furniture and even the old cradles. On the walls are the pictures of their grandchildren.

"The house needs painting but John can't do it," the 65-year-old woman told me on a recent visit. "He can't climb the ladder. He's 71 you know. It will cost $400 if we hire somebody. I guess it will have to wait."

The old couple use fewer of the six rooms in the house because climbing stairs and house cleaning have become too difficult to do on a regular basis.

"We like this house," the woman said. "The children keep telling us to move into an efficiency apartment. But the mortgage is paid and you know how that feels."

OLD HOUSES CONTAIN HAZARDS FOR THE AGED

But there are hazards there for the aged. The bathtub is old fashioned and slippery. Last year John fell in it and strained a ligament. Will he break his hip next time? Will he trip on the stairs? Take a tumble putting up a screen? Everywhere in that house is a danger spot for those no longer sure of foot or sight or subject to sudden dizziness.

The old person in the slum tenement, where one finds a greater proportion of old people than in private homes, has a much harder time of it. The rent averages about $30 a month. There are stairs to climb. In about half of the tenements there is no hot running water, toilet, or separate bath. If there is a cooking facility, it is a gas stove to threaten asphyxiation for the old person who may fall asleep while the cereal boils over.

Large numbers of the aged in slums subsist on relief or old-age insurance checks which average about $80 a month. Rather than spend their allowances on good raw food and cook it, they eat in restaurants because it's warm there and there are people to talk to. This gets translated into high-starch diets.

Such poor housing brings with it tuberculosis, mental ailments, and a high rate of chronic illness. In Tennessee a study by State authorities proved that rundown buildings produce a high incidence of that common injury to old people—hip fracture.

THOSE WHO RENT SAY, "WHERE WOULD I GO?"

Why do 4 out of 5 old people continue to maintain their own households despite the obvious difficulties?

While sentiment plays a great part in those owning their own homes, those who rent have a different reply.

"Where else would I go?" said an old widow. "My son, he can't have me in his three-room apartment. I can't afford a fancy place on my widow's pension. Go to an old folks home? Never. That's like dying."

But a great many old widows, perhaps 1 in 4 women, live with a son, daughter, or other relatives. In these situations, too familiar to social workers and clergymen everywhere, the abrasion of the old against the young lays bare the basic conflicts of the aged in an industrial society.

SOME COMPLAINTS OF A SON-IN-LAW

Take the case of a 73-year-old widow who lives with her daughter and son-in-law in a 5-room suburban ranch house. She has the third bedroom. With no outside interests except an occasional card game with friends, she watches television most of the day. What else does she do? Listen to her son-in-law:

"She's got the 'needle' out all day long. I can close the door behind it when I go to work, but my wife has to take it all day long.

"I can still hear her: 'You don't cook right. Don't spoil the baby. You smoke too much. You stay out too late. The house is too cold.' All day long. How much can my wife take?

"And then at night. We don't know if she's asleep or not. She's always listening. I'm going crazy. I wish I'd never bought this house. I would rather live in 3 rooms than have her with us.

"I know that's a terrible thing to say, but I can't help it."

Some old men and women find ways to be useful in the homes of their children: Baby sitting, helping with the housekeeping, tending the garden. But apparently they are in the minority.

THEY RESIST GOING TO HOMES FOR AGED

It is this kind of social pressure that has turned the thoughts of many public officials and social workers in the field of the aged to homes for the aged where the old would be fed, cared for, provided with various activities, and out of the way.

The old people, however, resist going to such places. To aged parents, efforts of their children to get them to live in a home for the aged is interpreted as rejection. "They are trying to get rid of me."

So strong is this feeling against homes that when the New York City Housing Authority recently built experimental apartments with nonskid floors, bathtubs, and railings for safety, the oldsters complained that the dwellings looked too institutional.
